Congressional Record

PROCEEDINGS AND DEBATES OF THE 86th CONGRESS, SECOND SESSION

SENATE

WEDNESDAY, APRIL 20, 1960

(Legislative day of Tuesday, April 19, 1960)

The Senate met at 12 o'clock meridian, in executive session, on the expiration of the recess, and was called to order by the Vice President.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O Thou God of grace and glory, we come with grateful hearts for the sacrament of April beauty, for the glory of common things, and for the light of heaven upon our daily path.

Help us so to live and toil that we may find eternity in the midst of time, and that walking the lighted way with pure intent, we may serve Thy kingdom of love and hasten the universal reign of the risen Redeemer upon the earth.

Forgive us for pettiness of spirit, for craven fears that keep us from our best. Put a seal upon our lips, that no bitter words may go forth to wound, to poison, or to defame. Keep us from all unfair judgments of others, and from all careless criticism.

Grant that we may be among those who stand in the evil day, and having done all, and facing all that evil can do, still stand, strengthened by Thy might.

We ask it in the dear Redeemer's name. Amen.

TRANSACTION OF ROUTINE BUSINESS

The VICE PRESIDENT. Under the order entered on yesterday, morning business is now in order.

ENROLLED BILLS SIGNED

The VICE PRESIDENT announced that on today, April 20, 1960, he had signed the following enrolled bills which had previously been signed by the Speaker of the House of Representatives:

H.R. 9307. An act to continue for 2 years the suspension of duty on certain alumina and bauxite, and to extend until July 16, 1960, the suspension of duty on imports of crude chicory and the reduction in duty on ground chicory; and

H.R. 9331. An act to extend and increase the authorized maximum expenditure for the special milk program for children.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the bill (S. 1751) to place in trust status certain lands on the Wind River Indian Reservation in Wyoming, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bill and joint resolution of the Senate, each with amendments, in which it requested the concurrence of the Senate:

S. 899. An act to provide for the discontinuance of certain reports now required by law; and

S.J. Res. 61. Joint resolution to amend Public Law 305 of the 85th Congress relative to the establishment of a commission to commemorate the 100th anniversary of the Civil War, to authorize the manufacture and sale of a Civil War Centennial Medal.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 1176. An act to amend the act of August 9, 1946 (60 Stat. 968), providing for the preparation of a membership roll of the Indians of the Yakima Reservation;

H.R. 4428. An act for the relief of the legal guardian of John David Almeida, a minor;

H.R. 7847. An act to make the uniform law relating to the record on review of agency orders (Public Law 85–791) applicable to the judicial review of orders issued under the Federal Aviation Act of 1958 and the Food Additives Amendment of 1958;

H.R. 8295. An act to authorize the transfer to the Navajo Tribe of irrigation project works on the Navajo Reservation, and for other purposes;

H.R. 8713. An act to authorize the Secretary of the Navy to convey certain real estate to the Oxnard Harbor District, Port Hueneme, Calif., and for other purposes;

H.R. 8806. An act for the relief of the Philadelphia General Hospital;

H.R. 9028. An act to provide that certain funds shall be paid to the Kickapoo Tribal Council of Oklahoma;

H.R. 9043. An act for the relief of Mock Fook Leong;

H.R. 9071. An act for the relief of the Houston Belt & Terminal Railway Co.;

H.R. 9226. An act for the relief of Pietro Mela;

H.R. 9249. An act for the relief of Marlene A. Grant;

H.R. 9442. An act for the relief of Charles Bradford LaRue;

H.R. 9470. An act for the relief of E. W. Cornett, Sr., and E. W. Cornett, Jr.;

H.R. 9507. An act to authorize the Postmaster General to waive collections on raised money orders cashed by banks and other business concerns, and for other purposes;

H.R. 9752. An act for the relief of K. J. McIver;

H.R. 9889. An act to eliminate the mandatory requirements for penalty charges on short paid mail and for other purposes;

H.R. 9983. An act to extend for 2 years the period for which payments in lieu of taxes may be made with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments;

H.R. 10068. An act to amend section 303 of the Career Compensation Act of 1949, to authorize travel and transportation allowances, and transportation of dependents and of baggage and household effects to the homes of their selection for certain members of the uniformed services, and for other purposes;

H.R. 10695. An act to provide for the rotation in oversea assignments of civilian employees under the Defense Establishment having career-conditional and career appointments in the competitive civil service, and for other purposes;

H.R. 10996. An act to authorize the use of certified mail for the transmission or service of matter required by certain Federal laws to be transmitted or served by registered mail, and for other purposes; and

H.R. 11516. An act to create a judicial officer for the Post Office Department.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the President pro tempore:

S. 634. An act for the relief of Grace C. Ream;

S. 1856. An act for the relief of Frank Podany;

S. 2434. An act to revise the boundaries and change the name of the Fort Laramie National Monument, Wyo., and for other purposes;

S. 2804. An act to donate to the Keweenaw Bay Indian Tribe, L'Anse Reservation of Michigan, a certain tract of Federal land with improvements located thereon; and

S. 2877. An act to authorize the reconveyance of tribally owned lands by the Muckleshoot Indian Tribe of the State of Washington to the original allottees, their heirs, devisees, or assigns.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 1176. An act to amend the act of August 9, 1946 (60 Stat. 968), providing for the preparation of a membership roll of the Indians of the Yakima Reservation;

H.R. 8295. An act to authorize the transfer to the Navajo Tribe of irrigation project works on the Navajo Reservation, and for other purposes; and

H.R. 9028. An act to provide that certain funds shall be paid to the Kickapoo Tribal Council of Oklahoma; to the Committee on Interior and Insular Affairs.

H.R. 4428. An act for the relief of the legal guardian of John David Almeida, a minor;

H.R. 7847. An act to make the uniform law relating to the record on review of agency orders (Public Law 85–791) applicable to the judicial review of orders issued under the Federal Aviation Act of 1958 and the Food Additives Amendment of 1958;

H.R. 8806. An act for the relief of the Philadelphia General Hospital;

H.R. 9043. An act for the relief of Mock Fook Leong;

H.R. 9071. An act for the relief of the Houston Belt and Terminal Railway Co.;

H.R. 9226. An act for the relief of Pietro Mela;

H.R. 9249. An act for the relief of Marlene A. Grant;

H.R. 9442. An act for the relief of Charles Bradford LaRue;

H.R. 9470. An act for the relief of E. W. Cornett, Sr., and E. W. Cornett, Jr.; and

H.R. 9752. An act for the relief of K. J. McIver; to the Committee on the Judiciary.

H.R. 8713. An act to authorize the Secretary of the Navy to convey certain real estate to the Oxnard Harbor District, Port Hueneme, Calif., and for other purposes; and

H.R. 10068. An act to amend section 303 of the Career Compensation Act of 1949, to authorize travel and transportation allowances, and transportation of dependents and of baggage and household effects to the homes of their selection for certain members of the uniformed services, and for other purposes; to the Committee on Armed Services.

H.R. 9507. An act to authorize the Postmaster General to waive collections on raised money orders cashed by banks and other business concerns, and for other purposes;

H.R. 9889. An act to eliminate the mandatory requirements for penalty charges on short-paid mail, and for other purposes;

H.R. 10695. An act to provide for the rotation in oversea assignments of civilian employees under the Defense Establishment having career-conditional and career appointments in the competitive civil service, and for other purposes;

H.R. 10996. An act to authorize the use of certified mail for the transmission or service of matter required by certain Federal laws to be transmitted or served by registered mail, and for other purposes; and

H.R. 11516. An act to create a judicial officer for the Post Office Department; to the Committee on Post Office and Civil Service.

H.R. 9983. An act to extend for 2 years the period for which payments in lieu of taxes may be made with respect to certain real property transferred by the Reconstruction Finance Corporation and its subsidiaries to other Government departments; to the Committee on Government Operations.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Subcommittee on Flood Control, Rivers and Harbors, of the Committee on Public Works; and the Antitrust and Monopoly Subcommittee, of the Committee on the Judiciary were authorized to meet during the session of the Senate today.

On request of Mr. BARTLETT, and by unanimous consent, the Committee on Agriculture and Forestry was authorized to meet during the sessions of the Senate today and tomorrow.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON REVIEW OF CERTAIN CONTRACTS WITH MCGRAW-HYDROCARBON

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on review of contracts dated May 13, 1955, and March 27, 1959, with McGraw-Hydrocarbon, a joint venture for the construction and operation of a fertilizer plant in Korea, International Cooperation Administration, Department of State, dated April 1960 (with an accompanying report); to the Committee on Government Operations.

REPORT ON EXAMINATION OF ALLOWANCES FOR FEDERAL EXCISE TAXES INCLUDED IN SPARE PARTS PRICES UNDER CONTRACT WITH COLLINS RADIO CO., CEDAR RAPIDS, IOWA

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of allowances for Federal excise taxes included in spare parts prices under Department of the Army contract DS-36-039-SC-36529, with Collins Radio Co., Cedar Rapids, Iowa, dated April 1960 (with an accompanying report); to the Committee on Government Operations.

PROVISION OF ADDITIONAL LANDS AT, AND CHANGE THE NAME OF, THE FORT NECESSITY NATIONAL BATTLEFIELD SITE, PA.

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to provide additional lands at, and change the name of, the Fort Necessity National Battlefield Site, Pa., and for other purposes (with an accompanying paper); to the Committee on Interior and Insular Affairs.

CLARIFICATION OF OWNERSHIP OF CERTAIN CHURCH PROPERTIES IN THE VIRGIN ISLANDS

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to clarify the ownership of certain church properties located in the Virgin Islands (with accompanying papers); to the Committee on Interior and Insular Affairs.

TRANSFER OF CERTAIN FEDERAL PROPERTY TO GOVERNMENT OF AMERICAN SAMOA

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to authorize and direct the transfer of certain Federal property to the Government of American Samoa (with an accompanying paper); to the Committee on Interior and Insular Affairs.

REPORT OF NATIONAL TRUST FOR HISTORIC PRESERVATION

A letter from the Secretary, National Trust for Historic Preservation, Washington, D.C., transmitting, pursuant to law, a report of that organization, for the calendar year 1959 (with an accompanying report); to the Committee on Interior and Insular Affairs.

APPOINTMENT OF U.S. NATIONALS TO MERCHANT MARINE ACADEMY

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to amend section 216(b) of the Merchant Marine Act, 1936, as amended, to permit the appointment of U.S. nationals to the Merchant Marine Academy (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

DRAFTS OF PROPOSED LEGISLATION

A letter from the Chairman, Federal Communications Commission, Washington, D.C., transmitting drafts of proposed legislation to suspend licenses or impose forfeitures in appropriate cases (47 U.S.C. 312, new 313, and renumber present 313-329); and to issue temporary restraining orders in appropriate cases (proposed new section to title 5 of the Communications Act, 47 U.S.C.) (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

REPORT ON BACKLOG OF PENDING APPLICATIONS AND HEARING CASES IN FEDERAL COMMUNICATIONS COMMISSION

A letter from the Chairman, Federal Communications Commission, Washington, D.C., transmitting, pursuant to law, a report on the backlog of pending applications and hearing cases in that Commission, as of February 29, 1960 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

SUSPENSION OF DEPORTATION OF CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders suspending deportation of certain aliens, together with a statement of the facts and pertinent provisions of law pertaining to each alien, and the reasons for ordering such suspension (with accompanying papers); to the Committee on the Judiciary.

SURVEY OF POSTAL RATES

A letter from the Postmaster General, transmitting, pursuant to law, a survey of postal rates, dated April 15, 1960 (with an accompanying document); to the Committee on Post Office and Civil Service.

DISPOSITION OF EXECUTIVE PAPERS

A letter from the Administrator, General Services Administration, Washington, D.C., transmitting, pursuant to law, a report of the Archivist of the United States on a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent value or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The VICE PRESIDENT appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A joint resolution of the Legislature of the State of California; to the Committee on Appropriations:

"ASSEMBLY JOINT RESOLUTION 5

"Joint resolution relating to pollution of San Francisco Bay waters by Federal installations

"Whereas two military bases in the San Francisco Bay area, the Benicia Arsenal and Treasure and Yerba Buena Islands, are still dumping raw untreated sewage and waste directly into bay waters, which is causing pollution of these waters; and

"Whereas the regional water pollution control board for the San Francisco Bay region and other agencies have attempted to bring about correction of this problem since 1951; and

"Whereas the Benicia Arsenal problem could be solved by the arsenal connecting with the sewage treatment plant built by the city of Benicia, which was built far in excess of the needs of that city and designed to provide treatment capacity for sewage from the Benicia Arsenal; and

"Whereas this treatment facility was financed by general obligation bonds of the city of Benicia in the amount of $877,000, which was accepted by the citizens of that city as their obligation in the protection of the bay waters; and

"Whereas under Public Law 660, 84th Congress, 2d session, $250,000 was granted to the city of Benicia by the U.S. Government to aid in the construction of this sewage treatment plant, yet the necessary funds to connect the Benicia Arsenal have not been made available; and

"Whereas approximately $320,000 is the estimated cost of connecting the Benicia Arsenal to the city system, which is the most economical method of combating this pollution problem; and

"Whereas the other installation causing pollution in San Francisco Bay is the naval installation on Treasure and Yerba Buena Islands, which is discharging 850,000 gallons of raw sewage into the bay every 24 hours; and

"Whereas this problem has also been under consideration by the regional water pollution control board since 1951 and was declared a condition of pollution and nuisance October 21, 1954 in the regional board's resolution 161; and

"Whereas approximately $700,000 is necessary for the construction of a sewage treatment plant for this installation; and

"Whereas the construction of these facilities would be in accordance with and in furtherance of Executive Order No. 10014, dated November 3, 1948, which directed all Federal agencies to cooperate with State and local authorities in preventing pollution of surface and underground waters: Now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the Congress of the United States to appropriate the necessary funds to correct the condition of pollution being created by the Benicia Arsenal and the Treasure and Yerba Buena Islands installation, with such appropriation specifically designated for such purpose; and be it further

"Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Finance:

"ASSEMBLY JOINT RESOLUTION 1

"Joint resolution relative to urging the Federal Congress to enact legislation relating to retroactive social security coverage for public employees

"Whereas on February 16, 1960, legislation was introduced in the current session of the Congress of the United States, in the form of a bill, H.R. 10448, by the Honorable EUGENE J. KEOGH, of New York, which would authorize the integration of publicly operated retirement systems with the old age and survivors' insurance program of the Federal Social Security Act, with a proposed retroactive effect extending to January 1, 1956; and

"Whereas the enactment into law of this bill would afford the State of California, as well as other States whose public retirement systems are not yet integrated with Federal laws, an opportunity to authorize a program to provide for individuals retired or proposing to retire under a publicly operated retirement system the additional benefits afforded under the Federal Security Act; and

"Whereas the benefits afforded by the old age and survivors' insurance provisions of the Federal Social Security Act are a matter of special, and frequently dire, need on the part of persons who have retired, or will in the near future retire, under the State Employees' Retirement System of the State of California, under the provisions of which survivors' benefits are provided on the basis of reduction in present retirement allowances to enable the funding of benefit allowances for survivors; and

"Whereas in this era of inflationary trends the fixed allowances for retirement provided for persons who have devoted a major portion of their lives to the public service are strained to the utmost and can ill bear the reductions necessary to provide for the survivors of the annuitants the benefits which, at best, are not comparable with those which would be afforded under Federal law upon the enactment of legislation of the type proposed by H.R. 10448: Now, therefore, be it

"Resolved by the Assembly and the Senate of the State of California, That the Congress of the United States of America is respectfully memorialized to enact into law the provisions of H.R. 10448 of the 86th Congress (2d session); and be it further

"Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to each California Senator and Representative in the Congress of the United States, and to the President and Vice President of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"ASSEMBLY JOINT RESOLUTION 7

"Joint resolution relative to memorializing Congress concerning the establishment in California of a national center for research on principles of irrigation

"Whereas a report to Congress by a committee appointed by the Secretary of Agriculture has recommended the establishment of a national center for research on principles of irrigation and has designated California as a possible location thereof; and

"Whereas California has the largest irrigated acreage of any State in the Union and has been a leader in the development of new methods of irrigation; and

"Whereas great interest exists in California in problems relating to irrigation which problems are of considerable complexity and great urgency and, because of the wide variation of crops and climatic conditions, are typical of irrigation problems encountered throughout the Nation; and

"Whereas Davis, Calif., which is also the site of the Davis Campus of the University of California, one of the leading educational institutions in the United States in the field of agriculture, is an excellent and logical location for such a research center: Now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the Congress to provide for establishment of a national center for research on principles of irrigation to be located at Davis, Calif.; and be it further

"Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of Agriculture."

A joint resolution of the Legislature of the State of California; to the Committee on Public Works:

"ASSEMBLY JOINT RESOLUTION 2

"Joint resolution relative to participation by the State of California in Federal water projects

"Whereas the State of California has by law authorized the State department of water resources to participate and cooperate with the United States in connection with Federal water projects; and

"Whereas pursuant to this authorization the department of water resources has entered into certain contracts with the Bureau of Reclamation of the Department of the Interior under which the State agrees to guarantee the repayment of the portion of the costs of certain Federal water projects allocated for repayment by agricultural water users, with the obligation of the State contingent upon appropriations made by the legislature for such purposes; and

"Whereas the legislature has appropriated certain funds for expenditure by the department of water resources for the above-mentioned purpose, and it is and has been the intent of the legislature that appropriations will be made from time to time to fulfill the obligation of the State under such contracts when and as necessary; and

"Whereas the Secretary of the Interior has established the policy that the State of California must impound all of the money appropriated for this purpose and use such money for no other purpose; and

"Whereas such policy will result in needlessly tying up large amounts of State funds which could be put to good use for other necessary State purposes; and

"Whereas such policy differentiates between the State and other local entities which contract to purchase water from the Bureau of Reclamation, inasmuch as no requirement is made of local entities that they impound the entire amount of their repayment obligation to the United States; and

"Whereas such policy indicates a lack of recognition of and confidence in the financial integrity of this State: Now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memoralizes the President and the Congress of the United States to take such action as may be necessary to establish a policy in connection with participation by the State of California in Federal water projects under which repayment assurances made by the State of California will be accepted upon the same basis as repayment assurances of other local entities and under which the State will not be required to impound money to meet such repayment assurances; and be it further

"Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of the Interior."

RESOLUTION OF NORTHEAST DISTRICT, KANSAS ASSOCIATED GARDEN CLUBS

Mr. CARLSON. Mr. President, Kansas is one State in the Union that does not have a national park.

At the annual meeting of the Northeast District of the Kansas Associated Garden Clubs at Lawrence, Kans., on April 8, a resolution was adopted urging the National Park Service to select one suitable area of no less than 25,000 acres of grassland for a true prairie national park.

The rolling rich prairie lands of Kansas and the Middle West was an invitation to thousands of our pioneers to settle that section. Today it is one of the important agricultural and industrial areas of the Nation.

We should preserve an area of this type in order that future generations may have some insight as to how our section of the country appeared previous to settlement.

I ask unanimous consent that this resolution be printed in the RECORD, and referred to the appropriate committee.

There being no objection, the resolution was referred to the Committee on

Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE KANSAS ASSOCIATED GARDEN CLUBS FAVORING ESTABLISHMENT OF A TRUE PRAIRIE NATIONAL PARK

Whereas Congress has established sizable national parks in order to preserve, unimpaired for the benefit of future generations, samples of nearly every major native plant association found in the 50 States; and

Whereas no national park has been established in order to preserve a sample of the true (tall grass) prairie that stretched westward from Indiana into Kansas and southward from Minnesota to the Gulf of Mexico; and

Whereas careful studies over many years by grass specialists employed by the National Park Service have shown that the best remaining samples of this once vast grassland are in Kansas; and

Whereas the advisory board on national parks, historic sites, buildings and monuments has recommended the establishment of a true prairie national park; and

Whereas the few remaining areas are being broken up by plowing, by highways, and by other means, so rapidly that no suitable area will be available a few years from now: Now, therefore, be it

Resolved, by the Northeast District of the Kansas Associated Garden Clubs in their annual meeting at Lawrence, Kans., on April 8, 1960, That the National Park Service immediately select one suitable area of no less than 25,000 acres of grassland for a true prairie national park, that the Congressmen from Kansas cause a bill to be drafted and introduced in the House of Representatives in order to create a true prairie national park and that the two Senators from Kansas cause a corresponding bill to achieve the same purpose to be introduced in the U.S. Senate; and be it further

Resolved, That the Secretary send a copy of this resolution to the President of the United States, to the Director of the Bureau of the Budget, to the Secretary of the Department of the Interior, to the Director of the National Park Service, to each of the U.S. Senators and Representatives from Kansas in the Congress of the United States, and to the Governor of the State of Kansas.

REPORT ON DISPOSITION OF EXECUTIVE PAPERS

Mr. JOHNSTON of South Carolina, from the Joint Select Committee on the Disposition of Papers in the Executive Departments, to which was referred for examination and recommendation a list of records transmitted to the Senate by the Administrator of General Services, that appeared to have no permanent value or historical interest, submitted a report thereon, pursuant to law.

BILLS INTRODUCED

Bills were introduced, read the first time, and by unanimous consent, the second time, and referred as follows:

By Mr. HUMPHREY:

S. 3391. A bill to authorize a 10-year program of grants for construction of veterinary medical educational facilities, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. BUSH (for himself and Mr. DODD):

S. 3392. A bill to provide for the construction of a shellfisheries research center at Milford, Conn.; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. BUSH when he introduced the above bill, which appear under a separate heading.)

By Mr. LONG of Hawaii:

S. 3393. A bill for the relief of Robert O. Lillie; and

S. 3394. A bill for the relief of Kam Yung (Lee) Chong; to the Committee on the Judiciary.

By Mr. BEALL:

S. 3395. A bill for the relief of the city of Frederick, Md.; to the Committee on the Judiciary.

By Mr. CLARK:

S. 3396. A bill to extend the educational materials postal rate to certain printed plastic educational reference charts; to the Committee on Post Office and Civil Service.

By Mr. KERR (for himself and Mr. MONRONEY):

S. 3397. A bill to dispose of surplus administrative reserves of the former Kiowa, Comanche, and Apache Indian Reservation; to the Committee on Interior and Insular Affairs.

By Mr. EASTLAND:

S. 3398. A bill to amend the Internal Revenue Code of 1954 to extend the time within which a minister may elect coverage as a self-employed individual for social security purposes; to the Committee on Finance.

By Mr. BYRD of Virginia:

S. 3399. A bill to authorize the exchange of certain property within Shenandoah National Park, in the State of Virginia, and for other purposes; to the Committee on Interior and Insular Affairs.

RESOLUTION

TO PRINT AS A SENATE DOCUMENT A STUDY ENTITLED "EXPORTS, IMPORTS, AND THE U.S. BALANCE OF INTERNATIONAL PAYMENTS"

Mr. HUMPHREY submitted the following resolution (S. Res. 307), which was referred to the Committee on Rules and Administration:

Resolved, That the study entitled "Exports, Imports, and the U.S. Balance of International Payments," prepared by Dr. Howard S. Piquet, senior specialist in International Economics of the Legislative Reference Service, Library of Congress, be printed as a Senate document, with illustrations.

THE VETERINARY MEDICAL EDUCATIONAL FACILITIES CONSTRUCTION ACT OF 1960

Mr. HUMPHREY. Mr. President, I introduce, for appropriate reference, a bill entitled "The Veterinary Medical Educational Facilities Construction Act of 1960."

Its purpose is to authorize a 10-year program of grants for construction of veterinary medical educational facilities.

This bill arises out of recognition of the increasing significance of veterinary medical education and of the inadequacy of existing facilities.

The bill touches but one phase of the challenge of veterinary medicine—the lack of funds for construction of new facilities.

Other needs should simultaneously be fulfilled such as the need for more veterinary medical research projects, as such.

ANIMAL HEALTH SERVES HUMAN HEALTH

Introduction of this bill does not in the slightest indicate an unawareness of vast unfulfilled needs in human medicine. On the contrary, this bill is a reflection of the latter interest. It is part of that interest. The two are inseparable—human health and the health of animals, whether most laymen recognize that fact or not.

A question before the Congress is not: "Shall we build more medical schools or more veterinary medical schools?"

The proper question is: "When will we act to meet all health needs?"—the needs of man in his entirety.

That, of course, means, first and foremost, more — many more — medical schools to graduate more M.D.'s in order to cope with a critical shortage of doctors which the U.S. Public Health Service has confirmed again and again.

But it also means more D.V.M.'s—doctors of veterinary medicine—through more veterinary medical schools and through expanding existing schools.

The layman—particularly the layman in the city may not realize how tremendously important veterinary medicine is to this Nation.

VET MEDICINE HELPS RELIEVE WORLD HUNGER

The layman may not understand how his own health is endangered by the shortage of doctors of veterinary medicine, both in Government and private practice. The city layman may not have stopped to think what healthy animals mean to the United States and to other peoples of the world. Healthy livestock means food to the population and income to the farmer. But healthy livestock also means clothing, drugs and biologicals, industrial products. Livestock particularly to other nations represents draft power, fuel, fertilizer—indeed a symbol of wealth itself.

In our mutual security program abroad, we should recognize that the critical food problem in foreign countries cannot be met except through improved veterinary medicine.

I have been a cosponsor for years of legislation to provide more adequate medical facilities, particularly the expansion of our medical school. As the result of the study which has been made by the Subcommittee on International Health Cooperation of the Committee on Government Operations, I have come to the conclusion that there is an imperative need for extending our veterinary medical facilities as a further way of protecting human health as well as, of course, the health of animals, which lends itself to the productive and prosperous American economy.

BASIS OF MY INTEREST

The origin of this bill is twofold:

First. From my personal familiarity with the outstanding work performed by the College of Veterinary Medicine of the University of Minnesota, and at land-grant and other colleges throughout the land.

Second. In facts which have come to my attention in my capacity as chairman of the Senate subcommittee which has been studying problems of medical research on a worldwide basis.

Out of this study is now being prepared a comprehensive committee print which will tell the story of veterinary medicine in the United States and throughout the globe. This will be a factual volume. It will not for the present attempt to present the conclusions of the subcommittee. Only in the final report of our study will those conclusions be presented. But, through chart and text, it will tell one of the least-understood, yet one of the most important, stories involving the health of the American people.

Extensive contents of the print have been arranged through the excellent cooperation of the Agricultural Research Service of the U.S. Department of Agriculture, in conjunction with our subcommittee staff.

But my action today in introducing this bill is as an individual Senator, one who feels the need for America to move ahead, now, this year, in 1960, on this comparatively neglected front.

SHORTAGE OF D.V.M.'S

These points should be noted:

We have 22,000 veterinarians today in the United States. That is not enough. There are at present 18 veterinary colleges in the United States. These colleges have won impressive laurels in the history of world veterinary medicine.

They graduate 850 annually. That is not enough.

The U.S. Department of Agriculture right now needs 300 veterinarians. State, local, and U.S. public health departments need 250. More are needed for poultry-disease control, for State and local food inspection programs and for research.

Estimated requirements, by 1975, based on a population of 230 million are, approximately 35,000 veterinarians; 1,200 graduates annually to reach the estimated need of total veterinarians 15 years from now.

THE COST OF ANIMAL DISEASE

I know, of course, that economy-minded individuals hearings of this bill may still question its cost. I should like them, however, to think of the cost suffered by the United States from not having adequate veterinary medicine.

The fact is that, fortunately, we have the greatest veterinary medical system in the world. But despite this system, annual losses of $2.7 billion—I repeat, 2.7 billions—not millions—because of animal and poultry diseases and parasites.

What does this mean to the farmer? It means that for every $100 which an American farmer receives in cash from the marketing of animals and animal products, $15.50 is lost to diseases and pests. And this occurs in a Nation which is rightly regarded as the safest place in the world to raise livestock. The fact is that the U.S. livestock industry is extremely vulnerable to widespread losses from infectious and contagious diseases. Why? In part, because animals can be moved so swiftly thanks to modern transportation by air, rail, motor, and water vehicles.

VET MEDICINE PART OF HUMAN MEDICINE

But there is an infinitely more important cost which this bill is designed to help reduce. I refer again to the cost in human health. The fact must be repeated that veterinary medicine is part and parcel of human medicine. Veterinary medicine serves three purposes in this connection:

First. It removes sources of exposure or infection to man by eradicating or controlling animal diseases which are transmitted from animal to man.

Second. It develops preventives or treatments for animals which can be adapted for use in human cases.

Third. It provides food hygiene programs to protect the consumer against possible food-borne diseases.

Has anyone ever estimated the total direct and indirect costs of a single major epidemic of a food-borne disease in a large city?

Do the people of America realize what a hoof and mouth epidemic if it ever got started and if it raged unchecked could mean to the cattle of the United States?

Do our people realize that disease and pests already claim one animal in every five produced?

Can a tangible value be put on the factor of countless millions of our citizens enjoying the companionship of healthy animals, dogs, cats, and other pets in their homes and on their farms?

And what of the value of a single human being stricken by a virus which may be caught from a swine or other animal?

ANIMAL DISEASES TRANSMISSIBLE TO MAN

Remember, there are no less than 100 animal diseases that can be transmitted to man. Has anyone ever estimated the cost to society of a single child who has been bitten by a rabid dog?

Veterinary research has provided new and indispensable knowledge of tuberculosis, brucellosis, sleeping sickness—encephalitis—hookworm, and other diseases transmissible to man from animals.

Has anyone estimated the cost to the State of New Jersey alone of eastern equine encephalitis—the disease which was transmitted last fall by mosquitoes to horses and from horses to man—with fatal results?

Counterattack is essential against these diseases transmissible to man.

But we must attack, too, diseases which strike both man and animal, whether or not transmissible between them.

It is no accident that the National Institutes of Health have soundly granted $1 million to the School of Veterinary Medicine of the University of Pennsylvania for research on cardiovascular diseases. It is no accident that the American Cancer Society has granted $100,000 for research on cancerous diseases of chickens.

As of February 1960, C. D. van Houweling, Assistant Administrator, U.S. Agriculture Research Service, informs me that $2.7 million has been awarded by national granting agencies for research in whole or in part connected with veterinary medicine.

These are figures compiled by the Biosciences Information Exchange.

But these research totals are not enough to satisfy the scientific needs of this Nation.

Moreover, even if it were from the standpoint of public health activity alone, we could not afford a shortage of veterinarians.

In 1958, W. W. Armistead, then president of the American Veterinary Medical Association, in testimony before the House Interstate and Foreign Commerce Committee on H.R. 7841 and 6784, estimated that there would be an increase by 1962 of 1,245 over the numbers employed in public health work at that time; 736 more than were then employed by the USDA. Current estimates by the AVMA indicate that these demands will continue to increase during the foreseeable future.

Are we going to take action now or are we going to ignore these rising future needs?

Are we going to make available money for these facilities so at least a beginning can be made on this phase of America's need?

Much remains to be done. We need sound salaries for veterinarians, sound career opportunities. But we need more schools and expanded existing schools.

So, I say, let us begin right now.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3391) to authorize a 10-year program of grants for construction of veterinary medical educational facilities, and for other purposes, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

SHELLFISHERIES RESEARCH CENTER AT MILFORD, CONN.

Mr. BUSH. Mr. President, on my own behalf, and for my colleague, the junior Senator from Connecticut [Mr. DODD], I introduce a bill to provide for construction of a shellfisheries research center at Milford, Conn., and ask that it be appropriately referred.

Mr. President, marine biologists at the U.S. Fish and Wildlife Service Laboratory in Milford, Conn., under the able direction of Dr. V. L. Loosanoff, have accomplished an outstanding breakthrough in solving the controlled propagation of clams, oysters and other shellfish.

Their success in this accomplishment—the dream of marine biologists for the past 70 years—has drawn attention from all coasts of this country as well as from foreign nations.

Working with limited facilities and personnel, the Milford laboratory has also developed the principles of a method which may rigidly control shellfish enemies.

These achievements promise to revolutionize the shellfish industry, and lead to more scientific farming of the sea, producing vast quantities of food for the world's expanding population.

There is now great need of expanded facilities so that a pilot clam and oyster

seed-producing plant can be put into operation, where people can be trained in the necessary techniques and superior seed strains can be developed.

Funds are needed to construct a laboratory-hatchery-training school building. Land adjacent to the present laboratory on which this can be built is already available, having been donated to the Federal Government by the State of Connecticut.

The bill I have introduced would authorize the appropriation of $1,250,000 for the building, and an additional $75,000 for land necessary for hatchery ponds.

This small investment will pay rich dividends to our economy, Mr. President, and in addition will show the underdeveloped countries of the world methods of producing much of the protein foods they so badly need.

Mr. President, I ask unanimous consent that the text of the bill may be printed in the RECORD following these remarks.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3392) to provide for the construction of a shellfisheries research center at Milford, Conn., introduced by Mr. BUSH (for himself and Mr. DODD), was received, read twice by its title, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior, acting through the United States Fish and Wildlife Service, is authorized and directed to construct at Milford, Connecticut, a research center for shellfisheries production and for such purpose acquire such real property as may be necessary. Such research center shall consist of research facilities, a pilot hatchery including rearing tanks and ponds, and a training school, and shall be used for the conduct of basic research on the physiology and ecology of commercial shellfish, the development of hatchery methods for cultivation of mollusks, including the development of principles that can be applied to the utilization of artificial and natural salt water ponds for shellfish culture, and to train persons in the most advanced methods of shellfish culture.

SEC. 2. There is authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, not to exceed $1,325,000 to carry out this Act.

NATIONAL WILDERNESS PRESERVATION SYSTEM—AMENDMENTS

Mr. O'MAHONEY. Mr. President, on behalf of the senior Senator from Colorado [Mr. ALLOTT] and myself, I submit amendments in the nature of a substitute to Senate bill S. 1123, the so-called wilderness bill.

On February 16, 1960, in an executive session of the Senate Committee on Interior and Insular Affairs considering S. 1123, I tentatively offered an amendment to provide a statutory means of setting aside certain areas of the public lands which were designated as wilderness by the Forest Service of the Department of Agriculture prior to February 1, 1960. At the same time, the amendment retains safeguards to meet the future needs of national defense or the needs of a progressive economy. In the two ensuing months I have had the benefit of numerous comments by Senators and others with great knowledge of the public lands.

The Senator from Colorado [Mr. ALLOTT] has joined me in frequent deliberations on this matter. The substitute which we are submitting today is the result of our joint efforts.

The substitute bill will give statutory designation as wilderness to 5,834,491 acres of national forest lands in 11 States which have been classified by the Secretary of Agriculture as wild, wilderness, or roadless. The bill provides the authority for the Secretary of Agriculture to ascertain the wilderness characteristics of 8,269,000 additional acres of national forest lands presently classified by the Department of Agriculture as primitive areas.

The Department of the Interior has no lands which are designated as wilderness. This substitute authorizes the Secretary of the Interior to investigate the lands under his jurisdiction, particularly the national park and national wildlife refuges and ranges, to determine their wilderness characteristics. Both Secretaries are authorized to report their findings and recommendations to the Congress so that Congress may then act. This amendment preserves the constitutional right of Congress to legislate on this matter which the original bill delegates to the executive.

In connection with lands to be proposed for wilderness designation after the enactment of this bill, it further provides that the independent views of the Forest Service, the National Park Service, the Bureau of Reclamation, the Bureau of Sport Fisheries and Wildlife, the Soil Conservation Service, the Federal Power Commission, the Rural Electrification Administration, the Federal Communications Commission, and the U.S. Geological Survey shall be transmitted to Congress with any recommendations the Secretary of Agriculture or the Secretary of the Interior may make with respect to wilderness designation. This is provided in order that the Congress may exercise its specific constitutional authority "to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States" in the light of the special information which these agencies can send to the Congress with respect to the effect that the designation of wilderness might have upon spectific activities, the supervision of which is entrusted to them.

The amended bill also provides, as does the Flood Control Act of 1944, that proposed reports by the two Secretaries shall be transmitted to the Governors of the States in which the areas lie for the comments and observations of the Governors which will be incorporated in the reports when they are sent to the Congress.

One of the cardinal differences between our version of S. 1123 and other versions is that in our substitute the legal descriptions of the 5,834,491 acres are set forth so that all the people may know.

As soon as printed copies are available I am sending them to the Governors of all States in which areas to be given statutory designation are situated. I shall do this in order that Governors may, if they desire, indicate to the Congress the effect that such designation would have on local conditions in their States.

While not absolutely identical, the features of the substitute bill providing for the manner of the administration of these wilderness areas are very similar to these provisions in other versions of the bill.

The VICE PRESIDENT. The amendments will be received, printed, and appropriately referred.

The amendments were referred to the Committee on Interior and Insular Affairs.

Mr. ALLOTT subsequently said: Mr. President, I should like to compliment the senior Senator from Wyoming [Mr. O'MAHONEY] for his submission of, as an amendment in the nature of a substitute for Senate bill 1123, the so-called wilderness bill.

Over the past few months it has been my privilege to work very closely with the Senator from Wyoming in the preparation of some of the amendments which have gone into the present substitute.

I wish to say that, more than anything else, I desire to compliment the Senator from Wyoming upon the great legal ability and the clear knowledge of law and the understanding of law which he has applied to this situation. I must say it is refreshing to find one trained in the law who is willing to apply it to factual situations in a way which will enable us to resolve and solve our problems under the laws of this country without resorting to various distortions of one kind or another.

The purpose of the new amendment in the nature of a substitute, in which I am happy to have participated to some extent, is to have lands set aside as wilderness areas by the Secretary of Agriculture or the Secretary of the Interior. Of course the Secretary of the Interior has no control over wilderness areas, as such; and that fact is well understood. But there are set aside areas which are considered to be in the nature of wilderness areas. Of course the only wilderness areas are under the jurisdiction of the Secretary of Agriculture.

However, this amendment will permit the Secretary of the Interior to ascertain whether it would appropriate to have 8 million acres of land declared wilderness areas, to be under the supervision of the Secretary of the Interior.

I should like to say that I believe that the amendment in the nature of a substitute, submitted by the senior Senator from Wyoming, on behalf of himself and me, meets many of the objections from persons who have objected to the wilderness bill. I believe this amendment provides the protection which should be given; and, in my opinion, it is a more clear-cut approach to the problem than any-

thing else which has been done up to date. Of course, there will be some who will not agree with it; but I believe the philosophy of this measure and the complete approach are more consistent with and more compatible to development of the powers of the Secretary of the Interior and the powers of the Secretary of Agriculture and the interest of the public than anything else which has been offered to date.

ESTABLISHMENT OF DUNE AND SEASHORE AREAS AS NATIONAL PARKS

Mr. ALLOTT. Mr. President, out of order, I send to the desk, for appropriate reference, an amendment in the nature of a substitute to Senate bill 2010. That bill was introduced by our late colleague, Senator Neuberger, on behalf of himself and myself, and it provides for the establishment of certain dune and seashore areas as national parks.

Since the death of Senator Neuberger, I take this new action, which is specifically in the interest of three areas, because it is my desire that the name of Senator Neuberger continue to be associated with this proposed legislation. Therefore, in submitting this new amendment—which is a more specific version of the more general bill the two of us previously introduced—the purpose is to keep his name on the bill, as I devoutly wish to do.

The VICE PRESIDENT. The amendment will be received, printed, and appropriately referred.

The amendment was referred to the Committee on Interior and Insular Affairs.

NATIONAL VOTERS' DAY—ADDITIONAL COSPONSOR OF JOINT RESOLUTION

Under authority of the order of the Senate of April 14, 1960, the name of Mr. KEATING was added as an additional cosponsor of the joint resolution (S.J. Res. 186) to provide for the designation of the first Tuesday after the first Monday in November of each year as "National Voters' Day," introduced by Mr. WILEY (for himself and Mr. RANDOLPH) on April 14, 1960.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD as follows:

By Mr. HUMPHREY:

Testimony given by him before the Subcommittee on Problems of the Aged and Aging in support of legislation to provide medical insurance to older citizens.

By Mr. WILEY:

Article entitled "Seaway Year May Be Big—There Is an 'If'," published in the Milwaukee (Wis.) Journal of April 16, 1960; and statement by him, relating to the outlook for trade and commerce through the St. Lawrence Seaway in 1960.

BEARDSLEY RUML

Mr. CARLSON. Mr. President, the death of Beardsley Ruml yesterday brought back memories of the enactment of the pay-as-you-go tax legislation.

When Mr. Ruml first proposed that income tax collections be made payable on a current basis, he was accused of being a dreamer, a visionary, and an impractical person; and many persons referred to him by using other terms or names derisive in character. I well remember when the proposal was first mentioned, inasmuch as I was then a member of the Ways and Means Committee of the House of Representatives.

In 1942, I introduced the first bill embodying what was known as the Ruml pay-as-you-go tax plan. After hearings and much debate and much discussion, the bill was passed by the House, and was sent to the Senate, where it finally was passed, and was enacted in 1943.

I well remember the attitude of the distinguished chairman of the Ways and Means Committee, the late Representative Robert Doughton, who was very much opposed to the measure, and who stated that it was so impractical that the Congress should not enact it. In short, he called it a forgiveness of 1 year's tax.

The bill was passed by the House of Representatives, and came to the U.S. Senate at a time when the Finance Committee of the Senate was under the able leadership of the late Senator Walter George. The Senate passed the bill; and thereafter, following conferences between the House and the Senate, the bill was finally approved on the basis of what was called a forgiveness of 75 percent of the tax, plus a 2-year forgiveness of 12½ percent.

As we look back on that legislation, I think it can truly be said that it was a piece of legislation that was absolutely necessary for the solvency of our Nation. It did not make much difference how the income taxes were collected when our people were paying $4 billion or $6 billion or $8 billion a year in income taxes; at that time, it made little difference whether the taxes were collected currently, or were collected in the year preceding the due date, or were collected on the basis of being in arrears for 1 year. But at the beginning of World War II, when great expenditures were incurred for mobilization and for military equipment, it was absolutely essential that some of these taxes be collected currently.

I well remember when the then Secretary of the Treasury, the late Carl Vinson, appeared before our committee. At first he had been opposed to the new tax plan; but the second year after it was put into operation, he testified that it was responsible for the collection of $5 billion in additional taxes.

I wished to call this matter to the attention of the Senate today, because often men who have visions and have the courage of their convictions sponsor and assist in securing the enactment of legislation that is most important; and in my opinion Beardsley Ruml rendered outstanding service.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, as part of my remarks, an article regarding Beardsley Ruml's life, which was published yesterday evening in the Washington Star; an editorial, entitled "B. Ruml," which was published in the Washington News; and an editorial, entitled "Beardsley Ruml," which was published in the Washington Post.

There being no objection, the article and the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Star, Apr. 19, 1960]

BEARDSLEY RUML DIES; PAY-AS-YOU-GO TAXMAN

Beardsley Ruml, 65, an "idea" man whose most notable brainchild was the pay-as-you-go withholding method of collecting income taxes, died yesterday in a Danbury, Conn. hospital.

He had been stricken with a heart attack a week ago in his home at West Redding, Conn.

At the time of his death, he was an adviser to the Commonwealth of Puerto Rico, the Associated Press reported.

Mr. Ruml had been a former board chairman of the R. H. Macy and Co. department store in New York and of the New York Federal Reserve Bank.

Although he liked to recall that he had been a registered Republican, Mr. Ruml became a leading Democratic planner.

He supported Franklin Roosevelt's New Deal and helped to draft the Agricultural Adjustment Act of 1933, a key piece of Democratic legislation.

RAISED STEVENSON FUNDS

In 1952, Mr. Ruml was appointed chairman of the finance committee of the Democratic National Committee.

With the imaginative planning for which he was noted, Mr. Ruml organized a mass appeal for money to help finance Adlai E. Stevenson's first bid for the presidency.

Party solicitors rang doorbells throughout the country seeking $5 contributions to the Democrat war chest.

At that time Mr. Ruml's approach to raising campaign funds was regarded as unique.

Beardsley Ruml was a portly, jovial man whose formula for thinking up ideas was deceptively simple: He liked to sit in an easy chair and wait until a bright thought came to him.

"Nobody can think if he's uncomfortable," Mr. Ruml once explained.

NOTED FOR IDEAS

His ideas brought him national fame—and a full measure of economic security.

When he took a $70,000-a-year job as treasurer for Macy's in 1934, Mr. Ruml said: "My job is just to sit around and think."

It was on a train between Chicago and New York that Mr. Ruml got the idea for a pay-as-you-go tax plan.

"Why should we be paying taxes on last year's income, which already is gone, out of present income, which we haven't yet received?" Mr. Ruml asked himself. "Why not put the income tax on a pay-as-you-go basis, skipping a year to make this possible."

His plan was enacted by Congress in modified form—the skipped year was eliminated—17 years ago.

BORN IN CEDAR RAPIDS, IOWA

Mr. Ruml, who was known as "B" to his friends, was born November 5, 1894, in Cedar Rapids, Iowa. His father, Wentzle Ruml, was a doctor who came to the United States from Bohemia. His mother was superintendent of a Cedar Rapids hospital at the time of her marriage.

As a boy, Beardsley Ruml impressed his teachers with his precocious knowledge. He attended Dartmouth College, where he earned a Phi Beta Kappa key.

Two years after graduation, he received his doctorate from the University of Chicago. His thesis was on psychometry, the study of measuring and determining intelligence.

Mr. Ruml was teaching at the Carnegie Institute of Technology when World War I started. He became civilian director of the Army's trade tests.

WAS CHICAGO UNIVERSITY DEAN

After the war, he was named assistant to the president of the Carnegie Corporation of New York. Then, in 1922, he became director of the Laura Spelman Rockefeller Memorial organization.

Before going to work for Macy's, Mr. Ruml served as dean of the social science division and professor of education at the University of Chicago.

A Macy's executive said the store was looking for a man who would bring us a stimulating mind. Mr. Ruml was that man, and Macy's never regretted its choice.

FRESH IDEAS SUPPLIED

"We wanted someone fresh," the store official said, "someone who would be able to challenge some of our ideas. We got what we asked for."

Mr. Ruml resigned from Macy's in 1949, after serving as chairman of the board for 4 years. Three years earlier, he had resigned from a 9-year chairmanship of the New York Federal Reserve Bank.

He is survived by his wife, Mrs. Lois Treadwell Ruml of West Redding; a daughter, Mrs. John Doyle, of Colchester, England, and two sons, Treadwell, of Chicago, and Alvin, of West Redding.

Funeral services will be held tomorrow at the Redding Federated Church.

[From the Washington News, Apr. 19, 1960]

B. RUML

Beardsley Ruml was one whose lusty love of life touched all who came in contact with his ranging intellect and imaginative personality.

A man of changing interests, he once guided Macy's department store, the Federal Reserve Bank of New York, and the bootstraps-lifting economic development which gave Puerto Rico the highest living standards of the Caribbean. But Mr. Ruml probably is most remembered for his sponsorship of the Ruml plan of income tax payment.

It was a simple plan designed to make any taxpayer's current tax payments applicable to the current year's income, rather than the previous year's income. It was to enable men to retire and pay taxes on retirement income without being penalized by a prohibitive tax on the previous year's income. It was called "forgiving taxes," but in fact the adoption of the Ruml plan brought the greatest increase in Federal revenue our Government has known.

The withholding tax, instituted when the Ruml plan was adopted, often has been blamed on him. But he never suggested that. The withholding tax was the idea of the then Secretary of the Treasury, Henry Morgenthau. And it is still with us. It has a chloroforming effect. Even the lively imagination of B. Ruml could not have foreseen how far a simple idea could go.

[From the Washington Post, Apr. 20, 1960]

BEARDSLEY RUML

R. H. Macy & Co. department stores, in the depth of the depression, found it a sound and profitable investment to pay Beardsley Ruml $70,000 a year just "to challenge our thinking," as the company's president put it. It was the country's good fortune that "B" Ruml in a long and varied career in business, banking and education almost continuously challenged the thinking of everyone about him, and no price tag could possibly be placed upon the many public fruits of this process. He was as prickly as a porcupine with stimulating ideas.

Best known as the creator of the income tax withholding plan, adopted by Congress in 1942 to ease the burden of war taxation, this Iowa-born educator and economist made even more fundamental contributions to concepts of public finance. He helped put across the idea of the Federal cash budget as the only useful gage of the economic impact of Government spending, and he guided the Committee for Economic Development toward some of its more enlightened and enlightening studies of national economic problems.

His interests knew few bounds; he seemed as much at home showing Macy's how to expand its sales as when he helped the Democratic Party (despite his Republican affiliation) raise campaign funds or lent his talents to the Bretton Woods Monetary Conference. He contributed an engaging good humor tinctured with iconoclasm, and his impact upon any group was at once convivial and electrifying. Mr. Ruml's death at 65 brings an untimely end to a career of great public usefulness.

Mr. MANSFIELD. Mr. President, I wish to join the Senator from Kansas in his remarks about Beardsley Ruml. It happened that at the time when the pay-as-you-go income-tax bill was before the Congress, the Senator from Kansas and I served in the House of Representatives; and I well remember the leadership—and it was leadership under extreme difficulty—which the Senator from Kansas displayed at that time. I think he should be given a great deal of the credit which justly goes to Mr. Ruml for the inauguration of this type of tax collection system.

JOINT MEETING ON MONDAY TO HONOR THE PRESIDENT OF FRANCE

Mr. MANSFIELD. Mr. President, I announce that on Monday there will be a joint meeting of the two Houses, in the Hall of the House of Representatives, in honor of the President of France, Mr. de Gaulle.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, I serve notice that there are on the calendar several bills which have been cleared by the policy committee, and may be brought up by motion in the near future, although not this week. But following this week, they may be brought up by motion. Among these are Calendar No. 893, Senate bill 910, authorizing the payment to local governments of sums in lieu of taxes.

Calendar No. 1035, Senate bill 743, the coal mine safety bill.

Calendar No. 1178, House bill 4251, amending the Internal Revenue Code with respect to exploration expenditures.

In addition, Mr. President, we may be considering various appropriation measures as soon as they are reported. It is anticipated that House bill 10569, the Treasury-Post Office appropriation bill, will be reported to the Senate in the near future.

Of course, any bills which previously have been cleared by the Policy Committee and have been announced by the majority leader may be brought up by motion.

PAN AMERICAN WEEK

Mr. KEATING. Mr. President, in the light of our historic bonds of friendship with the people of Latin America, I believe it to be eminently appropriate that we note the designation of this week as Pan American Week. It is observed both in Latin America and in the United States, and commemorates the first official International Conference of American States, held in Washington in 1889–90. The interdependence that has marked our long relationship with Latin America has continued to grow with the passing years. The traditional spirit of amity between our Nation and the nations to the south has only recently been impressively exemplified by the state visit of President Eisenhower to certain of our great sister Republics of South America.

The current period of tension and difficulties in the matter of Cuba remains, happily, an isolated exception to the harmonious accord that has always existed between us and our esteemed Latin American neighbors. Today, in the great period of social and economic change that is taking place in the world, we must remain especially sympathetic to the problems being faced by the Latin American nations in their adjustment to the new conditions and new challenges of our time.

In this regard, I am pleased to draw attention to a most significant address delivered by Gov. Nelson A. Rockefeller, of New York, at the annual Pan American Day luncheon of the Rochester Chamber of Commerce, on April 13 of this year. In this major speech, Governor Rockefeller warned about the growing threat of Communist Chinese forces in Latin America, and called on the United States to support a five-point program to achieve unity and solidarity among the Americas to combat them.

Mr. President, few men of our times have studied more closely the problems of South America, few men have a fuller understanding of our sister peoples to the south, than the present Governor of the State of New York. His particular competence and sympathies in this field make it imperative that his words be listened to and heeded. His exposition of the present and future of Latin America deserves wide reading and contemplation. I therefore ask unanimous consent that his address be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS BY GOVERNOR ROCKEFELLER PREPARED FOR DELIVERY AT THE ANNUAL PAN AMERICAN DAY LUNCHEON OF THE ROCHESTER CHAMBER OF COMMERCE, ROCHESTER, N.Y., WEDNESDAY, APRIL 13, 1960

The people of the Western Hemisphere are drawn together by a common heritage, a mutuality of interests, an interdependence that is without parallel among the great areas of the world.

The common heritage of the huge and rapidly growing populations here on two vast continents is a heritage of faith based upon a common belief in the Judeo-Christian precept of the brotherhood of man under the fatherhood of God. It is a common heritage of migration from the old world to seek opportunity in the new. It is a common heritage in the struggle for political freedom, led by George Washington in the north and by Simon Bolivar and Jose de San Martin in the south.

These peoples of the Western Hemisphere also share common objectives. To realize these common objectives—of individual freedom, opportunity, well-being and human dignity—we must achieve two basic goals: (1) Strengthening of the forces of democracy in all the 21 American Republics, and (2) genuine unity and political solidarity among the Americas.

Within such a framework, and against a background of a common heritage, we can develop programs of joint action that will make possible the realization of the hopes and aspirations of all our peoples.

This calls for nothing less than full and understanding cooperation on a sustained basis in the mutual interest of all the peoples of the Western Hemisphere.

To achieve our mutual goals, I recommend that the United States support the following actions:

1. An allout effort to achieve closer cooperation and far greater political unity among the 21 American nations.

No nation today, large or small, can preserve its national integrity or meet the needs of its people by action from within its own borders alone. This is as true for the United States as it is for Guatemala, Haiti, or Bolivia. Simón Bolívar foresaw this situation as the nations of the hemisphere won their independence. He predicted that, as the colonial empires broke up, some new association of free nations must be developed to take their place. Thus he called for formation of the Pan American Union, a free association of free men in free lands freely joining together in their common interest. In a way, this was just as significant a concept as the formation of the American Federation of the Thirteen Original States.

This is the 70th anniversary of the first International Conference of American States. The present organization of American States has behind it a long and honored tradition of inter-American cooperation. We must strengthen and revitalize the great Western Hemisphere tradition of frank and open consultation on all matters of mutual concern. We must achieve a clearer and stronger framework for joint action in the political and economic as well as the social and cultural fields.

This is not the responsibility of the United States alone, but the responsibility of all 21 American Republics—a fact attested to by one of the Western Hemisphere's truly great statesmen, Dr. Alberto Lleras Camargo, the President of Colombia, who is a guest of President Eisenhower in the United States at the present time.

2. A determined, well-planned, sustained, hemisphere-wide joint effort to raise standards of living through more rapid economic growth.

By the end of this century, we will have not 200 million neighbors to the south of us, but 500 or 600 million, and the population of the hemisphere as a whole, it is estimated, may be well over 1 billion people—this in less than 40 years. Economic growth in many of the Latin American countries has not been able to keep pace with this population explosion. This has accentuated dissatisfaction among peoples whose existence in many cases has been marginal.

Per capita gross national product in Latin America was considerably under $400 in 1958, compared with $1,900 in Canada and $2,500 in the United States.

The problem is of staggering dimensions. Just to keep pace with the rising population is truly a formidable task. Yet I am confident that the goal is attainable—the goal of industrial and agricultural development in Latin America that will not only keep pace with the population increase but will raise living standards as well.

The ingredients necessary to make this possible are the availability of capital in far greater quantities, technology, machinery and equipment, trained management and skilled labor. The new Inter-American Bank is an important step in the right direction, as is the development of Common Markets among groups of nations in Central and South America. However, our ultimate goal must be a Western Hemisphere economic union—a free flow of goods, capital and manpower that will make this hemisphere the greatest free-trading area in the world.

3. The development of imaginative joint inter-American programs to meet the social problems of the Western Hemisphere.

Land reform, urban housing, education, nutrition, health—these are the basic social problems in Latin America which increasingly demand solution as the population rises. We must pool our experience and devise means to attack these emerging problems, coperatively, wholeheartedly, on a hemispherewide basis.

We are not talking about remote peoples or remote places; we are talking here about peoples whose problems bear upon the political unity and economic growth of a hemisphere bound together in common cause. We are talking about our interests as well as theirs.

Left unsolved, these problems can only lead to explosions—explosions which will open the way to acceptance of totalitarian domination from outside the hemisphere.

4. Achievement of a greatly increased mutual understanding among the peoples of the Western Hemisphere through intensified programs for exchange of people, information, and cultural activities.

Effective cooperation depends upon mutual trust and understanding. Recent events have amply demonstrated the need to bring about a better knowledge and understanding among the peoples of the hemisphere. Closer personal ties, greater use of the printed word, radio and television, wider interchange of students, artists and intellectuals as well as business and professional people—all these are evident necessities in support of greater understanding, and therefore strengthened political unity, within the hemisphere.

5. More frequent meetings of the Ministers of Foreign Affairs of the Americas to develop common policies and programs of joint action to deal with common problems.

Serious problems threaten the security and well-being of the peoples of our hemisphere, whether they be land reform, availability of credit, the price of coffee, lack of civil liberties under a local dictator as in the Dominican Republic, or Communist efforts to subvert a legitimate uprising of the people against dictatorship as in Cuba.

These problems affect all the nations of the hemisphere, directly or indirectly, and effective inter-American consultation and cooperation are essential to their solution.

We might as well face the fact that international communism is doing all in its power to exploit these difficulties, to retard their solution, and to take advantage of any weakness in any one country of the Western Hemisphere or of any break in Western Hemisphere unity.

For example, the Soviet Union has already made a trade agreement with Castro's government in Cuba, and is attempting economic infiltration throughout the Americas. Over the years, the Communists have made effective inroads in intellectual and cultural circles. They have penetrated student and labor organizations. They dominate important segments of the various media of communications and have done their best to establish themselves in the armed forces.

What is not generally realized, however, is that Communist China, in addition to the Soviet Union, has been making a major effort at achieving influence in our sister republics. In fact, it is conceivable that the Soviet Union and Communist China have agreed to make Latin America primarily a Chinese sphere of influence.

For example, more Latin American Communists are now being trained in China than in the U.S.S.R.

During 1959, 3,000 Latin Americans, most of them non-Communists, were invited to Communist China—and went. This is greater than the number of Latin Americans who went to Russia or Eastern Europe last year.

Chinese cultural and political propaganda teams are touring our hemisphere at this moment, and a large cultural delegation from Latin America is in Communist China right now.

And the Communist Chinese radio now broadcasts 21 hours a week in Spanish and Portuguese to Latin America, waging an incessant campaign against the United States.

All these threats and all these problems are our business—and the business of all the Americas.

The time has come—in fact, it is rapidly passing—for all-out Western Hemisphere cooperation, and joint action in dealing with our common problems through a common policy to achieve our common goals. These goals are to strengthen the forces of democracy in all 21 American republics and the unity and solidarity of the hemisphere as a whole in order to achieve our common objectives of individual freedom and justice, respect for human dignity, and economic opportunity and well-being for all the peoples of the Americas.

Mr. KEATING. Mr. President, a fine editorial in the New York Times emphasizes the importance of Pan American Week and the need for solidifying our ties with our neighbors to the south. Such editorials as this play a vital role in alerting the American people to the problems of Latin America and in renewing the interest of the United States in the continuing progress and welfare of all the peoples of South America.

I ask unanimous consent that this editorial be printed at this point in the RECORD.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). Is there objection?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 18, 1960]

PAN AMERICAN WEEK

Pan American Week begins today. Each year at this time the nations of Latin America and the United States commemorate the first official International Conference of American States held in Washington in 1889–90. This is being counted as a 70th anniversary. In any event, anniversaries are always useful milestones at which one looks back over the stretch of road just traveled and ahead into the unknown.

The Latin American scene was dominated in the past year by the Cuban revolution and its leader, Fidel Castro. All indications

point to the coming year being similarly dominated. The impact of Cuba's revolution has been hemispheric, and in this respect it is proving even more influential than the Mexican Revolution of 1910–20.

One reason for this is that the Cuban revolution, whatever one feels about it, does embody many of the major aspirations of the Latin-American peoples. As President Lleras Camargo of Colombia sees it, the next 10 or 15 years will witness a struggle for social justice that will end in totalitarianism if democratic processes do not provide land, jobs, and a decent standard of living for all peoples. The race is between evolution and revolution, but evolution cannot be the long, slow process we followed in the United States. The underdeveloped peoples of Latin America, Africa, the Middle East, and Asia are impatient. They are being wooed, in the form of communism, by an alternate system of life and economy which has proved that backward countries can raise their standards and can industrialize without foreign investments.

At the heart of the demand for social justice in Latin America is agrarian reform, and here, again, one must recognize the appeal of the Cuban revolution. As a general rule there is a striking imbalance between the few wealthy and the poor masses, the city and the country, the big landowner and the landless peasant. The gap has to be closed. The Cuban answer is revolution; the others want evolution. At least, their governments want it that way. No statesman would care to see a Castro-type revolution in his country, and this explains the general hostility to Cuba on the governmental and ruling-class level in Latin America.

The point that President Lleras Camargo of Colombia constantly made during his recent sojourn here was that the Latin-American countries could not have their agrarian reform or industrialization without development loans from public institutions. The alternative, he warned, would be a repudiation of the democratic process and "a historical disaster."

Latin America is entering a period of crisis. The old policies will not suffice. This is a week for ceremony and celebration, but it should also be a week for dedication to the ideals of democracy and social reform in the Western Hemisphere.

THE WIRETAPPING MESS—CONFUSION COMPOUNDED

Mr. KEATING. Mr. President, terrible confusion exists today in connection with wiretapping. There is need for a comprehensive Federal law to deal with all aspects of the subject. There is an even more urgent need for legislation which would make it clear that the present outmoded provisions of the Federal Communications Act are not intended to preclude all State efforts to regulate wiretapping.

I have introduced bills designed to achieve these objectives. These bills have a dual purpose—to protect against unauthorized invasions of privacy from any source and to permit law-enforcement agencies to utilize, under proper safeguards, scientific methods of crime detection. The bills have received very encouraging support in editorials in some of the Nation's leading newspapers.

The complete lack of justification for transforming the telephone into a privileged instrument for criminal conversations is becoming increasingly apparent. There is no protection for the civil liberties of the community in a policy which immunizes from police detection crimes plotted on the telephone. There must, of course, be strict regulation of any such activities and unsupervised, unauthorized snooping must be severely punished, but under appropriate safeguards similar to those which apply to searches and seizures of other evidence of crime, wiretapping is a legitimate means of fighting crime.

As a practical matter, the present law operates almost in complete reverse of what is desirable. It fails completely to curb the activities of professional blackmailers and people of that ilk, but it succeeds all too well in stifling the work of diligent law-enforcement officers who have acted in complete conformity with the requirements of State law. The law puts the policeman in jeopardy of prosecution, even where he has acted under a State court order, and it suppresses the evidence the District Attorney has against the lawbreakers on trial. This is an intolerable situation and cries out for relief.

Mr. President, the excellent editorials which have appeared on this issue in the New York Mirror, the New York Herald Tribune, the New York Journal American, the New York Times, the New York Daily News, and the Rochester Times-Union, among others, should be weighed carefully by all members interested in effective law enforcement. Their common theme is that the present Federal law is outmoded, that the legal situation is hopelessly confused, and that action by Congress is imperative. I agree wholeheartedly with those conclusions.

Mr. President, I ask unanimous consent that these editorials be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Mirror, Apr. 16, 1960]

END THIS CONFUSION

When the law is clear, when the law is understood by the people, the law is respected.

The law governing wiretapping has been badly confused.

Evidence obtained by wiretapping cannot be used in Federal cases. The U.S. Supreme Court has so ruled.

Other courts, State and Federal, have held that the Federal prohibition extends to States, such as New York, in which the laws permit the use of wiretapping for gathering evidence in criminal trials.

Without legal wiretapping, law enforcement agencies would be powerless to deal the imposition of the Federal stricture upon with many kinds of criminal activities, and the States would, in the opinion of our police and prosecutors, result in a "gigantic legal jailbreak."

Now the U.S. Court of Appeals, by a 4-to-1 decision, has returned the element of common sense to the law. It ruled that Federal courts should not interfere with State prosecutions in which State-approved wiretap information is used as evidence.

The ruling is right, but it is not enough.

The Federal Communications Act, section 605, which makes it illegal to intercept any communication without the permission of the sender, needs to be spelled out so that even judges and justices can understand it.

It was never meant to protect the criminal, but has been so construed in hair-splitting decisions.

The act must be amended now, to protect the rights of law-abiding citizens; and amended in such clear language that the shield of civil rights cannot be employed by hoodlums, murderers, kidnapers.

[From the New York Herald Tribune, Apr. 15, 1960]

CONGRESS MUST CLEAN UP THE WIRETAP MESS

The New York district attorneys are understandably pleased, although less than jubilant, over the decision of the U.S. Court of Appeals against barring the State's use of wiretap evidence in the Pugach and O'Rourke cases.

"We agree," said Judge J. Edward Lumbard's majority opinion, "that in the circumstances of these two cases a Federal court should not intervene in criminal prosecutions by a State for violation of its criminal laws."

But this by no means takes the State of New York out of the woods on whether its long-established use of wiretaps in law enforcement, as approved by the State courts, is or is not in violation of vexatious section 605 of the 1934 Federal Communications Act. In short, the prosecutors are still lacking a clear and permanent green light for wiretap evidence.

The U.S. Supreme Court hasn't said outright that wiretapping is a Federal crime, although it has come pretty close. At any rate, it prohibits such evidence in the Federal courts. But we have yet to hear of Attorney General Rogers cracking down on New York for the controlled official wiretapping permitted by State constitution. Nor have we heard of J. Edgar Hoover forbidding his FBI agents to listen in.

The trouble, of course, is that section 605 isn't absolutely clear. If it were, the lawyers and judges wouldn't have such a field day of confusion.

There are only two courses. Either we prohibit all wiretapping and thereby invite abuses all over the lot, or we frankly recognize that wiretapping, under legal safeguards and careful supervision, is a highly useful weapon against crime.

Whatever it was that Congress meant by section 605 back in 1934 ought to be cleared up to take the courts off the spot. Senator KEATING and Congressman CELLER have introduced bills that back up New York's wiretap law. Let's pass this remedial legislation and thus clear the judicial fog.

[From the New York Journal American, Apr. 16, 1960]

DANGEROUS MUDDLE

The 4-to-1 decision of the U.S. Court of Appeals upholding the use of wiretap evidence in criminal prosecutions in State courts is an encouraging step in the right direction, but—

It fails to clarify a muddled situation which is largely the result of an ambiguous section of the 1934 Federal Communications Act and the interpretation the Supreme Court has placed upon it.

What is urgently needed to clear the judicial fog is quick congressional passage of the Keating-Celler bill upholding the right of States to use legalized wiretapping, under court-approved restrictions, as a means of ferreting out crime.

The question of State rights was touched upon in the court of appeals decision. The majority opinion, written by Judge J. Edward Lumbard, declared:

"We do not think a Federal court should interfere with the prosecution of a State criminal proceeding in order to provide an additional means of vindicating any private rights created by the Federal Communications Act."

Wiretap evidence cannot be introduced in Federal courts because the Communications Act makes it a crime to divulge wiretap con-

tents. But the Supreme Court has gone beyond this point by ruling that Congress intended to bar such evidence regardless of its source.

Without definitive legislation on the part of Congress, the use of one of the most potent weapons against crime is stymied even in those States which have legalized wiretaps by law enforcers under carefully supervised safeguards. As it is, the prosecution of hundreds of cases is at a standstill pending clarification of this muddle.

This barrier to law enforcement could be immediately dissolved by congressional approval of the Keating-Celler bill.

[From the New York Times, Apr. 16, 1960]

DIRTY BUSINESS

The conflict between Federal and State law on the dirty business of wiretapping must be resolved, and it ought to be resolved in favor of congressional legislation authorizing strictly controlled use of wiretapping limited to certain types of crimes and only on court order.

New York State, for example, permits its law-enforcement officers, under statutes adopted as recently as 1958, to wiretap under controlled conditions and to introduce in the courts evidence thus obtained. Yet the U.S. Supreme Court has interpreted the Federal Communications Act of 1934, the basic law on the subject, as prohibiting wiretapping by either Federal or State officials, and prohibiting the use of wiretap evidence in Federal courts—while leaving it open to State courts to use such evidence despite the expressly illegal action (under Federal law) of their officials in obtaining it. In its decision this week in a wiretapping case the U.S. Court of Appeals thus refused to enjoin New York officials from introducing wiretap evidence at a State trial; and it did so, of course, in full recognition of the fact that wiretapping violated Federal law and that such evidence could not be used in Federal courts.

This situation, under which State law enforcement officers (in the five States that permit wiretapping) can violate Federal law and yet get away with it and even have their evidence admitted in State courts, is anomalous and absurd. It is worse than that, for since no State officers have been prosecuted by the Federal Government for wiretapping (nor is it likely that they would be), the Federal Government is thus conniving in the commission of crime and in the breakdown of respect for law at the very heart of the law-enforcement process.

And yet it is not the State officers operating under State laws who are to be condemned, but rather the inaction of Congress in straightening out the wiretap mess. Every believer in civil liberties and in the right of the individual to privacy and the protection of his person dislikes the idea of wiretapping, electronic eavesdropping, and similar methods of crime detection. Yet as Alan F. Westin of Columbia University points out in an article in the April Commentary, it is only unreasonable searches and seizures that were outlawed in the fourth amendment. "It is not outside traditional justice for the conversations of those who communicate with a person reasonably suspected of criminal activity to be subject to a search," he points out; but of course the search must be strictly limited; and the limitations must be enforced. The act of 1934 never envisaged the conditions the police and the courts are faced with today in the field of wiretapping; Congress has the duty to clarify it and bring it up to date.

[From the New York Daily News, Apr. 16, 1960]

SOME WIRETAP PROGRESS

The U.S. Court of Appeals has ruled, by a 4-to-1 vote, that wiretap evidence can be introduced in State courts. This decision will help in clearing up some of the long-time State-Federal confusion regarding the legality of State wiretaps.

Chief Judge J. Edward Lumbard now decrees flatly that in wiretap cases "a Federal court should not intervene in criminal prosecutions by a State for violations of its criminal laws."

That decision is welcome. But, as our District Attorney Frank S. Hogan points out, the wiretap mess isn't completely untangled yet.

Even this court decision can be appealed to the U.S. Supreme Court. Meantime, the wheels of justice in such cases will turn slowly or not at all.

Hogan sees an important need for Federal legislation which will make it plain that Congress really approves wiretaps in State criminal cases, under careful legal safeguards.

New York's Representative CELLER and Senator KEATING have introduced bills to this effect. Congress should pass that legislation pronto, before the present state of modified confusion inspires more legal jailbreaks.

[From the Rochester Times-Union, Mar. 22, 1960]

SIMPLE REMEDY FOR WIRETAP CONFUSION

Daniel Gutman, dean of New York Law School, believes the legal problem of admitting evidence obtain by court-authorized wiretapping is a real one.

A body of case law, based on a "sleeper" clause in the Federal Communications Act, continues, he says, to delight all the criminal elements of society. While the decisions are in Federal cases, one of them can be construed as knocking out also the use of such evidence in New York courts.

The New York Court of Appeals has held such evidence is admissible. Dean Gutman declares it is essential, for otherwise law-enforcement agencies could be crippled in their fight against organized crime.

He proposes a simple amendment to the Federal act to remove the doubt and to safeguard society. The amendment would provide an exception in States which have authorized issuance by the courts of permissive wiretapping orders. This would eliminate the controversy on the rules of evidence while leaving related questions open to further discussion.

It seems to us the New York congressional delegation should act on this suggestion.

NEGRO VOTING

Mr. HOLLAND. Mr. President, the public press advises us that the so-called civil rights bill, on which the Senate began action on February 15 of this year, is to be approved as it came from the Senate by the House of Representatives tomorrow. It seems to me a part of an editorial from the Florida Times-Union, of Jacksonville, Fla., for April 19, 1960, is a rather appropriate commentary at this time, and I am going to read a part of the editorial into the RECORD.

Mr. President, in the city of Jacksonville there live about 90,000 Negro citizens. Of that number, between 25,000 and 30,000 are registered to vote.

This editorial has as its subject "What Is the Real Cause of Rally Disinterest" and it deals with general disinterest in other rallies, and then proceeds to mention a particular rally held for Negro citizens in the Negro portion of Jacksonville.

I read from the editorial:

While Duval searches its soul—

Duval is the name of the county—

to account for the lack of interest in the early rallies, by far the most interesting aspect disclosed so far was the low attendance at the meeting held for Negro voters. Only 10 persons showed up other than the candidates and their workers and cheering sections.

This happened, mind you, after the Congress of the United States had debated for months a bill to protect the voting rights of Negroes. Literally millions of words have been published and broadcast all over the world about the voting rights of U.S. Negroes, yet only 10 members of that race attended a political rally held especially for them.

The ironic turn of events should give some commentators on civil rights cause for serious reflection. Is it possible that all the controversy in Washington about a subject in which the persons directly affected are only mildly interested?

EIGHTY-FIVE WONDERFUL YEARS—85TH BIRTHDAY OF HON. FRANK H. WASKEY

Mr. BARTLETT. Mr. President, today I desire to salute across the miles Alaska's first Delegate in Congress, the Honorable Frank H. Waskey, who is 85 years old today. Now living in Oakville, Wash., Frank Waskey can look back to his contributions to the 49th State with pride. He is held in the highest esteem by all who know him or know of him.

Frank Waskey was born on April 20, 1875, only 8 years after the United States purchased Alaska from Russia. Minnesota was Frank Waskey's State of birth, and he lived there 23 years before heading north to Nome. The statistics of Frank Waskey's early years have the ring of Alaska's history. His move to Alaska in 1898 coincided with the gold rush to the Klondike in neighboring Canada, with subsequent gold discoveries in Alaska itself. Indeed, Frank Waskey engaged in mining, as well as being a banker and director of a publishing company.

When Frank Waskey was 31 the Congress passed a law providing for a voteless Delegate in Congress to serve in the House of Representatives. That law was written 6 years before the Organic Act of Alaska was passed in 1912 extending limited governing rights to the people of Alaska—so limited that they pressed for statehood to a successful conclusion. Frank Waskey was elected as the first Delegate, and started his term of office in August of 1906, and served until March 3, 1907. He served at a time when Oklahoma and Arizona and New Mexico were still territories, and interest in Alaska was sparked only because of the cry of gold in the North.

How many changes Frank Waskey has witnessed and how vigorously he has lived his 85 years. His interest in Alaska has never diminished. After serving in the 59th Congress, he returned to Alaska, where he continued his mineral prospecting, served as U.S. Commissioner, was a fur buyer and curio dealer, and carried on many other activities which took him into many far reaches of that great land.

Frank Waskey is a wonderfully fine and gentle man, and one of the great pleasures and rewards of my own life has been my enriching friendship with him.

Alaska's last Delegate in Congress greets Alaska's first Delegate with a heartfelt and warm "many happy returns of the day."

TRIBUTE TO THE LATE BILL CUNNINGHAM

Mr. BRIDGES. Mr. President, in the death of Bill Cunningham the fourth estate has lost one of its most brilliant members. No longer will the tense drama of sports arenas and political convention halls be brought to the news-reading public in his matchless prose. Bill was considered by sportswriters themselves as unequaled among them in his era. His soaring phrases for the broad picture and his descriptive words for detail, often coined on the spot, were as good as a ringside seat. Bill felt deeply about the things he wrote and he expressed his views with all the vigor of his all-American football frame. His views were expressed with strength, but a strength devoid of ponderousness, for his mind was as nimble as were the fingers which flew over the keys of his typewriter, so that not a deadline was ever missed, no matter from what part of the world Bill chanced to be reporting.

Because of his strong feelings and his constant drive to set wrong to right and to set the record straight when, in Bill's opinion, one had not had his complete day in court, made interesting and valuable reading because of his worldwide knowledge of people and events.

Bill drove himself hard all his life, as any champion must to remain at the top, and he was always the working inspiration for those around him. It was thus at a testimonial dinner to Bill just a year ago that Cardinal Cushing, in suggesting a motto for the "Champ," said, "Never enough, always more."

The death of Bill Cunningham will mean the loss of many things to many lives, but, most poignantly to me, it means the loss of a friend. Whatever else may be forgotten or remembered, those happy years of friendship will always remain with me.

PROBLEMS IN KOREA

Mr. JAVITS. Mr. President, the world has read this morning the news on riots and disorders in Korea, which very seriously concern our country and very seriously concern the other free peoples of the world.

Mr. President, I think it is our responsibility in the Senate of the United States to emphasize support for the State Department in a very difficult situation. I wish to state I think the State Department did exactly the proper thing in taking the position it took with the Korean Ambassador yesterday and in making clear that, so far as the United States is concerned, the United States certainly disapproves of "repressive measures unsuited to a free democracy."

Mr. President, many Americans lost their lives in the struggle in Korea, which was a cause, in my view, for world peace. We have far more than a normal interest in that area of the world and in that particular situation which would be attributable to our being a leader in terms of the peace effort of the whole free world.

Mr. President, I hope very much that our position and our interest in this situation will not stop with the protest which has been made. We all know the President of the United States was contemplating a trip to Korea. I hope that trip will not be called off but that, on the contrary, it may be reevaluated, as the situation develops in Korea, in terms of its effectiveness as an indication of our continued interest and also, in the person of the President, of our very great seriousness in the protest which was made by the Secretary of State to the Korean Ambassador yesterday.

Mr. President, there is one thing which distinguishes the free world from the Communist world in particular. We do not "sweep things under the rug," and we do not pretend everything is fine when it is not. On the contrary, we have a deep faith that intelligent and reasonable human beings will give us credit for trying to work out a situation which runs counter to what we believe is justice and democratic practice, rather than to pretend it does not exist or to pretend it is something which it is not.

I think the United States is demonstrating the finest aspects of the free world in the position which it took yesterday with respect to Korea. I hope that we shall continue, in that same vein, to do everything we humanly can, while we respect the sovereignty and the integrity of the Republic of Korea, to see that true democratic practices and a truly representative government are in every way made possible for the Korean people.

The Korean people have suffered very much. They have been very heroic in their own defense. We helped to defend that country in a 3-year war at the cost of more than 33,000 American lives. Since that time we have backed the country with American aid estimated at more than $2½ billion.

We are certainly no "Johnnys come lately" to the cause of the Korean people. We should stand up to the current problem without fear and without apology, while at the same time we maintain full respect for the finest moral and spiritual values as well as the finest values in government, which are our heritage.

In short, Mr. President, I do not believe that anything would be gained at all, nor would it be consonsant with our own views, to beg the question. It should be faced frankly. We should do everything we can to bring about democratic freedoms and constitutional liberties in that country, if we feel they are being denied. I do not believe we should, out of hand, call off the President's trip. On the contrary, we should reevaluate it in terms of its affirmative contribution to the very constructive conduct we hope to bring about.

I conclude by expressing the opinion that the people in the lesser developed areas of the free world—Asia, south and southeast Asia, Africa, the Near East, and Latin America—understand very clearly that all cannot be perfect even in a world in which we are striving as much as we can to make it better. These peoples will give us, in my opinion, full credit if we do our utmost to bring about the conditions in which we believe. They will not expect perfection, and they will understand human fallibility, provided we are true to our professions and we continue to try.

I think this is the real test of Korea. I will say to the present occupant of the chair [Mr. MANSFIELD], I know the tremendous interest which the present occupant of the chair has taken in this particular subject, and the constructive contribution which is now very possible for all of us in this field, in which I am confident the distinguished Senator from Montana will play his full and constructive role.

Mr. President, I ask unanimous consent to include in the RECORD sundry editorials and news articles in respect to the statement I have made.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 19, 1960]

TEXT OF U.S. STATEMENT ON KOREA

WASHINGTON, April 19.—Following is the State Department's statement today on Korea:

"The Secretary called in the Korean Ambassador this afternoon to impress upon him the profound and growing concern of this Government over the serious continuing public unrest and acts of violence in Korea.

"Although these matters are admittedly the responsibility of the Republic of Korea, this Government has been obliged to take cognizance of them. This is because the United States, as the principal sponsor of the Republic of Korea as an applicant for United Nations membership, has in the eyes of the world, always been closely associated with Korea as a friend, supporter, and ally.

"Ambassador Yang (Dr. You Chan Yang) was informed that this Government believes that the demonstrations in Korea are a reflection of public dissatisfaction over the conduct of the recent elections and repressive measures unsuited to a free democracy.

"The Secretary asked Ambassador Yang to draw to the attention of his Government the seriousness of the repercussions abroad, which are likely to result in a marked weakening of the Republic of Korea's international position and prestige.

"The Secretary suggested that the Korean Government should, in its own best interest and in order to restore public confidence, take necessary and effective action aimed at protecting democratic rights of freedom of speech, of assembly and of the press, as well as preserving the secrecy of the ballot and preventing unfair discrimination against political opponents of a party in power."

[From the New York Herald Tribune, Apr. 20, 1960]

THE STORM BREAKS IN SOUTH KOREA

The rioting and bloodshed in Korea are of intimate concern to this country. Ten years ago, we went to war to save South Korea from communism. We have since underwritten its economy and supported its 85-year-old President, Dr. Syngman Rhee, to the fullest extent. Its democratic forms were based on American example, and were designed, among other things, to show that free Western political institutions are as good for Asia as communism is bad.

Now Korea is in the grip of the worst internal crisis in its entire 12-year life. Violence has erupted in the major cities and martial law has been imposed as a result of national elections last month which gave

Dr. Rhee his fourth successive term of office. The charges made by the opposition clearly cannot be dismissed, and the United States has taken the unusual step of telling Dr. Rhee, in public, to do something about them.

These include allegations of police brutality; of ballot box stuffing; of strong-arm tactics on the part of Dr. Rhee's Liberal Party to prevent the registration of Democratic Party candidates, and of the use of public funds for Liberal campaign propaganda.

Dr. Rhee is a dedicated anti-Communist and his uncompromising attitude has probably been responsible, more than any other single factor, for checking communism on his side of the 38th parallel. But this does not sanction his arbitrary methods of governing nor his haughty contempt for those who disagree with him. The Korean Government is trying to give the impression that Communists are behind the current upheavals. The Communists are certainly profiting from them, but it would be foolish to assume that the Government is innocent of injustice or that its behavior squares easily with a democratic conception of administration.

The Democratic Party is, like the Liberal, generally conservative. The students who form the great part of the demonstrators may harbor Communist agents, but in the main they represent a spontaneous protest against Dr. Rhee's highhandedness. On the face of it, this is a protest which is easy to understand and surely impossible to ignore.

Whatever the outcome, the freedom of the Republic of Korea and its democratic evolution must be our chief concern. We cannot avoid responsibility for the future even if we desire to; our prestige and our blood have been committed in Korea with finality. And all of non-Communist Asia is watching to see how we acquit ourselves.

[From the New York Times, Apr. 20, 1960]

TURMOIL IN SOUTH KOREA

South Korea has been swept by mass riots amounting to an incipient insurrection. Starting as irresponsible student demonstrations, these riots have snowballed to involve tens of thousands in the country's major cities and have already cost more than fourscore of lives and injuries to hundreds.

Most of the rioters are in no sense Communists. But Communist agents help to incite them and, what is more important, they are openly backed by revolutionary propaganda broadcast by the Communist regimes of North Korea and mainland China that launched the attack on South Korea 10 years ago and are only waiting to resume it under more promising conditions. A continuation of the riots could provide them with the opportunity for it.

For the moment the situation appears to have been brought under control by the proclamation of a national emergency, by rigid martial law, curfew, local censorship and the closing of all universities and schools. But the United States, which provides the bulk of the United Nations troops that guard South Korea, is right in expressing grave concern over such a development in a country created under United Nations auspices, defended in a 3-year war at the cost of more than 33,000 American lives and backed by American aid of more than $2½ billion. In view of this, the American Government is certainly justified in calling on both President Rhee and all Koreans to consider the consequences of their action, to restore law and order, and beyond that to remedy the immediately justifiable grievances resulting from repressive measures unsuited to a free democracy.

These grievances arise in the main from opposition charges that the national election of March 15 that elected President Rhee for a fourth 4-year term was "rigged" and was conducted under police terror. But the fury of the opposition Democratic Party, which is as anti-Communist as President Rhee's own Liberal Party, turns not so much against the President, who was assured of overwhelming reelection even without the unfortunate death in Washington of his Democratic opponent shortly before the election. It turns rather against Vice President Lee, who displaced the Democratic incumbent and whose election does, indeed, appear to have been steamrolled to assure a Liberal successor should anything happen to the 85-year-old President. But occasional election rigging has been known in countries with far older democratic rule, and insurrectionary riots that endanger the very existence of the country are obviously not the best means to cure it.

It is to be hoped that both President Rhee and his regime as well as the Democratic opposition will now get together to devise a better functioning democracy than heretofore so that the sacrifices of the Koreans themselves and of many free nations for them may be justified.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I should like to make inquiry of the distinguished occupant of the chair with respect to the possible disposition of the pending nomination today, and what the business will be for tomorrow and for the ensuing week, if the distinguished Senator from Montana is in a position to inform the minority leader.

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). The Chair will say to the distinguished minority leader that it is hoped we will be able to have a yea-and-nay vote on the Durfee nomination some time around the middle of the afternoon. When that business is concluded, it is the intention of the leadership to adjourn the Senate until tomorrow, for a brief formal meeting, and then to adjourn the Senate from Thursday until the following Monday at noon.

Mr. DIRKSEN. I thank the Presiding Officer.

FEDERAL AID TO EDUCATION

Mr. MURRAY. Mr. President, I am certain that I am not the only Member of the Senate whose office is still receiving mimeographed form letters in opposition to Federal aid to education.

In various Montana communities, conservative community leaders are waging concerted campaigns to influence local PTA units to reject the overwhelming sentiment of the State PTA, and to go on record in opposition to Federal aid.

In order to sound convincing these people have paraded the timeworn bogeyman of Federal control, redtape, and socialism before well-meaning, public spirited groups. The irony of the situation comes to light, however, when one discovers that the leaders of the anti-Federal-aid brigade are the same persons who march before the State government and declare that schools are a purely local matter. After accomplishing this, their next plan of attack is usually to exert their economic power on the local level in order to secure the defeat of any bond proposals in behalf of schools.

It is difficult for me to understand how anyone in my home State of Montana, who professes a sincere interest in improved standards of education, can sanction such adamant opposition to Federal aid in light of the fact that Montana stands second only to Utah in the amount of school revenues from State and local sources as a percent of total personal income, while Montana's personal income per student is only 89 percent of that of the average State's. These statistics are taken from the December 1959 report of the Committee for Economic Development.

I am indeed proud of the effort my fellow Montanans are putting forth on the State and local level, but Montana has a slender tax base, and in spite of our efforts we rank 12th out of 13 Western States in average teachers' salaries.

Mr. President, I have never for a minute doubted that I am working for the best interests of the people of my State in my constant and strong advocacy of Federal aid to education. And I am further comforted by the assurance that the vast majority of Montanans stand behind me in this endeavor for the benefit of their children and of future generations.

Mr. President, I ask unanimous consent to insert in the RECORD at this point an article from the Herald-News of Wolf Point, Mont., entitled "Poplar Schools Overcrowded, Under Equipped." This article describes the inadequate school facilities in one small Montana community, and I believe it points out the need for Federal aid to help poorer school districts of this type.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POPLAR SCHOOLS OVERCROWDED, UNDER EQUIPPED

This week Superintendent Duane Adams issued a statement explaining why the new Poplar High School building is so sorely needed. He emphasized the steadily increasing enrollment and the inadequacy of the present facilities. He states the needs as follows:

"The Poplar public school has been receiving an average of 100 first grade pupils annually since 1955. This will continue and gradually increase. These grade enrollments have caused overcrowding of the high school facilities.

"Our facilities currently contain grades 4 through 12 in one building. This has caused some problems, and scheduling often becomes complicated. Changing classes for high school and recess for grades creates noises for both. Fourth grade classrooms are located on the same floor with two high school classrooms. Toilet, lavatory, and drinking fountain facilities are inadequate plus the mixing of age groups up to 17- or 18-year-olds. The limited and poor facilities have caused considerably heavier classload than the physical nature of some particular rooms are suited for.

"Our plant has three sections in it, the center one being built in 1915. This structure has two main stories, with a part full basement, and a half basement. This full basement was originally a gymnasium, later a shop, then it was converted to a band- and lunch-room, and is currently being used as a bandroom and chorus room. This, of course, gives the classrooms above no end of distraction. The fire escape from this area

is inadequate, plus the fact that the boiler room is immediately adjacent to it. The board of trustees has passed a resolution condemning this area. The half basement area is occupied by toilet and lavatory facilities and two classrooms and has also been condemned by the board of trustees. One of the two classrooms opens into the boiler room, and with the conversion of the lunchroom in the basement to a chorus room, we were able to abandon this room to our custodial staff as a storage room. The other room is currently being used for high school science, and by no stretch of the imagination is it adequate as a classroom.

"Our home economics department occupied two rooms at the end of our present fifth and sixth grade classroom wing. The department was very adequate and well equipped; however, we needed classrooms for our grades. The use of these two rooms has certainly helped relieve our crowded conditions for the time being. Our board of trustees did not wish to discontinue home economics, because we feel it is a very important program in our community. A home economics department will be planned for in our new building.

"Four years ago a temporary partition was installed in the high school assembly room because of the crowded space. This partition, of course, gave us two classrooms. However, it has caused many complications for our high school library and assembly hall.

"Our shop quarters are constructed from a temporary frame building moved in from the Fort Peck Dam project. The board of trustees has condemned this building. Inspection of it will prove its condition."

Mr. MURRAY. Mr. President, Mr. Duane Adams, the superintendent of schools at Poplar, points out that their facilities currently contain grades 4 through 12 in 1 building. In his description of the physical plant, he said:

The fire escape is inadequate, plus the fact that the boiler room is immediately adjacent to it. The board of trustees has passed a resolution condemning this area. The half basement area is occupied by toilet and lavatory facilities and two classrooms, and has also been condemned by the board of trustees. One of the two classrooms opens into the boiler room, and with the conversion of the lunchroom in the basement to a chorus room, we were able to abandon this room to our custodial staff as a storage room. The other room is currently being used for high-school science, and by no stretch of the imagination is it adequate as a classroom.

Our shop quarters are constructed from a temporary frame building moved in from the Fort Peck Dam project. The board of trustees has condemned this building.

TRIBUTE TO THE LATE ALFRED KOHLBERG

Mr. BRIDGES. Mr. President, a great American passed away in New York a short time ago. A soldier has fallen at a critically important part of our cold war ramparts who will not be easily replaced. The death of Alfred Kohlberg, textile importer and Communist fighter extraordinary is a severe blow to all militant anti-Communists, as well as to the cause of freedom.

To those who did not know him personally, I can best describe him as a tough and relentless front-line fighter against communism who nevertheless remained an intensely vibrant, humorous, and warm-hearted human figure. He laughed easily and naturally. His happy chuckle and twinkling eyes belied the deadly seriousness of the dedication with which he pursued his objective of warning the American people against the pitfalls and snares of world communism.

Stricken twice in the past few years with near fatal heart attacks, Kohlberg followed his doctor's orders to cut down on his business and social activities so that he would have more time for his anti-Communist crusade. A tireless letter writer to newspapers, Kohlberg found that he had to have a small printing plant installed in his office in order to turn out his bulk mailings of what might be called epistles to the Philistines. At a recent banquet in his honor in New York he cheerfully admitted that only a very small percentage of his annual output was ever published, but that he was quite happy and satisfied with even that. And if they did not always publish his inimitable letters, I am sure most editors read and absorbed them. He was probably turning out another of his famous letters to the editor when the hand of death stilled his indomitable heart forever.

It is interesting to note that Mr. Kohlberg was not always an anti-Communist. Indeed, he often admitted that like most American businessmen he had believed the Communist menace to be greatly overrated, at least in this country, and that there was no particular reason why he should become worried over it. Like so many others, he stumbled on communism largely by accident.

Kohlberg had been a member of the board of directors of the Institute of Pacific Relations for several years. He also read the Communist Daily Worker every day merely to keep informed on what the Soviet line was with respect to China, where he had considerable business interests. He became impressed with the fact that many of the IPR's publications and press releases closely paralleled or echoed the official Soviet foreign policy line as it appeared in the Daily Worker. Mr. Kohlberg then decided to read up on communism.

After months of study and consultation with experts he prepared a lengthy bill of particulars showing that the Institute of Pacific Relations, of which he was a director, closely followed the official policy line of the U.S.S.R. He laid his carefully documented charges before his fellow directors, most of whom were financiers or big businessmen. His charges were ridiculed and turned down by an almost unanimous vote of his own board.

Few men of consequence had time to listen to Mr. Kolhberg's "absurd and groundless" charges. In 1950, when the Senate created the Internal Security Subcommittee of the Judiciary, Mr. Kohlberg came to Washington. He soon convinced Senator Pat McCarran that he was not seeing spooks under the bed. An investigation of the Institute of Pacific Relations was ordered. A barnful of IPR records were gone over by a staff of experts. The hearings lasted nearly 2 years and fill some 15 volumes. The subcommittee by unanimous vote found that the IPR fostered and financed by leading American corporations and foundations, "has been considered by the American Communist Party and by Soviet officials as an instrument of Communist policy, propaganda, and military intelligence." The final report of the subcommittee of the Senate more than vindicated Mr. Kohlberg's charges against the IPR.

The whole shameful story of the betrayal and abandonment of free China, a stanch ally of America all through the dark days of World War II, was now a matter of unimpeachable Government record, available for all time to the scholar and the historian.

The crypto-Communists in our midst, the phony liberals, and the fellow travelers, however, were not long in launching their counterattack on Alfred Kohlberg. It was whispered and noised around that there was a secret and most sinister "China lobby" operating in this country and that Kohlberg, the handkerchief importer, was probably head of it. The monumental gall of the pro-Communists was never more strikingly betrayed than by the invention of this canard. While they openly advocated appeasement of and surrender to Red China in her demands for recognition, and a seat in the United Nations, even during the Korean war when American boys were being killed by the Red Chinese "human sea" of "volunteers," it was the lowest and basest form of un-Americanism to support and defend the cause of Nationalist China.

At first Kohlberg naturally denied that there was any "China lobby" in this country or that he was the visible head of it. Later the sheer hypocrisy and absurdity of the charge struck his good humor and he widely advertised that he and he alone represented the entire "China lobby." The Communist-inspired canard collapsed soon thereafter.

An organization which he did found and of which he was very proud was the American Jewish League Against Communism. Mr. Kohlberg became its first national chairman. It bestowed annual awards to outstanding American anti-Communists. The committee of endorsers was another Kohlberg enterprise which took much of his time and energy. This committee, sponsored by 70 prominent national figures, printed and distributed a great quantity of foreign policy guides which patriotic Americans concerned over the decline of American foreign policy could use in their own organizations in the form of resolutions, letters, speeches, etc. The committee of endorsers urged severance of relations with all Communist states, nonrecognition of Red China, restriction of all military aid to dependable and loyal anti-Communist countries and similar sound proposals.

In 1947 a small anti-Communist magazine appeared in New York named Plain Talk. It was loaded with literary TNT and little known facts on Soviet espionage and underground activities all over the world. It was well edited and soon became indispenable to articulate and dedicated anti-Communists. It can now be disclosed that Mr. Kohlberg largely financed and helped set up this invaluable little magazine now unfortunately defunct.

In his seventies, the wear and tear of controversy began to take its toll on Alfred Kohlberg. He fought the good fight to the end, cheerful and serene in the knowledge that the spreading black night of apparently invincible communism could be hurled back and finally destroyed if enough men of good will and faith dedicated their lives to that purpose, as he had done. The titanic struggle against the consummate evil of godless atheistic communism will go on. My prayer is that more Alfred Kohlbergs will step forward to take his place.

ORDER OF BUSINESS

Mr. WILEY. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

NOMINATION OF JAMES R. DURFEE TO BE ASSOCIATE JUDGE OF THE U.S. COURT OF CLAIMS

The Senate resumed the consideration of the nomination of James R. Durfee, of Wisconsin, to be an associate judge of the U.S. Court of Claims.

The PRESIDING OFFICER. Morning business having been concluded, the Senate will resume the consideration, in executive session, of the nomination of James R. Durfee, of Wisconsin, to be an associate judge of the Court of Claims.

The question is, Will the Senate advise and consent to the nomination?

Mr. WILEY obtained the floor.

Mr. YOUNG of Ohio. Mr. President, will the Senator yield to me?

Mr. WILEY. Mr. President, I ask unanimous consent that I may yield to the Senator from Ohio without losing my right to the floor.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Wisconsin? The Chair hears none, and it is so ordered.

PROPOSAL TO LIBERALIZE SOCIAL SECURITY RETIREMENT PAYMENTS

Mr. YOUNG of Ohio. Mr. President, this year marks the 25th anniversary of the most humane and advanced social legislation in our Nation's history, the Social Security Act.

Under its beneficent provisions, more than 72 million people have assurance that in their old age they will enjoy a measure of dignity and security.

However, Mr. President, we cannot rest on laurels of the past. We have a duty to further expand and liberalize this program for the welfare of the Nation and its citizens.

Recently, the Forand bill, which would have provided for surgical and hospital payments for elderly persons covered by social security, was defeated in the Committee on Ways and Means of the House of Representatives.

Although this particular legislative proposal was shelved in the Committee on Ways and Means of the other body, there really should be no question in our minds but that legislation liberalizing and expanding the social security system should be enacted into law before adjournment of this session of the Congress. Why stand in the way of necessity and of progress?

We must maintain social security as an insurance system, actuarially sound. In liberalizing retirement payments by providing for payment of medical and surgical services of doctors of their own choice, and for some necessary hospitalization, we make essential provisions for those faced with the calamity of debt beyond their means. This can be accomplished with but a slight increase, not to exceed one-fourth of 1 percent for the employed and employer, and not to exceed three-eighths of 1 percent per annum for the self-employed.

Mr. President, it is a happy personal recollection that as a member of the Committee on Ways and Means of the House of Representatives, I helped draft the present Social Security Act.

Tremendous debt should not be a penalty to be paid by elderly people when the calamity of prolonged illness or necessary surgical attention comes into their homes. This added protection against a disaster of this sort is a pressing social welfare problem which we should meet.

We must be realistic, Mr. President, and legislate in recognition of the fact that medical and surgical expense for older people—particularly those in their seventies—is probably three times the expense incurred by those in their forties and fifties. For many thousands of these people living on small incomes or pensions, the rising cost of hospital and medical care presents an increasingly cruel and worrisome dilemma.

Mr. President, as a trial lawyer I have observed, as have all persons who have given any thought whatever to the subject, that the life expectancy of our citizens has been greatly increased during the past 20 years.

Medical science has had the financial backing of the Congress of the United States in providing funds for research, and within a short period it is reasonable to expect great progress in preventative medicine in connection with cancer and heart disease, and that the scourge of these afflictions which strike so many families, will be curbed and brought to an end.

What good are these advances in the healing arts when they are priced beyond the reach of the great majority of retired workers?

Even now it is unrealistic and unfair to provide that men and women receiving social security retirement at ages 62 and 65, respectively, be denied such payments if their earnings exceed $1,200 per annum. Such limit should surely be increased to at least double that amount. We should encourage employment instead of discouraging it.

Those persons who oppose a forward-looking program to liberalize our social security system, Mr. President, speak of health insurance procured from private companies. The facts are that only one in eight persons who would be benefited by enactment of legislation with provisions similar to those included within the Forand bill, has health insurance, to some extent, procured from a private company. Frankly, I have no such insurance coverage nor have I had at any time during the past 15 years. I, personally, considered the expense out of line and too great, and am certain that many other average persons in their 60's have felt the same way.

Ironically, however, men and women who are above the age of 65, are the very ones who are confronted with the threat of the highest expense for medical services and hospital care. It is a fact that the average medical bills of this group during the 6 years from 1952 to 1958, increased by nearly 75 percent.

Mr. President, there are all sorts of facts and figures, but they all add up to the simple fact that medical expenses rise with a person's years. At the same time, for most people, the ability to meet them declines rapidly once they are off the payroll.

It is a tragic situation that here in the richest country in the world, millions of our elderly citizens live in constant fear the savings set aside for a dignified old age will be washed away by one serious illness.

It will be a sad commentary on our bountiful democracy if we are unable to replace this fear with trust and confidence in the future.

I advocate enactment of legislation providing for payment of some necessary medical bills for those who are retired. I do not advocate any change whatsoever in the freedom we Americans enjoy to be attended by doctors of our choice, and surely I subscribe to the view that physicians and surgeons may choose the patients they desire to attend and have full freedom to choose the hours they decide to give to rendering professional services.

Legislation we should enact would provide payment from the social security fund in the manner private insurance programs are operated.

The most vociferous and most formidable opponent of this forward-looking legislation has been the American Medical Association. The bogus label of "socialized medicine," applied by their propagandists to any form of payment for medical care, is plain nonsense.

This is not socialism. It is simple common sense. It is no more socialistic than any other form of social security. The charge of "socialism" against the Forand bill is as empty, meaningless, and vicious today as it was against social security 25 years ago.

It is no surprise that ruling officials of the National Association of Manufacturers and the U.S. Chamber of Commerce should also take this position. They have been wrong on every issue affecting the well-being of the American people since the turn of the century.

Mr. President, for years the ruling clique of the American Medical Association and its powerful lobby in Washington have been using the timeworn tag of "state socialism" or "socialized medicine" on all legislation which they oppose.

A generation ago, the AMA opposed reporting tuberculosis cases to a public authority, although this has since become the basis of all TB control. It opposed the National Tuberculosis Act which Congress passed unanimously.

Since then, this foot-dragging organization has fought against compulsory vaccination for smallpox; immunization against diphtheria and other preventive measures by public health agencies; and Federal aid to reduce infant and maternal deaths.

It stubbornly resisted the Social Security Act. To this day it continues to oppose the inclusion of physicians and surgeons under its coverage. This is in spite of the fact that poll after poll indicates that the great majority of self-employed doctors would welcome social security participation and do desire coverage within our social security system.

Unfortunately, at all times the social security system and, in fact, unemployment insurance, have been viewed as "state socialism" by those in power as the small group running the AMA. Their views are that "relief is a local problem," and their thinking is of the era of William McKinley, or even before that period.

Mr. President, the list of progressive legislation which was unsuccessfully resisted by the American Medical Association seems endless. It includes public venereal disease clinics; free diagnostic centers for TB and cancer; the Red Cross blood banks; Federal aid to medical education; voluntary health insurance; Blue Cross; school health services; and Federal aid to public health. The small clique controlling the American Medical Association have opposed all the forward steps the American people, through the Congress, have taken.

American Medical Association ruling officials even had the temerity to assert that Government medical care for dependents of men in the Armed Forces might be harmful to national defense.

What is progress to all other Americans is "socialism" to the managing dictators of the American Medical Association and like-thinking groups.

They appear to have little concern for the problems of older Americans. In opposing legislation such as provided in the Forand bill, they are, in effect, saying to them: "Get lost, drop dead, but do not get sick."

Mr. President, if the Federal Government steps in to provide insurance for the aged against catastrophic illness, it will not be moving in where private industry can do the job. To the contrary, it will be assuming responsibility in an area where private industry cannot offer the needed protection.

The Social Security Act, which attains its 25th birthday anniversary this August, met with violent opposition from the ruling clique of the AMA at the time President Franklin D. Roosevelt proposed the legislation. Despite this violent opposition on the part of the leaders of the American Medical Association, the average income of physicians and surgeons throughout the country has skyrocketed to heights unequalled in other professions and the citizens of this nation have enjoyed better health and increased life expectancy.

Now, Mr. President, we will not go back. We will go forward and improve upon and liberalize the Social Security system of which we should all be proud.

In every referendum taken by the American Medical Association under the auspices of various State medical associations, the thousands of physicians and surgeons participating by overwhelming majorities expressed their wish to be included under coverage of our social security system the same as self-employed dentists, attorneys at law, and members of various other professions.

NEEDED—A FARM PROGRAM, NOT A REPUBLICAN APOLOGY FOR ITS FAILURES

Mr. HUMPHREY. Mr. President, recently the senior Senator from Iowa [Mr. HICKENLOOPER] placed in the CONGRESSIONAL RECORD excerpts from remarks made by the chairman of the Republican National Committee, the Senator from Kentucky [Mr. MORTON], at a fundraising dinner in Des Moines, Iowa. There in the heart of the Corn Belt, the chairman of the Republican National Committee, running true to political form, set up a farm program strawhorse and proceeded with fiery language to demolish it.

He spoke at some length on "The Family Farm Income Act of 1960," a bill introduced in the House of Representatives by the gentleman from Texas, Mr. POAGE, and some 20 other Democratic Members of the House. This is a fine, constructive proposal, one which would give family farmers a voice in the formulation and management of farm programs, one which would improve family farm income, one which would reduce Government expenditures for farm programs.

Mr. President, please note that the Republican national chairman did not talk to Iowa farmers about the Republican farm program. That is because there is no Republican farm program which Republicans want to talk about in the hearing of farmers. Instead, he talked about the Democratic-sponsored "Family Farm Income Act," calling it a resurrected Brannan plan. The Brannan plan, which involves compensatory payments to agricultural producers under certain circumstances, is probably the most talked-about and least understood farm proposal that has ever been made. For more than a decade it has been used as a rallying cry for the Republican forces that oppose any legislation that will increase the incomes of the family farmers of this Nation.

Of course, the Republican administration approves the use of the Brannan plan for sugarcane and sugar beet producers, and also for the producers of wool. Compensatory payments are cruel chains of regimentation when the Republicans oppose them. When they favor them, such payments represent solid constructive expanding dynamic Republican farm policy. However, to label the "Family Farm Income Act" as the Brannan plan is farfetched. Compensatory payments are named in the bill, as originally introduced, as one of a long list of income stabilization programs which might be utilized if the necessity existed and if approved by two-thirds of the producers concerned and the Secretary of Agriculture was agreeable. The proposal might just as logically be labeled a "weed, fire, and insect control" bill, simply because these words appear in one section.

Among the many witnesses who presented supporting testimony at recent House Agriculture Committee hearings on the Family Farm Income Act were 11 Democratic Governors. These Governors came from States where hard-pressed farmers have learned the hard way that the Democratic party is the only political party with a sincere and continuing interest in the welfare of family farmers. Farmers have learned that promises are often made in leap year by aspiring politicians and are easily forgotten or disclaimed in the following year.

Among the Democratic Governors who supported the Family Farm Income Act was Gov. Herschel Loveless of Iowa. Following the Republican national chairman's speech deriding the bill, Governor Loveless released a press statement which effectively reveals the fallacy of the Republican fundraising stratagem and points up some important farm facts.

I ask unanimous consent that this statement, edited in accordance with the rules of the Senate, be printed in the RECORD at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GOVERNOR LOVELESS COMMENTS ON MORTON FARM SPEECH AT GOP RALLY IN DES MOINES, IOWA

Iowa Gov. Herschel C. Loveless declared today, with reference to the speech made here last night at a GOP fundraising rally by Senator THRUSTON B. MORTON, of Kentucky, Republican National Committee chairman:

"Senator MORTON'S talk offered our troubled farmers nothing but the moth-eaten Republican promises of still more freedom to go broke. In an effort to divert attention from the sorry administration record of do-nothing and do-wrong, Chairman MORTON beat a dead horse, called the Brannan plan, with extravagant alarums and ridiculous assumptions.

"Even worse, the Morton speech curried public prejudice against all farm programs with exaggerated claims that a pending Democratic farm bill in Congress would so reduce farm output as to raise food prices sharply and do grievous harm to workers and businessmen depending on farm marketings and purchases. Chairman MORTON the same as said that farmers should continue overshooting their markets and taking low prices to provide profits for agri-business. The Morton speech contributed exactly nothing to clear understanding of the farm issue and disappointed thousands of our farmers who had hoped the GOP leadership was at last ready to debate remedial proposals on merit and fact and not merely with supercharged emotion."

Detailed comment by Governor Loveless is as follows:

"Last night, the Republican National Committee chairman, Senator MORTON, of Kentucky, charged that Democrats 'have been seeking only to exploit and not to solve' the

farm problem. He tried to leave the impression that the administration is in no way responsible for agriculture's ills today. He denounced the Family Farm Income Act of 1960, now pending before the Agriculture Committee of the U.S. House of Representatives, as a repackaged Brannan plan and spoke slightingly of the general support expressed for it recently by a group of 11 Midwest Governors, including myself.

"On the other hand, using the lame excuse that the GOP farm plank has not yet been written and that the ideas of the GOP presidential nominee cannot yet be anticipated, MORTON failed himself to outline a GOP program alternative. He said only that the Republicans would base their plan on the 'premise that farm income can be bolstered without putting farmers in chains' and that it would 'stand forthrightly for the farmer, for his security, and for his freedom.'

"It seems clear from a close reading of the speech that Senator MORTON scarcely knows what he is talking about, with respect either to the so-called Brannan plan or the Family Farm Income Act of 1960.

"Playing his scare game to the limit, MORTON declared postively that under the 1960 act, production would be forced down 30 percent on hogs, 30 to 40 percent on eggs, and more than one-half on wheat acreage. Cattle producers, he warned, could be similarly regulated with prices fixed by grades.

"Just where Chairman MORTON obtained such positive estimates is not clear. There certainly is nothing in the 1960 Act which specifies such figures. Moreover, under the main supply management provision of the Act, the national goal for any commodity would not be set by some bureaucrat thirsting for dictatorial power over farmers. The goal would be worked out by a producer-elected committee, subject to the approval of the Secretary of Agriculture to insure proper regard for the public interest.

"The weakness of the Morton speech is mostly clearly revealed in his omission of the fact that no supply stabilization program could go into effect under the pending 1960 act until it had been approved by a two-thirds majority of voting producers. Failure to acknowledge this referendum procedure was only one of the many glaring omissions in the Morton speech.

"Chairman MORTON also seized on an oversight in the original wording of the 1960 act to scare farmers who feed all their grain production to poultry or livestock. As the act was first drawn, eligibility to vote in a referendum on a feed grain program would have depended on the producer having marketed an average minimum of $500 worth of feed grain a year. In testimony before the House Agriculture Committee on March 15, our group of State Governors were assured that this provision would be broadened in the final draft of the act to take account of grain marketings also in the form of livestock.

"Chairman MORTON showed his lack of understanding of farm economics by declaring that prices would not rise sufficiently with supply adjustment to help farm income. Such a contention flies in the fact of all reputable analyses of the supply-demand aspects of the current farm situation.

"In his rash haste to discredit the Democrats and in disregard for the fact that excess supply is currently mostly responsible for low farm prices, Chairman MORTON made a demagogic appeal for public opposition to any form of supply adjustment. He did this by contending, on the basis of his baseless assumptions, that a sharp increase would occur in food prices and other living costs. He talked alarmingly about the business volume effects of supply adjustment on the processing, transportation and distribution of farm commodities and also on the sales to farmers of machinery, petroleum products, feeds, seeds, lumber, fencing, etc.

"In substance, Chairman MORTON was saying that farmers should be left to continue overshooting their market and taking unacceptably low prices so as to provide maximum business volume and profits for other people. Aside from being inexcusably callous, this argument contains serious flaws.

"Farmers with low incomes are not good customers of the service industries, no matter if farm output is large. Moreover, the processors and other handlers of such major farm commodities as animal products now have less assurance of volume stability than could be the case under an effective farm program. This is because excessive grain production generates wide fluctuations in feeding operations. Because it brings low prices, an oversupply of livestock products, induced by too much cheap feed, invariably is followed by a cutback in feeding. It appears that we shall see such a consequence in 1960 in the form both of smaller hog supplies and some reduction in egg output.

"As for effects at retail, some change in supply and price conceivably may occur with production adjustment, but the change, if any, should tend to be relatively small. In the first place, much of the excess margin which an adjustment program would undertake to eliminate is not going to the retail counter now. Second, the producer's entire price today represents only 38 cents of the consumer's dollar going for food. It takes a change of at least 2.6 percent in the farm price to cause a change of 1 percent at the retail level. Some authorities contend that middlemen could absorb a large part of any farm price rise without any reflection at the retail level.

"In any case, experience has shown that an increase in farm income is soon reflected back into the national economy through increased spending by farmers. Because of their high out-of-pocket production costs, farmers are big spenders. The U.S. Department of Agriculture has currently estimated that United States farm people spend more than $40 billion per year on production and consumption goods and services.

"Chairman MORTON failed to acknowledge that the Family Farm Income Act of 1960 specifically prohibits the further accumulation of farm commodities in Government hands and at the same time provides for a gradual reduction in existing stocks, partly through distribution to producers who divert land from excess crop production. Thus, the 1960 act could effect a considerable saving in operational costs of the farm program.

"The Republican farm policy strategy is apparent from the Morton speech. It is to hurl epithets at every proposal not acceptable to President Eisenhower and Secretary Benson, hence the current attempt to stir up opposition by use of the Brannan label. Curiously, the Republican opposition has sometimes denounced the Brannan plan on the ground that it would regiment farmers most extremely while at other times, it has contended that the plan would pay farmers the difference between market price and parity on unlimited production, thus to 'bust' the U.S. Treasury.

"Actually the supplemental payment feature was only one of a variety of methods set forth in the controversial proposal put forward by Secretary of Agriculture Brannan back in 1949. Under that proposal, for example, price support through nonrecourse loans (with the option to surrender the goods in settlement) would have been continued on a number of commodities. Under the 1960 act, as already mentioned, further accumulation of commodity stocks in Government hands through takeover of loan collateral would be prohibited.

"Although one would never suspect it from the Morton speech, the Brannan plan provided for a continuation of the referendum method under which supply control could not be imposed on any commodity without producer consent. It is worth noting, too, that in his original presentation to Congress, Mr. Brannan referred to his payment system as a means of encouraging 'the farmer to go on producing to meet genuine consumer need, rather than restricting output short of that need.'

"Aside from permitting the use of direct payments at times to supplement the income-raising effects of supply and market adjustment, there is no great resemblance between the Brannan plan and the 1960 act. Even with respect to payments, the 1960 act imposes greater limits on the amount of money which might be expended on each commodity or commodity group.

"Farmers will recognize that MORTON's beating of the dead horse of the Brannan plan is only an effort to divert attention from the administration's sorry do-nothing and do-wrong record on farm policy. The GOP's constant screaming about more freedom for farmers and the need to break the stranglehold of the Federal farm program is growing pretty thin, especially in the Corn Belt. Farmers are aware, even if Chairman MORTON is not, that our troubles today are due more to too much, rather than to too little, freedom to produce. There never has been a compulsory program on feed grains; individual producers could participate or not, at their option. Unfortunately, under the policy decisions of the administration and the veto blockade on revision attempts, compliance with the farm program in the Corn Belt declined to the point of effectiveness. Admittedly, some legislative changes were needed from time to time to insure satisfactory program results, but the administration never seriously sought really effective revisions.

"The proposed Family Farm Income Act of 1960 is not a perfect bill and our group of Midwest State Governors do not contend that it is. But it would provide producers with some rather effective tools for dealing, if they so desire, with their problems of supply and marketing and it deserves fair and serious discussion. Thus, while recognizing that further revisions are needed and will take place before going to the House floor, our Governor group did give general endorsement.

"Chairman MORTON's remarks showed a singular lack of appreciation for the fix Midwest agriculture is now in. He had the effrontery to make prejudicial remarks about farm production adjustment proposals on the grounds that they would hurt business while the auto industry meantime was preparing production cutback which the Wall Street Journal said 'naturally would cut purchases of steel, rubber, aluminum, lead, glass, plastics, paint, and other items.'

"At the same time, U.S. Department of Agriculture figures showed farmers' cash receipts for January and February as being down 7 percent from the same period in 1959, and USDA spokesmen also were telling a congressional committee that total net farm income in 1960 may be down a further half-billion dollars from 1959.

"GOP Chairman MORTON has declared that for the first time since 1950, there is now 'the opportunity for a meaningful, full-dress debate of the entire farm problem.'

"This is a dubious statement; there has never been a lapse in opportunity for farm policy discussion at any time since 1950. But it is certainly correct to say that the opportunity exists; and, accordingly, Democrats everywhere are prepared to engage the Republicans in 'meaningful, full-dress' debate.

"As seems evident from Chairman MORTON'S performance in Des Moines, the problem will be to get the Republicans to address themselves to the hard facts of the situation and to offer concrete proposals. Farmers are past the point of being charmed by vague promises such as 'full parity in

the marketplace.' The hour is late and thousands of additional operators will be forced out of agriculture by 1961 if this dallying continues.

"As I have said repeatedly this winter, the farm situation today is a lot more serious than is generally realized. If general legislation is not to be passed this session, the Congress may need to consider emergency-type legislation to bolster the credit facilities for hard-pressed farmers and to set up a special land retirement program to be applicable at least to the 1961 crop year."

Mr. HUMPHREY. Mr. President, the charge is repeatedly made that the Democratic Congress has not passed farm program legislation which would reverse the income-depressing programs that has been in effect since 1954. This in untrue. Repeatedly the Democratic Congress has passed good, sound legislation, legislation which has been vetoed by the White House upon the recommendation of Secretary Benson. Just last year Congress passed a wheat bill that would have stopped the buildup of the wheat surplus and cut Government wheat program costs. The President vetoed it.

Good farm legislation is before Congress today, both in the House of Representatives and in the Senate. The strength of the Republican attack in Des Moines on the Family Farm Income Act is proof enough that this is good proposed legislation. The Republican national chairman states that 1960 presents an opportunity for debate of the entire farm problem. This is unnecessary. A continuing running debate has been going on for years. Farmers are weary of this debate. They want legislation. They want solid income-improving farm programs. They want a voice in managing their own affairs, a hand in shaping their own futures. They want to remain on their farms, producing the agricultural abundance essential to the physical and economic health of this country, but producing an abundance for use, not for waste, and producing it for a fair price, not for a price so low that family farmers are forced off the land.

It may be that the Family Farm Income Act, which at present is drawing the fire of the friends of the Benson family farm downfall program, is the farm bill Congress should enact. House Agriculture Committee hearings on this proposal have not yet been completed. As with any viable piece of legislation, it is still in a growing stage. It is my understanding that the principal sponsors are even now revising it and improving it in accordance with new suggestions and ideas developed in the hearings.

There are several ways in which the Senator from Minnesota would like to see it strengthened. Any comprehensive bill should, I believe, provide for a national safety reserve of food and fiber. There is no need to push the panic button on this matter of Government-held commodities. Twice this country has found that the CCC stocks were a treasure trove, once in World War II and again when the Korean war broke out.

It is my hope that farm legislation, in considering the use of food and fiber, will not overlook the hungry and needy in our own country. The fulfillment of the needs of our less fortunate citizens, needy through no fault of their own but because of unemployment, illness, and old age, should certainly be undertaken before we call agricultural abundance a burden and a curse.

It is my hope that the comprehensive farm bill which wins the support of Congress will include a proposal to use agricultural productive capacity to help strengthen the economies of those countries which are struggling to improve the lot of their people in democratic ways—in short, to make positive use of food for peace.

I also hope that comprehensive farm legislation will provide real assistance to those farm people who suffer from chronically low-income, the farmers who are not greatly helped by price support programs but who nevertheless should be considered in the total rural picture.

Mr. President, I draw to your attention the Family Farm Program Development Act, the proposal made by the Senator from Minnesota which brings farm programs into perspective with total food and fiber use, a proposal which would establish firm guide-lines for programs of agricultural production and use, farm income stabilization, long-range agricultural resources conservation and adjustment, and development of low income rural areas.

I say with justifiable pride that this bill is worthy of the criticism of the chairman of the Republican National Committee. In view of the kind of farm programs the Republicans favor, their criticism is an accolade, something like a Good Housekeeping Seal of Approval.

Mr. President, today I recommend that the Government of the United States, even under existing legislation, make at least a 5-year commitment to the Republic of India to enable it to meet its food deficit requirements for the next 5 years. The United States ought to be willing to supply 15 million tons of wheat to be delivered according to a schedule, and at a price which is fair and reasonable, taking for our compensation Indian currency, which can be used to help to develop the Indian economy and to pay for the American costs of government activities in that particular part of the world.

I propose that whatever kind of farm program is enacted shall also provide for long-term assistance, long-term credits, or long-term commitments by the American economy and the American Government to supply food and fiber to the food deficit areas of the world. Such a proposal is sound and sensible. It will fully utilize the productive capacity of our agricultural economy.

Mr. President, I ask unanimous consent that a short analysis of S. 2502, the Humphrey Family Farm Program Development Act, be printed in the RECORD at the conclusion of my remarks, together with a longer description which I have prepared. I call the bill a charter of hope.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 2502—THE HUMPHREY FAMILY FARM PROGRAM DEVELOPMENT ACT

AN ANALYSIS

Four major goals of the act:

1. To improve farm prices and family farm income.

2. To assure ample supplies of food and fiber for all domestic needs, for commercial exports, for a national safety reserve, and for use by our Government in building world peace.

3. To reduce the tax burden through lower farm program costs.

4. To protect the well-being of future generations by conserving soil and water resources now wasted on unneeded production.

Farm problem of national concern:

The Humphrey bill approaches the "farm problem" as a national problem.

A prosperous national economy must include a prosperous farm economy.

Farmers should have true parity, voice in programing: Through this bill, an overall farm program can be developed that will establish a new concept of parity—a concept of a fair price—based upon farm earnings comparable to current earnings of other groups. Farm producers will be permitted a major voice in choosing the most suitable program method for balancing market supply with demand.

ANALYSIS BY TITLE

Title I—Policy

1. To assure consumers adequate supplies of food, fiber, and timber products, currently and in future years.

2. To bring market supply of farm products into balance with demand for domestic use and export.

3. To enable cooperating producers to secure a fair price and fair income.

4. To use the Nation's abundance of food and fiber products to promote world peace.

Title II—Domestic food and nutrition program

1. Provides for an annual domestic food and fiber program that will include expanded national school lunch and special milk for children programs; a food allotment program for our needy; and a national security reserve of food and fiber products to protect us against possible emergency shortages.

Title III—International food and fiber program

1. Provides for an annual report on worldwide needs for food and fiber as a basis for a program for the United States to supply its fair share of this demand. This long-term program shall be consistent with the international policies of this country to build world peace and to encourage the development of the emerging nations of the free world.

Title IV—Adjusting supply and demand

1. Provides for farmer-elected commodity committees to share in choosing the most suitable method to adjust supply to demand when two-thirds of the producers approve a national marketing quota program in a nationwide referendum.

Methods available (individually or in combination) shall include, crop loans, marketing premium payments, marketing agreements, marketing orders, surplus diversion purchases, purchase agreements, export incentive payments, export equalization payments, stabilization pools, income-deficiency or compensatory payments direct to farmers, and other methods to achieve fair price objectives at lowest possible taxpayer cost.

2. Defines a "fair price" of a commodity as "the price which will yield returns on capital and labor on family farms comparable to nonfarm earnings, based upon the

study of commercial family farm costs and returns published annually by the Department of Agriculture."

Title V—Long-term agricultural program

1. Provides for an expanded agricultural resources conservation program including land-use adjustments and temporary retirement of land not currently needed for production.

Title VI—Low-production farms

1. Provides for expanded and accelerated program for low-production and low-income family farms, including increased supervised credit and individual farm and home management guidance.

2. Provides for special vocational training and employment services for those wishing to leave farming.

(Attachment C)

A CHARTER OF HOPE

(By Senator HUBERT H. HUMPHREY)

This Nation needs a national food and fiber policy that will:

1. Determine a fair price for farm commodities and a fair income standard for farmers, and achieve these goals through programs designed to ease the tax burden instead of pushing it higher;

2. Establish agricultural production goals that will satisfy the true needs of the American people and the commercial export market; provide necessary reserves for emergencies; and strengthen our foreign policy by the use of food for peace;

3. Establish a postive agricultural resources conservation program that permits land use adjustments designed to meet current goals and at the same time safeguards our agricultural production potential for the expanded needs of future generations;

4. Establish employment goals for American agriculture which will insure the farm population, especially farm families, of adequate opportunities to be fully and usefully employed. Means to attain these goals would include expanded farm credit facilities and farm and home management guidance services; and, in addition, educational and employment opportunities for those within the farm population who wish to transfer to other occupations.

FAMILY FARM PROGRAM DEVELOPMENT

I spelled out these goals and guidelines for achieving them in the Humphrey Family Farm Program Development Act which I introduced last August. This is a charter of hope for family farmers.

In attaining these goals, I believe farmers themselves should have a major voice in deciding what kind of legislation and regulation they need to bring about proper supply adjustments in commodities produced in excess of the amounts needed.

If farmers are enabled by law to work out marketing programs that will provide a fair price, I know they are willing to comply with regulations calling for land retirement, soil and water conservation—and definite ceilings on the total of commodity loans or payments to any one farm producer.

WHO WOULD BENEFIT?

Such programs would benefit the farmer by protecting his income.

They would benefit the consumer, who would know that ample supplies would be available to him at a fair price and that under our traditional efficient family farm system of food production he would not risk the threat of high prices inherent in any system of corporate monopoly in agriculture.

Such programs would benefit both consumers and farmers by reducing the tax burden. The Federal Government would cease to be a major market and warehouse.

And they would benefit the Nation's industries, and those who work in those industries, by keeping farmers' purchasing power at levels that would keep factories running and workers employed.

FARMER THE FORGOTTEN MAN

The American farmer is today's forgotten man.

Dairy farmers are especially aware of this. The deliberate Republican policy of farm deflation hit dairy farmers early and hit them hard on April 1, 1954, when dairy support prices were slashed from 90 percent of parity to 75 percent.

Dairy farmers led the downhill parade. Year by year, the prices and income received by all farmers have gone down the sliding scale. Today the farmer is getting only 37 cents as his share of the dollar spent for retail food, the least he has received in 20 years.

At the same time, the cost of almost everything a farmer has to buy to keep his farm operating has gone up. Taxes have gone up, interest rates have gone up, and so have cash wage rates. Farm machinery and implements, autos and trucks, building and fencing materials—all of these cost much more today than when the farm deflation started.

The only prices that have gone down are for those items farmers buy from other farmers—feed, and seed, and feeder livestock.

Current farm policies have brought about falling prices, falling parity, falling income—and failing farms. Neither farmers nor the Nation can stand for the continuation of these policies. The disastrous end result would be to push farmers onto the "free market," to force farmers to stand alone as the only group in the country unprotected from the harsh economics of supply and demand.

ABUNDANT PRODUCTION

The realistic alternative is the kind of farm program I favor, one that is keyed to efficient and abundant production that will bring a fair price and a fair income to family farmers.

The American mind and the American conscience are not suited to a philosophy of scarcity.

We must plan for the production of food and fiber in the abundance needed to supply all commercial markets, at home and abroad.

We must plan for abundant production that will feed the needy, the unemployed, and those unfortunates among us who do not have the strength to help themselves, and whose claims are based on humanity.

We must plan for abundant production that will be used as part of a definite international economic aid program directed toward attainment of world peace.

We must plan for the abundant production that will be needed to feed our future generations.

Food is too vital to our individual and to our national future to permit any longer haphazard, chance production that fills no need, increases taxes, undermines the welfare of farm families, wastes soil and water resources, and—a needless extravagance we sometimes forget—wastes human labor and will.

WHAT WE CAN ACHIEVE

I believe it is plain everyday commonsense to enact a farm program that will achieve the goals of a farsighted food and fiber policy. Undoubtedly, there would be some mistakes made and some difficulties encountered under this kind of program. There is no magic, overnight solution to the tremendous farm policy problems that have been posed by advancing agricultural technology—and by inept manipulation of current farm programs. But such a program, being based upon sound and worthy objectives, would be self-repairing instead of self-defeating.

It would bring supply and demand into balance at the highest possible levels, instead of trying to bring them into balance at depressed levels.

This program is a "charter of hope" for family farmers, but it can be more than that. It can be the foundation of a charter of hope for the free world.

NOMINATION OF JAMES R. DURFEE TO BE ASSOCIATE JUDGE OF THE U.S. COURT OF CLAIMS

The Senate resumed the consideration of the nomination of James R. Durfee to be associate judge of the U.S. Court of Claims.

Mr. WILEY. Mr. President, I have sent word to my junior associate that I am about to speak on the subject of the nomination of James R. Durfee to be associate judge of the U.S. Court of Claims. Yesterday the junior Senator from Wisconsin spoke for some 5 hours. I shall not speak that long, but I shall cover the issues as he said before the committee they were, and as he said on the floor they were.

His first issue was that Durfee lacked the training and experience required for a judge on a court. Then he amplified his statement by saying that Durfee has had no congressional experience, no tax or Government claims experience, and no actual judicial experience.

The junior Senator from Wisconsin gave 2 reasons for his opposition. The second one was—and this is his own statement:

In the only Federal quasi-judicial experience Mr. Durfee has enjoyed, he has on three distinct occasions flagrantly violated the code of ethics of the agency which he himself heads.

On every one of these occasions it is clear (1) that he accepted "unusual hospitality"; and (2) that the hospitality was provided by persons who had an intense and obvious pecuniary interest in the business of the Civil Aeronautics Board, his agency.

However, Mr. President, in order, as it were, to escape that statement, the junior Senator from Wisconsin made the following statement before the committee:

It is true that on every one of these three occasions cited above there was an apparent public purpose of sorts. The trip to North Carolina was to lend the authority of the head of the CAB to achieve a more cooperative relationship between the Military Air Transport Service and the commercial air lines. The trip to Mexico was a ceremonial inaugural flight to encourage "a better understanding of the common interests of both countries."

The purpose of the Rome trip, another ceremonial inaugural flight, was to advance the people-to-people program for greater international understanding.

I have quoted the language of my junior associate as he used it before the Committee on the Judiciary.

Then, to wind up the matter, he said:

Finally, let me say that I feel sure that the nominee did not look at these entertainment occasions as cold bloodedly as I have described them.

I presume he was chiefly interested in the public purpose on all occasions. He referred to what he called the Wiley report. Let us get that matter straight,

Mr. President. When I was asked by the chairman of the committee to sit on the subcommittee, I recognized that the junior Senator was, in the language of the court, prosecuting, and I was defending. I recommended Mr. Durfee. I also recognized that the junior Senator was to be a judge, and I was to be a judge. In other words, we served in a dual capacity. So he was serving in a dual capacity, and so was I.

But I did not write the report; I had nothing to do with it, except for the fact that the chairman of the committee asked me to have one prepared. I referred it to someone in my office, who went to the staff of the Judiciary Committee; and they got out the report. But afterwards the committee unanimously adopted it. Then one Member said he would have to see about the matter. So it is a committee report.

Mr. President, for some 30 years I practiced law. I know something about judicial ethics. I remember definitely that in one case a man began to monkey with the jury. All of us who serve here are jurors.

Mr. President, when I came to the Senate it was my privilege to meet with many distinguished Senators who had served many years. One of the lessons I learned was that if one has a candidate for office, one should not contact his fellow Senators about the appointment. They will listen, on the floor, to what comes up; but one should not write letters to them about the matter.

Another thing I learned was never to try one's case in the newspapers. I learned that when I was practicing law. I remember that on one occasion when a case was being heard, the judge dismissed the jury because they had been reading the material which was put out by one of the counsel; and I distinctly remember that the judge said to the counsel, "If you persist in this, I will fine you for contempt."

I have not spoken to anyone about this matter, except one person who asked me about it. Among the Members of this august body I have not spoken to anyone except the members of the committee who decided on the report.

So, Mr. President, let us consider the issues. First, let it be recognized that I speak in favor of the nomination of James R. Durfee, to be judge of the U.S. Court of Claims. The record of the nominee has been very carefully dismissed and considered by the Senate Judiciary Committee, whom my junior associate praised, and then castigated them. The committee, after full consideration, has recommended Mr. Durfee for confirmation. Mr. Durfee is currently a member, and the Chairman, of the Civil Aeronautics Board, for which office he was unanimously aproved by the U.S. Senate less than 4 years ago. His service as Chairman of the Civil Aeronautics Board is second longest among that of the 12 men who have occupied the post since the Board was created in 1938.

MR. DURFEE'S PROFESSIONAL AND PERSONAL ACCOMPLISHMENTS

Mr. President, let us consider who the nominee is. His nomination was first sent to the Senate in August of last year. Action on it by the Senate was postponed and postponed, and finally it was put off until this year. As a consequence, the President sent the nomination back to the Senate on January 11.

Mr. President, as we remember, the first objection made to the nomination was that Mr. Durfee, so we have been told, lacks technical training and experience. Well, let us see about that. Previously, Mr. Durfee served with distinction as a member of the Public Service Commission of Wisconsin, from 1951 to 1956, and as chairman of the commission in 1953 and again in 1955.

Before serving on the Wisconsin Public Service Commission, Mr. Durfee had conducted a very successful law practice in Antigo, the county seat of Langlade County, in northern Wisconsin, for over 25 years.

Mr. President, I practiced law for 30 years, and I know what the general practice of law does to give a man ability, and—and this is a thing that counts very much—to give one the power to discriminate and be judicial and not go off the deep end.

Mr. Durfee was also district attorney of Langlade County for two terms, from 1928 to 1932. In addition to these impressive professional attainments, Mr. Durfee has been for many years a leader in the legal and civil life of his home State of Wisconsin. He served as the president of the Langlade County Bar Association, as a member of the board of governors of the Wisconsin Bar Association, as a member of the State committee on judicial selections, and as State commander of the American Legion in Wisconsin.

In 1957, Mr. Durfee was honored by Marquette University for 30 years of leadership in the legal profession. How can it be said that he had had no experience?

His support before the Judiciary Committee was bipartisan. Among his ardent supporters, who appeared before the subcommittee, was former member of the Civil Aeronautics Board, Gen. Joseph P. Adams, a Democrat. Likewise, in hardy support of the nomination is the National Association of State Aviation Officials, which, on February 9, 1960, commended the nominee for his outstanding public service during his chairmanship of the Civil Aeronautics Board. Even the Independent Airlines Association, which has for years criticized the practices of the Civil Aeronautics Board, has felt incumbent upon itself to testify that Mr. Durfee "was at all times fair, and at no time indicated any prejudgment of an issue." They added also that "while he was certainly severe and uncompromising in his enforcement of regulations, he acted with eminent impartiality and honesty."

That is the language of the Independent Airlines Association.

My colleague in the Senate, the junior Senator from Wisconsin [Mr. PROXMIRE], who is the only person to have voiced opposition to this nomination, testified, nevertheless, that the nominee is a popular man in his home town, is an honored man in the State, was successful in his practice of the law, and that support for him is not confined to Wisconsin alone. The American Bar Association supports him.

The opposition of my colleague to the nomination of Mr. Durfee can be summarized in four separate categories—though my colleague referred to two—which I shall analyze very carefully, in order to show that they are without much merit.

It will be remembered that my colleague spoke of the participation of Mr. Durfee as official representative of the Civil Aeronautics Board in two inaugural trips. The first one was to Mexico City. Let us get this fact straight. Those two trips were in 1957. The other trip that was criticized was in 1956. Let us make it clear that all of those matters have been before the appropriate committee of the House. As will be shown, the chairman of the committee voluntarily sent to me his approval of this man and his character.

THE PARTICIPATION OF MR. DURFEE AS OFFICIAL REPRESENTATIVE OF THE CIVIL AERONAUTICS BOARD IN AN INAUGURAL FLIGHT TO MEXICO CITY

It was alleged at the nomination hearing, and again at later times, that the nominee's participation in 1957 as a guest of Eastern Air Lines on their inaugural flight to Mexico City was in conflict with his position as Chairman of the Civil Aeronautics Board.

Shortly after a new nonstop route from New York to Mexico City was approved for Eastern Air Lines, the nominee, from September 15 to September 18, 1957, was the guest of the Air Lines on a special inaugural flight to Mexico City and back. Fifty-four other guests also participated in this flight.

This inaugural nonstop flight—note the word "inaugural," because this is a practice which has existed for over 20 years, the record will show, and has been approved in all instances—this inaugural nonstop flight from New York to Mexico City marked the beginning of a new and better era in our aviation relations with Mexico. For 10 years the United States had been vainly trying to get the Mexican Government to agree to such a new air route. Finally, the United States obtained four new nonstop routes from the United States to Mexico City for a 2-year period. The United States was desirous of continuing this improved relation with Mexico. The members of the Civil Aeronautics Board present on that inaugural flight conferred with the Mexican Minister of Transport, and other high Mexican aviation officials with this objective. They also participated in several official receptions furnished by both the Mexican and U.S. officials and airlines. The United States was being represented there officially.

To determine the weight to which the criticism of Mr. Durfee's participation in an inaugural flight is entitled, it is necessary to understand the meaning and general nature of inaugural flights.

Inaugural flights are utilized to mark the initiation of new air services. Such new air services are of great interest and benefit, not only to the commercial carriers involved, but also to the nations they serve. Such new services are the product of long negotiations. The Civil

Aeronautics Board, as well as the State Department, plays an important role in making such new services possible. An inaugural flight, therefore, marks not only an expansion of U.S. commercial air services, but also the successful completion of a Civil Aeronautics Board undertaking.

The Civil Aeronautics Board is directed by Congress to encourage the development of the air transportation system of this country. Let me repeat and emphasize those words—to encourage the development of the air transportation system of this country. In addition to its quasi-judicial functions—let me emphasize those words, "quasi-judicial functions"—the Board also has the duty to negotiate for international air routes with foreign countries. In this bargaining process, the Board acts as a negotiator for the carriers. When this bargaining is completed and a bilateral agreement is signed with another country, the inaugural flights over the routes involved is a common international practice. These inaugural flights are intended to promote international good will. The arrival of such flights in the country of destination is commonly marked by diplomatic ceremonies and receptions. Usually, the members of the Civil Aeronautics Board and staff participating in the flight utilize the opportunity to confer with aviation authorities of the other country. That was done in the instance of each of these two inaugural flights.

It must be stressed that inaugural flights are accompanied by a great amount of publicity, and each one of the inaugural flights in which Mr. Durfee participated received widespread news coverage. In fact, Mr. Durfee's participation in this inaugural flight, along with other members of the Board and its staff, was announced by press releases issued by the Civil Aeronautics Board. An analysis of guest lists in recent years shows that, in addition to members of the Civil Aeronautics Board and staff, such flights have also included Members of Congress, congressional staffs, other Federal officials, foreign officials, and members of the news media.

I have set in my statement a list showing participants in inaugural flights from 1940 to 1959, and I ask unanimous consent that the list be incorporated in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Participants in inaugural flights, 1940–59

	Officials	Family
CAB members	23	4
CAB staff	71	13
Senators and Congressmen	56	7
Congressional staff	7	1
Other Federal officials	90	11
State and local officials	206	31
Foreign officials	245	37
News media	376	6
Subtotal	1,074	110
Total	1,184	

Mr. WILEY. Mr. President, participation in inaugural flights has been continuously and officially approved by the Civil Aeronautics Board since 1940. Let me emphasize the year—1940. The airlines involved are required to file with the Civil Aeronautics Board a list of all guest passengers in such flights. They are not permitted to charge any guest on an inaugural flight. Shortly after the Civil Aeronautics Board adopted its code of ethics in 1951, it very specifically held that participation in inaugural flights was not within the prohibitions of the code.

What are we talking about, then? Why this attack?

The propriety of participation by Government officials in inaugural flights was also looked into by the House Subcommittee on Legislative Oversight. In response to a questionnaire which was addressed to all members of the six regulatory agencies being investigated by the subcommittee, Mr. Durfee on October 14, 1957, provided the subcommittee with complete details of the inaugural flight referred to above. Later, he also testified before this subcommittee on four different occasions. At no time was he questioned on the subject of inaugural flights and no reference is made to this matter in the subcommittee reports. In a letter to me, dated February 20, 1960, Representative OREN HARRIS, chairman of the subcommittee, said with regard to Mr. Durfee's participation in inaugural flights:

> The committee considered this information in the course of its investigation. The facts, of course, speak for themselves. On the basis of these facts and our committee investigations, the committee did not charge Mr. Durfee with any impropriety. Insofar as I know, the personal and professional conduct of Mr. Durfee has not been questioned by any reliable sources.

The Civil Aeronautics Board also wrote to the Comptroller General for his opinion on March 19, 1958, in order to ascertain whether the participation of Board members and staff in inaugural flights was properly undertaken. While in an earlier opinion the Comptroller General expressed the view that the practice of free transportation on inaugural flights may be prohibited by law, he now concluded in his reply to the Civil Aeronautics Board:

> We have no authority to make a binding determination as to the proper interpretation of this statute and from the standpoint of the audit functions of this Office. I have no reason to question your determination as to the continued official nature of the flights mentioned or the participation therein by officials of the Civil Aeronautics Board, or their staffs, under the circumstances related. While in my opinion such action would not be a violation of 18 U.S.C. 1914, that is, as stated above, a matter for final determination by the Attorney General or the courts.

Mr. President, I have a letter from Mr. Coates Lear, a copy of which was sent to the junior Senator from Wisconsin [Mr. PROXMIRE]. This man was a lawyer representing one of the airlines involved. He states:

> WASHINGTON, D.C., *March 16, 1960.*
> EDITOR, THE WASHINGTON POST AND TIMES HERALD,
> *Washington, D.C.*
>
> DEAR SIR: I wish to comment on the letter of Senator PROXMIRE which was published in the Post on March 16, 1960. Senator PROXMIRE claims that Mr. James Durfee, chairman of the Civil Aeronautics Board, is not qualified to be appointed to the Court of Claims primarily because in October 1956 Mr. Durfee went to Pinehurst, N.C., as a guest of two airlines who then had cases pending before the Civil Aeronautics Board.
>
> Inasmuch as I was attorney for one of the airlines at the time, I believe that I am qualified to comment on the propriety of the Pinehurst trip.
>
> In my opinion the trip was entirely proper and did not constitute a breach of the CAB Code of Ethics. The fundamental point which Senator PROXMIRE overlooks is the fact that the Civil Aeronautics Act requires the CAB to encourage and foster the development of civil aviation. In other words, the law under which the Board operates is, in large measure, a promotional statute. This distinguishes the functions of the CAB from those of a court.
>
> The purpose of the Pinehurst trip was to assemble representatives of the Civil Aeronautics Board, the Military Air Transport Service, and various airlines to discuss the problem of competition by MATS with the civil air carriers. Unfair competition by MATS is a problem which concerns all civil air carriers in the same sense that the unauthorized practice of law is of concern to all members of the bar. In other words, there is no disagreement among air carriers on the subject of competition by MATS. Moreover, it is the duty of the Civil Aeronautics Board in its capacity of encouraging the development of air transportation to attempt to resolve this problem in the interest of the civil air carriers in order to foster their healthy growth and mitigate their subsidy requirements.
>
> Senator PROXMIRE stresses the point that the airlines had cases pending before the Civil Aeronautics Board. Insofar as my client was concerned, its cases were pending only in the sense that a lawyer always has cases pending in court. Yet, this fact alone has never been construed to insulate judges from conversations with lawyers about matters of general interest to the bench or bar. Indeed, from a technical standpoint, all airlines always have cases pending before the CAB. Thus, Senator PROXMIRE's alleged code of ethics would completely insulate the members of the Board from the airline industry contrary to the express provisions of the statute under which the Board operates.
>
> If Senator PROXMIRE is so concerned with preserving the judicial integrity of the Civil Aeronautics Board (and presumably the other Federal regulatory agencies) I respectfully suggest that he examine the beam in the eye of Congress before belaboring the mote in Mr. Durfee's eye. Specifically I refer to the growing practice of Congressmen to attempt to influence the votes of the members of the Civil Aeronautics Board in adjudicatory proceedings by ex parte telephone calls and letters and by personal appearances before the Board. For example, in 1957 a total of 76 Members of Congress participated in oral argument before the Board in adjudicatory proceedings and in 1958 there were 103 such appearances.[1] This practice utterly destroys the judicial integrity of the CAB; yet, it is vigorously defended by some Members of Congress, apparently on the theory that they have an inalienable right to attempt to influence decisions of the CAB in contested route cases.[2]
>
> I, for one, am getting a little weary of reading of the sanctimonious platitudes

[1] Source: Brief of CAB, p. 80, in *Eastern Air Lines, et al.* v. *C.A.B.* (271 F. 2d 752).

[2] See, for example, hearings before a subcommittee of the Committee on Interstate and Foreign Commerce, House of Representatives, 86th Cong., 1st sess. (Major Administrative Process Problems) (1959).

voiced by Members of Congress, when it is apparent that Congress has one standard of ethics for its Members and an entirely different standard for all other Government officials.

It is difficult for me to believe that a person as able and intelligent as Senator PROXMIRE is really convinced that Mr. Durfee is not qualified for the Court of Claims position. In any event, I suggest that his one-man campaign against Mr. Durfee serves no purpose other than to discourage competent men from accepting important positions in the Federal regulatory agencies.

Very truly yours,

COATES LEAR.

Mr. President, I am glad to observe that my junior associate has arrived in the Chamber.

Mr. President, it is clear, therefore, that the participation of Mr. Durfee in the inaugural flight to Mexico City was not in disregard of either the statutes of the United States or the code of ethics of the Civil Aeronautics Board. In fact, the Civil Aeronautics Board still considers such practice an important official part of its functions—I repeat: the Civil Aeronautics Board still considers such practice an important official part of its functions—and has a few weeks ago again sent some of its staff on an inaugural flight to South America.

Mr. President, in light of all this evidence, it is obvious that the practice of inaugural flights has a long national and international history. At no previous time has this practice been questioned.

I repeat: At no previous time has this practice been questioned. The participation of Mr. Durfee in such flights was not secretive—it was widely publicized. His participation was as an official representative of the Civil Aeronautics Board and of this country. He was one of many guests. This flight was not arranged to accommodate him personally, and it has never been asserted that in the disposition of any business before the Civil Aeronautics Board, Mr. Durfee was improperly influenced—I will say that my distinguished colleague has never made any such statement, either, and does not contend that Mr. Durfee was improperly influenced—to extend any favors to the airline that was his host in this inaugural flight.

THE PARTICIPATION OF MR. DURFEE AS OFFICIAL REPRESENTATIVE OF THE CIVIL AERONAUTICS BOARD IN AN INAUGURAL FLIGHT TO ROME

Mr. President, the next item I want to discuss is the participation of Mr. Durfee as official representative of the Civil Aeronautics Board in an inaugural flight to Rome.

Mr. Durfee again participated in an inaugural flight by Trans-World Airlines to Rome during the period of October 2 through October 6, 1957. Approximately 100 Americans representing education, religion, the arts, sciences, sports, business and government, also took part in this flight. During the Rome stay, Mr. Durfee, another Board member, and a member of the Board's staff, together with representatives of the State Department, conferred at length with the Italian Ministry of Aviation and other top aviation officials. They discussed, informally, the need for revision of the bilateral air agreements between the United States and the Italian Government. In addition, they also participated in the meetings of the people-to-people organization in Rome.

Again, I feel that to hold Mr. Durfee accountable for a practice inaugurated much before his term and which has generally been approved by all concerned, would be unreasonable.

The nominee has also been criticized for having his wife participate with him in the inaugural flight to Rome, Italy. She was invited. The official letter that was written included her. Yet, the participation of the nominee's wife in this inaugural flight cannot be totally divorced from the question of feminine participation in other official and semi-official functions. It is clear that in many cases the wives of officials have been guests on ceremonial flights. I have introduced the record showing that.

These wives have not only been the wives of Civil Aeronautics Board officials, but also the wives of Members of Congress, officials of other Government agencies, and the wives of foreign dignitaries. When viewed against the nature, purpose, and background of inaugural flights, I can see no impropriety in wives accompanying their husbands in such cases. Custom and usage with respect to inaugural flights has been for wives to be invited to accompany their husbands on those occasions when the wives of foreign dignitaries are invited to accompany their husbands. There is good reason why this is so. In meeting other officials and dignitaries, and being entertained by them, the presence of a wife is most helpful. Basically, the situation is no different from that which exists in any other area of foreign relations. It is customary for high ranking officials to be accompanied by their wives or other official hostesses when attending various international conferences so that the overall position of this Nation may be enhanced by an exchange of social amenities.

We all know that the President, the Vice President, and several of our Secretaries of State, have always taken their wives or other official hostesses with them on foreign travel. A good wife—and Mrs. Durfee is a good wife—is an asset under every and all circumstances. My colleague, the junior Senator from Wisconsin, knows that, because he has a good wife. In a social way, and in a business way, yes, also in a political way, this is true.

Why is it that when Senators and Representatives go on a mission they take their wives with them? Why did Foster Dulles always have his wife along? Why does the President contemplate taking his wife to Russia? It is not only that they may have a good time. The presence of these wives often contributes to the better relations between our representatives and the representatives of other countries.

Then, of course, there is another angle to taking one's wife along. Most of the wives, like my colleague's wife, are very efficient secretaries. They can handle a typewriter and take shorthand. They can get out the mail. My wife always has a typewriter along, and can get out not only the mail, but also releases and speeches that I dictate to her.

I think, Mr. President, that there was nothing improper in Mrs. Durfee's participation in the inaugural flight to Rome. I think that bringing in the wife is only another indication of a very weak argument.

THE NOMINEE'S PARTICIPATION IN A CONFERENCE OF AIRLINE EXECUTIVES AND GOVERNMENT OFFICIALS AT WHICH THE EXPENSES OF ALL PARTICIPANTS WERE PAID BY TWO AIRLINES

Mr. President, the next item is the nominee's participation in a conference of airline executives and Government officials at which the expenses of all participants were paid by two airlines.

The opposition to Mr. Durfee has charged that for 2½ days, from October 19 to 21, 1956, that Mr. Durfee, together with several other Government officials and airline executives, was the guest of the Flying Tiger Line and the Overseas National Airlines at a weekend golfing party at Pinehurst, N.C.

The idea for the weekend meeting was conceived by Mr. L. C. Burwell, Jr., vice president of the Flying Tiger Airline, whose home was at Pinehurst, N.C. The Flying Tiger Line was at the time engaged in extensive transatlantic commercial charters. Its two largest competitors in this business were Pan American and Overseas National. All three companies were, however, concerned with the competition of Military Air Transport Service in moving routine traffic that, in their opinion, should have rightly gone by commercial air carrier. The purpose of this informal meeting was to enable the airlines and Government officials to get together in order to aid in the solution of the problem.

Mr. Durfee participated at this weekend meeting. Also, present were Mr. Frank Pace, former Secretary of the Army; Mr. Juan Trippe, president of Pan American; Col. Harmar Denny, member of the Civil Aeronautics Board; Mr. Eugene Zuckert, formerly Assistant Secretary of the Air Force; Mr. Prescott, president of the Flying Tiger Line; Mr. George Tompkins, president of the Overseas National;.and General Wilson, Deputy Commander of Military Air Transport Service. General Twining, Chief of Air Staff, and Senator SYMINGTON were also invited but were unable to attend. The expenses of this meeting were shared by the Flying Tiger Line with the Overseas National Airways in order to avoid any appearance of impropriety. The approximate cost per participant in this weekend gathering was estimated at $84, the major part of which paid for the chartering of the Pullman car which brought the participants to the meeting and back.

Mr. President, in the invitation to Mr. Durfee it was specifically pointed out that the Congress had charged the Civil Aeronautics Board with the responsibility of fostering the growth of civil aviation, that the proposed meeting would bring together representatives of the competitive airlines, and should provide him with a good opportunity to "strike a blow for freedom." During this 2½-day golfing weekend the participants also had long discussions as to the ways and means of fairly allocating some of the

airlift missions of Military Air Transport Service to the civil industry.

I stress again that it was not the purpose of this meeting to aid any one particular airline. It was instead the purpose of the meeting to discuss the possibility of making a larger allocation of military airlift for all eligible commercial air carriers. This is an objective which under the Federal Aviation Act well rests within the responsibility of the Civil Aeronautics Board to foster and encourage civil and commercial aviation. The Civil Aeronautics Board has been concerned with this problem over the years, and over the past 4 years the nominee has attended numerous conferences with defense officials for this same purpose and has also testified before committees of Congress as to his efforts in this direction.

It is important that Mr. Durfee's attendance at the Pinehurst meeting be judged in the proper perspective. It is to be noted further that this meeting was given widespread publicity. It has not been claimed that any effort was made to unduly influence the attending public officials. Nor is it claimed that any of them were influenced. The object was to sit down and discuss and seek the solution of a problem, in the midst of some golfing, just as the President often consults in this manner with those with whom he associates, during a game of golf. As has already been stated, the purpose was to consider the matter of MATS taking business which should go to the commercial airlines. That is not disputed.

Mr. President, I believe that when Mr. Durfee, as member and Chairman of the Civil Aeronautics Board, has to exercise judicial functions—he must conform to the strict standards of judicial impartiality. Yet, Mr. Durfee's responsibility as Chairman of the Civil Aeronautics Board is not merely judicial. He must also exercise many other duties and responsibilities—administrative and quasi-legislative.

One of the elemental needs of Mr. Durfee's position is constant awareness of aviation problems and needs. Yet, it is clear that he would have been deprived of the necessary information for the discharge of his many functions if he was to be denied all associations with the members of the industry or the governmental agencies concerned with similar problems.

It is obvious that Mr. Durfee's participation in the Pinehurst meeting was part and parcel of his responsibility as Chairman of the Civil Aeronautics Board. This meeting was held in order to discuss problems with which the Civil Aeronautics Board is concerned and within its appropriate jurisdiction. This was in 1956. I certainly fail to see any misconduct in Mr. Durfee's taking part in this meeting. Just because a meeting is held outside the official offices of the Civil Aeronautics Board does not make such meeting improper.

MR. DURFEE'S TRAINING AND EXPERIENCE FOR AN APPOINTMENT AS A JUDGE OF THE COURT OF CLAIMS

Mr. President, the final comments I want to make concern Mr. Durfee's training and experience for an appointment as a judge of the Court of Claims.

In challenging the professional qualifications of Mr. Durfee for appointment to the Court of Claims it was argued by my colleague, the Junior Senator from Wisconsin, that Mr. Durfee had not served in Congress, he had not previously served as a judge, and he had not had any substantial experience in handling claim cases. Yet these, in my opinion, are not appropriate standards for measuring the nominee's qualifications for this important assignment. Commenting on this subject the Judiciary Committee said:

> Despite the high regard we have for Members of Congress, we totally fail to see the relevance of an elective term in Congress to the requirements of the Court of Claims. Likewise, we do not agree that a previous judicial appointment—as contrasted with the high quasi-judicial posts held by Mr. Durfee—is a necessary prerequisite for an appointment to this court.

Furthermore, an examination of the nominee's outstanding legal record indicates extensive experience in the handling of private claim cases.

The Constitution and the laws establishing and pertaining to Federal courts and to the Court of Claims do not spell out any precise qualifications to be exacted of appointees. There is no particular justification, therefore, for insisting that a nominee to the Court of Claims be possessed of such special qualifications as prior membership in Congress, prior service as a judge, or the specialization in the handling of claims. On the other hand, a nominee's competence must be judged by his overall legal experience and stature, his judicious temperament, and his record of legal fairness and integrity. In all these aspects, the nominee stands out as one who has attained the highest ranks in the legal profession.

Mr. PROXMIRE. Mr. President, does the Senator care to yield now, or does he wish to finish his statement?

Mr. WILEY. I shall be finished with my statement in a few minutes. Then I shall be glad to yield.

Mr. President, service on an independent regulatory commission, such as the Civil Aeronautics Board, requires a high degree of legal knowledge, a knowledge of administrative procedures, and a knowledge of the legal rights of business establishments subject to the jurisdiction of such agencies. It seeems entirely reasonable to conclude, therefore, that experience gained from such source is judicial in nature and pertinent to the functions of the office to which Mr. Durfee has been named.

The selection of competent persons for judicial appointments in the United States has almost invariably involved elevation of practicing attorneys to judicial positions. It would seem that the experience gained by Mr. Durfee from 25 years in the practice of law—a practice which Senator PROXMIRE himself described as "successful"—and from the resolution of the complex legal questions that confront members of independent regulatory commissions or ratemaking commissions, on which the nominee served for nearly 10 years, would equip Mr. Durfee admirably for promotion to service on the specialized court in question.

That is the judgment of the President of the United States who made the nomination and who investigated the nomination, and it is the judgment of the Attorney General, the judgment of the American Bar Association, and of many other organizations and people, as is shown in the printed RECORD. In the Committee on the Judiciary we have occasion time and time again to refer claims to that court for adjudication. So as far as we are concerned, those claims are of a nature which requires the evaluation of evidence, seeing the witnesses, and judging their integrity and ability. Let us consider the experience this man has had along these lines.

We also know that while engaged in the private practice of law Mr. Durfee served as general counsel for two banks and other important business enterprises. He had an excellent reputation as a trial attorney specializing in tort cases before the courts of northern Wisconsin.

Mr. President, in the exercise of his functions as Chairman of the Civil Aeronautics Board it was Mr. Durfee's responsibility to evaluate and determine contested legal cases involving great economic advantages and valued in tens of millions of dollars. Such experience provides the nominee with an excellent preparation for the high position to which he is now nominated.

That is the one issue that was raised, that he was not accustomed to dealing with big things. Here is the answer. It is very clear. It shows that in one instance $15 million was involved.

What are the functions of the court to which Mr. Durfee is nominated? The Court of Claims has jurisdiction over all claims arising out of any contract with the Federal Government and its agencies, and also jurisdiction to hear and determine claims for damages, other than tort actions, provided the claimants would have the right to sue if the United States were not immune to such suits. Here, in Mr. Durfee, we have a prominent lawyer of my State whose many legal abilities have been highly praised by the bench and bar of Wisconsin while he was in the general practice of law for 25 years. Subsequently he acted as chairman of an important State regulatory commission and an important Federal regulatory agency. In the exercise of these functions he had to make decisions in matters involving millions of dollars, including complicated claims and complex tax questions.

CONCLUSION

Certainly, the Members of the Senate, and particularly the lawyer Members, know that the successful lawyer in 25 years of general practice has accumulated highly specialized skills in handling claims. The same basic legal principles prevail in the cases that come before the Court of Claims. There are literally hundreds of lawyers who have successfully handled claims in the Court of Claims without being specialists or without confining their practice to this particular court. I believe that Mr.

Durfee is extremely well prepared to discharge the duties of judge of this court.

The fact that the American Bar Association standing committee on the Federal judiciary, to which judicial appointments are submitted for comment, has unanimously approved the nominee would seem to provide further evidence for a determination favorable to this appointment.

I must note in conclusion that no objection to this appointment has been officially advanced by any member of the judiciary or the legal profession. Mr. Durfee's qualifications have been attested to by several authorities highly competent to appraise the qualifications of a candidate for Federal judicial office. The members of the Judiciary Committee, likewise, considered Mr. Durfee's 25 years of successful private practice and his 10 years as a member and chairman of independent regulatory and ratemaking boards as highly qualifying him for this nomination, and as being in the tradition of the outstanding experience and background of the other distinguished members of the Court of Claims.

Mr. President, I urge the speedy confirmation of James R. Durfee to the U.S. Court of Claims. I realize that the nomination of Mr. Durfee was seized by some—including some of the press—as a political issue. Yet there is no justification for such action. We have in Mr. Durfee a devoted public official—and character assassination is certainly not in the American tradition of due process and fair trial. To make a political football of the life and professional standing of a man who has demonstrated his competence, devotion, and ability is inexcusable, especially when no one can put his finger on one thing and say that the man is dishonest or that he can be influenced, and when all the evidence is to the contrary, as has been clearly demonstrated.

Mr. President, those objecting to Mr. Durfee's nomination had the opportunity to come before the Judiciary Committee and to have their objections heard. Only one such objection was heard, and that was from the junior Senator from my State.

Mr. Durfee was nominated by the President of the United States on the recommendation of the Attorney General. The American Bar Association's standing committee on the Federal judiciary was unanimous of the view that Mr. Durfee is qualified for this appointment. Several Wisconsin judges who have known Mr. Durfee over the years have written to the Senate Judiciary Committee supporting this nomination.

Mr. Durfee's record speaks for itself. For anybody now to come and totally disregard all the prior careful evaluation of Mr. Durfee's professional and personal qualifications and to undertake to try him through publicity is totally unfair. It has cut deep into the heart of Mr. Durfee and of his wife.

On the basis of all the evidence, the Senate Judiciary Committee felt that the nominee was fitted for the appointment and recommended that the Senate confirm this nomination.

I urge the speedy confirmation of James R. Durfee to the U.S. Court of Claims as a candidate of the highest personal integrity and professional accomplishments.

Mr. President, in conclusion, I should like to read the statement of the Independent Airlines Association regarding the nomination of James R. Durfee:

In response to the question as to what has been the experience of Independent Airlines Association with Mr. James R. Durfee, presently Chairman of the CAB and a nominee for the Court of Claims, I should first explain the special position of our association.

The Independent Airlines Association speaks for 20 air carriers, all of them classified by the CAB as supplemental carriers, and historically the small business element. Since the end of World War II, when our carriers were organized, predominantly by war veterans, we have been in a continuous struggle for the right to enter aviation. Not only have our members had a most difficult economic battle, with the older, route-type franchised carriers, but we have been the victims of the regulatory agencies (CAB) concerted policy to eliminate us by a process which congressional committees have repeatedly referred to as strangulation by regulation.

All this by way of introduction to our dealings with Chairman Durfee. We are pleased to report that Mr. Durfee demonstrated superior judicial and administrative capacity in the following ways:

1. He was at all times fair, and at no time indicated any prejudgment of an issue.

2. He resisted the pressures and blandishments which, in our long and often bitter experience, surrounded the Board and often influenced its policies.

3. He expedited long and difficult cases which had been languishing in the CAB for years.

4. He apparently transcended partisanship, so that when the Board divided, it was based on substantive issues and not on arbitrary party lines.

5. He demonstrated the highest character and integrity as well as ready insight into the problems of appellants and the interest of the public and the Government.

It was a most refreshing and reassuring experience for us, as small business, to encounter a Chairman, who, while he was certainly severe and uncompromising in his enforcement of regulations, acted with such eminent impartiality and honesty. While many of his decisions were not to our advantage, they were always arrived at in such a way to leave with us the feeling that we had been dealing with a public servant of the highest caliber.

This statement is entirely unsolicited. However, we are not only anxious, but feel it our duty, to express ourselves strongly in support of a man of Mr. Durfee's character and ability and proven record of public service. In behalf of the IAA, we thought it proper to make known an intimate experience with Mr. Durfee.

I yield to my junior colleague.

Mr. PROXMIRE. Mr. President, my senior colleague has made an impassioned, eloquent plea. I shall not detain the Senate very long. There are many questions and points on which we disagree. However, I recognize that the Senate desires to move along with the nomination, and I know the distinguished minority leader is waiting to make his speech.

In his prepared speech, at page 12, my colleague made the following statement:

Furthermore, an examination of the nominee's outstanding legal record indicates extensive experience in the handling of private claim cases.

This is identical with the statement he made in the committee report.

I call the attention of my colleague to the hearings, in which this precise point was raised. The nominee himself was asked by me:

The question I have raised as to your qualifications is this—and I wish that you would tell the committee if this is not true—that you have not had congressional experience; that you have not been a judge on the bench; and you have not had cases involving the kind of work that would come before the Court of Claims; to wit, tax cases or Government contract cases, or at least a substantial number of them. You have not developed the kind of experience, in other words, that the present occupants of the Court of Claims have. If you have, it would be extremely interesting to me and the members of this committee, I am sure, for you to set forth what your background has been to qualify you.

Mr. DURFEE. Prior to my past 10 years, which I have spent entirely in the regulatory field, I was engaged in the general practice of law in the county seat, a city of about 10,000 people.

I represented one of the two banks in that city. I represented the largest manufacturing corporation in that city. I represented other substantial clients.

I would not claim that I was a specialist in tax cases. I would say that I have had extensive practice and that I worked diligently and full time from 1932, when I left the office of district attorney, until 1951.

I would answer the Senator by saying that while I had experience in tax cases and in claims against the Government, not before the Court of Claims, but other courts, I did—as I said, I cannot say that I was a specialist in this kind of practice—that is correct.

It seems to me, on the basis of the nominee's own statement, that he had not had this kind of experience; that he had not tried a single case before the Court of Claims in all his law experience; that he had been an attorney in a small city of 10,000 population. So what possible basis does my colleague have for his statement:

Furthermore, an examination of the nominee's outstanding legal record indicates extensive experience in the handling of private claim cases.

Mr. WILEY. What the Senator has just read bears out the correctness of that statement. The Senator is not a lawyer; he does not know what a lawyer has to go through. I have been a lawyer for 40 years.

The nominee has practiced law. He has handled tort claims. He has handled matters involving claims of every kind, except that he did not try cases in the Court of Claims. But his general practice was such that he acquired the qualifications needed to become a judge. He has acquired the experience which comes from 25 years of active practice, representing banks, representing corporations, representing, as he undoubtedly did, labor. This means that he has handled all kinds of claims.

The junior Senator from Wisconsin is trying to be specific in relation to the Court of Claims. What is the difference between trying a claim case in a circuit court; trying a claim case in a county court; and trying a claim case in the Court of Claims?

In the matter of taxes, all of us have had some tax experience. That is one

of the types of issues which are considered by the Court of Claims. Perhaps I should not make such a statement, but despite the fact that I have not had any cases in the Court of Claims, I would not hesitate to say that my experience would qualify me to sit with those persons who have been representatives and have acquired claims experience.

Mr. PROXMIRE. I should like to pursue the question a little further. If I understand the English language—and perhaps I do not—the nominee himself answered:

I would answer the Senator by saying that while I had experience in tax cases and in claims against the Government, not before the Court of Claims, but other courts, I did—as I said, I cannot say that I was a specialist in this kind of practice—that is correct.

My point was aimed at ascertaining whether the nominee had the kind of qualifications which the present members of the Court of Claims have, and had before they were appointed. In every instance, they had pertinent, extensive experience relating to the kind of work with which the Court of Claims deals.

My point is that the nominee has not had such experience. I suppose there are 50,000 lawyers in the United States who have had some kind of experience in handling tax cases occasionally, and handling claims, now and then. But no one would argue that because they have practiced law for 20 or 25 years they would be qualified to sit on a court which handles technical matters, a court which is as demanding as the Court of Claims, and which has as heavy a caseload, as I showed yesterday, as the Court of Claims has.

The nominees to this court who have been approved by the Senate have, as I have said, in every case not merely practiced law in a town of 5,000, 10,000, or 20,000, but have had specific experience and background which particularly qualify them. This nominee does not have any experience of that sort.

Mr. WILEY. Mr. President, will the Senator yield?

Mr. PROXMIRE. The Senator has the floor. I have concluded my questions.

Mr. WILEY. I certainly must disagree with the Senator. I think his question answers itself. I appreciate the astuteness of my associate. He is very good, but he is not good enough to get by with this kind of argument, because the qualifications of a man are largely a matter of development when he gets to work.

Since the junior Senator from Wisconsin has come to the Senate, I have observed that he has developed considerably along certain lines.

When a man starts in new employment, if he has the background which Durfee has, and he gets his teeth into the work, he can do what the position requires.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD certain statements concerning Mr. Durfee's qualifications for the position to which he has been nominated.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF MR. DURFEE

We in the regulatory field are sometimes told that we should at all times maintain the same judicial aloofness from the industry which we regulate as judges do from litigants. As to matters involved in adjudication following hearings on the record, this is correct. But the Board is not entirely a court. It is also a quasi-legislative body, with powers to make, as well as judge, law in aviation, within the rulemaking limits delegated to it by Congress. In defining these powers of the Board, Congress at the outset directs the Board to encourage and develop an air transportation system properly adapted to meet the present and future needs of the foreign and domestic commerce of the United States, of the postal service, and of the national defense. In essence, we are directed to promote aviation. There are those who criticize these dual quasi-legative—quasi-judicial functions of the Board as imposing inconsistent standards of ethical conduct, but that's the law under which the Board operates.

General speaking, the courts construe and apply the statutory law as Congress writes it in arriving at their judgments. Courts are not expected to promote or develop aviation or any other business. The Board is not only expected to do this; it is directed and required to do it by Congress. We certainly do not go about this promotion and development of aviation in the aloof atmosphere of a court or the strict isolation of a judge's chambers. We work with this industry every day to encourage and develop aviation. That's a very important part of the job that Congress has directed us to do.

As an example, let us consider the promotion and development of U.S. international air commerce. We, and the State Department negotiate and bargain for international air routes with foreign countries. In this bargaining process, we consult constantly with our own international carriers, since we are, in a sense then, acting as their negotiators, not their judges. When the bargaining is over and we have a bilateral air agreement with another country, our designated carrier or carriers are authorized to fly an inaugural round-trip flight over the routes involved, and this authority may be extended to a new type of service. The other country concerned usually grants the same inaugural flight authority to its carriers. The airline invites the guests which usually include U.S. Government officials, foreign government officials, Members of Congress, city and State officials, airline officials both U.S. and foreign, and members of the press.

These inaugural flights are intended to promote international goodwill and cooperation with the foreign countries involved and to develop and encourage U.S. air travel as directed by Congress. These flights are widely publicized both at home and abroad. The arrival in the other country of destination is commonly marked by diplomatic ceremonies, receptions, banquets, and other entertainment by the airlines and Governments of both countries. Usually, the members of the Board and staff participating in the flight will take this excellent opportunity to confer further with the aviation authorities of the other country to encourage and develop future air commerce.

For example, I refer to the case of the TWA New York to Rome inaugural nonstop on October 2, 1957, when in addition to meetings of the people-to-people organization in Rome, another Board member and I and a member of our staff, together with representatives of the State Department twice conferred at length with the Italian Ministry of Aviation and other top Italian aviation officials. We discussed informally the then pending consultations for revision of our bilateral air agreement with the Italian Government, in the interests of our country and both our certificated international carriers to Italy—TWA and Pan American.

The Eastern inaugural nonstop New York to Mexico City on September 15, 1957, as General Adams said yesterday, marked the beginning of a new and better era in our international aviation relations with Mexico. For 10 years we had been vainly trying to get the Mexican Government to give foreign air carrier permits to all of the U.S. carriers holding a certificated authority to operate routes from the United States to Mexico.

We had just obtained four new nonstop routes from the United States to Mexico City for a 2-year period. We were desirous of continuing this improved relationship with Mexico. The members of the Board present conferred with the Mexican Minister of Transport and other high Mexican aviation officials with this objective. We participated in several official receptions, dinners, and other entertainment furnished by both the Mexican and United States officials and airlines. I believe that by this exchange of social amenities and conferences, we did accomplish substantial improvement in our international aviation relations with Mexico, not just for Eastern Airlines but for all our U.S. carriers to Mexico.

This long established practice of inaugural flights has been recognized for its great promotional value to U.S. aviation and international relations by the press, by the Congress, and by the Board.

[From the Green Bay Press-Gazette, Jan. 29, 1960]

SENATOR PROXMIRE'S ATTACK ON DURFEE

Senator PROXMIRE's objection to Senate confirmation of James R. Durfee, named to the U.S. Court of Claims by President Eisenhower, sounds rather superficial and political. Mr. Durfee, a former practicing lawyer in Antigo, Wis., is widely known as a fine citizen and public servant in Wisconsin.

Durfee is a past commander of the Wisconsin Department of the American Legion. He had served in many civic offices in his hometown and served Wisconsin well as chairman of the Wisconsin Public Service Commission before going to Washington as Chairman of the Civil Aeronautics Board.

Durfee's record as Chairman of the CAB is as well known to President Eisenhower and Senator WILEY as it is to Senator PROXMIRE. Yet neither the Senator nor the President found any reason why he could not support Mr. Durfee for the position on the court. E. R. Quesada, Administrator of the FAA, who of necessity had many official contacts with Durfee and the CAB, testified that Durfee was "a man of the highest integrity, always helpful, sincere, and, in my opinion, a very fine public servant."

Senator PROXMIRE, during his term of office, has followed a very strict rule of accepting no gifts of any kind that might entail future obligations from him. That is a very good rule and one that might be adopted by all people in public office. But it is possible to go to unnecessary extremes in following such a rule, as when Senator PROXMIRE returned a small package of aluminum foil to another Member of Congress who had arranged to have it sent to him, presumably as an advertising stunt by a hometown industry.

Senator PROXMIRE objected at the hearing to Durfee's confirmation because he said Durfee had unethically accepted unusual hospitality from airlines which had cases pending before the CAB. On two occasions he said that Durfee had taken trips as a guest of airlines, one to Mexico and one to

Rome. On another occasion he said he had spent 2½ days at Pinehurst, N.C., as a golfing party guest of the Flying Tigers Airlines and of the Overseas National Airlines.

Senator WILEY holds that the trips Durfee made as a guest of the airlines on inaugural flights were perfectly proper since any person serving as head of the CAB would be required to make appearances at such events. It is quite common of course for airlines inaugurating new routes to have prominent officials aboard on the first trip. This was the case in Durfee's trip to Mexico and also on the trip to Rome. As for the days spent at Pinehurst it was explained that the meeting was arranged by the two airlines for the purpose of exploring the possibility of curtailment of competition from military air transport service. There were both airline officials and Government officials at the meeting which was evidently paid for by two competing lines.

The objections were based on pretty thin ground and we are happy to note that the Senator is not going to make the claim that Durfee is "personally obnoxious" to him. This may indicate that the Senator made his objections as a political gesture but intends to let the nomination go through if the Republicans press for it.

EXCERPTS OF STATEMENT BY SENATOR MONRONEY ON SENATE FLOOR, APRIL 14, 1960

In the case of Jim Durfee I feel that I have a clear duty to the Senate to support his nomination and to comment on some of the charges which have been made against him. I do not purport to judge whether his background and experience properly equip him in a professional way for service on the Court of Claims. This is a matter which has been carefully considered by the Committee on the Judiciary, certainly the Members of the Senate best able to make such a judgment, and that committee has unanimously concluded that the nominee is well fitted for the office to which he has been named.

Rather, my responsibility in connection with this nomination arises from the fact that questions have been raised as to the propriety of certain conduct by the nominee during the time that he has been Chairman of the Civil Aeronautics Board. During the entire 4 years of his service on the Board, I have served as chairman of the Aviation Subcommittee of the Committee on Interstate and Foreign Commerce, and therefore have probably had more direct contact with James Durfee and a more adequate basis on which to evaluate his service as Chairman of the Board than any other Member of the Senate.

I can say to Senators in all sincerity that that service has been distinguished by Mr. Durfee's diligence, courage, and fairness. I know James Durfee as a man of great integrity and great dedication. I know of no public official whose elevation to the Federal judiciary I could more enthusiastically support.

I know of no member of the Board during my experience who has succeeded more brilliantly in fulfilling this most difficult role. I know of no single carrier or group of carriers who has ever expressed, either publicly or privately to me, the slightest misgivings as to James Durfee's integrity or fairness.

Chairman Durfee has aptly described the role of the Board in the hearings on the confirmation of his nomination:

"We in the regulatory field are sometimes told that we should at all times maintain the same judicial aloofness from the industry which we regulate as judges do from litigants. As to matters involved in adjudication following hearings on the record, this is correct. But the Board is not entirely a court. It is also a quasi-legislative body, with powers to make, as well as judge, law in aviation, within the rulemaking powers delegated to it by Congress.

"In defining these powers of the Board, Congress at the outset directs the Board to encourage and develop an air transportation system properly adapted to meet the present and future needs of the foreign and domestic commerce of the United States, of the postal service, and of the national defense. In essence, we are directed to promote aviation in these three directives. There are those who criticize these dual quasi-legislative—quasi-judicial functions of the Board as imposing inconsistent standards of ethical conduct, but, Mr. Chairman, that is the law under which the Board operates.

"Generally speaking, the courts construe and apply the statutory law as Congress writes it in arriving at their judgments. Courts are not expected to promote or develop aviation or any other business. The Board is not only expected to do this, it is directed and required to do it by Congress.

"We certainly do not go about this promotion and development of aviation in the aloof atmosphere of a courtroom or the strict isolation of a judge's chambers. We work with this industry every day to encourage and develop aviation. That is a very important part of the job that Congress has directed us to do."

[From the Dallas Morning News, Jan. 31, 1960]

MR. DURFEE ON BOARD

Whether James R. Durfee is the best possible nominee for the Federal court of claims bench, the News, of course, is not in position to say. But charges brought against Durfee's confirmation do not, on their face, carry much weight.

Senator WILLIAM PROXMIRE charges that Durfee traveled by air three different trips as the guest of an airline. Two of the trips were inaugural—new service—trips abroad. Another was a trip to Pinehurst for weekend golfing. Undoubtedly the airlines believed that they would get publicity out of these trips and undoubtedly they did get it. (Thanks to Senator PROXMIRE, they are still getting it, for that matter.)

It appears to the News that Mr. Durfee, who took these trips as an official member of the Civil Aeronautics Board, owed it to his position to fly whenever convenient or necessary in order to familiarize himself with the duties of his office. Either Congress ought to appropriate large sums for air travel by CAB members or it ought to countenance travel on these promotional flights.

EXCERPT FROM REPORT ON NOMINATION OF JAMES R. DURFEE TO THE COURT OF CLAIMS

1. THE PARTICIPATION OF THE NOMINEE AS OFFICIAL REPRESENTATIVE OF THE CIVIL AERONAUTICS BOARD IN INAUGURAL FLIGHTS TO MEXICO CITY AND ROME

It was alleged at the nomination hearings that the nominee on two separate occasions in 1957 was a guest of commercial airlines on their inaugural flights to Rome and to Mexico City, and that such participation was in conflict with his position as Chairman of the Civil Aeronautics Board. Attention was called to the "Principles of Practice of the Civil Aeronautics Board," sometimes called the code of ethics, which provide in section 300.4 that "it is particularly improper that persons interested in the business of the Board should provide unusual hospitality to the Board or its staff; nor should such hospitality be answered."

Shortly after a new nonstop route from New York to Mexico City was approved for Eastern Airlines, the nominee, from September 15 to September 18, 1957, was the guest of the airlines on a special inaugural flight to Mexico City and back. Fifty-four other guests also participated in this flight. It has been implied that the nominee's participation in this flight was ethically improper due to the fact that at about that time there were some 76 applications by Eastern Airlines pending with the Civil Aeronautics Board.

The nominee again participated in an inaugural flight of Trans World Airlines to Rome during the period of October 2 through October 6, 1957. Approximately 100 Americans, representing education, religion, the arts, sciences, sports, business, and government, also took part in this flight. The propriety of the nominee's participation is again questioned due to the fact that at that time Trans World Airlines is reported to have had 16 applications pending before the Civil Aeronautics Board.

It is thought that in simple justice and to determine the weight to which these charges are entitled, it is necessary to understand the meaning and general nature of inaugural flights.

Inaugural flights are utilized to mark the initiation of new air services. Such new air services are of great interest and benefit, not only to the commercial carriers involved but also to the nations they serve. Such new services are the product of long negotiations. The Civil Aeronautics Board plays an important role in making such new services possible. An inaugural flight, therefore, marks not only an expansion of U.S. commercial air services, but also the successful completion of a Civil Aeronautics Board undertaking.

The Civil Aeronautics Board is directed by Congress to encourage the development of the air-transportation system of this country. In addition to quasi-judicial functions, the Board also has the duty to negotiate for international air routes with foreign countries. In this bargaining process, the Board acts as a negotiator for the carriers. When this bargaining is completed and a bilateral agreement is signed with another country—the inaugural flights over the routes involved is a common international practice. These inaugural flights are intended to promote international good will. The arrival of such flights in the country of destination is commonly marked by diplomatic ceremonies and receptions. Usually, the members of the Civil Aeronautics Board and staff participating in the flight also utilize the opportunity to confer with aviation authorities of the other country.

It must be stressed that inaugural flights are accompanied by a great amount of publicity, and each one of the inaugural flights in which the nominee participated received widespread news coverage. In fact, the nominee's participation in these two inaugural flights, along with other members of the Board and its staff, was announced by press releases issued by the Civil Aeronautics Board. An analysis of guests lists in recent years shows that, in addition to members of the Civil Aeronautics Board and staff, such flights have also included Members of Congress, congressional staffs, other Federal officials, foreign officials, and members of the news media.

Participation in inaugural flights has been continuously and officially approved by the Civil Aeronautics Board since 1940. The airlines involved are required to file with the Civil Aeronautics Board a list of all guest passengers in such flights. They are not permitted to charge any guest on an inaugural flight. Shortly after the Civil Aeronautics Board adopted its code of ethics in 1951, it very specifically held that participation in inaugural flights was not within the prohibitions of the code.

The propriety of participation by Government officials in inaugural flights was also looked into by the House Subcommittee on Legislative Oversight. In response to a questionnaire which was addressed to all members of the six regulatory agencies being investigated by the subcommittee, the nominee on October 14, 1957, provided the subcommittee with complete details of the two inaugural flights referred to above. Later, he also testified before this subcommittee on

four different occasions. At no time was he questioned on the subject of inaugural flights and no reference is made to this matter in the subcommittee reports. In a letter to Senator WILEY, dated February 20, 1960, Representative OREN HARRIS, chairman of the subcommittee, said with regard to the nominee's participation in these inaugural flights:

"The committee considered this information in the course of its investigation. The facts, of course, speak for themselves. On the basis of these facts and our committee investigation, the committee did not charge Mr. Durfee with any impropriety. Insofar as I know, the personal and professional conduct of Mr. Durfee has not been questioned by any reliable sources."

To ascertain whether the participation of Board members and staff in inaugural flights was properly undertaken, the Civil Aeronautics Board also wrote to the Comptroller General for his opinion on March 19, 1958. While in an earlier opinion the Comptroller General expressed the view that the practice of free transportation on inaugural flights is prohibited by law, he later concluded in his reply to the Civil Aeronautics Board that—"We have no authority to make a binding determination as to the proper interpretation of this statute and from the standpoint of the audit functions of this Office I have no reason to question your determination as to the continued official nature of the flights mentioned or the participation therein by officials of the Civil Aeronautics Board, or their staffs, under the circumstances related. While in my opinion such action would not be a violation of 18 U.S.C. 1914, that is, as stated above, a matter for final determination by the Attorney General or the courts."

It appears, therefore, that the participation of the nominee in the two inaugural flights to Mexico City and Rome was not in disregard of either the statutes of the United States or the code of ethics of the Civil Aeronautics Board, as generally interpreted. In fact, the Civil Aeronautics Board still considers such practice an integral part of its functions, and has as recently as 2 weeks ago sent some of its staff on an inaugural flight to South America.

In light of all this evidence it is the conclusion of this committee that the practice of inaugural flights has a long national and international history and that this is the first time that this practice has ever been questioned. The participation of the nominee in such flights was widely publicized. He was one of many guests. These flights were not arranged to accommodate him personally. It has never been asserted that in the final disposition of any of the Civil Aeronautics Board business, the nominee was improperly influenced to extend any favors to the airlines that were hosts in these inaugural flights. To hold the nominee accountable for a practice inaugurated much before his term and which has been generally approved in the past, would be unreasonable. If it was the desire of Congress that such practices be discontinued, Congress has certainly had the opoprtunity to so direct. We fail to find in the nominee's participation in such inaugural flights any elements that are morally reprehensible.

2. THE NOMINEE'S PARTICIPATION IN A CONFERENCE OF AIRLINE EXECUTIVES AND GOVERNMENT OFFICIALS AT WHICH THE EXPENSES OF ALL PARTICIPANTS WERE PAID BY TWO AIRLINES

The opponents of this nomination have charged that for 2½ days, from October 19 to October 21, 1956, the nominee, together with several other Government officials and airline executives, was the guest of the Flying Tiger Line and the Overseas National Airlines at a weekend golfing party at Pinehurst, N.C.

The idea for the weekend meeting was conceived by Mr. L. C. Burwell, Jr., vice president of the Flying Tiger Airlines. The Flying Tiger Line was at the time engaged in extensive transatlantic commercial charters. Its two largest competitors in this business were Pan American and Overseas National. All three companies were, however, concerned with the competition of Military Air Transport Service in moving routine traffic that, in their opinion, should have rightly gone by commercial air carrier. The purpose of this informal meeting was to enable the airlines and Government officials to get together in order to aid in the solution of the problem.

The nominee participated at this weekend meeting. Also present were Mr. Frank Pace, former Secretary of the Army; Mr. Juan Trippe, president of Pan American; Col. Harmar Denny, member of the Civil Aeronautics Board; Mr. Eugene Zuckert, formerly Assistant Secretary of the Air Force; Mr. Prescott, president of the Flying Tiger Line; Mr. George Tompkins, president of the Overseas National; and General Wilson, Deputy Commander of Military Air Transport Service. General Twining, Chief of Air Staff, and Senator Symington were also invited but were unable to attend. The expenses of this meeting were shared by the Flying Tiger Line with the Overseas National Airways in order to avoid any appearance of impropriety. The approximate cost per participant in this weekend gathering was $84, the major part of which paid for the chartering of the pullman car which brought the participants to the meeting.

In the invitation to the nominee it was specifically pointed out that the Congress had charged the Civil Aeronautics Board with the responsibility of fostering the growth of civil aviation, that the proposed meeting would bring together representatives of the competitive airlines, and should provide him with a good opportunity to "strike a blow for freedom." During this 2½-day golfing weekend the participants also had long discussions as to the ways and means of fairly allocating some of the airlift missions of Military Air Tranport Service to the civil industry.

It was not the purpose of this meeting to aid any one particular airline. It was instead the purpose of this meeting to discuss the possibility of making a larger allocation of military airlift for all eligible commercial air carriers. This is an objective which under the Federal Aviation Act does well rest within the responsibility of the Civil Aeronautics Board—to foster and encourage civil and commercial aviation. The Civil Aeronautics Board has been concerned with this problem over the years, and the nominee has attended, over the past 4 years, numerous conferences with defense officials for this same purpose and has also testified before committees of Congress as to his efforts in this direction.

The nominee's attendance at the Pinehurst meeting must, therefore, be judged in the proper perspective. It is to be noted further that this meeting was given widespread publicity. It has not been claimed that any effort was made to unduly influence the attending public officials.

The nominee's participation in this trip was fully reported by him to the House Committee on Legislative Oversight in October 1957, the same as the two inaugural flights. The statement of Chairman Harris, heretofore referred to, that the committee did not charge the nominee with any impropriety and that his personal and professional conduct had not been questioned by any reliable sources would, therefore, also refer to the nominee's participation in this trip.

It is the view of this committee that it was incumbent upon the nominee in the exercise of his judicial functions to conform to the strict standards of judicial impartiality. Yet, the nominee in his function as Chairman of the Civil Aeronautics Board, was also endowed with other duties and responsibilities. One of the elemental needs of his position was constant awareness of aviation problems and needs. Yet, it is clear that the nominee would have been deprived of the necessary information for the discharge of his many functions if he was to be denied all personal associations with the members of the industry or the governmental agencies concerned with similar problems.

It is certainly not within the jurisdiction of this committee to interpret the Civil Aeronautics Board "code of ethics," yet there is nothing in the evidence concerning this meeting which would raise any question in the minds of the members of this committee as to the propriety of the nominee's conduct.

3. THE NOMINEE'S TRAINING AND EXPERIENCE FOR AN APPOINTMENT AS A JUDGE OF THE COURT OF CLAIMS

In challenging the professional qualifications of the nominee for appointment to the Court of Claims it has been argued that he had not served in Congress, he had not previously served as a judge, and he had not had any substantial experience in handling claim cases. Yet these, in the opinion of this committee, are not appropriate standards for measuring the nominee's qualifications for this important assignment. Despite the high regard we have for Members of Congress, we totally fail to see the relevance of an elective term in Congress to the requirements of the Court of Claims. Likewise, we do not agree that a previous judicial appointment—as contrasted with the high quasi-judicial posts held by the nominee—is a necessary prerequisite for an appointment to this court. Furthermore, an examination of the nominee's outstanding legal record indicates extensive experience in the handling of private claim cases.

Inasmuch as the Constitution and the laws establishing and pertaining to Federal courts and to the Court of Claims do not spell out any precise qualifications to be exacted of appointees, there would seem no particular justification for insisting that a nominee to the Court of Claims be possessed of such special qualifications as prior membership in Congress, prior service as a judge, or the specialization in the handling of claims. On the other hand, a nominee's competence must be judged by his overall legal experience and stature, his judicious temperament, and his record of legal fairness and integrity. In all these aspects, the nominee stands out as one who has attained the highest ranks in the legal profession.

In view of the fact that service on an independent regulatory commission, such as the Civil Aeronautics Board, requires a high degree of legal knowledge, a knowledge of administrative procedures, and a knowledge of the legal rights of business establishments subject to the jurisdiction of such agencies—it seems entirely reasonable to conclude that experience gained from such source is judicial in nature and pertinent to the functions of the office to which the appointee has been named.

Furthermore, the selection of competent persons for judicial appointments in the United States has almost invariably involved elevation of practicing attorneys to judicial positions. It would seem that the experience gained by the nominee from 25 years in the practice of law—a practice which Senator PROXMIRE himself described as "successful"—and from the resolution of the complex legal questions that confront members of independent regulatory commissions or ratemaking commissions, on which the nominee served for nearly 10 years, would equip the nominee admirably for promotion to service on the specialized court in question.

While engaged in the private practice of law the nominee served as general counsel for two banks and other important business enterprises. He had an excellent reputation as a trial attorney specializing in tort cases before the courts of northern Wisconsin.

In the exercise of his functions as Chairman of the Civil Aeronautics Board it was his responsibility to evaluate and determine contested legal cases involving great economic advantages and valued in tens of millions of dollars. Such experience provides the nominee with an excellent preparation for the high position to which he is now nominated.

The fact that the American Bar Association standing committee on the Federal judiciary, to which judicial appointments are submitted for comment, has unanimously approved the nominee would seem to provide further evidence for a determination favorable to this appointment.

We must note in conclusion that no objection to this appointment has been officially advanced by any member of the judiciary or the legal profession. The nominee's qualifications have been attested to by several authorities highly competent to appraise the qualifications of a candidate for Federal judicial office. The members of the Judiciary Committee, likewise, consider the nominee's 25 years of successful private practice and his 10 years as a member and chairman of independent regulatory and ratemaking boards as highly qualifying him for this nomination, and as being in the tradition of the outstanding experience and background of the other distinguished members of the Court of Claims.

CONCLUSION

We find the nominee well fitted for the office to which he has been named. We find no merit in the objections that have been raised against the appointment.

Accordingly, it is recommended that the Senate confirm the nomination of James R. Durfee to be a judge of the Court of Claims.

[From the Antigo Journal]

NEW HONOR FOR DURFEE

James R. Durfee, recently nominated to be judge of the U.S. Court of Claims at Washington, D.C., is a shining example of a small-town boy who made good. Antigo and the State of Wisconsin can be proud of his almost meteoric rise.

Durfee has achieved national prominence within the span of less than 10 years. At the turn of the present decade, he was practicing law in Antigo. He is now Chairman of the Civil Aeronautics Board and will become a member of the Court of Claims when the Senate confirms President Eisenhower's appointment.

Durfee is well known to a great many people in Wisconsin through his service for one term as commander of the Wisconsin Department of the American Legion and later as a member and then chairman of the Wisconsin Public Service Commission.

In these posts, as well as in many other civic undertakings, Durfeee has made a fine record.

A native of Oshkosh and a 1926 graduate of the Marquette University law school, Durfee opened his law practice in Antigo in 1927. He took an active role in community and State affairs and soon became well known throughout Wisconsin.

In 1950, Durfee was appointed by then Governor Kohler to membership on the public service commission and 2 years later became chairman of the commission. He compiled such a fine record that he was selected by President Eisenhower for the chairmanship of the Civil Aeronautics Board where he has served since April 1956.

The Civil Aeronautics Board is an independent Federal agency charged with broad responsibilities for almost everything that goes on within civil aviation in the United States. The Chairman of the CAB has a big job and Durfee performed so capably that he has been chosen for a new and higher position. His nomination to the Court post was strongly supported by Republican Senator ALEXANDER WILEY, of Wisconsin, who stated that Durfee has "demonstrated his ability in a position of high government trust and is well equipped for the court position."

Nomination for a Federal post doesn't always mean certain appointment. Such posts are filled by the President with the advice and consent of the Senate and, under the policy of senatorial courtesy, one Senator generally can prevent confirmation of a nominee by simply making it known that the person is "personally objectionable and obnoxious" to him.

Whether Senator WILLIAM PROXMIRE, of Wisconsin, a Democrat, will find Durfee objectionable remains to be seen but it is probable that during the weeks prior to the formal nomination the senatorial amenities have been complied with and that the slate is clear for confirmation.

HOW TO LOSE VOTES

Senator WILLIAM PROXMIRE, the glib Wisconsin Democrat who has irritated so many of his own colleagues, certainly won no friends and influenced no people by delaying Senate confirmation of James R. Durfee, appointed by President Eisenhower to the U.S. Court of Claims.

Under the pretext of wanting more time to investigate the nominee, Senator PROXMIRE succeeded in putting off Senate action until possibly early next year. Senator PROXMIRE said Tuesday that Senator EASTLAND, Democrat, of Mississippi, chairman of the Judiciary Committee, has agreed to postpone the hearing scheduled today until after the first of the year. Senator EASTLAND himself wouldn't say how long the delay would last.

Regardless of the time factor, the very fact that the Durfee nomination has been held up won't sit easily with many persons in Wisconsin. Durfee, as an Antigo attorney, as a member and later chairman of the Wisconsin Public Service Commission, as one-time commander of the Wisconsin Department of the American Legion, and as a former member of the board of governors of the Wisconsin State Bar, has earned wide friendship in the State and the Proxmire slur won't soon be forgotten.

It is strange that Senator PROXMIRE is the only senatorial Member who thought it necessary to investigate more fully the Durfee nomination. As a Wisconsinite, he should be acquainted with Durfee's fine record in the offices he has held and in State and community affairs. As a Senator, he should be cognizant of Durfee's achievements at his present position as Chairman of the Civil Aeronautics Board.

By his own action, Senator PROXMIRE has admitted he isn't too well aware of what is going on right under his own nose.

Mr. WILEY. Mr. President, I yield the floor, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, I should like to ask the distinguished junior Senator from Wisconsin whether he proposes to discuss the pending nomination any further; and, if so, for how long?

Mr. PROXMIRE. Yes, I do; I intend to discuss the pending nomination for about 15 or 20 minutes.

Mr. DIRKSEN. The reason for the inquiry is that several Senators wish to take planes this afternoon. I do not propose to detain the Senate very long; and I thought that if we could contrive a vote on the nomination by 3 o'clock, that would give these Members of the Senate an opportunity to vote before they go to the airport.

Mr. PROXMIRE. I shall do my very best to cooperate; and if he takes half an hour, I see no reason why I could not finish in much less time than that.

Mr. DIRKSEN. I shall not take more than half an hour, and probably less than that.

Mr. MANSFIELD. Mr. President, will the Senator from Illinois yield?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. I should like to point out that, in view of the many committee meetings being held this afternoon, we would also have to have a quorum call, in order to get Senators from the various committee rooms into the Chamber in time to vote.

Mr. DIRKSEN. Mr. President, I was going to ask the minority staff to alert the Members to the fact that there would be a record vote by or possibly before 3 o'clock.

Mr. MANSFIELD. Mr. President, if the Senator from Illinois will yield, I ask the majority attachés to do the same, insofar as the majority Members are concerned. I wish they would be notified to be here by 3 o'clock, for the vote.

Mr. DIRKSEN. Mr. President, the only reason for intruding myself into this discussion is to be sure that a complete record in behalf of the nominee is made.

First, I would point out that before the nomination came to the Senate it had careful attention by the President and the White House Staff.

At this point I would insert in the RECORD a letter, dated April 9, addressed to the distinguished junior Senator from Wisconsin, and signed by Gerald D. Morgan, the Deputy Assistant to the President. The letter touches on this matter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The Honorable WILLIAM PROXMIRE,
U.S. Senate, Washington, D.C.

DEAR SENATOR PROXMIRE: This will acknowledge receipt of your letter of April 7 addressed to the President, with relation to his submission of the nomination of James Durfee to the U.S. Court of Claims. All of the facts which you relate were known to the President at the time he submitted his nomination of Mr. Durfee to the Senate. According to the March 7, 1960, report of the Senate Judiciary Committee in its consideration of the nomination of Chairman Durfee, all of the matters contained in your letter to the President were considered with care, and somewhat exhaustively, by that committee.

Following the hearing and consideration of these matters, Mr. Durfee's nomination was unanimously reported to the Senate. It would seem that any possible questions which could be raised as to the matters concerning you which you relate in your

letter have been thoroughly considered and are a part of this report. After discussing and carefully considering all of the facts in connection with the matter the Senate Judiciary Committee, before which you yourself testified on the very subject matter in question, unanimously found:

"It is certainly not within the jurisdiction of this committee to interpret the Civil Aeronautics Board 'Code of Ethics,' yet there is nothing in the evidence concerning this meeting which would raise any question in the minds of the members of this committee as to the propriety of the nominee's conduct."

In view of the foregoing the President must decline to accede to your request.

Sincerely,

GERALD D. MORGAN,
The Deputy Assistant to the President.

Mr. DIRKSEN. Mr. President, I need refer to only one or two sentences in the letter.

The first is this:

All of the facts which you relate were known to the President at the time he submitted his nomination of Mr. Durfee to the Senate.

That indicates that the White House had full knowledge of all the facts involved.

And one other sentence, as follows:

Mr. Durfee's nomination was unanimously reported to the Senate.

And that is quite correct.

But, Mr. President, I shall let the letter speak for itself.

Second. As in the case of all other nominations, this nomination received a check by the FBI; and it could not have gotten to the Senate floor unless there was a clear record by the Federal Bureau of Investigation, because that is almost routine in the Judiciary Committee. Those reports are sent to the chairman, and he has an opportunity to examine them. Under the Judiciary Committee rule, he reports to the other members of the committee whether the file is clear.

Third. Notice of the nomination was published in the CONGRESSIONAL RECORD, in accordance with the rule.

Next, only three witnesses appeared before the committee, in addition to Mr. Durfee himself. Two of them came to testify in his behalf. One came to testify against him; that was the distinguished junior Senator from Wisconsin [Mr. PROXMIRE].

This nomination received attention in the subcommittee; it was the subject of a unanimous report by the full committee; and I wish to say that the report is not a report by the senior Senator from Wisconsin [Mr. WILEY]—as was indicated here, yesterday. It is a report from the Judiciary Committee of the U.S. Senate, and it was unanimous. So that is the first thing to be said in behalf of the nominee.

Furthermore, there was approval by the President, with full knowledge; and there was approval by the FBI; and there was approval by the subcommittee; and there was approval by the full committee.

Confirmation of the nomination is opposed by the distinguished junior Senator from Wisconsin [Mr. PROXMIRE]; and he made his case before the Judiciary Committee on January 25.

This morning, I noticed in the press some statement about "pressure." Well, Mr. President, all I can say is that after his appearance, I received a letter, dated January 28, from the junior Senator from Wisconsin [Mr. PROXMIRE]; and in the letter he pointed out his opposition to the nominee.

The last sentence of his letter reads as follows:

I do, however, vigorously oppose him and I earnestly hope that you will do so too.

Sincerely,

Bill,
WILLIAM PROXMIRE,
U.S. Senator.

But I think it is fair to assume that this letter went to all members of the Judiciary Committee; and, for aught I know, it went to all Members of the Senate. I do not mind the pressure; I am delighted to have it. So I want the letter to be a part of my remarks in the RECORD; therefore, at this time I submit it for inclusion in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON BANKING AND CURRENCY,
January 28, 1960.

The Honorable EVERETT MCKINLEY DIRKSEN,
U.S. Senate, Washington, D.C.

DEAR EV: For the first time since I've been in the Senate—and I hope the last time—I am as a Wisconsin Senator opposing the confirmation of a Wisconsin man to a Federal appointment. I am doing this reluctantly, but I feel very strongly about it.

I've appeared before a subcommittee of the Judiciary Committee to state the reasons for my opposition to James Durfee's nomination for the Court of Claims. (He is now CAB Chairman.) Very quickly, my reasons for objection are these:

First. Durfee is not qualified for the job.

The Court of Claims primarily handles tax and contract claims against the Government. The classic background for the court has been: (1) Actual experience in the courts on tax or claim work: Durfee has none; (2) experience on the bench as a judge: Durfee has not been a judge; (3) experience in Congress (because this court has taken over constitutional responsibilities originally imposed on Congress): Durfee has not served in Congress.

All of the present Court of Claims judges have good technical qualifications. Durfee is 63 years old. Three of the four judges remaining on the court are over 70. It would be difficult for Durfee to learn this new, highly technical job before his retirement.

I have polled most of the active practitioners before the court. They are about 2 to 1 opposed to Durfee. Their opposition is strictly impersonal and based entirely on his lack of qualifications.

Secondly, I am convinced that Durfee has violated the explicit code of ethics of the CAB while he served as its chairman. The code specifies:

"300.4. Unusual hospitality: It is particularly improper that persons interested in the business of the Board should provide unusual hospitality to the Board or its staff; nor should such hospitality be accepted."

In my judgment Durfee violated this code on these three occasions:

1. When he accepted a chartered Pullman car trip plus entertainment at a golfing party at Pinehurst, N.C., the weekeend of October 20, 1956, paid for jointly by Overseas National Airways and the Flying Tiger Line (2½-day trip). Both lines had cases pending before the Board at the time.

2. When Durfee took a preinaugural flight to celebrate the opening of a new route from New York to Mexico City September 15–18, 1957, plus entertainment and hospitality in Mexico City paid for by Eastern Air Lines (4-day trip). Eastern had many cases pending before the Board at the time. In fact, Pan American had petitioned the CAB to revoke the grant of this very route to Eastern over which Durfee traveled as Eastern's guest.

3. When Mr. and Mrs. Durfee took an inaugural flight from New York to Rome, October 2–6, 1957, plus a $25-a-day hotel room in Rome for 4 days, paid for by TWA (6-day trip). TWA had many cases pending at the time before the Board.

Durfee has testified that the North Carolina trip was to iron out differences between MATS and the commercial airlines, and that the other two flights were specifically authorized by a letter written by the CAB chairman in 1951, Donald W. Nyrop, as not included in the prohibition against "unusual hospitality" of CAB regulations 300.4. He also said that the CAB Administrator is invested by the Congress with the responsibility for promoting aviation. These trips, said Durfee, were in fulfillment of that responsibility.

I feel very strongly that this explanation has little merit.

I am not invoking any "personally obnoxious" objection, because I have in fact no personal or political reasons for opposing Durfee.

I do, however, vigorously oppose him and I earnestly hope that you will do so too.

Sincerely,

BILL,
WILLIAM PROXMIRE,
U.S. Senator.

Mr. DIRKSEN. In addition to the appearance before the Judiciary Committee, and in addition to the letter, the distinguished junior Senator from Wisconsin [Mr. PROXMIRE] appeared before the Committee on Interstate and Foreign Commerce, of the House of Representatives. He appeared there on March 18. He spoke generally about the need for legislation in the field of ethics.

There has been a great deal of ethical vaporing, in the Senate and elsewhere, for a long time; and most of it leaves me rather cold. We do not live in a vacuum. I am not a public eunuch; I did not come here bereft of all powers, all abilities, and all responsibilities. I want to serve my people; and I am sure the junior Senator from Wisconsin wants to serve his people, too.

But in connection with that ethical discussion, this case was discussed. Other material was put into the CONGRESSIONAL RECORD at the same time.

The reasons advanced by the junior Senator from Wisconsin in opposition to confirmation of the nomination were twofold. The first one was the statement by the junior Senator from Wisconsin that the nominee is not qualified. The second one was the statement by the junior Senator from Wisconsin that the nominee violated the code of ethics of the Civil Aeronautics Board.

Mr. President, let us take a little look at the question of qualifications. It has been pointed out that the nominee's qualifications do not match those of the four other members of the Court of Claims—there being five members when there is no vacancy. Well, let us see about that. Of the five judges, includ-

ing the one who served there before, only one had congressional experience—just one. He served for 23 years in the House of Representatives. I served with him for a great many years, before he left the House of Representatives and took a seat on the Court of Claims.

Only two had any tax or governmental experience.

Only one had any actual judicial experience before his appointment to the Court of Claims.

What was their experience prior to that time? One practiced law for 10 years and then served in Congress for 23 years. I do not know that service in the Congress qualifies one particularly for service on the bench. Generally speaking, I think a lawyer with a good, rounded practice could serve well as judge on the Court of Claims, when we think of all the claims we send to the Court of Claims from the Judiciary Committee. I am sure the senior Senator from Wisconsin [Mr. WILEY] is absolutely correct when he says that after 30 years of legal experience he would feel qualified to serve on the Court of Claims, and I know he would be.

One member of the court was professor of law until he was nominated to the National Labor Relations Board. I remember when he used to appear before hearings of committees of the House of Representatives. I know him very, very well. Then he was appointed to the court.

One member practiced law for 10 years, and then became a Government attorney in the Department of Justice and the Bureau of Internal Revenue, for a total of 2 years. Then he returned to private practice for 16 years. Part of that time he served as mayor of his town. Perhaps that experience qualifies one to sit on the court; I do not know. But he returned as Assistant Attorney General for 2 years.

One member of the court practiced law 11 years, was elected a judge, and served about 8 years.

One other member was a prosecuting attorney for the Department of Justice, special attorney in the Treasury Department, and then became a member of the U.S. Court of Tax Appeals, later known as the Tax Court.

Mr. President, when we compare all these men, Jim Durfee will stack up very well with anybody who is a member of the court.

What are Mr. Durfee's qualifications? First of all, he was elected for two terms as prosecuting attorney. Evidently the people in Antigo, Wis., and Langlade County, must have liked him. They might have been fooled the first time, but the second time he would not have fooled them. They elected him twice.

Next, he was a member of a quasi-judicial body. He was on the service commission, the utility commission, appointed by the Governor. Evidently the Governor must have thought pretty well of him. A Governor does not go around through the State fingering people who have no capacity to serve on such a commission, and that is particularly true in Wisconsin, where the leaders are keenly discerning about that sort of thing.

Then, of course, Jim Durfee has had a long period of private practice. He was not a professor; he was not a Member of Congress; he was not lucky enough to be elected to the Senate; he probably never was a rural mail carrier or a county clerk. But he was a lawyer, and a good one, and everybody knows it. As I think of the work that goes before the Court of Claims and the cases sent to it day after day from the Judiciary Commitee, I believe Jim Durfee qualifies very well to serve on the court.

He has a great many endorsers. Other people think he is a pretty good fellow. The local bar association wrote the Senator from Mississippi [Mr. EASTLAND] as being 100 percent in favor of the appointment of James Durfee, saying he will make an excellent judge.

Mr. President, one lawyer does not fool other lawyers in a local bar association very long. They take one's measure. They find out what his capacity is. I am a member of the local bar, the county bar, the State bar, the city bar. I belong to a great many bars. I have sort of lost track of them, as a matter of fact. But, believe me, the local bar association associates will soon discover what one's mettle is, and they place their stamp of approval or disapproval upon him.

A circuit judge in Wisconsin sent a recommendation stating that Mr. Durfee's integrity is unimpeachable, and that his experience eminently qualifies him for the position to which he has been appointed. A judge in the 10th judicial district stated he has the temperament, background, and qualifications which fit him exceptionally for high judicial office.

Finally, there was an endorsement by the standing committee on the judiciary of the American Bar Association. I have had some experience with the Committee on Character and Fitness of the American Bar Association, when a name is sent to the Department of Justice to be transmitted to the President for appointment to the bench. Let the American Bar Association Committee on Character and Fitness consider it, and it can dream up all sorts of reasons against the nomination. I have had to fight them a good many times. But this committee gives the present nominee an accolade. They say he is fit for the position.

Mr. President, what more does it require to testify to the capacity, to the temperament, to the experience of the gentleman whose name is presented?

I think the Senator from Wisconsin [Mr. WILEY] has put in the RECORD the letter from the Independent Airlines Association, which has an office here in Washington. The head man is I. H. Mansfield. I have never seen him. He has never called on me, so far as I know, but he says:

> The Independent Airlines Association speaks for 20 independent air carriers, all of them classified by the CAB as supplemental carriers, and historically the small business element.

What do they say? They say:

> We are pleased to report that Mr. Durfee demonstrated superior judicial and administrative capacity in the following way.

Mr. President, it is not necessary for me to encumber the RECORD, but I submit the statement of the Airlines Association for inclusion in my remarks, and ask unanimous consent to have it printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE INDEPENDENT AIRLINES ASSOCIATION REGARDING NOMINATION OF THE HONORABLE JAMES R. DURFEE TO THE U.S. COURT OF CLAIMS

In response to the question as to what has been the experience of Independent Airlines Association with Mr. James R. Durfee, presently Chairman of the CAB and a nominee for the Court of Claims, I should first explain the special position of our association.

The Independent Airlines Association speaks for 20 air carriers, all of them classified by the CAB as supplemental carriers, and historically the small-business element. Since the end of World War II, when our carriers were organized, predominantly by war veterans, we have been in a continuous struggle for the right to enter aviation. Not only have our members had a most difficult economic battle, with the older, route-type franchised carriers, but we have been the victims of the regulatory agency's (CAB) concerted policy to eliminate us by a process which congressional committees have repeatedly referred to as strangulation by regulation.

All this by way of introduction to our dealings with Chairman Durfee. We are pleased to report that Mr. Durfee demonstrated superior judicial and administrative capacity in the following ways:

1. He was at all times fair, and at no time indicated any prejudgment of an issue.

2. He resisted the pressures and blandishments which, in our long and often bitter experience, surrounded the Board and often influenced its policies.

3. He expedited long and difficult cases which had been languishing in the CAB for years.

4. He apparently transcended partisanship, so that when the Board divided, it was based on substantive issues and not on arbitrary party lines.

5. He demonstrated the highest character and integrity as well as ready insight into the problems of appellants and the interest of the public and the Government.

It was a most refreshing and reassuring experience for us, as small business, to encounter a chairman who, while he was certainly severe and uncompromising in his enforcement of regulations, acted with such eminent impartiality and honesty. While many of his decisions were not to our advantage, they were always arrived at in such a way to leave with the feeling that we had been dealing with a public servant of the highest caliber.

This statement is entirely unsolicited. However, we are not only anxious, but feel it our duty, to express ourselves strongly in support of a man of Mr. Durfee's character and ability and proven record of public service. In behalf of the IAA, we thought it proper to make known an intimate experience with Mr. Durfee.

Mr. DIRKSEN. There, Mr. President, is something on qualifications. How much qualification does one need to sit on the Court of Claims? How much qualification does one need as a lawyer, as a man with experience, as a man with legal ability and a judicial temperament—unless these endorsements are all wrong, and this experience counts for naught? That is as far as I need go

with this question of competence on the part of Mr. Durfee.

The second charge against Mr. Durfee, and one, of course, that I see has been ventilated editorially in the New York Times, is on the question of propriety. It is set forth in an editorial from the New York Times of April 17. I see copies of it have been put on every Senator's desk. There is just a little polite pressure being made in the Senate relating to Mr. Durfee. For my part, they can put it in the CONGRESSIONAL RECORD, if they like, but I just do not agree with it.

That brings me to the second charge, namely, whether or not Mr. Durfee violated the code of ethics of the CAB by accepting unusual hospitality. First of all, this matter goes back to the 20th of October 1956. This coming October will make it 4 years since the trip was made to Pinehurst, N.C. Why wait so long? Why did not somebody come here and impeach Mr. Durfee? That is the way to get rid of judges if they have done anything warranting impeachment One goes to the House and gets a Member of that body to file articles of impeachment, if there is impropriety.

It has been 3½ years since this happened. Why has it not been noted before? Mr. Durfee appeared before the Harris Oversight Subcommittee, and was never asked about the matter. Mr. Durfee has appeared four different times: in 1957, 1958, and 1959. The question was never raised.

Why did Mr. Durfee go to Pinehurst? He went as the guest of Flying Tigers and some other airline. I have the name somewhere in my notes. The meeting had a purpose; namely, to discuss one of the problems which was ventilated for hours upon the Senate floor last year and the year before, "How much business does the Military Air Transport Service get? How much business do commercial carriers get?" We set a dollar limit. That was the matter to be discussed. There was no secret about it.

Mr. Durfee in his statement to the committee said, with respect to the trip to Pinehurst:

> This was a weekend golfing trip as a guest of L. C. Burwell, vice president of Flying Tigers.

Is it a crime to be the guest of the vice president of an airline, to go to a meeting where there are high military personnel, personnel from commercial airlines, and others, for the purpose of discussing current matters?

There is the picture at the back of the Chamber. It was published in Sports Illustrated. I do not get much time to read Sports Illustrated. Perhaps this never would have come to pass if there had not been published the picture of the flying golfers.

What is wrong with golfing? What is wrong with Mr. Durfee going to Pinehurst to discuss official matters? The competitors of these airlines were present: Overseas National, Pan American, and Flying Tigers. The question was the whole business of transporting passengers and cargo by contract with the Military Air Transportation Service and other defense establishments.

Mr. Durfee says:

> When the invitation was tendered by Mr. Burwell, I was advised that representatives of these competitive airlines would be present, and also representatives of the Military Air Transport Service, including General Wilson, deputy commander. One of the reasons the trip was organized, as explained to me, was to afford an opportunity for a congenial get together with representatives of the defense establishments concerned and some of the airlines principally concerned with the MATS civil airlines problem.

Mr. Durfee further says:

> I have participated in at least 10 or 15 conferences with defense officials and others over the past 4 years for this same purpose (one just last week) and I have testified before committees of Congress as to our efforts in this direction.

Do we want him to sit in a cubbyhole in the Commerce Building—immolate and immobilize himself—and not find out what is going on? That certainly would be something for a member of a regulatory agency dealing with this kind of an industry to do.

Unless we proceed on the theory that every time a member of a regulatory agency accepts a little hospitality he suddenly becomes suspect, we should not assume any such attitude. The very purpose in handpicking people is that they will stand up and exercise independent judgment, no matter what hospitality may be extended to them.

There is a singular attitude which has been developing in recent years in the Nation's Capital. I think the Congress does a great disservice to many of the regulatory agencies. I think if it were in my control, I would give these men appointments for 15 years, and not let them succeed themselves. Then I think we would cut through the ensnarling redtape and get some business done.

The minute these men show a little initiative, a little aggressiveness, a little vigor, and sit down with somebody who has an identity with a company which may appear before the Board, some seem to think they will be defiled. That is a strange attitude. What is to become of regulation in Government if we proceed on that theory?

The first charge is of violation of the CAB code, on the ground that the nominee accepted unusual hospitality.

The next concerns the flight to Mexico. This was from September 15 to 18, 1957. Pretty soon that incident will be 3 years old.

There were plenty of press releases as to that ceremonial and inaugural flight. The world knew about it. Now we drag it out on the Senate floor. It will soon be 3 years old, but now it suddenly comes up, like Banquo's ghost, like a haunting specter, when there is a nomination before the Senate.

There was no secret about it at the time. The interesting thing about it is that there was a very impressive guest list of those who went on the flight. Some of the guests were:

Harry R. Betters, executive director, the U.S. Conference of Mayors, Washington, D.C.

Hon. John Burke, commissioner of the Massachusetts Department of Commerce and personal representative of Gov. Foster Furcolo, Boston, Mass.

Hon. I. W. Carpenter, Assistant Secretary of State, and Controller, Department of State, Washington, D.C.

Senor Don Vicente Sanchez Gavito, Minister Plenipotentiary, Embassy of Mexico, Washington, D.C.

And my distinguished and beloved friend—and I am glad he went—the acting majority leader, the Senator from Montana [Mr. MANSFIELD]. I am glad the Senator from Montana went on that trip. I am sorry I could not go with him at the time.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. MANSFIELD. Mr. President, one of the results of that trip was a report on a study mission to Mexico which I made on my return. I ask unanimous consent that a copy of the study mission report may be printed in the RECORD at this point.

Mr. DIRKSEN. I think that is wonderful. I am delighted to have it as a part of my remarks.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

MEXICO—REPORT OF SENATOR MIKE MANSFIELD ON A STUDY MISSION, NOVEMBER 17, 1957

1. INTRODUCTORY

In a report prepared after a study mission to Mexico which I undertook in 1955, I called attention to some of the principal deficiencies of our technical assistance program south of the border and to the difficulties which had to be overcome if that program were to serve the mutual interests of Mexico and the United States.

One of the purposes of the present report will be to develop briefly the major developments which have taken place in the 2 years which have elapsed since my previous trip with respect to this and other aspects of Mexican-American relations. After commenting briefly on some of the implications of these developments, I shall offer a few suggestions as to courses of action which might be pursued in order to cement further our relations with the people of Mexico.

In the earlier report I suggested that, if even a limited technical assistance program were to be maintained, it was, above all, essential for the two governments to reach a common understanding as to the areas in which technical assistance was not only needed but honestly desired. If this were not possible, continuation of the program could not, I believed, be justified on grounds of mutual self-interest.

These impressions were reinforced on my last trip to Mexico. I found little evidence that responsible officials in both the United States and Mexico share any particular enthusiasm or even interest in continuation of the program as a whole. It has substantially deteriorated, having little impact outside of Mexico City; and such impact as it has is accomplished with certain adverse side effects which can hardly be said to have improved amicable relations between our two countries.

For this reason and in view of the resistance which U.S. technical cooperation has encountered (with one possible exception discussed below), I believe that serious reflection should be given to the termination of the program at an early date. The causes (or explanation) of this resistance, linked in part, as it is, with Mexican national pride and a deep spirit of sovereign independence, need not detain us.

To suggest termination, moreover, is not prompted merely by the desire to effect economies in the expenditure of public funds by eliminating an unproductive effort. Instead, it should be acknowledged that a variety of factors have combined to render the program highly dubious. Any decision as to its final liquidation should depend in large part upon the findings of our Mexico City Embassy, as the office best equipped to appraise the effectiveness of technical cooperation between the two countries on the Government level.

The current status of the technical assistance program in Mexico is discussed below in more detail.

2. TECHNICAL COOPERATION

Probably the most distinctive feature of U.S. technical cooperation south of the border is the substantial number of projects which have been discontinued either because of lack of support or failure to reach agreement with Mexican officials on the matter of implementation.

Cooperation programs, by late 1955, had been initiated in the fields of agriculture, health and sanitation, education, industrial productivity and research, transportation, mining, geology, and training. Area development programs were in the planning stage.

In February of 1956 the Mexican Government notified the United States that all the area development projects, as well as the agriculture program, were to be discontinued. Other projects which were dropped, after efforts to complete them proved fruitless, were the programs in education, industrial research, and health and sanitation (an activity which the Mexicans have now taken over entirely on their own).

Substantially greater interest has been manifested by the Mexicans in the industrial productivity program which was initiated 2 years ago. An Industrial Productivity Center was created by the Combined Industry Chambers to centralize work in this field. Its board of directors includes such organizations as the Bankers Association, the National Confederation of Chambers of Commerce, the Mexican Employers Association, and two of the leading labor organizations (CTM and CROM). ICA provides approximately $50,000 for the operating budgets of the center, an equal amount being contributed from Mexican sources both public and private. The Mexican contribution will be increased during fiscal year 1958, to permit further expansion of the program.

The objectives of the program include, among other things, implementation of efficient management and production techniques in Mexico, to achieve a higher rate of production with corresponding benefits to labor and consumer groups. Technical help has been given to such industries as cotton textiles, shoes, tanneries, fruit and vegetable preservation, and readymade garments. Some 18 productivity teams have visited the United States. ICA has projected $269,400 for this activity for fiscal 1958, an increase of some $45,000 over the 1955 program.

ICA has also provided a permanent technician and several short-term training consultants for the El Olivar transportation training center. The United States contributed $50,000 for the purchase of equipment and supplies, and in 1957 provided $100,000 to be deposited to a joint fund for the organization and equipping of a number of training road camps. A greatly reduced contribution ($16,000) is planned by ICA for fiscal 1958.

In view of the nature of the training center, which has the full support of the Ministry of Communications and Public Works, and which is financed almost entirely from Mexican funds, the continued participation of the United States, even on a modest basis, would not seem to be warranted.

The cost of other U.S. technical cooperation projects in Mexico, from 1955 to date, appears in the following table:

[In U.S. dollars]

Fiscal year	Geology	Mining	Central banking	Labor training	Vocational rehabilitation
1955	$133,500	$34,100	0	$53,000	--------
1956	84,000	22,000	$1,000	88,100	--------
1957	59,000	34,500	34,200	122,600	--------
1958 (proposed)	37,000	46,000	47,000	110,000	$29,000

As already indicated in this report, there is serious question whether U.S. technical cooperation in Mexico should be continued, with the possible exception of the industrial productivity program, in view of the previous record.

This is not to ignore that some extremely important benefits have accrued from cooperative efforts during the postwar years in certain matters. An example is the eradication of hoof-and-mouth disease. Within 5 years from the institution of a joint vaccination program in 1947, under which 17 million animals were treated, the Mexican cattle industry was freed from the contagious affliction which had compelled the United States to quarantine cattle shipments from Mexico.

3. THE CORN DROUGHT AND PUBLIC LAW 480 ASSISTANCE

The destruction of Mexico's principal food source, corn, due to this year's drought, could have caused a considerable drain of Mexico's exchange reserves to pay for the large quantities which had to be imported. However, on October 23, 1957, an agreement was concluded between the United States and Mexico for a Public Law 480 loan, for the sale of 500,000 metric tons of corn to Mexico, involving a total of $28,500,000. In addition to this, Mexico has purchased approximately 200,000 metric tons under long-term loan provisions, through the Commodity Credit Corporation.

No further Public Law 480 sales are contemplated at this time, as it is believed that the transactions already completed will satisfy Mexican requirements. In this crisis, again, the utility of Public Law 480 procedures have once again been demonstrated.

4. MEXICAN LABOR RELATIONS

In no phase of its recent history has Mexico exhibited greater advancement and maturity than in the area of labor relations. This factor has been of particular significance in the progress which has taken place south of the border. Despite problems of inflation and the monetary devaluation which took place in 1954, Mexico has had very few strikes in the past 6 years; and the labor movement, although militant, has shown increasing responsibility in its relations with employers.

The Mexican labor movement is well organized, comprising six major labor federations. Of these the most important are the Mexican Confederation of Labor (CTM), with a membership of approximately 1¼ million; and the Federation of Federal Workers (FSTSE), consisting of some 300,000 members. A labor party bloc was formed in 1953, representing and coordinating the activities of about 90 percent of the Mexican labor movement.

During a stormy period from 1937 to 1941, Mexican labor was dominated by the fiery Vicente Lombardo Toledano, whose long and ardent adherence to Communist doctrine was manifested in policies followed by the CTM. Since 1952 undisputed direction of the CTM has been in the hands of Fidel Velázquez who had assumed leadership jointly with Fernando Amilpa in 1941. Between 1941 and 1947 Velázquez succeeded in eliminating Lombardo Toledano's influence and followers, finally breaking with him completely when the CTM pulled out of the Communist-controlled World Federation of Trade Unions in 1948, and its Latin American counterpart, the CTAL.

Today, the CTM is one of the firm pillars of the Regional Inter-American Labor Organization (ORIT), the Western Hemisphere branch of the democratic, anti-Communist International Confederation of Free Trade Unions. The CTM maintains a close and cooperative relationship with the AFL–CIO. This provides an important vehicle for cultivating greater friendliness throughout a broad range of interests between our two countries, and for developing an understanding of the problems faced by our working people.

A strong and independent labor movement is of paramount importance in combating the inroads of communism. This responsibility has been accepted by Mexico's Labor Unity Bloc, which has an anti-Communist committee to prevent Communist penetration into labor's ranks. Its action has been very effective, and today, with some exceptions, the labor movement in Mexico is anti-Communist.

5. SOVIET ACTIVITY IN MEXICO

Continued vigilance is required, however, to meet the unrelenting efforts of the Soviet Union to spread propaganda hostile to the United States.

Mexico is one of three nations in Latin America which maintain diplomatic relations with Moscow (the other two being Uruguay and Argentina). The existing interests between the two governments hardly justify the disproportionate size of the Soviet Embassy, which has 19 officials named on the diplomatic list, and which is estimated as staffed by 112 persons. The subversive objectives which this activity reflects should not be lightly dismissed.

The Republic of Mexico has always ranked high as a target of Soviet intrigue. Although emphasis has been on cultural relations, this activity does not explain the presence of many staff members with military backgrounds, or the contacts engaged in by known Soviet agents. Extensive propaganda units of an anti-American character have been established in Mexico under the guise of economic study groups. These units serve as instruments to create a facade of public opinion on matters of vital concern to the United States and other nations of the free world.

Soviet operations in Mexico are complemented by a Czechoslovak mission, whose activities along commercial and cultural lines permit wide travel and study of the area. The opportunities so presented in areas remote from tighter metropolitan surveillance are obvious. Moreover, the Soviets have not been loath to play upon latent suspicions and mistrust to fan the flames of hostility against the Yanqui colossus.

Here, too, security considerations during this critical period would seem to justify closer collaboration between the United States and Mexico in a common defense against Communist penetration of the Western Hemisphere.

6. THE BRACEROS QUESTION

One further aspect of Mexican-American labor relations deserves mention. This is the problem of braceros, or migratory workers, and illegally entered laborers (so-called wetbacks). Essentially the problem arises because of the inability of Mexican agriculture and industry to absorb local labor, which finds the higher wages paid in the United States too strong an attraction to resist. Although Mexicans generally feel somewhat unhappy at the necessity for their workers to seek employment in the United States, bracero remittances in the past have been a rather important source of foreign

exchange. The disadvantage, according to some economists, is that skilled workers, of which Mexico is already short in supply, often do not return from the United States. But, on the whole, the net effect of braceroism has been to produce warm feelings on the part of the workers for the United States.

Because hundreds of thousands of these Mexican workers have been entering the United States illegally in recent years (over 1 million in 1954), the traffic provoked a flood of protest from labor organizations in this country. It was contended that the presence of braceros tended to displace American workers and to depress wages; whereas, on the other hand, as a fugitive, the migratory laborer had no recourse to our laws for enforcement of minimum wage and other requirements.

Both governments saw the need for replacing the uncontrolled worker traffic by some kind of an orderly system, and entered into an agreement in August 1951 concerning the contracting of Mexican farmworkers. The agreement, which has been extended to June 30, 1959, provides protection for the Mexican worker in wages, working conditions, and fair treatment; but it also prohibits the hiring of Mexicans in case of strikes or lockouts, as well as for any jobs for which American workers were available. Despite the agreement, thousands of Mexican workers continued to cross the border illegally, although there has been an increase in the amount of contracted labor.

It does not appear, therefore, that Government action has solved the problem by any means, and new controversies continue to arise. The latest difficulty relates to the Mexican desire for including nonoccupational insurance coverage in the program. Negotiations on this issue have been ineffectual thus far.

7. RECOMMENDATIONS FOR FUTURE ACTION

It is, of course, true that the future of technological and scientific collaboration with Mexico is not something which can be divorced from the larger problem of developing a more harmonious association between the peoples of the two countries.

During my latest visit to America's closest southern neighbor I sought to ascertain what lines of action might be followed to advance still further the friendship and mutual esteem which, happily, have become more evident in American-Mexican relations. It is too sanguine to expect that the harsh memories, suspicions, and apprehensions generated in an earlier day can be erased overnight. Yet, to accomplish this result should be given a high priority in our policy.

It will take determined patience and effort on both sides. And it will require a sustained manifestation of American sincerity in persuading our Mexican friends that their national progress, economic advancement, and the welfare of their peoples are very much in the interest of their northern neighbor. The United States already enjoys a gratifying degree of good will among the Mexican people, with what must be regarded as a minimum of distrust in view of the recriminating atmosphere of the 19th century.

In my opinion, the destinies of Mexico and the United States—indeed, of all of the nations of the Western Hemisphere—have become inextricably linked as a consequence of the surging forces in international life during the past few decades. To such a degree is this true that there should be a frank and open recognition of the interdependence of the two Republics. I am convinced that the mutual respect which prevails will be accompanied by steadily increased cooperation in all matters of common concern.

I believe there is much we can do to advance the objective of better relations. My recent trip to Mexico has convinced me that the United States is neglecting several courses of action which could substantially contribute to greater understanding between the two countries.

In the first place, we should radically expand our educational exchange program to stimulate a much broader interchange with Mexico of students, professors, technicians, and scientists. Few neighbors in the world have as much to offer each other as the United States and Mexico, and in few areas can this understanding be more appealing and more rewarding. An intensified exchange program would encourage harmonious relations between our respective peoples on a level which is most essential to an understanding of their problems and their aspirations; while the social milieu of the exchanges will also be enriched by such contacts.

It is hardly necessary to observe that Mexico has much to offer to American visitors of an artistic, sociological, and archeological nature. Conversely, there are many ways which American experience can benefit Mexico in areas where our own culture has made especial progress. I know of few better means to efface whatever bitterness and resentment may still be entertained toward the United States in Mexico than by close collaboration of our peoples in fields of common professional and cultural interest.

This exchange of educational and professional personnel should be further broadened so as to institute a regular system of interchange between the service academies of the two Governments. The natural feelings of friendliness and good will resulting from such exchange would thereby be supplemented by an indoctrination in the strategic, tactical, and logistic problems of each country and familiarization with training methods best suited to meet them.

The hitherto limited extent of United States-Mexican participation in athletic and cultural programs should likewise be expanded. Arrangements could be made, for example, for participation in sporting activities popular in both countries. A tradition of such activity would produce much good will and fellowship, as it has in American university life.

On the political level, consideration should be given to the establishment of a North American Parliamentary Union, which could also include Canada. Periodic meetings of delegates to the Union would provide a common forum for these countries representatives to become better acquainted, and to become more aware of factors which underlie national legislative policies whose overtones too frequently have a most disturbing effect across the border.

At the same time, efforts should be made, in collaboration with Mexico, to find the solution to a number of problems which have produced irritation in the past. As one example, an agreement should be reached with Mexico as quickly as feasible on the thorny problem of jurisdiction in territorial waters, with particular reference to shrimp and other fishery resources.

It is to the interest of the United States to pursue this course. To a very great degree, Mexico has come to represent the cornerstone of our long-range relations with the rest of Latin America. Yet, because of its very proximity, we have perhaps tended to take Mexico for granted, failing to recognize its importance to us, to perceive how far it has advanced, or to appreciate what Mexico can be in knitting the nations of the Western Hemisphere into that closer unity which may prove vital to the preservation of freedom in the Americas.

8. CONCLUSIONS

The transformation in Mexico since 1940 has been nothing short of phenomenal. From a strike-plagued and insecure society wracked with recurrent labor unrest which destroyed the confidence of private investors and threatened the existence of the entire Mexican economy, has emerged a mature, solid, and highly respected member of the family of nations. Mexico today is a stable, progressive society, and a leader in inter-American affairs. Its development has leaped forward, with advances in industry and in the welfare of its people that would not have been believed possible 20 years ago.

What is even more encouraging has been the gradual appearance in Mexico—at least in the metropolitan areas—of a middle class. American private investment has contributed in no small way to this important development as well as to Mexico's increased productive capacity by fostering and financing local sources of manufacturing and distribution, which, in turn, is opening internal markets within Mexico for low-cost merchandise. Investment capital from abroad now enters Mexico with assurance of fair treatment. Similar encouragement has been given by the Mexicans to developing foreign travel. The tourism program, an important basis of dollar exchange for this fascinating country, is being pushed with marked success. The stream of American tourists flowing southward represented last year an income source of $279 million.

Numerous internal problems remain, however; and serious differences still exist between the United States and Mexico on several matters, some of which have been longstanding. These problems are not insoluble, but they will yield only to prompt and courageous leadership and a determined effort by both our peoples. The opportunities of such leadership and effort are the privilege and responsibility of free and independent nations.

The United States and Mexico have it within their power to eradicate the festering memories of a former unhappy association by building a new and more enduring foundation for cooperation in a spirit of equality, mutuality, and respect. This can be achieved by working out a more satisfactory pattern of equal relationships in the fields of trade, military defense, and culture. The revolutionary technological changes in modern warfare now taking place make it all the more imperative that the defense of their common border be regarded by the two Governments as a matter of mutual concern. The cultivation of continued peaceful and cooperative relations with the neighbor on our southern flank is not, therefore, merely something to be desired: It is vital to our national security.

In a world in which totalitarianism relentlessly seeks to proliferate its way into national freedom, no nation can pretend to suffice unto itself, aloof, and alone, its future survival jeopardized by smoldering antagonisms and suspicions of the past.

APPENDIX

REPORT BY SENATOR MANSFIELD ON U.S. TECHNICAL ASSISTANCE PROGRAMS IN CENTRAL AMERICA (EXCERPTS [1] 1955)

Mexico

The technical assistance program in Mexico which has increased in size from $765,000 in 1953 to some $1.8 million in 1956, is in need of careful attention. In an area of critical importance to the United States, it is doubtful if the program as presently operated serves the interest of either this country or Mexico as well as it should.

The fault does not lie with the officers engaged in administration of the program,

[1] Technical Assistance. Final report of the Committee on Foreign Relations pursuant to the provisions of S. Res. 214, 83d Cong., 2d sess.; S. Res. 36 and S. Res. 133, 84th Cong., 1st sess.; and S. Res. 162, 84th Cong., 2d sess. [Extended by S. Res. 60 and 99 of the 85th Cong.] S. Rept. 139, March 12, 1957.

who exhibit ability and understanding. Rather, it grows out of an apparent failure at the governmental level to reach certain basic understandings essential to the success of the program at the operating level.

If technical assistance in Mexico is to serve the national interest of the United States, it must be based on a mutuality of interests as between the two governments concerned, and those governments must recognize that mutuality of interest. In other words, it is doubtful if the technical assistance program in Mexico is worth continuing unless the policymaking officials of both nations agree that each nation will reap benefits from the program.

There was little evidence that such officials of the United States are giving their wholehearted support of the technical-assistance program in Mexico. Likewise, there was little evidence that their counterparts in the Mexican Government are particularly interested in the program. As a result, the day-to-day operating peoples on the American and Mexican sides must carry on in a somewhat subrosa fashion.

If the technical-assistance program in Mexico is worth doing, it is worth doing well. The time has come for officials of both Governments at the ministerial level to reach a clear understanding on whether it is in the mutual interests of the United States and Mexico to continue the program. If it is agreed that the program should be continued, as I believe, then it must receive the wholehearted support of officials of both Governments at all levels.

The National Interest of the United States and Mexico

It is my belief that a limited technical-assistance program is in the mutual interests of the United States and Mexico.

So far as the United States is concerned a Mexico with a higher standard of living and a larger national income would be a better customer for the United States. By the same token, Mexico would find this country a better customer for its products. Moreover, from the point of view of the United States it is not desirable for the disparity of standards of living as between the two countries to become greater. Rather, the gap should be narrowed so that the material and cultural wealth of the Americas can be put to the joint job of expanding the area of man's individual freedom and of contributing to his spiritual strength.

The technical-assistance program to be in the national interests of the United States and Mexico cannot be a one-way street. Mexican art and architecture, rooted in the Mexican civilizations of the past, can make immeasurable contributions to the life and culture of the United States. Similarly, U.S. techniques in some agricultural and industrial areas can make substantial contributions to the Republic of Mexico.

Technical assistance can contribute not only to improvement of living standards in Mexico and consequent expansion of trade between the two countries, but it can help bring the peoples of these nations more closely together. As the bonds of friendship are strengthened, it may be expected that on the international stage the Mexican Government will better understand the policies and attitudes of the United States. The same would be true with respect to U.S. understanding of her great neighbor to the south.

There are many factors in the Mexican situation which make the operation of a technical assistance program most difficult.

In the first place, Mexico is not an underdeveloped country in the usual sense. She has engineers, doctors, architects, scientists, educators, industrialists, and other professional people among the most able in the world. Her mineral resources are in the process of development.

Under these circumstances, it is but natural that there is resentment in some circles in Mexico at "gringo" meddling. There is no question but that in time Mexico would be able to engineer her own economic development without outside assistance. Nevertheless, Mexico does need more trained mechanics; better agricultural production; and, in general, assistance in the development of a middle class. The main contribution the United States might make to this development would be to expedite the process already under way.

A second difficulty encountered in operating a technical assistance program in Mexico stems from the strong nationalism of her people.

Strong nationalism, a characteristic of every proud people, including ourselves, is not to be regretted. But nationalism must be understood and worked with. This means that the tendency of some American officials, not in Mexico in particular but also elsewhere to couch the technical assistance program solely in terms of gifts of superior technical knowledge, must be avoided. Nationalism, insofar as it may operate to impede a technical assistance program, can best be dealt with by making it clear that our aid programs are undertaken because of their mutual value to both participants. This assistance is not an activity carried on by the United States for charity purposes. The program rather has been undertaken because we believe these expenditures in foreign countries serve to promote the general welfare and interests of the United States. We cannot expect Mexico, or any other country, to participate wholeheartedly in such programs unless they believe the programs are also in their national interest.

A third factor which impedes the successful operation of the technical assistance program is attributable to the activities of the Communist underground in Mexico. Although the Communist Party is recognized as legal, it has not registered as a party for purposes of participating in elections. Nevertheless, there is little doubt but that there has been some Communist penetration in governmental and educational circles. Furthermore the Soviet Embassy in Mexico has been a source of considerable Communist propaganda throughout Latin America.

While communism does not pose an immediate threat to Mexico and while the Government is firmly dedicated to the principles of democracy, there is evidence that Communist elements in Mexico seek to pervert nationalism into anti-Americanism. They have sought, also, to brand the technical assistance program as 20th century American imperialism. To some extent they have been successful in equating technical assistance with imperialism, thereby inducing some Mexicans to make a mistake similar to that made by some Americans who have equated the liberalism of the Mexican Government with communism.

The greatest difficulty in carrying on the technical assistance program, however, is not attributable to the nature of the country, to nationalism, or to communism. The greatest difficulty arises, as indicated earlier, in the failure of the two governments candidly to explore the area in which their joint national interests might be advanced by a technical assistance program. This will be a stumbling block to future technical assistance programs in Mexico, as it has been to past programs—several of which have literally withered away because of the lack of interest of responsible officials in both countries.

Conclusion

It is beyond the province of this report to try to tell either the executive branch of the U.S. Government or the Government of Mexico how to operate the technical assistance program in Mexico. Observation of the program for the few days available did not provide a sound background or basis for submitting detailed recommendations. It was possible during this period, nevertheless, to determine with some degree of confidence that the program as presently operated does not serve either the interests of the United States or of Mexico as fully as would be possible if both countries were wholehearted in their support of the program.

It is suggested, therefore, that the U.S. Government at the ministerial level should find an opportunity in the near future to make a straightforward statement to the Government of Mexico to the effect that the United States believes that it is in our national interest, as well as in the national interest of Mexico, to carry on a limited technical assistance program for the purpose of reducing the disparity in economic conditions which now exists to the end that trade and mutual understanding be increased. Should it be possible to reach a clear agreement on the basis of such a mutuality of interest, present difficulties at the operating level should be mitigated, assistance would be far more effective than it is at present, and mutual pride and publicity might be given to the joint efforts of these two North American neighbors.

Should Mexico believe that the technical assistance program is not in her national interest, there should be no recriminations from the United States. As has been indicated earlier in this report, Mexico may be expected in time, and on her own, to get the same results, albeit they may be delayed more than might be the case were she to participate in the technical assistance program.

Mr. DIRKSEN. Mr. President, the distinguished acting majority leader will say that this was one of the most fruitful trips for this country which was ever taken, in developing extra permits for American airlines serving Mexico.

Mr. President, other guests were:

Hon. James Morgan, mayor of Birmingham, Birmingham, Ala.

Hon. deLesseps Morrison, mayor of New Orleans, New Orleans, La.

His Worship George H. Nelms, mayor of Ottawa, Ottawa, Canada.

Hon. Walter Reynolds, mayor of Providence, Providence, R.I.

Senor Don Justo Sierra, counselor, Embassy of Mexico, Washington, D.C.

Gen. J. M. Swing, Commissioner, U.S. Department of Justice, Immigration and Naturalization Service, Washington, D.C.

Hon. JOHN TABER, member of Appropriations Committee, U.S. House of Representatives, Washington, D.C., a former chairman of the House Appropriations Committee.

I served under Mr. TABER's chairmanship. He is a distinguished Representative from New York.

Hon. John J. Theobold, deputy mayor of New York City, New York, N.Y.

The secretary of the American Travel Writers Association; the executive vice president of the American Society of Travel Agents; and 19 newspaper and radio men, including travel editors.

Those were persons on the guest list. What were they doing there? Among other things, they had business with the Minister of Transport of Mexico for the purpose of developing business for our own country.

It was a ceremonial flight. A charge could not be made for a ceremonial inaugural flight. That was the rule. No

charge could be made, so there was no payment of fare.

The Legislative Oversight Committee knew about all this for a long time.

That is a part of the indictment. First, he is not qualified. I think that charge is so amply repudiated that it requires no further elaboration from me.

Second, he is charged with a violation of the CAB ethical code, first, because of the Pinehurst trip, and next, because of the Mexico trip.

Third, there was the trip to Rome, on which he took his wife. It has been one of my great regrets that so often I have made trips abroad, and did not have the pleasure of taking Mrs. Dirksen along. I am sorry, in a way, that I did not, as I look back upon them. Some of them were pretty rugged trips. But this trip had a purpose. This was the so-called people-to-people trip. There was a guest list. That flight took place on the 2d of October 1957. Let me read the guest list:

TWA INAUGURAL FLIGHT, NEW YORK TO ROME, NONSTOP—OCTOBER 2, 1957

WILLIAM H. AYRES, Congressman, Republican, of Ohio.

EDWARD P. BOLAND, Congressman, Democrat, of Massachusetts.

STEVEN B. DEROUNIAN, Congressman, Republican, New York.

Harold I. Baynton, chief counsel, Senate Committee on Interstate and Foreign Commerce.

James R. Durfee, Chairman, CAB.

Mrs. Durfee (wife).

Joseph B. Goldman, Assistant CAB General Counselor.

Mrs. Goldman (wife).

G. Joseph Minetti, CAB member.

Clarence Sayen, president, ALPA (Air Line Pilots Association).

Mrs. Sayen (wife).

The following are connected with the non-Government people-to-people diplomatic program:

Charles E. Wilson, president.

Dr. Barclay Acheson, chairman, magazine committee.

H. Sanders Anglea, chairman, fraternal groups committee.

Dr. Joseph W. Barker, cochairman, science and engineering groups committee.

Mark Bortman, cochairman, civic committee.

George P. Brett, cochairman, books committee.

Col. Edward P. F. Eagan, chairman, sports committee.

Ernest Kehr, chairman, philatelic committee.

Hon. David McKendree Key, chairman, Foreign Service Alumni.

Judge Jubenal Marchisio, cochairman, nationalities committee.

Norman C. Mindrum, vice chairman, 4-H Club.

Barry Faris, editor-in-chief, INS.

John F. Lynch, National Broadcasting Co.

Mrs. Barbara Lynch (wife).

Vincent Martinez, society editor, Il Progresso.

Calvin Tomkins, associate editor, Newsweek.

Why should he not go in such a trip? What did he do when he got over there? Among other things, there were sessions with the Italian Minister of Air Transport. There were a good many sessions and conferences. Among other things, it was desired to bring about a revision of the bilateral agreement on air transport between Italy and this country which was then in effect.

So he is to be castigated. He is to be rejected and cast into outer darkness because he took his wife along, and because TWA paid the cost of the passage. What is wrong with that? He did a good job over there. Senators take their wives on trips. Members of the House take their wives, not only on air trips, but on boat trips and other trips. There is nothing very unusual about that. I think it is all to the good. But that is the third element in the charge with respect to Mr. Durfee, and the allegation that he has violated some ethical provision in the CAB code with respect to accepting unusual hospitality.

The singular thing is that the distinguished junior Senator from Wisconsin [Mr. PROXMIRE] has indicated that when Mr. Durfee was on the Wisconsin Public Service Commission he rendered competent service. He was considered pretty good. In his statement before the House the junior Senator from Wisconsin intimated, even if he did not expressly so state, that perhaps the reason Mr. Durfee rendered faithful and competent service there was that there was a law on the books with respect to people who might be approached by lobbyists, and it was desired to keep everything ethically nice, sweet, and wholesome.

I think I am correctly informed—and I will ask my staff members to correct me if I am mistaken—that that law went on the books after Mr. Durfee left Wisconsin. The law that keeps everyone pure and sweet out there went on the books after Jim Durfee came to Washington. Besides, it did not apply to him at all. If I read that law correctly, it had relationship to the legislature and to lobbyists.

In his testimony before the Interstate and Foreign Commerce Committee of the House, this is what the distinguished junior Senator from Wisconsin said:

> Let me just put it this way: both of these men had come from Wisconsin. (One was Mr. Durfee.) Both of these gentlemen had been on the public service commission in Wisconsin. Both of these gentlemen had been chairman of the public service commission in Wisconsin.
>
> The conduct of these men as far as I know was good in Wisconsin. There was no relationship with the public utilities they regulated. They did not accept cocktail party invitations.

That is a challenge. That is a chore in this man's town.

The junior Senator from Wisconsin continued:

> I am sure the opportunity might have been there. The utilities knew and the commissioners knew this was against the law, and improper, and if they did this, retribution would follow quickly and they behaved themselves. This is about as clear an example of how a law can work, disregarding the attitudes of all of us who are fallible as human beings to influence a higher level of ethical conduct.

The junior Senator from Wisconsin went on to point out, or at least to intimate, that the reason for the difference between Mr. Durfee's conduct in Wisconsin and his conduct in Washington was the lack of a Federal statute prescribing ethics for an administrative agency. Mr. Durfee's conduct was good in Wisconsin, so the absence of a law in Washington had something to do with the caving in of his integrity.

Can Senators imagine such a thing in the case of a man 63 years of age? If his integrity was going to cave in, it would have done so long before he reached that age.

Mr. Durfee's conduct in Washington was ascribed to the lack of a law. I assume that the Wisconsin statute to which the junior Senator from Wisconsin refers is that amendment to chapter 13, passed in 1957, which adds to the definition of unprofessional conduct the following:

> Directly or indirectly furnishing * * * to the Governor, any legislator, or to any officer or employee of the State, to any candidate for State office or for the legislature, any food, meal, lodging, beverage, transportation, money, campaign contributions, or any other thing of pecuniary value.

Was this statute responsible for the good conduct of Mr. Durfee in Wisconsin as a member and chairman of the Wisconsin Public Service Commission?

First. It was not passed until after Mr. Durfee had come to Washington with the CAB, so it could not have affected his conduct.

Second. To whom and to what does it apply in Wisconsin? It applies to lobbyists and to the practice of lobbying for or against legislation before the legislature.

The definition of "unprofessional conduct" appears in the section on lobbying as paragraph (3). Paragraph (1) states:

> Lobbying is the practice of promoting or opposing the introduction or enactment of legislation before the legislature or the legislative committees or the members thereof.

Paragraph (2) states:

> Lobbyist: Any person who engages in the practice of lobbying for hire.

Section 13.61 states the legislative purpose:

> The purpose of sections 13.61 to 13.71 is to promote a high standard of ethics in the practice of lobbying and to provide for the licensing of lobbyists, and the suspension or revocation of such licenses.

Section 13.66 provides that no person shall practice as a lobbyist until he has been duly licensed.

Section 13.63 sets out the requirements for eligibility for a license and for its suspension. Paragraph (2) states:

> Upon verified complaint charging the holder with having been guilty of unprofessional conduct.

Therefore, this statute in Wisconsin is not aimed at members of Wisconsin agencies and commissions. It is aimed at Wisconsin legislature. If legislation like this is passed by Congress, it would not affect the agencies here anymore than it did in Wisconsin. It would not create a standard of ethics for agency personnel here any more than in Wisconsin.

To make it crystal clear what they were getting at by this 1957 statute in Wisconsin, section 13.66(3) states expressly:

> The restrictions upon the practice of lobbying provided by subsections 13.61 to 13.71 shall be effective only during the regular and

special sessions of the legislature and for the period between the general election and the commencement of the regular session.

So not only does the Wisconsin statute only apply to the influencing of legislators, but it applies only to the influencing of legislators during certain times.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. PROXMIRE. I hesitate to interrupt the Senator. I know that he is trying to make his speech within 30 or 35 minutes. He started after 2 o'clock, and I shall try to finish before 3 o'clock. I shall make the interruption as brief as possible.

The Senator is constructing an obvious strawman by talking about a law to which I was not referring. I was referring to the law which was on the books when both Doerfer, Chairman of the Federal Communications Commission, and Durfee, Chairman of the Civil Aeronautics Board, served on the public service commission in Wisconsin. That law did not prohibit this action, but it provided something almost as effective. It provided that any money spent by lobbyists must be reported to the Secretary of State, and that the information must be made available to the press.

I may also add that the Senator from Illinois himself has just read to the Senate the provisions of the present law which apply, as he has stated, to any officer or employee of the State, which would certainly include the chairman of the Wisconsin Public Service Commission.

Mr. DIRKSEN. I shall cut this short, and reply to my friend.

I am amazed that the junior Senator from Wisconsin should think that some words on the statute book can make a man honest in Wisconsin, and that the absence of those words can make him dishonest, or inclined to toy with impropriety, in Washington, D.C. That is about as incredible as anything I have heard uttered on the floor of the Senate. It is incredible to think that 4 years ago he could come from the Senator's State impeccably honest, with conscience-scented air in his nostrils, and that the moment he reached the Nation's Capital he went in for improprieties. Can anyone imagine that?

Mr. EASTLAND. I cannot.

Mr. DIRKSEN. No; I cannot, either. I will accept it on any ground that the junior Senator from Wisconsin wants to put it. He said the nominee was competent and rendered good service in Wisconsin. But then Jim Durfee comes to Washington, and because he does not have the sheltering, cloistering, beneficial influence of the Wisconsin law, suddenly his character gives out, and blowholes appear in the human cast. Oh, great conscience. I give up. I salute the diligence and assiduity of the distinguished junior Senator from Wisconsin. He has been at this for quite a while. However, with all his efforts all he has been able to dredge up is what we in the contracting business used to call nothing but a waterhaul.

It is a rather unhappy situation that one has to stand here to defend a distinguished public servant against the kind of charges that have been made. For all these years the nominee has been upstanding, he has been honored by the people in a great many capacities. He has been honored by his governor and he has been honored by the President of the United States. Now, after all this time, we are called upon to defend him.

Mr. President, I am about to conclude. The tragedy of today in government is in the form of a question: "Why do people seriously consider appointive public service?" First, there is the business of getting appointed. That is no easy trick. It is not easy because first one must get some senatorial support, if it is a high level office he seeks. He must also know some politicians. Then people must write letters of endorsement in behalf of Joe Doakes or Bill Brown or Joe Green. He must know about an existing vacancy, and then must get himself considered for the appointment.

Second, he must go through the FBI mills. The FBI goes through the person's record with a fine tooth comb. I have had occasion to see one or two of the raw files of the FBI on people. Sometimes they can make very lurid reading.

Then he must get the President to send his name to the Senate. It must be published in the RECORD. Then he must appear before the subcommittee. Then he must appear before the full committee. They ask him all sorts of questions: "How much stock do you own? Do you have any pension rights? Do you have any retirement rights? Is there anything that would be a conflict of interest as between what you have and what you do and the service that you would perform in Government?" Usually people who appear before committees are taken apart piece by piece. Then there comes the confirmation.

After confirmation there follows all kinds of harassment and pettiness and criticism of decisions.

One Member of the Senate wanted to review one of Jim Durfee's decisions in certain cases. That is how far they went. One would think that character counts for naught.

A man lives for 63 years and his neighbors think he is a good man. They elect him to office. His clients like him because he has a good law business. The Governor likes him and he appoints him to the public service commission. The President goes through his life's record with a fine-tooth comb and nominates him.

Then suddenly the charge of impropriety is made because the man has accepted "unusual hospitality." That is an amazing thing. He ought to have been confirmed by a unanimous vote. I know that is not going to happen, because there is going to be at least one vote against him, so far as I know.

Well, I guess that is the story, Mr. President. I am willing to let the junior Senator from Wisconsin close the debate. I have had my say. I fully intend under any circumstances to assert and reassert, over and over again, that officials in the Government do not live in a vacuum. If they did, they would not be worth their salt. But they are people of character. When something is dredged up about a trip being paid by an airline, I am ready to let the character of the man speak, because that will be the man himself. When he sits, poring over files, involving competing interests of airlines, he will, out of his conscience and a full heart, finally render a decision, not for himself, but for his Government. That is what he does. I put my chips on Jim Durfee. I rest my case.

Mr. PROXMIRE. Mr. President, I suppose that about 25 percent of the speech made by my good friend from Illinois could apply to any nomination that is submitted to the Senate. After all, the President has to consider the nominee he is recommending. However, the Senate has a duty to scrutinize the nomination. The Constitution provides for that duty.

It is not easy to oppose any man for Federal office, because the nominees are selected by the President, and they have been screened before the nominations come to the Senate. It is particularly not easy to oppose a man from my own State, a man who has many friends in my State.

Another 25 percent of the speech of my friend from Illinois has been devoted to my appearance before the House in favor of a code of ethics for public officials. I still stand by that. I believe the law we have in the State of Wisconsin has had a good effect. Of course, there are a great many people in Wisconsin who are of fine character, but I would not say that people in the other 49 States are not also of good character. I think one of the reasons why we have had our fine experience in Wisconsin is that we have laws that prohibit the kind of misconduct and the kind of misbehavior which has sullied the Federal Government in the past 6 or 8 months.

I wish to make one more point before I deal with the qualifications of the nominee, in reply to the Senator from Illinois.

Of course, the head of the CAB should not live in a vacuum. He should not be cloistered. Neither should the heads of the FCC, the FPC, and the other agencies which have been under fire. I do not claim that they should isolate themselves from the people they regulate. They should not. They ought to mingle with them and talk with them. There is no reason why they should not have dinner with them or go to a cocktail party with them or travel with them. The only point I make is that when they do those things, they should not be under obligation to the people whom they regulate. It is very simple: All they have to do is to pick up their own checks.

I think the State of Wisconsin has a regulatory system which has worked very well. Our officials are not cloistered. They associate freely, regularly, and constantly with the people whom they regulate. There has been no complaint on the part of the industries which are regulated that the officials who regulate them do not understand their jobs or are out of sympathy with those who are regulated. Wisconsin has provided that legislators and the persons who are charged with the regulation of the pub-

lic utilities industries shall not be entertained by or be under any other kind of obligation to those whom they regulate.

My case against the nominee is based, first, on the assertion that he is not qualified for this appointment. Second, it is based on the assertion that he has had a kind of quasi-judicial experience on the CAB, but that on a number of occasions when his judicial position has been under fire, when his judicial temperament has been tested, when his judiciousness of operation has been challenged, he has violated the specific judicial code under which all members of the CAB are expected to operate. Neither the senior Senator from Wisconsin nor the junior Senator from Illinois nor the committee report nor any other source which has discussed this matter has met that point.

The point is that there was a violation of a specific code. I have the evidence in the rear of the Chamber, and I shall discuss it briefly in a few minutes.

So far as the qualifications of the nominee are concerned, as I said to the senior Senator from Wisconsin, I suppose it may be said that there are 50,000 or 100,000 lawyers in the United States who have had some kind of experience in tax matters or in claims cases, but I do not believe anyone would say that any of those persons should be selected for appointment to a top Federal post, such as a judgeship on the U.S. Court of Claims, the body which has the major responsibility for handling claims against the Government, and expect such a person to be qualified for the work.

How are those qualifications determined? The Senator from Illinois and the Senator from Wisconsin, my senior colleague, have argued that the nominee is a lawyer, and a moderately successful lawyer.

What I did was inquire among the people who practice before the Court of Claims in the District of Columbia. Seventy percent of all the cases handled by that court are handled by what is known as the District of Columbia Court of Claims bar, which represents not only private claimants, but also the public. I had my staff conduct a poll of those practitioners. I obtained every single name I could get of those who practice before the Court of Claims. They overwhelmingly agreed that the nominee is not qualified to serve on the Court of Claims.

There has been a discussion of the persons who now serve on the Court of Claims, including their experience before they were appointed. The experience of the nominee can be tested against any one of the present membership of the court, and it will be found that there is no comparison in their relative qualifications.

Judge Laramore served 12 years as a circuit judge. Obviously, he had substantial judicial experience for his appointment.

Judge Jones served 24 years in Congress, 9 years as chairman of the Committee on Agriculture. People have criticized experience in Congress as a basis for service on the Court of Claims. But the Court of Claims is a congressional court. It was established to handle claims which Congress was unable to handle. It took over congressional and constitutional duties. Judge Jones has had qualifying experience; admittedly, he is the only member of the court who has had; but it is pertinent experience.

Judge Whittaker was an attorney with the Bureau of Internal Revenue and was also an Assistant Attorney General of the United States. In those capacities he acquired exactly the kind of experience which would give him an understanding of the problems which would face him as a judge of the Court of Claims.

Judge Madden is one of the outstanding authorities in America on property. He is coauthor of a case book on property. He was a professor of law at the Universities of Oklahoma, Ohio State, and West Virginia. He was visiting professor of law at the University of Chicago, and at North Carolina, Cornell, Stanford, Yale, and Vanderbilt Universities. He is an outstanding expert on exactly the kind of problems which confront the Court of Claims.

Finally, there is Judge Littleton, who is retiring. Judge Littleton was a member and later Chairman of the Board of Tax Appeals. The Board of Tax Appeals, of course, provides absolutely the perfect background of experience for service on the Court of Claims.

That is an outline of the experience of the 5 present members of the court.

I submit, based on the qualifications of those men, that the qualifications of the nominee do not measure up to those standards. He is not qualified, on the basis of the qualifications of the persons who now serve on the Court of Claims. I think that is a fair basis for comparison.

We could select any lawyer and get the members of his bar association to say that he is a good man; that he is well liked; and that the bar association recommends him. There may be nothing seriously wrong with him. But for a position such as a judgeship on the Court of Claims, better qualifications are needed. We as Senators have a responsibility to demand that those who are appointed for top positions be qualified. That does not simply mean that they must have a law degree and have had a few years of experience.

Mr. President, there were three instances of violations of the judicial code of ethics by the nominee. Two of them involve inaugural flights. I admit that there were extenuating circumstances in connection with those inaugural flights. There is no question about it. There was a precedent. Other CAB Chairmen had taken such flights, as had other members of the Board. There was a specific ruling to exempt CAB members from the code of ethics so far as the taking of inaugural flights was concerned. All that is true. Nevertheless, I say it is exceedingly bad practice. It is perfectly proper for Congress to examine the practice and to determine whether a person who is appointed to an exalted judicial office has demonstrated the kind of grasp of judicial responsibilities which will be expected of him by having taken flights which obligated him in the sense that he was a guest of airlines subject to his regulation.

The fact is that such flights are authorized by the Civil Aeronautics Board. It was the Civil Aeronautics Board which interpreted the law that the airlines could not charge for such flights.

There was an omission indicating exactly why the flight to Mexico on Eastern Air Lines, which had 76 cases pending before the Board, was injudicious. Two days before the flight taken by the Chairman, Pan American petitioned the CAB to set aside the route assigned to Eastern, because Pan American thought it was better qualified to handle the route. Nevertheless, in spite of the fact that this particular inaugural flight was under judicial fire, and the decision would come before the Chairman of the CAB, Mr. Durfee took the flight. He was wined and dined by Eastern. He went to Mexico City. He was entertained there and traveled back and forth aboard Eastern. Thirty days later, he denied Pan American's petition.

Mr. President, I have agreed that there are extenuating circumstances, because it takes a degree of judicial appreciation to refuse to take flights under those circumstances. But I say that as to the other incident which took place—the trip to Pinehurst, N.C.—the fact is that there is simply no such excuse whatsoever. I refer to page 71 of the hearings, where I asked:

> Now I ask the nominee, Is there any evidence of any kind, any precedent to indicate that this trip to Pinehurst, N.C., was not a violation of the code prohibiting unusual hospitality?
>
> Mr. DURFEE. I know of no such communication of any prior member of the Board that a trip such as I did to Pinehurst was or was not a violation.

Mr. President, in the rear of the Chamber is the only public record of this trip. I repeat: the only public record. I emphasize that statement because the committee report states that the trip received widespread publicity. But it was not mentioned in the newspapers, the news magazines, or any Government publication. No one was told of it. The only medium which gave it publicity was the magazine Sports Illustrated.

The code of ethics of the CAB, section 300.4, provides:

> Unusual hospitality: It is particularly improper that persons interested in the business of the Board should provide unusual hospitality to the Board or its staff; nor should such hospitality be accepted.

In this picture we have George Tompkins, president of Overseas National Airlines. He was an expense-paying cohost. We also see Louis Burwell, vice president of the Flying Tiger Lines, and also an expense-paying cohost. We also see Robert Prescott, president of the Flying Tiger Airlines, and also an expense-paying cohost.

On yesterday I pointed out that although these airlines had cases pending before the CAB at that time, there is also in this picture James R. Durfee,

Chairman of the CAB, and he had all his expenses at that meeting paid; he was a guest. If that is not a violation of the code of ethics of the CAB, what is a violation? We could not hypothesize a more specific, clear-cut, obvious violation of the code of ethics than this one.

Mr. President, I have done my best to try to get some kind of decision on this matter. The Judiciary Committee told me—as appears on page 6:

It is certainly not within the jurisdiction of this committee to interpret the Civil Aeronautics Board code of ethics.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I am glad to yield to my good friend, the Senator from Pennsylvania.

Mr. CLARK. How is it possible for the Judiciary Committee to pass on the qualifications of the nominee without interpreting the code of ethics of the CAB?

Mr. PROXMIRE. I thank the Senator from Pennsylvania. I think there is simply no answer to it. After all, if the Judiciary Committee does not pass on this, who does?

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield further to me?

Mr. PROXMIRE. I yield.

Mr. CLARK. Is it not obligatory on the Senate, in passing on this nomination, to determine whether the nominee has violated the code of ethics?

Mr. PROXMIRE. I think it certainly is incumbent on the Senate to make that determination.

Mr. CLARK. Does not the Senator from Wisconsin think the Senate is entitled to have the opinion of the Judiciary Committee on this point, before the Senate votes on the question of confirmation of the nomination?

Mr. PROXMIRE. I think it is particularly entitled to have that opinion, in view of the fact that the Judiciary Committee did interpret the code of ethics in relation to the two inaugural flights. How inconsistent could it be? When it felt that it could interpret the code of ethics favorably to the nominee, it did so. But when the author of the report thinks the interpretation would be unfavorable to the nominee, the report says it could not make such a determination.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield further?

Mr. PROXMIRE. I yield.

Mr. CLARK. Has the Senator given thought to having the nomination returned to the Judiciary Committee, to have it make a determination as to whether the nominee violated the code of ethics?

Mr. PROXMIRE. I have given considerable thought to that. But in view of the way the matter was steamrollered by the committee, I assume that would be a futile effort.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield again to me?

Mr. PROXMIRE. I yield.

Mr. CLARK. I assume that the Senator from Wisconsin has talked with the members of the Judiciary Committee about this matter.

Mr. PROXMIRE. I have.

Mr. CLARK. Can the Senator tell me whether he believes the members of the committee believe that if Mr. Durfee had violated the code of ethics of the CAB he would still be qualified for the position to which he has been nominated?

Mr. PROXMIRE. I have no such information. I talked to the members of the committee at the time when I appeared at the committee hearing, and I have talked to some of the individual members. But I had no success in my attempts to secure that information.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield again to me?

Mr. PROXMIRE. I yield.

Mr. CLARK. I wish to be scrupulously fair to the nominee, and I know the Senator from Wisconsin does, too. We certainly do not wish to pillory him in any way; we wish to give him the benefit of every doubt.

I think the President has great latitude in submitting nominations to the Senate, and I do not believe we should carelessly reject nominations, particularly not on ideological grounds.

Mr. PROXMIRE. Let me say that under no circumstances would I favor the rejection of this nomination or any other nomination on any such grounds. Unlike the Senator from Pennsylvania, I voted in favor of confirmation of the nomination of Mrs. Luce when she was under fire, although she had attacked a former Democratic President.

I would support a vigorous Wisconsin Republican if he were qualified and if he had not violated the judicial code. But this man has violated the code.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield further?

Mr. PROXMIRE. I yield.

Mr. CLARK. What justification is given by the nominee and those who support confirmation of his nomination for his having taken the full-expenses-paid junket to Pinehurst, with his expenses paid by the executives of two airlines with respect to which matters were pending before the Commission?

Mr. PROXMIRE. The justification is very, very interesting, because it goes to the very heart of my objection. They said public business was discussed, and that it was discussed in a constructive way. They said the meeting was a fine one, and they said good results were achieved from the meeting. They said the Military Air Transport Service, which had had too many routes, was persuaded, on the basis of the meeting, to surrender some of them; and Overseas Airlines got some of them and the Flying Tiger Airline got some of them, and Pan American Airways got some of them; and the commercial aviation industry benefited, so they said. That may or may not be true; we cannot tell, because no representative of the general public was permitted to attend the meeting. In short, the one party which had a deep interest in the meeting was shut out.

All we know is that the meeting was held in Pinehurst. We know those who were there played golf, and apparently they played poker; and that is all we know about the meeting.

Mr. CLARK. Were representatives of MATS at the meeting?

Mr. PROXMIRE. Yes.

Mr. CLARK. Does the Senator from Wisconsin know whether the expenses of the representatives of MATS were paid by the airlines?

Mr. PROXMIRE. They were paid by the airlines.

Mr. CLARK. So the net result was that representatives of two airlines entertained the executive officials of MATS and also the nominee, the Chairman of the Civil Aeronautics Board; and as a result of that entertainment, MATS gave up some lines of aeronautical transport to private airlines. Is that correct?

Mr. PROXMIRE. That is correct.

Mr. CLARK. Is not a conflict of interest involved in connection with MATS, also?

Mr. PROXMIRE. I do not know how a conflict of interest could be any clearer; and if a general who represented MATS at that meeting were nominated, and if his nomination were now before us, I would oppose confirmation of his nomination, just as I opposed confirmation of the nomination of James Durfee.

As a matter of fact, I think that trip would constitute a basis for a censure action. However, we are now considering this nomination, this promotion to a lifetime judicial position.

As the Senator said to me the other day, in speaking of the action by the Judiciary Committee, this is one of the most fantastic situations he has ever seen.

Mr. Doerfer, the Chairman of the Federal Communications Commission, took a trip on a yacht which belonged to a man who was active in the television industry, but who did not have any cases before the Federal Communications Commission. But Mr. Doerfer was denounced, and had to resign.

On the other hand, the head of the CAB did something that is obviously worse, because he violated a specific code, and cases in which his host were interested were pending before his agency at the time when he accepted the entertainment. But he does not go out; instead, he goes up.

Mr. CLARK. Mr. President, I should like to congratulate the Senator from Wisconsin for his very courageous fight in connection with this matter.

Mr. PROXMIRE. I thank my friend from Pennsylvania for his extremely helpful colloquy.

Mr. President, I also tried very hard to discover whether that action constituted a violation of the law. As a matter of fact, the language of the letter I received from the Comptroller General made it clear to me that, under any sort of interpretation, it did violate the criminal code, which provides that when public business is involved it is a violation for any person to pay or accept expenses, including travel expenses and hotel bills, of a public employee.

In order to ascertain whether that conduct of the nominee did violate the

law, I was told by the Comptroller General that it would be necessary to apply to the Attorney General. I did apply to the Attorney General; and the Attorney General said that he could only give an opinion to the President or to the heads of the executive departments. So I wrote to the President. The President replied that they could not decide this and that they would not decide this, upon my request, and that they would not request an opinion from the Attorney General, and that they would not do so because the Judiciary Committee had already considered this, but they have said that the question of whether such conduct constituted a violation of the code of ethics is outside their jurisdiction.

Therefore it seems that it is outside the jurisdiction of the President and it is outside the jurisdiction of the Attorney General, and it is outside the jurisdiction of the Comptroller General, and it is outside the jurisdiction of the Judiciary Committee; and apparently only the Chairman of the CAB, himself, can determine whether he violated the law and whether he violated the code of ethics.

So, as a U.S. Senator, I have no alternative except to construe the law as I can read it, and construe this code of ethics simply as it is, and to conclude that he violated both of them. And on that basis I must vote against confirmation of the nomination.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield further to me?

Mr. PROXMIRE. I yield.

Mr. CLARK. Would the Senator hazard the suggestion that the interest of the Attorney General in determining whether Mr. Durfee should be prosecuted criminally for what he did was about as strong as the interest of the Attorney General in determining whether he could get a few Negroes enfranchised under the Civil Rights Act of 1957?

Mr. PROXMIRE. I think that is an excellent analogy, and I thank my colleague from Pennsylvania.

Mr. President, in conclusion, this nomination comes at a time when the country has been shocked by similar hospitality accepted by the head of the FCC. The head of the Federal Communications Commission accepted hospitality under similar circumstances, and was denounced from one end of the country to the other, and had to resign under fire.

I want to call attention to an editorial in the New York Times, which says just exactly what I have said. I am going to read the first two paragraphs of it:

> The slack sense of public ethics that has characterized a number of officials of this and previous administrations, and has resulted in their ouster, is a serious malady of American political life. It was most recently displayed in the case of Chairman John C. Doerfer of the Federal Communications Commission, who resigned after it was disclosed that he had accepted extensive (and expensive) hospitality from an executive in the radio and television industry—the very thing the FCC was set up to regulate.

We agree with Senator PROXMIRE of Wisconsin—

This is the New York Times—

> that there is no difference in principle between this case and that of the chairman of another of the great Federal regulating agencies, the Civil Aeronautics Board, who in 1956 and 1957 allegedly—

We have proven he did. It is not an allegation; it is a fact—

> accepted lavish hospitality from airlines whose applications were pending before the very same agency.

Mr. President, this, to my knowledge, is the first time the question of recent misbehavior of Federal employees has been squarely put to the U.S. Senate. Our decision is peculiarly important because this country is at an ethical crossroads. The greatest weakness in America today is not a military weakness, or lack of economic growth, or even an educational weakness, important as these are. The fundamental, basic weakness in America is a moral weakness, a weakness in the character of too many of the American people.

Our difficulty is that we too rarely have an opportunity to confront the moral problem directly and decisively, except when the decision is black and white and very simple. This is not that kind of a decision. As I say, it is not easy, and I can say the proponents of the nominee are very sincere persons. This is not a clear-cut issue. It is a tough issue and a hard one. It is not easy to vote against the nominee, because he is a popular man, and there are good qualities in this man.

We suffer from a kind of nibbling away at moral substance. There are many sincere and inspiring calls to arms against this moral illness, but there is rarely or never any action. If the Senate approves this nomination, it will be adding another who-gives-a-damn vote, this time from the body we proudly call the greatest deliberative body in the world, to the serious moral weakness of our country.

Mr. President, I yield the floor.

Mr. DIRKSEN. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is, Will the Senate advise and consent to the nomination of James R. Durfee to be an associate judge of the U.S. Court of Claims? The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from Nevada [Mr. CANNON], the Senator from Idaho [Mr. CHURCH], the Senator from North Carolina [Mr. ERVIN], the Senator from Alaska [Mr. GRUENING], the Senator from Arizona [Mr. HAYDEN], the Senator from Texas [Mr. JOHNSON], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Rhode Island [Mr. PASTORE] are absent on official business.

The Senator from Massachusetts [Mr. KENNEDY] and the Senator from Wyoming [Mr. O'MAHONEY] are necessarily absent.

On this vote the Senator from North Carolina [Mr. ERVIN] is paired with the Senator from Wyoming [Mr. O'MAHONEY]. If present and voting, the Senator from North Carolina would vote "yea," and the Senator from Wyoming would vote "nay."

The Senator from Nevada [Mr. CANNON] is paired with the Senator from Massachusetts [Mr. KENNEDY]. If present and voting, the Senator from Nevada would vote "yea," and the Senator from Massachusetts would vote "nay."

The Senator from Alaska [Mr. GRUENING] is paired with the Senator from Oklahoma [Mr. MONRONEY]. If present and voting, the Senator from Alaska would vote "nay," and the Senator from Oklahoma would vote "yea."

I further announce that, if present and voting, the Senator from Rhode Island [Mr. PASTORE] would vote "yea."

Mr. DIRKSEN. I announce that the Senator from Maryland [Mr. BUTLER], the Senator from Arizona [Mr. GOLDWATER], and the Senator from California [Mr. KUCHEL] are necessarily absent.

The Senator from New Hampshire [Mr. COTTON] is absent on official business.

If present and voting, the Senator from Maryland [Mr. BUTLER], the Senator from New Hampshire [Mr. COTTON], the Senator from Arizona [Mr. GOLDWATER], and the Senator from California [Mr. KUCHEL] would each vote "yea."

The result was announced—yeas 69, nays 15, as follows:

YEAS—69

Aiken	Ellender	Mansfield
Allott	Engle	Martin
Bartlett	Fong	Morton
Beall	Frear	Moss
Bennett	Fulbright	Mundt
Bible	Hart	Muskie
Bridges	Hartke	Prouty
Brunsdale	Hennings	Randolph
Bush	Hickenlooper	Robertson
Byrd, Va.	Hill	Russell
Byrd, W. Va.	Holland	Saltonstall
Capehart	Hruska	Schoeppel
Carlson	Jackson	Scott
Carroll	Javits	Smathers
Case, N.J.	Johnston, S.C.	Smith
Case, S. Dak.	Jordan	Sparkman
Chavez	Keating	Stennis
Cooper	Kerr	Talmadge
Curtis	Long, Hawaii	Thurmond
Dirksen	Long, La.	Wiley
Dodd	McCarthy	Williams, Del.
Dworshak	McClellan	Williams, N.J.
Eastland	Magnuson	Young, N. Dak.

NAYS—15

Clark	Kefauver	Murray
Douglas	Lausche	Proxmire
Gore	Lusk	Symington
Green	McGee	Yarborough
Humphrey	Morse	Young, Ohio

NOT VOTING—16

Anderson	Goldwater	McNamara
Butler	Gruening	Monroney
Cannon	Hayden	O'Mahoney
Church	Johnson, Tex.	Pastore
Cotton	Kennedy	
Ervin	Kuchel	

So the nomination was confirmed.

Mr. DIRKSEN. Mr. President, I ask that the President be immediately notified.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

Mr. MANSFIELD. Mr. President, I ask that the remaining nominations on the Executive Calendar be considered at this time.

The PRESIDING OFFICER. The remaining nominations, under the head of "New Reports," will be stated.

UNITED NATIONS

The Chief Clerk read the nomination of Louis Wellington Cabot, to be the representative of the United States of America to the 15th session of the Economic Commission for Europe of the Economic and Social Council of the United Nations.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

DIPLOMATIC AND FOREIGN SERVICE

The Chief Clerk read the nomination of Leland Barrows to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the State of Cameroun.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. MANSFIELD. I ask that the President be immediateley notified of the confirmation of these two nominations.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 10234) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. PRESTON, Mr. THOMAS, Mr. CANNON, Mr. BOW, and Mr. TABER were appointed managers on the part of the House at the conference.

The message also announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H.R. 1725. An act for the relief of Martin Pysz;

H.R. 3107. An act for the relief of Richard L. Nuth;

H.R. 5150. An act for the relief of Our Lady of the Lake Church;

H.R. 6479. An act to provide for the conveyance of certain real property of the United States to the village of Highland Falls, N.Y.;

H.R. 8024. An act to amend the act of May 9, 1876, to permit certain streets in San Francisco, Calif., within the area known as the San Francisco Palace of Fine Arts, to be used for park and other purposes;

H.R. 9106. An act for the relief of John E. Simpson;

H.R. 10947. An act for the relief of Aladar Szoboszlay;

H.R. 11190. An act for the relief of Cora V. March;

H.R. 11388. An act for the relief of Dr. Henry H. Cohan; and

H.J. Res. 598. Joint resolution to extend the time for filing of the final report of the Lincoln Sesquicentennial Commission.

HOUSE BILLS AND JOINT RESOLUTION REFERRED

The following bills and joint resolution were severally read twice by their titles and referred as indicated:

H.R. 1725. An act for the relief of Martin Pysz; to the Committee on Finance.

H.R. 3107. An act for the relief of Richard L. Nuth;

H.R. 5150. An act for the relief of Our Lady of the Lake Church;

H.R. 9106. An act for the relief of John E. Simpson;

H.R. 10947. An act for the relief of Aladar Szoboszlay;

H.R. 11190. An act for the relief of Cora V. March;

H.R. 11388. An act for the relief of Dr. Henry H. Cohan; and

H.J. Res. 598. Joint resolution to extend the time for filing of the final report of the Lincoln Sesquicentennial Commission; to the Committee on the Judiciary.

H.R. 6479. An act to provide for the conveyance of certain real property of the United States to the village of Highland Falls, N.Y.; and

H.R. 8024. An act to amend the act of May 9, 1876, to permit certain streets in San Francisco, Calif., within the area known as the San Francisco Palace of Fine Arts, to be used for park and other purposes; to the Committee on Armed Services.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

The Senate resumed the consideration of the bill (S. 2131) to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

ORDER FOR ADJOURNMENT TO TOMORROW AND FROM TOMORROW UNTIL MONDAY NEXT

Mr. DIRKSEN. Mr. President, I should like to inquire of the acting majority leader what the program for tomorrow is and what the program may be for the remainder of the week.

Mr. MANSFIELD. There will be no further business this afternoon. There will be a pro forma meeting tomorrow, but no business will be undertaken, and there will be no voting.

It is the intention of the leadership that the Senate adjourn from tomorrow until 12 o'clock noon on Monday next.

Mr. DIRKSEN. I thank the Senator.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate adjourns tonight, it adjourn to meet at 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. I ask unanimous consent that at the conclusion of business tomorrow, the Senate adjourn until 12 o'clock on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, at this time I ask chairmen and members of the various committees to get busy and report whatever legislation can be reported, so that it may be considered on the floor of the Senate, because the calendar is pretty well up to date.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of yesterday be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION TO FOREIGN RELATIONS COMMITTEE TO FILE REPORT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Committee on Foreign Relations have until midnight on Friday next to file its report on the Mutual Security Act of 1961.

The PRESIDING OFFICER. Without objection, it is so ordered.

OUR UNBALANCED FOREST BUDGET

Mr. MANSFIELD. Mr. President, it was the hope of the Senator from New Mexico [Mr. ANDERSON] and myself that it would be possible for us to join together in a speech on the reforestation needs of our Nation. It was not possible for us to arrange to obtain the floor during the past few days and now the Senator from New Mexico has gone to his State for an extended period. Before leaving he suggested that I combine the thoughts we intended to express and speak for him as well as for myself.

This is a task, this is a challenge, and this is a responsibility I feel honored to discharge because I look upon the Senator from New Mexico as one of the Nation's truly outstanding conservationists. It is no accident of the alphabet that his name appears ahead of mine on the 1949 Anderson-Mansfield Reforestation and Revegetation Act. CLINTON P. ANDERSON knew what the problem was from his wartime experience as Secretary of Agriculture. He had the vision to see that we should reforest the 4 million acres of national forest needing this beneficial treatment by 1965. He developed a bill to meet this challenge. I was a willing and honored cosponsor. If we had proceeded under the Anderson schedule, we would now have almost completed the reforestation of the national forests. Clearly then, CLINTON P. ANDERSON saw exactly what must be done to protect our forest resources.

Today, mainly because the present administration has turned its back upon implementing a well-reasoned law, we

have a greater need for national forest reforestation than existed 10 years ago.

There is extreme doubt in my mind that the issues which are involved have ever even received the President's personal attention. These denuded forests are failing to produce the timber they should. They are not serving our watershed needs. They are a blight in our national forests. This condition could exist only in an administration which evades the responsibilities of the second half of the 20th century.

This failure to meet our resource responsibilities is the work of small minds. It comes from ignorance of need and a lack of faith in ability. I refuse to accept the premise that our Nation is so poor that it cannot replant its public forests. I cannot believe that the Federal Government is unable to provide sufficient funds for the national forests to surpass the planting efforts of any single private concern.

Our forest budget is badly out of balance. Today over 4½ million acres of the national forests require reforestation. Since the creation of the national forests, only 2,002,956 acres have been planted and of this amount 1½ million acres, or over 80 percent, occurred during the Roosevelt-Truman eras.

The record achievements in tree planting occurred during Franklin Delano Roosevelt's administration—in only 1 year alone over 223,000 acres were planted. In 7 years of F.D.R.'s administration, tree planting averaged 160,000 acres each year. The good progress that we were making as a Nation was stopped by World War II and, subsequently, though tree planting activities picked up after this war, they fell off somewhat when Korea came along.

During the last 7 years, the Eisenhower administration has failed to meet its responsibilities. In only 1 year, 1959, has it managed to do more to reduce the backlog of national forest areas needing reforestation than did Hoover during his administration. As a matter of fact, the Eisenhower administration's record shows less accomplishment than the Hoover administration and less than one third the annual accomplishment of the Roosevelt administration. This administration has totally ignored the authorization provided by the Anderson-Mansfield Act. Until the 84th Congress proceeded to correct the situation, the administration succeeded in cutting tree planting activities to about one-half of that in effect under the Truman administration. Since 1954, Congress has provided approximately one third more in funds for reforestation than the budget requests submitted by the administration. The funds authorized by the Anderson-Mansfield Act would have totaled $73 million through fiscal year 1959, but during this period approximately $15 million has been appropriated. This is a scant 20 percent of authorized needs.

Last year the administration submitted its program for the national forests. It envisioned expending $375 million for reforestation and stand improvement. This year's budget request was for a mere 8½ percent of the maximum amount needed annually. To carry the program on at the required level would involve adding $37½ million to the Forest Service budget. At the rate we are proceeding, we are not even holding our own in achieving needed reforestation.

Since 1906 almost 22 million acres of national forest lands have been burned by forest fires. In the decade just past we have burned an average of close to 200,000 acres annually while we have planted trees on an average of but 22,900 acres annually. Not every acre that is burned must be replanted, but we are burning annually 10 times as many acres as we are planting, and even after accounting for all the possibilities under the Knutson-Vandenberg Act, it is evident that our rate of reforestation is below the rate of depletion.

The problem is not solely on Federal lands—what we need are programs effective everywhere. In 1958 Dr. Richard McArdle, Chief of the Forest Service, said in his annual report:

> Within the next 10 years 48 billion trees need to be planted, mainly on small ownerships, if the wood requirements of a larger population are to be met by the year 2000.

The Federal Government's direct responsibility extends to 5.4 milion acres. States and local governments have a direct responsibility for 2.3 million acres, but the great bulk of our reforestation need, 43.6 million acres, are on private lands and by far the greatest portion is in small private ownerships where virtually nothing is being done. Representative of this troublesome fact is that in 1958 alone when 908,000 acres of private land were planted, a mere 27 companies accounted for 330,000 acres of the planting, or over 40 percent of all the work done on private land. But these companies own only a small portion of the Nation's private timber lands. Reforestation is moving ahead rapidly on industrial private holdings, but it is lacking badly on the Federal lands and on small private woodlands.

The Chief of the Forest Service set forth his views before the Senate Appropriations Committee and I shall let his testimony speak for itself:

> I am very unhappy with the progress that we are making in reforesting the more than 4 million acres in the national forest system which should be planted. They are not producing the timber they could produce. They are not serving as effective watersheds. They are not serving recreational purposes. They are not serving the public in any way that they should.
>
> We have this enormous backlog of a large area needing planting to make it productive. It is not going to become productive by itself. Man is going to have to help it.
>
> Added to that backlog every year are additional areas where fires denude the forests, or where logging takes place and restocking of the cutover areas is not obtained promptly through natural means. So actually we are not even keeping abreast of our situation, but falling behind.
>
> Senator McGee. The program is getting behind rather than gaining.
>
> Mr. McArdle. This is not the kind of statement I would like to make to you, Senator, or to this committee; but you asked me my opinion, and I am telling it to you frankly.

The Chief of the Forest Service said he did not want to make the type of statement he did, but his opinion was sought and he gave it frankly and honestly. I shall let the record speak on why this condition exists:

> Senator McGee. I know you do not draw up the national budget. Did you submit a budget for this Department?
>
> Mr. Peterson. A budget was submitted for the Department.
>
> Senator McGee. And what request did the Department make for reforestation?
>
> Mr. Peterson. As I recall the Department's request, the Department did not ask an increase for this item.
>
> Senator McGee. The Department did not in itself make the request for an increase?
>
> Mr. Peterson. That is the information I have, I believe that is correct.
>
> Senator McGee. The Department was mindful we were not even keeping pace with the need in this area?
>
> Mr. Peterson. Entirely so; yes, sir.
>
> Senator McGee. The Department would take this responsibility then for neglecting the development of this resource?
>
> Mr. Peterson. No; I do not accept that for the Department. The Department, of course, like all other agencies of the Government, gets its budgetary policies from the Bureau of the Budget as to the total funds available.
>
> Senator McGee. Before your requests were prepared you had then submitted a ceiling beneath which you had to stay, on all of your total expenses?
>
> Mr. Peterson. That is right.
>
> Senator McGee. If it were not for the ceiling imposed, the Department would have a larger request?
>
> Mr. Peterson. Most assuredly.

Last year a number of us joined together to introduce Senate Joint Resolution 95, which was designed to urge acceleration of our reforestation program. This resolution has had the complete opposition of the Bureau of the Budget. The Bureau of the Budget favors more study, as though this in itself were a solution to the problem that small woodland owners face. It is my view that we have studied long enough. But, in addition, we also know that the administration has cut back Federal funds appropriated under the Clark-McNary Act. This administration apparently wants to stop doing everything while it tries to make up its mind whether it should do anything. I would like to place in the Record at this point a few words that Dr. McArdle had to say in a speech of February 25 before the American Pulpwood Association on small woodlands:

> Small Woodlands
>
> Foresters have been talking for years about the small woodlot problem but not too much seems to get done about them—at least in relation to what is needed.
>
> The facts are well known. They have been recited so many times it sounds as though the record were stuck. Over one-half of this country's forest land is 4½ million small forest ownerships. The average size is 60 acres. In the East, where most of you operate, two-thirds of the commercial forest land is still in small ownerships despite some recent industrial acquisitions. One-half of our future timber will have to come from small forest properties.
>
> We know what is needed. Forty-three million acres should be planted, yet only 1 percent of this is being done each year. Timber-stand improvement needs to be stepped up 20 times. Only 14 percent of these small holdings are getting adequate fire protection. And so on.
>
> How do you get through to these 4½ million people, many of whom do not live

on the land and either frankly don't care about timber or, if interested at all, look on timber growing as purely a secondary matter? Your industry is doing a lot, but it is only a drop in the bucket compared to what is needed. The same may be said of Federal and State efforts.

Basically the physical forestry measures essential to put these lands in shape can only be bought, ordered, persuaded, or obtained by some combination of these three. One thing appears to be clear. Persuasion alone is not getting the job done fast enough.

Personal philosophies of Government, psychology, budgets, and political science all get involved, and as a result the lands tend to stay in poor shape. What these lands will yield 40 years from now will largely be decided in the sixties—again the decade of decision.

The small woodlands are a good example of what I meant earlier in referring to decision by default. The grave danger is that differing philosophies will clash so strongly that too little will get done on the ground, or it will get done too late. As a consequence, the lands won't grow the timber you will need so urgently.

The fateful decision here is whether men of policy and power will have the foresight and, if I may say so, the "guts," to partially compromise deepset philosophical convictions in order that these lands may contribute their essential share to our raw-material base.

The Bureau of the Budget tells us that the Department can proceed on a systematic basis to plant the 5 million acres of Federal lands needing reforestation. I ask unanimous consent that a letter dated March 1 to Senator ANDERSON from the Chief of the Forest Service be printed in the RECORD at this point. To this tabulation an additional table has been added showing the record of acreage burned since 1950.

There being no objection, the letter and tabulation were ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., March 1, 1960.

Hon. CLINTON P. ANDERSON,
U.S. Senate.

DEAR SENATOR ANDERSON: This is in reply to a verbal request received on your behalf from Mr. Robert Wolf, staff member of the Senate Interior and Insular Affairs Committee.

Mr. Wolf asked that you be supplied with the attached tabulation which shows by years since enactment of the Anderson-Mansfield Reforestation Act, both the acres planted on national forests and the acres needing to be planted. He also requested that the information be supplied for all national forests and separately for New Mexico. He further requested by years monetary information on the amounts of money requested for national forest reforestation in the President's budget and the amounts appropriated by Congress.

In accordance with Mr. Wolf's request, the figures do not include the acreage of recently logged areas planted under the Knutson-Vandenberg Act. In recent years, at least, this acreage has exceeded the acreage given in the attached tabulation. Neither does the attached tabulation include interplanting or planting of very recent burns or other areas not included in the backlog of plantable area.

A copy of this letter and tabulation are being sent directly to Mr. Wolf.

Very truly yours,

RICHARD E. MCARDLE,
Chief.

Area planted, and area needing planting on the national forests in New Mexico and total, all national forests—Appropriations, by fiscal years 1950–59

Fiscal year	New Mexico		All national forests		Funds			Area burned
	Area planted and seeded (acres) [1]	Area needing planting (acres) [2]	Area planted and seeded (acres) [1]	Area needing planting (acres) [2]	Authorized by Anderson-Mansfield Act	Budget request	Provided by Congress [3]	
1950	0	56,285	29,048	4,636,258	----------	$1,422,160	$1,357,643	255,387
1951	0	56,285	25,576	4,610,682	$3,000,000	2,205,118	1,163,535	314,606
1952	0	56,285	19,702	4,590,920	5,000,000	1,160,206	1,264,686	138,544
1953	285	56,000	23,980	4,567,000	7,000,000	1,182,991	1,162,333	231,314
1954	860	55,140	[4] 12,454	4,354,546	8,000,000	925,020	834,520	107,656
1955	0	55,140	13,770	4,540,776	10,000,000	450,235	867,650	276,140
1956	212	54,928	18,174	4,522,602	10,000,000	900,000	1,230,000	208,429
1957	1	54,927	21,102	4,501,500	10,000,000	1,130,000	1,500,908	118,324
1958	48	54,879	26,500	4,475,000	10,000,000	2,183,000	2,228,600	86,608
1959	152	54,727	38,707	4,436,293	10,000,000	2,186,000	3,015,000	240,000
Total	1,358	----------	228,613	----------	----------	----------	----------	1,977,008

[1] Work done under the Knutson-Vandenberg Act in planting areas currently being logged are not included.
[2] Plantable area or area in need of complete reforestation.
[3] Under national forest protection and management activity in Forest Service appropriation.
[4] Excludes 10,302 acres of planting on new burns not included in the backlog of plantable area.

Mr. MANSFIELD. I also added to this material the fund record for reforestation for the fiscal years 1960–61, as follows:

	Budget request	Provided by Congress
1960	$3,015,000	$3,215,000
1961	[1] 3,215,000	[2] 6,505,000

[1] Comparable basis to 1960 excludes transfer of $215,000 from ranger district management.
[2] As provided by Senate excludes $215,000 transferred from ranger district management and $1,000,000 to reforest areas burned last year.

It is encouraging that the Democratic 84th, 85th, and 86th Congresses have consistently added more money to the budget for reforestation. It is significant that requests for reforestation money from the executive branch dropped from $2.2 million for fiscal year 1951 under Harry Truman's administration to a low of $450,000 for fiscal year 1955 under this administration. The Congress has built this program up to $6.5 million, but it is still substantially below what is needed.

This year, however, the Senate took a significant step forward when it made available a special appropriation of $1 million to reforest and rehabilitate areas that were burned last year in addition to providing an almost 100 percent increase in the administration's fund request to reduce the backlog of areas currently needing replanting.

Mr. President, I ask unanimous consent that there be placed in the RECORD at the close of my remarks a series of letters between the Bureau of the Budget and the senior Senator from Montana [Mr. MURRAY] and letters from the Chief of the Forest Service. I also ask that there be placed in the RECORD at the conclusion of my remarks a tabulation showing the national forest acreage burned each year since 1908 and the acreage of land planted each year since 1906. The comparison of the record since the beginning of the Forest Service to the present demonstrates quite conclusively that the position of the Bureau of the Budget was reached by using incorrect premises. In fact, since the Bureau largely controls the premises on which the budget is placed, we would never achieve the rate of planting that they speak of if their advice were to be followed.

If we are to achieve the rate of reforestation that is needed on the national forests in order to meet our wood requirements by the year 2000, we must extend our reforestation efforts to at least 12 times the funds suggested by the administration this year.

Under the criteria applied by this administration, "budgetary considerations, of course, will influence the rate at which reforestation work can be accomplished." This sterile concept pays no heed to the condition of our natural resources. It is a negative philosophy geared to putting off until tomorrow the things that should be done today. The condition of our forests and the rate at which they have been destroyed by fire make it essential that we adopt a national policy of purposeful reforestation.

There being no objection, the letters and other material were ordered to be printed in the RECORD, as follows:

National forests

Year	Area burned	Area planted
1906	115,416	----------
1907	212,850	----------
1908	414,638	8,000

MAY 15, 1959.

The SECRETARY OF AGRICULTURE,
Department of Agriculture,
Washington, D.C.

MY DEAR MR. SECRETARY: The Senate Committee on Interior and Insular Affairs is herewith transmitting Senate Joint Resolution 95 for your study and report thereon.

This joint resolution deals with two situations, one, Federal responsibility toward its own lands; the other, Federal programs to aid State and private forestry. This committee desires that these two objectives be treated separately in your report and that priority be given, if necessary, to reporting on the Federal responsibility toward its own lands. Specific information is desired on the costs and benefits for reforesting Federal lands as well as the best estimate possible of the effect on our wood supply in the year 2000 if action is not taken at least on the Federal lands.

It is requested that 40 copies of your report on this bill be supplied for the use of the committee, the subcommittee, and the staff.

It is the hope of the committee that your report may be submitted within 30 days, or that we be advised if any delay beyond this time period is necessary.

Sincerely yours,

JAMES E. MURRAY,
Chairman.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., September 1, 1958.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in reply to your letter of May 15, 1959, requesting the views of the Bureau of the Budget on Senate Joint Resolution 95, to provide for the acceleration of the various reforestation programs of the Department of Agriculture and the Department of the Interior, and for other purposes.

The resolution would make it the policy of the Congress to provide a continuing reforestation program by accelerating and supplementing existing reforestation programs during the next 10 years on both Federal and non-Federal timberlands. Authorization is included to appropriate whatever funds are needed to accomplish the objective.

The Department of Agriculture, in a report being submitted to your committee on Senate Joint Resolution 95, points out that it has undertaken a study of the proper roles of the Federal, State, and local governments and private owners in planting trees on small forest ownerships. This study is in accord with the administration's policy to foster non-Federal participation in matters which should not be the sole responsibility of the Federal Government. Pending completion of this study, the Department of Agriculture does not favor increased Federal authorizations for tree planting on non-Federal lands.

In addition to the above consideration, it should be pointed out that both the Department of Agriculture and the Department of the Interior feel that the resolution is not necessary, since existing authorization is adequate for Federal lands. Reforestation of the approximately 5 million acres of Federal land involved in the total of 48 million acres mentioned in the resolution as needing planting can proceed on a systematic basis under existing legislation. Future budgetary considerations, of course, will influence the rate at which reforestation work can be accomplished.

In view of the above, the Bureau of the Budget recommends against enactment of Senate Joint Resolution 95.

Sincerely yours,

PHILLIP S. HUGHES,
Assistant Director for Legislative Reference.

DEPARTMENT OF AGRICULTURE,
Washington, D.C.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate.

DEAR SENATOR MURRAY: This is in response to your request of May 15, 1959, for the views of this Department on Senate Joint Resolution 95 to provide for the acceleration of the various reforestation programs of the Department of Agriculture and the Department of the Interior, and for other purposes.

This Department recommends that Senate Joint Resolution 95 not be enacted.

Senate Joint Resolution 95 would make it a policy of Congress to provide a continuing program for the reforestation of Federal, State and private land in order to accomplish tree planting on 48 million acres. This would be accomplished by accelerating and supplementing the existing reforestation programs administered by the Secretary of Agriculture and the Secretary of the Interior during the ensuing 10-year period commencing July 1, 1960.

In order to accomplish its purposes, Senate Joint Resolution 95 would authorize appropriation of needed funds to supplement those regularly appropriated to each Secretary for his respective tree planting programs. Each Secretary would be authorized to apportion such supplemental funds as he deems appropriate to accomplish the goals of their programs.

About 48 million acres of commercial forest land should be planted during the next 10 to 20 years in order to help supply forest products which will be needed by the year 2000 to meet projected demands. The need to do this is urgent.

About 43 of these 48 million acres of idle and nonproductive commercial forest land in the Nation is on lands owned by States, local governments, and private parties. Substantial areas of these non-Federal holdings are being planted each year as a consequence of Federal, State and local programs and private efforts, particularly the larger forest industries. The overall rate is insufficient, however, if long-range production needs are to be met. Less than 1 million acres of commercial forest land in these non-Federal holdings were planted in 1958.

The Department is currently reviewing State-Federal forestry programs for small forest ownership. This review may have a bearing on the Department's future views as to the proper roles of the State, local and Federal Governments and private owners in planting these small forest ownerships to trees.

In the meantime, the Department believes that the States should assume much greater financial responsibility for tree planting on non-Federal lands. For this reason, we do not at this time favor the proposed increases in Federal authorizations for tree planting on such lands.

On the nearly 185 million acres of national forest and associated lands administered by the Department, about 4.4 million acres are estimated to be in need of reforestation. Of this acreage, 3.9 million acres have been planned for reforestation during the first 10- to 15-year period of the program for the national forests recently recommended to Congress.

Reforesting the 3.9 million acres of national forest and associated lands will cost an estimated $199 million at 1958 costs. If this acreage is planted, the timber production by the year 2000 will be an estimated 975 million board-feet per year. Using today's stumpage prices, such production would have an estimated value of about $12.7 million per year.

The Department needs no additional legislative authority to carry out its plan for restocking the national forests and other lands it administers. The rate at which the plan can be effected, however, will necessarily depend on the overall financial resources of the Federal Government and its total budgetary needs and commitments.

The Bureau of the Budget advises that there is no objection to the submission of this report.

Sincerely yours,

———,
Secretary of Agriculture.

SEPTEMBER 15, 1959.

Mr. MAURICE H. STANS,
Director, Bureau of the Budget, Executive Office of the President, Washington, D.C.

DEAR MR. STANS: I have your brief negative report on Senate Joint Resolution 95, which was referred to this committee. I note in your reply that there are studies being conducted regarding tree planting on small private forest ownerships. With regard to the Federal lands, you state that planting can proceed on a systematic basis and that budgetary considerations will influence the rate of tree planting.

I wish to call to your attention a publication by the Department of Agriculture entitled "Timber Resources for America's Future" and in particular, as an example, the text on pages 68 through 70 entitled "Forest Tree Planting." Will you prepare for me and submit within the next 60 days a further report documenting the results to be

expected under the present systematic procedure if tree planting is carried forward on Federal lands at the present rate. In making this projection you may also wish to explain the progress that will be made if the upward trend of the last decade or so continues into the future. In either event, the impact of this reforestation activity on our wood supply should be related to expected private and State activity and specifically to our wood needs. You may wish to refer to the annual report for 1957 by the Chief of the Forest Service, which indicates that unless the tree planting job before us is accomplished in the next 10 years, our wood needs in the year 2000 will exceed supply.

It is my observation that the Federal Government is lagging badly in fulfilling its responsibility to our Federal lands. I desire to have your views on this situation and your thoughts on the role of the Federal Government should play, both on its own lands and as a conservation leader.

I would also like to be advised on why the administration has taken the position that Federal funds made available for tree planting on non-Federal lands should be decreased while a study is under way. I understand your letter to state that an increase is not favored pending completion of the study, but I am at a loss to appreciate the basis upon which fund requests have been reduced.

It is my plan to hold hearings on this resolution and associated resource policy matters. I, therefore, would appreciate this request receiving careful, complete and prompt consideration.

Sincerely yours,

JAMES E. MURRAY,
Chairman.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., November 23, 1959.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in response to your request of September 15 for a further report supplementing the adverse position of the Bureau of the Budget on Senate Joint Resolution 95, to provide for the acceleration of the various reforestation programs of the Department of Agriculture and the Department of the Interior, and for other purposes.

You asked us to document the results which might be expected if tree planting is carried forward on Federal lands at the present rate. The Department of Agriculture has advised that about 70,000 acres of Federal lands were planted or seeded in the fiscal year 1958. If planting continued at this level, about 80 years would be required to plant or seed the more than 5 million acres of Federal lands needing restocking. However, during the last 5 years substantial gains have been made in the rate of planting Federal lands over previous periods. If this trend is projected from the present level, Federal lands needing restocking would be planted or seeded in about 40 years.

You also requested that the projection of planting and seeding activity on Federal lands be related to expected private and State activity and to wood needs. The Department of Agriculture has advised that planting and seeding of private, State, and municipal forest lands reached an alltime high of 970,000 acres in the fiscal year 1958. About 45 years would be required to plant or seed such deforested lands if future activity continues at the 1958 level. If planting proceeds at the rate established by the upward trend of the past 5 years, about 25 years would be required to complete the job.

If it were decided to plant 48 million acres in the next 10 years, as a measure to help meet the wood needs of the Nation by the year 2000, planting rates on lands under all ownerships would have to be stepped up substantially—about four times over the current accelerated trends on Federal lands and about 2½ times on private, State, and municipal lands. To accommodate failures in planting which can normally be expected, replanting of some areas would have to be planned.

It should be emphasized that the foregoing analysis is limited to the problem of restocking the 48 million acres of deforested or poorly stocked commercial forest lands which have accumulated from the past as a result of logging, fires, epidemics of insects and diseases, and other causes. The analysis does not include the substantial Federal activity under the Knutson-Vandenberg Act (46 Stat. 527) in planting areas currently being logged in the national forests, nor the planting of trees instead of other agricultural crops under the soil bank conservation reserve program. Nearly 500,000 acres are planted yearly under these programs.

The Bureau of the Budget recognizes the need for a reforestation program for Federal lands, but it likewise recognizes the importance of maintaining the fiscal affairs of the Federal Government on a sound basis. The Bureau, therefore, believes that the rate of acceleration of a reforestation program must be dependent on overall budgetary considerations and the relative urgency of the needs of other programs requiring the expenditure of Federal funds. In our letter of September 1, 1959, to your committee, we pointed out that both the Department of Agriculture and the Department of the Interior believe that existing authorization is adequate and that Senate Joint Resolution 95 is not needed for Federal lands.

In our letter of September 1, 1959, we also recommended against enactment of the resolution because the Department of Agriculture is studying the roles which the Federal, State, and local governments and private owners need to take to assure needed planting of trees on small non-Federal forest ownerships. This is a comprehensive, long-term review of the small ownership reforestation problem. The Department's present position is that the States should provide an increasing share of the cost of the reforestation effort on non-Federal lands and we concur in this position. In the event that this review should indicate the desirability of a change in this position, you may be assured that the Bureau of the Budget will give consideration, within the budgetary context discussed above, to any budgetary recommendations growing out of the review. The Bureau subscribes fully to the concept of an equitable sharing of the cost of programs benefiting various segments of our economy.

Sincerely yours,

MAURICE H. STANS,
Director.

DECEMBER 18, 1959.

Mr. MAURICE H. STANS,
Director, Bureau of the Budget,
Executive Office of the President,
Washington, D.C.

DEAR MR. STANS: Thank you for your further report on Senate Joint Resolution 95, which comes closer to the heart of the issue than your previous adverse report.

You now show that there is a possibility that the period required to plant Federal lands may be reduced from 80 to 40 years, if planting proceeds at the rate of the past 5 years. Will you advise me on the rate for the various Federal lands? Will you also advise me on whether the fiscal years 1959, 1960, and 1961 budget expectations make it reasonable to project the trend of 1953–58?

On the private lands you show a much faster rate of accomplishment. I wonder whether this data, which is on a national basis, is substantiated when activities in the several States and on various types of private ownerships are considered individually.

Sketchy information available to me leads to the conclusion that the rate is not uniform and that extremely encouraging activities in certain sectors cannot be translated into national results. For example, a large and active reforestation program on forest industry holdings may not affect farm and non-industrial holdings. Similarly, an active program in one State, affecting all ownerships, will be effective only in that State.

To utilize this data to establish a national result may mask the difficult problem areas requiring attention.

It would be appreciated if you would reexamine the premises upon which you base the new trend estimates of time to complete tree planting and advise me whether I have any cause for concern. A reply which reaches me in late January 1960 would be satisfactory.

Sincerely yours,

JAMES E. MURRAY,
Chairman.

DECEMBER 18, 1959.

Mr. RICHARD E. MCARDLE,
Chief, U.S. Forest Service,
Department of Agriculture,
Washington, D.C.

DEAR MR. MCARDLE: Will you furnish me factual tables setting forth the following information on reforestation for the various Federal, State, county, and private commercial forest lands. The data should be by States in the manner found in "Timber for America's Future," table 19, page 543.

1. The number of years it will take to complete the reforestation on each ownership category, if planting continues at the level reached in fiscal year 1958.

2. The number of years it will take to complete reforestation on each ownership if planting continues at the rate established by the upward trend of the past 5 years.

Please provide appropriate averages for each region and the Nation, which will coincide with table 19 referred to above.

Your cooperation is appreciated.

Sincerely yours,

JAMES E. MURRAY,
Chairman.

EXECUTIVE OFFICE OF
THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., February 12, 1960.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in response to your letter of December 18, 1959, relating to our previous reports on Senate Joint Resolution 95, and requesting information on planting trends on private forest lands and for each of the various Federal ownerships comparable to information previously furnished on Federal lands as a whole.

In line with your request, we have again reviewed the tree planting situation on Federal and non-Federal lands. You will note from the enclosed table 1 that the total 1953 plantable acreage in the national forests was 4.6 million acres and that only 26,500 acres

were actually planted in 1958, requiring a total of 172 years to complete the job at the 1958 rate. However, within existing budgetary policy, the administration has recommended funds in the 1961 budget to continue implementation of the program for the national forests, which was transmitted to the Congress by Secretary Benson in March 1959. One of the major elements of this program is the seeding or planting of the nonstocked or poorly stocked plantable lands in the national forests. Progress in the seeding or planting of these lands is being made, and we are assured by the Department of Agriculture that if the upward trend in planting over the past 5 years is continued the 1958 backlog of about 4½ million acres of plantable area on the national forests can actually be accomplished in about 40 to 45 years. This excludes work done under the Knutson-Vandenberg Act (46 Stat. 527) in planting areas currently being logged.

On Bureau of Land Management and Indian lands, the 1958 backlog of plantable area amounts to about 417,000 acres. If planting trends of the last 5 years continue, it appears that this backlog can be completed in about 13 years.

Planting on the many categories of land included in "Other Federal" shows only a slight upward trend during the 5-year period 1954 to 1958 inclusive. A projection of this trend indicates that the 1958 backlog of about 520,000 acres of needed planting can be completed in approximately 30 years.

The above projections of accomplishment assume that planting will be largely on land classed as plantable in the U.S. Forest Service report on "Timber Resources for America's Future."

You asked whether the fiscal years 1959, 1960, and 1961 budget expectations make it reasonable to project the trend of 1953–58. Planting reports for fiscal year 1959 show an increase in all three categories of Federal land substantially in excess of the calculated trend. Funds available in 1960 and proposed for 1961 are likewise expected to result in plantings in excess of this trend.

You are correct in surmising that national averages are not necessarily representative of the particular rates of planting in the several States and under the various types of non-Federal ownership. This is brought out in the enclosed State-by-State tabulation (table 2) furnished by the Department of Agriculture covering rates of accomplishment on non-Federal lands.

We trust that the above information, plus the more detailed information which we understand the Forest Service has provided on this subject, will provide your committee with a basis for completing your evaluation of the national reforestation effort.

Sincerely yours,

MAURICE H. STANS,
Director.

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington D.C., January 29, 1960.

Hon. JAMES E. MURRAY,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate.

DEAR SENATOR MURRAY: This is in further reply to your letter of December 18 requesting information on reforestation for State, private, and various classes of Federal commercial forest land.

As mentioned in our acknowledgment of December 24, item 2 of your original request has been omitted on advice of Mr. Robert Wolf of your staff. Mr. Wolf advised also that for the individual States it would be acceptable to supply the information requested in item 1 of your letter basing it on plantable area as of January 1953 and rate of planting in 1958. However, it was suggested that for the national totals we supply information both on the basis of plantable area as of 1953 and as of 1958.

The statistics on plantable area are those shown in table 19, page 543 of "Timber for America's Future." Acreage planted is taken from annual planting statistics published by U.S. Department of Agriculture, Forest Service, "Report of Forest and Windbarrier Planting in the United States." It will be noted that plantable area under Department of the Interior in the attached table relates to Bureau of Land Management and Indian lands; while acreage planted includes in addition to BLM and Indian lands about 350 acres planted on lands administered by the Fish and Wildlife Service. The distribution of this planting is shown in a footnote to table 1.

The attached tables show the acreage of commercial forest land in need of planting as of January 1, 1953, by States for national forests, Department of the Interior (Bureau of Land Management and Indian lands), other Federal, State and municipal, and private. It also shows the acreage planted in each State for each class of land in fiscal year 1958 and the number of years required at the fiscal year 1958 rate to plant the acreage reported in need of planting.

Based on planting reported since January 1, 1953, the acreage of commercial forest land remaining to be planted as of July 1, 1958, by classes of ownership and the years required to plant this land at the 1958 rate and at the trend rate (assuming the upward trend in planting over the past 5 years is continued from the present level) is estimated as follows:

	Plantable July 1, 1958	Years required to plant—	
		At 1958 rate	At trend rate
National forests	4,475,000	169	45
BLM and Indian	417,000	15	13
Other Federal	520,000	31	30
State and municipal	2,369,000	32	19
Private	40,368,000	44	25

Additional plantings would have to be planned to accommodate failure in planting which can normally be expected and additions to the plantable area by fires, pests, and clear cutting which in many cases require replanting or seeding to continue the land in production. In calculating accomplishments in reducing the backlog of plantable area, work done under the Knutson-Vandenberg Act (46 Stat. 527) in planting areas currently being logged in the national forests are not included. The acreage planted under the soil bank conservation reserve program has also been excluded because this type of land is not included in the plantable acreage figure.

Mr. Wolf indicated that you would like to have the figures for the Department of the Interior land in Montana shown separately for the Bureau of Land Management and the Indian Service. The plantable acreage of Bureau of Land Management commercial forest land in Montana was estimated in the Timber Resource Review at 4,000 acres on January 1, 1953. For Indian land this figure was 31,000 acres. Since that date, 9 acres of Department of the Interior land in Montana is reported to have been planted.

You realize, of course, that the Department of Agriculture is not the authoritative source with respect to information regarding activities in the Department of the Interior. Since your request and subsequent phone conversation with Mr. Wolf specifically included coverage of Department of the Interior lands, we have supplied you such information as is available to us from the Timber Resource Review and subsequent reports. A copy of this letter is being forwarded to the Department of the Interior in the thought that if the figures are erroneous for that Department, they may wish to correct them.

Sincerely yours,

RICHARD E. MCARDLE,
Chief.

[3] No estimate.

FEBRUARY 11, 1960.

Dr. RICHARD E. MCARDLE,
Chief, Forest Service,
U.S. Department of Agriculture,
Washington, D.C.

DEAR DR. MCARDLE: Thank you for your letter of January 29 enclosing further information on the status of governmental and nongovernmental reforestation activities.

I am extremely disappointed at the rate of progress being made in replanting national forest land, and I am amazed that under these circumstances the administration not only opposes Senate Joint Resolution 95 but also fails to seek needed funds in the budget.

I am hopeful that this Congress will correct this deplorable situation.

Sincerely yours,

JAMES E. MURRAY,
Chairman.

Mr. MCGEE. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. MCGEE. In view of the fact that we are including in the RECORD the combined statements of the Senator from Montana and the Senator from New Mexico, we ought to call the attention of our colleagues to two or three especially significant sections of those statements. They deal with the problem of reforestation, a problem which involves one of our great productive resources. On the basis of evidence we received in the Appropriations Committee from the Forest Service itself, and testimony supplied to our committee by those interested in reforestation, it appeared that the desperate need for reforesting our rapidly diminishing lands was actually governed by budgetary considerations, rather than the need on a national level.

When one remembers that this is a resource which returns many times its cost in the form of income to the Federal Government, the present policy seems to be ridiculous, so far as economy is concerned.

I point out, from the report just submitted for the RECORD, that at the present time the rate of reforestation has sunk to a new low. It is even lower in average acres per year than it was during the Hoover administration. That means that the Eisenhower administration has sunk to a state of neglect of our forest reserves lower than that existing in more than a quarter of a century. This we regard as an extremely serious dip for so-called budgetary reasons.

The Forest Service presented to us a program which would recover our lost forest reserves over a period of 10 or 12 years. The Forest Service made a straightforward request originally for funds to do this reforestation work. But according to the budget this year, and at the rate the budget allows for this year, it will require much more than 12 years before we recover these lost timber reserves. In fact, it may require enough longer to tax the survival of the distinguished Members of this esteemed body.

For example, in Wyoming's neighboring State of Montana, at the present rate it will require 236 years to reforest the lost trees in that area. In California it will require 722 years, at the present budgetary rate. In my own State of Wyoming it will require 400 years before the reforestation program is completed, at the present rate. One can multiply these figures much more in other areas. In the State of Idaho—and I see on the floor the senior Senator from Idaho [Mr. DWORSHAK]—at the present budgetary rate it will take 1,205 years. In some States, as in our neighboring State of Colorado, it will take 7,381 years.

My only suggestion is that this is a dramatic illustration, a real case in point, of the folly of governing by budget instead of in the light of the need for productive resources.

I commend to the attention of my colleagues the material put in the RECORD by the Senator from Montana [Mr. MANSFIELD] in behalf of the Senator from New Mexico [Mr. ANDERSON].

REORGANIZATION OF DISARMAMENT ACTIVITIES

Mr. KEFAUVER. Mr. President, I was delighted to read the report that the administration plans to reorganize its disarmament activities.

I think this recognition of the problem on the part of the administration is long overdue, but is an example of the kind of constructive service that can be rendered by an alert, aggressive, and loyal opposition party.

For what the administration has done is accept one of the major recommendations of the Democratic Advisory Council—except that it proposes to do it by reshuffling existing agencies, rather than by establishing a new, independent agency.

Last October the advisory council's committee on science and technology proposed the need of a "peace laboratory" to engage in and sponsor research aimed at solving the technological problems involved in monitoring and inspecting disarmament agreements. Dr. Ernest C. Pollard, chairman of the committee and also chairman of the biophysics department at Yale University, said that the committee was unanimous in its endorsement of this concept. Drs. Polykarp Kusch and Harold Urey, both Nobel Prize winners and committee members, endorsed the proposal at a press conference that day.

The committee prepared a policy pamphlet on the proposal which was approved by the Democratic Advisory Council at its meeting in New York City on December 5. By this time the thinking of the committee had developed into how such work should be organized, and the December 5 proposal was for a National Peace Agency, organized independently and reporting directly to the President.

The policy document deplored the fact that only a handful of people, scattered through various agencies, were working at the problems of promoting peace through international agreements on arms limitation.

It listed a number of examples of the types of programs to be undertaken by the proposed new Agency. Mr. President, I ask unanimous consent to insert this list from the policy pamphlet of the Democratic Advisory Council, entitled "A National Peace Agency," dated December 5, in the RECORD at this point in my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST OF EXAMPLES OF PROGRAM TO BE UNDERTAKEN BY THE PROPOSED NATIONAL PEACE AGENCY

The following may be taken as illustrating the kinds of programs to be undertaken by the Agency, naturally in cooperation and consultation with other national and international agencies when appropriate:

1. Research and development bearing upon the science and technology of nuclear test monitoring, including seismology, atmospheric sampling and detection of electromagnetic radiation.

2. Design, engineering and testing of experimental systems for monitoring nuclear tests, including subsurface, atmospheric and space detonations.

3. Research and development relating to systems and instruments for detecting and identifying missile and satellite tests.

4. Design; engineering and testing of experimental systems for monitoring missile and satellite tests.

5. Development and testing of satellites for monitoring nuclear tests in cosmic space.

6. Research and development in the techniques of aerial reconnaissance inspection.

7. A broad program of research and development relating to overall problems of disarmament, arms limitations and inspection and control systems.

8. Development and application of communications and advanced computer techniques for analyzing the problems involved in inspection of national budgets and economic indicators as they bear upon disarmament inspection systems.

9. Development of new analytic organizations (similar to those described in sec. 5) for the purposes of:

(a) Applying the techniques of operations research to peace problems in the same way that "war gaming" is conducted for the military problems.

(b) Generating new ideas and concepts applicable to systems and techniques for arms limitation.

(c) Conducting general disarmament studies.

10. Support of studies and research on projects such as:

(a) Techniques for limiting the use of space for military purposes.

(b) Techniques associated with communications systems for inspection purposes.

(c) Techniques relating to conventional armament inspection and detection systems.

(d) Inspection techniques involved in limited warfare situations.

(e) Surprise attack detection systems.

(f) Monitoring techniques appropriate to the submarine problem.

(g) Legal aspects of national sovereignty extended to the space domain and freedom of the seas.

(h) Analyses of the effects of disamament agreements upon national economies.

(i) Scientific and technical problems of underdeveloped nations.

11. Investigate on a continuing basis the broad aspects of the effects of radiation upon man. With the increasing contamination of this planet's environment and the potential contamination of other planets, it is imperative to know the overall implications of radioactive contamination for man.

12. Research on educational techniques aimed at rendering underdeveloped nations less technologically dependent.

13. Research and development on the food production problems of underdeveloped nations including the improvement of crop yields, development of new agricultural products, and improvement of food storage and preservation techniques.

14. Research and development in conservation of water (including desalination of sea and brackish water) and mineral resources for underdeveloped countries.

15. Development of practical power-generating systems suitable for application to the agricultural and early industrial needs of underdeveloped countries.

16. Research and development on medical problems peculiar to the requirements of underdeveloped countries.

17. Initiation of studies and research in such problem areas as:

(a) Overpopulation, including acceptable methods for dealing with the problems of overrapid population expansion. These studies will embrace analyses of national and world resources for food, power, and ore production.

(b) Determination of the proper technical levels at which aid to underdeveloped nations should be applied and specification of the optimum manner in which such aid may be applied.

(c) Collection and analysis of information on the scientific and technical problems of the various underdeveloped countries.

Mr. KEFAUVER. Mr. President, there are now pending in Congress a number of bills based on the Democratic Advisory Council's proposal. Senator HUMPHREY and Senator KENNEDY both have such bills pending, and there are at least 19 bills in the House, all based on the National Peace Agency proposal.

What the administration proposes is a step forward and, therefore, to be welcomed. I hope that it will be carried forward in a truly bipartisan spirit. Meanwhile, I hope that the Congress itself will take the more fundamental step of approving the National Peace Agency. As a member of the Democratic Advisory Council, I am pleased that we have been able to make this contribution.

SUGAR-BEET QUOTAS SHOULD BE INCREASED

Mr. DWORSHAK. Mr. President, in cosponsoring S. 3361, designed to amend and extend the 1956 Sugar Act, I reserve the right to seek additional domestic sugar-beet quotas for farmers of Idaho and other Western States, taking into account expanding needs of our growing population and the capacity of available processing facilities.

The proposed law, extending the life of the Sugar Act for another 4 years, provides for a domestic beet-sugar increase of only 150,000 tons, compared with the additional 300,000 tons sought in S. 2924, which I introduced on January 27, the objective of which I have not abandoned.

Any increase in quotas is offset in the increased production per acre to some extent, but the increase I seek would help considerably in allocations to farmers wanting to go into sugar-beet production for the first time.

In Idaho we have reclaimed additional thousands of arid acres through reclamation. Under the Northside Minidoka Extension alone, 75,000 more acres have come under cultivation.

Last year 4,763 Idaho farmers requested allocation of an additional 49,856 acres that were not granted. Total new acreage granted to new growers was 879 out of 13,000 acres requested.

In 1959 Idaho's allocation was 87,914 acres out of the 925,000-acre domestic total allotment.

I am mindful of the problems involving transportation of sugar to more remote markets and also the maximum facilities of processing plants, which, I have been advised, is an additional approximately 20 percent now serving Idaho growers.

It is vital to the beet growers of Idaho and other Western States that the present act, which will expire at the end of 1960, be extended for another 4 years to permit sound planning on the part of farmers and processors and a stable market.

Contracts will be made in the fall of this year, between growers and processors, for beets to be planted next spring and processed next fall, and the sugar derived will be sold mainly in 1962. The farmer's final payment depends upon the net return from the sale of the sugar.

Extension of the Sugar Act, in the past, has enabled farmers to plan ahead. It also has been helpful to processors, whose contribution consists of planning, improvement in processing and research, which have played an important part in the industry's increased efficiency and productivity. Between 1933 and 1959, 35 percent more sugar was produced from 8 percent fewer acres as a result of planning and research.

While S. 3361 would increase the sugar beet quota for the mainland by 150,000 tons and cane quotas by 50,000 tons annually, the United States is now producing only about 30 percent of its consumption.

This could not be construed as punitive legislation against Cuban people, whose respect we have cherished for so many years, because Cuba would benefit from deficits which have developed in domestic offshore producing areas, particularly in Puerto Rico.

The complexities of sugar production are great.

It is true that Cuba produces one-third of our consumer demand. The Cuban producers receive a bonus on imports which our eastern refineries require to keep their plants in operation and thus contribute to government through taxes and provide jobs for thousands of laborers.

It is noteworthy that S. 3361 provides that when Congress is in session the President could take no action without prior approval of Congress relative to sugar quotas of foreign countries. The President, while the lawmaking body is not in recess, would be required to report his findings with recommendations.

When Congress is in recess the President's authority would be strictly restricted to cutting foreign quotas. His authority to reduce quotas, during congressional recess, would apply only to a given calendar year. The quota for the country affected would be automatically reinstated the following year.

Under existing law, a foreign country retains the right to market its full quota, even though a deficit is declared and the sugar involved is reallocated to other producing areas.

S. 3361 includes a proposal that if a deficit should be declared in the quota of any country except the Republic of the Philippines the quota for that country will be reduced for the calendar year by the amount of the deficit.

The need of this amendment is urgent in view of the expressed anti-American attitude of some Cuban Government leaders. Under the present law an unfriendly foreign country could dump its full quota on the American market, under certain conditions, at a time when a substantial oversupply might result in seriously depressing prices.

Repeatedly, during my 20 years in Congress, I have consistently insisted that our domestic markets be protected and that our producers be given priority in supplying our domestic consumers.

American agriculture today faces the problem of producing crops which are not in surplus. Beet and cane sugar produced in continental United States is about 30 percent of our total consumption. There is no good reason why this percentage should not be increased, instead of continued reliance upon uncertain foreign sources for our sugar supplies. Congress should meet this challenge now, as the Sugar Act is extended. Failure to act would be tragic.

FULL DISCLOSURE OF INTEREST CHARGES

Mr. DOUGLAS. Mr. President, I am greatly encouraged by the rising support given by the public and the newspapers to S. 2755, the truth-in-finance-charges bill, upon which hearings are now being held by a subcommittee of the Committee on Banking and Currency. I ask unanimous consent to have printed at this point in the RECORD an editorial entitled "Full Disclosure Bill," published in the Northern Virginia Sun of April 5, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FULL DISCLOSURE BILL TO CURB HIDDEN INTEREST CHARGES

Hearings are now going on in the Senate on a bill that should be welcome to lenders and borrowers alike.

Sponsored by Senator PAUL DOUGLAS of Illinois and others, the purpose of the bill is to require that financing charges be clearly and accurately explained to the borrower, so that he is fully aware of just what he is paying for, and how much.

There are several kinds of misleading practices that Senator DOUGLAS and his colleagues are trying to curb. For example, frequently no interest rate is quoted at all—the buyer of an article is simply told that he will only have to pay $10 down and $10 a month, without any mention at all of how much he will have to pay in interest charges. Such a device can be used to conceal exorbitant financing charges.

MONTHLY VERSUS ANNUAL RATE

Another device very misleading to many borrowers is the quotation of a monthly, rather than an annual rate of interest. For example, a borrower may be told by unscrupulous lenders that he can borrow money at 1 percent. This sounds a great deal less than the 5 or 6 percent the bank may have mentioned. What the borrower does not know is that this is 1 percent a month—

or 12 percent a year—more than twice what the bank has quoted. Local bankers have said that borrowers have actually come in and complained that they have been quoted much lower borrowing rates by other would-be lenders.

Another deceptive device is the quotation, on a loan that is to be repaid in installments, of a flat interest charge rather than quoting an interest rate on the unpaid balance. For example, someone may borrow $1,200, to be paid back in monthly installments of $100 over a year's time, with a quotation of a "6 percent interest charge"—or $72. Such a charge would be justified if the borrower were going to have the use of the entire $1,200 during the entire year, repaying the entire amount at the end of 12 months. But if he is going to repay it in installments, he has the use of less and less of the $1,200 as time goes on. But still, he goes on paying 6 percent on the entire amount of the loan. Actually, under these circumstances, the interest rate on the money of which the borrower actually has the use is nearly twice the figure he has been quoted—almost 12 percent.

INFORMATIVE, NOT PROHIBITIVE

While the Douglas bill would not prohibit such practices, it would require that they be pointed out to the borrower in a clear way. The philosophy of this bill is similar to that embodied in the recent measure requiring the manufacturer's list price to be clearly designated on new automobiles. This does not prevent the dealer from discounting the price or making any arrangement with the buyer he may see fit. It merely requires full disclosure so that the buyer knows what the proper price is.

The importance of the Douglas bill is growing every year. Total installment debt now stands at $39.5 billion, and noninstallment debt another $12.5 billion, so that the total consumer credit now amounts to $52 billion each year.

It would seem to be to the interest of both the borrower and the reputable lender that a bill along the lines of the Douglas proposal be passed.

Mr. DOUGLAS. Following that, I submit an editorial from the Washington Post of April 9; an editorial from the Denver Post of April 10; an article by the justly respected Mr. Jack Steele, published in the Washington Daily News of April 4; an article published in Retail Trends; and an editorial published today in the Washington Daily News. It will be remembered that the very able junior Senator from Utah [Mr. Moss] inserted in the RECORD on yesterday an editorial in support of this bill, published in the Deseret News, of Salt Lake City.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 9, 1960]

SHOPPING FOR CREDIT

We do not for a moment suppose that such an apostle of economic liberalism and the expanding economy as Senator PAUL H. DOUGLAS wants to eliminate personal and consumer credit. He recognizes fully that these are one of the wellsprings of American growth and prosperity. When he proposes, therefore, that lenders be required to state interest in simple, annual terms, he probably believes that the result would be, not less borrowing, but more prudent borrowing. We suspect that he is right and that the loan officials and merchants who oppose his bill are needlessly fearful of its results.

Small loan companies levy interest rates that are among the highest—sometimes up to 40 percent in simple, annual terms. Yet borrowers who agree to such terms are generally less concerned with costs than with availability of the funds. Although the mathematics for translating the terms of a monthly-payment note to an annual basis may be beyond most borrowers, nearly anyone can approximate the expense by simple multiplication. A more explicit statement of interest charges would be unlikely to deter many borrowers, but a common basis for the statement of charges might lead those in search of credit to shop around.

Admittedly the plan would call for some standard tables of interest charges with which lenders and merchants could readily compute rates, but the Government could supply the necessary conversion tables at small cost as part of the program to enforce Mr. DOUGLAS' proposed law. The Federal Trade Commission might be an appropriate administrative agency. As a supplement to State statutes which set maximum credit charges, the Douglas proposal would provide a useful service for the Nation's consumers.

[From the Denver Post, Apr. 10, 1960]

CREDIT MEN DISCREDIT THEMSELVES

The American business community sometimes seems to have a genius for putting itself in the worst possible light in the eyes of the public.

An example in point is the present effort by some firms engaged in the time payment business to defeat Senate bill 2755 by Senator PAUL DOUGLAS, Democrat, of Illinois.

The Douglas bill merely provides that a person who buys an automobile or anything else on installments must be furnished with a statement clearly showing how much he is paying in interest and other charges.

Some time payment concerns have become so adept at concealing their credit rates that even William M. Martin Jr., Chairman of the Federal Reserve Board, finds it difficult to figure out just what interest is being charged.

In the interest of business honesty the Government has long required the grading of meat, the labeling of fabrics to disclose their content of wool, etc., the use of standard names for furs, full disclosures concerning new stock issues, truth in advertising, etc.

But, now that it is proposed to extend the same principle to those who might hoodwink credit customers, wails of anguish are echoing through the Senate Banking Subcommittee room where the Douglas bill is up for a hearing.

Representatives of the National Retail Merchants Association and others are making it sound as if American business could not survive without chicanery.

This of course is poppycock. If anyone other than a businessman said it, he would be accused with some justification of trying to discredit the capitalist system.

When businessmen say it, they foul their own nest.

[From the Washington Daily News, Apr. 20, 1960]

LEFT-HANDED SUPPORT

Senator DOUGLAS' "truth in lending" bill has been acquiring some distinguished support—in a grudging way.

The American Bankers Association is for the bill, according to the organization's president, but with a string attached. The association thinks a law requiring lenders and installment creditors to itemize their finance and service charges is OK. But it claims a provision to require a statement of interest charges, on an annual rate basis, would confuse rather than enlighten the borrower.

The U.S. Chamber of Commerce says it isn't against the bill, but thinks it should be enforced at State and local levels. The bankers also think the States could do it better.

But if we are going to start telling the truth about gyp interest rates and frivolous charges which some outfits impose on unknowing borrowers and pay-later buyers, why not tell the whole truth? The interest rate is a vital part of the story. Evidence before the Douglas committee has revealed rates of 12 to 36 percent as fairly common, and in other instances up to 100 percent.

And if the States can do such an effective job of curtailing these abuses, why aren't more of the States doing it? Certainly, it would be better if the States policed this business. It would be even better if there were no abuses to require a law.

The only reason a Federal law is being proposed is that there seems to be no other way to protect the public. It would be much more satisfactory if everybody in the lending and credit business would see to it that the customers always had the truth, and the whole truth. More law should be a last resort—and in this case that seems to be the story.

[From the Washington Daily News, Apr. 4, 1960]

BILKED CONSUMERS SWAMP SENATOR DOUGLAS—LETTERS POUR IN ON CREDIT ILLS

(By Jack Steele, Scripps-Howard staff writer)

Senator PAUL H. DOUGLAS, Democrat, of Illinois, has received letters from hundreds of consumers who are convinced they have been "taken" for excessive finance charges.

Indignant installment buyers from coast to coast—and from all walks of life—have written the Senator in support of his truth-in-lending bill. It would require that total finance charges and true interest rates be stated in all consumer credit transactions.

Many letter writers send along original sales contracts for their autos, appliances, furniture, etc., to show that they have been charged interest rates ranging from 15 to 30 percent in many instances and sometimes as high as 80 or 100 percent.

NO IDEA

The letters indicate few credit buyers—at the time they sign such contracts—have any idea about either the finance charges or the interest rates they will have to pay.

Some ask Senator DOUGLAS not to reveal their names or details of their cases to spare them from embarrassment.

Typical of these letters is one from a woman here in Washington who wrote: "We have been taken, too, but my husband would rather suffer in silence."

Senator DOUGLAS also has received a number of letters—most of them from bankers and retail merchants—opposing his bill. They object chiefly to the requirement that lenders and time-sellers state the simple annual interest rate on the declining balance of the credit.

An Illinois banker commented: "The average individual would not understand the simple-interest figure as much as he understands the dollars and cents figures which are quoted to him at the present time. We feel this would be more confusing than helpful.

PATHOS PACKED

But Senator DOUGLAS has received many pathos-packed letters from people who understand they have been gouged by an infinite variety of credit abuses.

An Albuquerque, N. Mex., man wrote that he had to borrow $414 from a "loan shark" 18 months ago. He has paid back $432, but finds he still owes $215. The $175 interest he has paid represents a 60-percent rate.

A Baldwin Park, Calif., woman wrote that she was induced to buy credit health and accident insurance with her car. But when she broke her arm and couldn't meet the monthly payment, she had to pay an $8.09

penalty because the policy had a 30-day waiting period.

And a dentist wrote that his Evansville, Ind., patients didn't realize, when they bought easy-payment dental plans, that a flat 15 percent is added to dental estimates for credit.

INSTALLMENTS

An official of the Alabama Bar Association sent in the case of a Birmingham man who bought a used car. The car buyer owed an unpaid balance of only $254, but his contract called for 12 monthly payments of $39—a total of $468. This was broken down as follows: $245 paid to the auto dealer; $33.45 paid to the dealer's "reserve"; $55 collision insurance; $4.68 credit life insurance; $1.75 other insurance; $129.12 to the finance company.

Thus the finance company's rate of interest was slightly more than 80 percent. And the dealer netted an extra profit of $24.45—nearly 10 percent of the amount financed—as a "kickback."

A Watervliet, N.Y., man told of a deal he made to have his house covered with aluminum siding. The cost of $3,150, he was told, would be financed at a "6-percent bank rate." Later he found that the actual finance charge was $1,877 and the interest rate closer to 17 percent.

EXCERPT FROM NEWSLETTER BY RETAIL TRENDS, APRIL 15, 1960

Statutory disclosure of credit charges is now a probability.

The present antideception atmosphere is propitious.

What will stores do if the law passes? Typical: "We'll state the cost of our credit services according to law. We'll be at no disadvantage; legitimate terms are about uniform—all stores will be in the same shoes."

Questions: Would disclosure discourage installment buying? If so, would disclosure result in lower installment charges? If so, would merchandising markup be raised commensurately? If so, would this higher markup hurt stores competitively? If so, would this favor nonservice, discount operations?

The rationale of the Douglas bill, requiring full disclosure of carrying charges on the current outstanding balance expressed in simple annual interest, is that retailers and others offering credit have gone to extremes with the pay-later gimmick. A day of reckoning is now threatened. "The goose that lays the golden egg is having her habits investigated to see whether she is consuming more than her share of feed." Perceiving the support for his bill, Senator DOUGLAS says he's "surprised at my own moderation."

(The bill is being changed to define Federal-State relationship in the regulation of credit practices and to define "finance charges.")

It is the old story when something is made too much of a good thing—when it is exploited as a source of income it becomes vulnerable to statutory control. Installment credit has been the open sesame for extra retail profits and has expanded in the climate of full employment and optimism.

Many stores, finding out that there was no customer resistance to the optional charge plan and that revolving credit with charges of 1½ percent a month serves as a substitute for the open charge account without interest, reacted with exuberance: How long has this bonanza been going on?

Defenders of high credit charges invite the critic to "look at the entire picture—our earnings are not excessive." But the entire picture conceals the fact that earnings concentrate in the credit column, making up for low earnings or lack of earnings in other sectors of operation.

"If a store can't make it in merchandising, then something is wrong. Living on credit income simply covers up a basic weakness in the business.

Exorbitant interest charges is an abuse that accompanies big credit expansion. Testimony revealed that auto credit is as high as 60 percent annually on the current outstanding balance. The answer to those who believe that high credit charges will be driven underground by forcing full disclosure is that competition enforces competitive prices. If credit has to be conducted under subterfuge, it is untenable. In a nutshell, if consumers knew the truth about what they are paying, they would not buy without cash.

The public is more alert to credit abuses than retailers are inclined to believe. Example: A large ad of the Bowery Savings Bank, New York City, which exposed concealed excessive interest charges, resulted in so many commendatory letters, requests for reprints, and praise by newspaper columnists that the ad was repeated last Sunday.

Another blast at "buying without knowing what the cost of the credit adds to the price of the product" came from the California State Consumer Council, which says that use of credit is "the No. 1 consumer problem."

ELECTIONS IN THE TEAMSTERS UNION

Mr. CAPEHART. Mr. President, I have received many telegrams, letters, telephone calls, and conferences dealing with the Teamster Union monitoring system which is taking place at the moment under the authority of the District Court in Washington.

Members of the Teamsters Union, which has a membership of 1,600,000 members, tell me they would like to have a free, open election, to elect a president. I do not know who is right or who is wrong.

For fear that someone will say that I am either for or against the present president of the Teamsters Union, Mr. Hoffa, I will say that I do not know whether he would or would not be reelected if an election were held. But I wish to make it crystal clear that I think these people are entitled to have an election.

Senators will remember that we passed the Landrum-Griffin bill last year. The basis of that bill was to guarantee democracy in unions. The purpose of the bill was to make certain that the rank and file of union members had a right to be heard and had a right to elect their own officials in free and open elections.

Now I am told—and again I say that I do not know whether it is true or not—that as a result of the monitoring system in effect at the present time, these people are denied an election.

I have in my hand an editorial entitled "Monitoring Hoffa," published in the Wall Street Journal of Wednesday, April 6, 1960. No one can accuse the Wall Street Journal of being particularly prolabor or antilabor. It is a business newspaper. I shall not read the entire editorial. I ask unanimous consent that the entire editorial may be printed at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MONITORING HOFFA

We hope no one will take what follows here as an argument to keep James R. Hoffa in his job as president of the Teamsters. The man is as much a menace now as he was before Federal Judge Letts switched the Teamsters' monitors around.

The three monitors, it will be recalled, were appointed two years ago as the result of a compromise in a court suit filed by some dissident Teamsters against Hoffa's rule; they claimed Hoffa's election as president was rigged, and they asked for a new election. Under the compromise, Hoffa was permitted to take office provisionally under the eye of a three-man monitor panel. One member was to be nominated by the union, which is to say Hoffa; one member by the dissidents, and one, an impartial chairman, by Judge Letts.

As a result of the ineffectiveness of the monitors, Judge Letts recently decided to make some changes. So he removed Lawrence T. Smith, the panel member who represented the anti-Hoffa Teamsters because he thought Mr. Smith did not have his heart in his work.

To replace Mr. Smith, Judge Letts appointed a former Federal Bureau of Investigation agent who in past years has investigated Hoffa. Simultaneous with that change, Hoffa's member of the monitor panel, Daniel Maher, notified Judge Letts that he wished to resign and Hoffa nominated a Teamster lawyer to take his place. Judge Letts not only declined to accept Hoffa's nominee; he declined to accept Maher's resignation.

Thus the monitor panel is composed of a Hoffa man who has been ordered to continue serving though he does not want to and two men both appointed by Judge Letts.

Some comments, we think, are in order.

First, anyone who thinks Hoffa is going to overlook the opportunity to call this present monitor board "rigged" just does not know his man. Hoffa will use this development to obtain as much sympathy for Hoffa as he can force from it.

More important, though, is the fact that a Federal court has become as entangled as this one in trying to manage the Teamsters. In retrospect, it would appear far better to have gone ahead with the rigged election suit against Hoffa, instead of permitting such a compromised snarl. If Hoffa stole the election, he could have been ousted by the court. If it could not have been proved that the election was rigged, that issue would have at least been disposed of.

But, because a different course from a Federal trial with witnesses and evidence was sought, what have we now? A Federal judge with other judicial duties has to spend a great deal of time trying to run a labor union.

And we have 2 years during which not very much has been done about Hoffa and the Teamsters.

Mr. CAPEHART. Mr. President, I shall read the last two paragraphs of the editorial for emphasis:

But, because a different course from a Federal trial with witnesses and evidence was sought, what have we now? A Federal judge with other judicial duties has to spend a great deal of time trying to run a labor union.

And we have 2 years during which not very much has been done about Hoffa and Teamsters.

Mr. President, I am opposed in principle to courts running labor organizations or businesses for long periods of time. And I am told that the cost of the operation of the Teamsters Union by the court and the monitors is about $30,000 a week.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a letter I have received from the General Drivers, Warehousemen & Helpers Union of Gary, Hammond, East Chicago, and Whiting Ind.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GENERAL DRIVERS, WAREHOUSEMEN & HELPERS UNION LOCAL NO. 142,
Gary, Ind., April 18, 1960.

Hon. HOMER E. CAPEHART,
Senate Building, Washington, D.C.

SIR: The members, stewards, and officers of the Lake and Porter Counties, Ind., Teamsters Union Local No. 142 have instructed me to bring to your attention, a condition that is slowly and surely draining the resources of our organization through Federal court appointed monitors. To date the cost of this monitorship has exceeded $692,000.

As an organization of American citizens numbering approximately 7,000 members in the Lake and Porter Counties, Ind., area, we are being denied our constitutionally guaranteed rights by the monitors. Even the recently enacted Kennedy-Landrum-Griffin law makes the holding of elections by international, national, and local unions mandatory.

We urge you, as our Senator, to request the U.S. Senate to fully investigate this moitorship to the end that we have restored to us the rights as guaranteed by Federal law and be permitted to hold a convention for the purpose of electing a general executive board and the drafting of a new international constitution.

Your help will be sincerely appreciated.

Very truly yours,

MICHAEL SAWOCHKA,
Secretary-Treasurer.

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed at this point in my remarks an article entitled "Monitors Versus the Teamsters," written by William Goffen, and published in the Nation for April 9, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONITORS VERSUS THE TEAMSTERS

(By William Goffen)

Last week's ousting of Godfrey P. Schmidt as attorney for the dissident Teamsters, and the scheduled trial next month of James Hoffa on charges of misusing his union's funds, focus attention on what Justice Felix Frankfurter has called "a most unusual manifestation of the equity powers" of a court—the monitorship which has ruled the union since early 1958.

Shortly after the union election of 1957, 13 rank-and-file dissidents, then represented by Schmidt, instituted legal action to set the election aside as rigged. After 22 days of trial, the plaintiffs rested, whereupon the defendants (the union's elected officials), agreed to a settlement without ever having taken the stand in their own defense. The terms were expressed in a consent decree entered on January 31, 1958, by Judge F. Dickinson Letts of the U.S. District Court for the District of Columbia, who had presided over the trial.

The settlement provided for a board of three monitors to serve until a new convention for the election of officers. One of the monitors appointed by Judge Letts was Schmidt. The officials who had been elected at the 1957 convention were to serve provisionally until the new election, which the general executive board of the Teamsters was authorized to call after 1 year, and the balloting was to be held with such guarantees of the democratic process as the secret ballot and supervision by an outside agency like the Honest Ballot Association.

Had the defendants, instead of agreeing to a settlement, gone through with the trial and then lost, the victorious plaintiffs would have achieved no more than the prompt calling of a new convention and an election under court supervision. Since Hoffa, who had been chosen president at the 1957 convention by overwhelming vote, seemed certain to win again in a new election conducted under any conditions, it is difficult to understand why defense counsel consented to the agreement calling for a monitorship.

As authorized by the consent decree, the Teamsters' general executive board issued a call for a new convention and election for March 1959. At this point Schmidt, who had signed the consent decree as plaintiffs' counsel, nevertheless petitioned Judge Letts to postpone the balloting. The judge obliged by issuing a modification order postponing the holding of any new election until such time as recommended by the board of monitors.

Schmidt's opposition to a new ballot (which under the terms of the agreement would have dissolved the monitorship and terminated the lawsuit) is understandable for reasons other than his professed concern for the welfare of the rank-and-file Teamsters he represented. Since February 1958, the board of monitors has taken more than $350,000 in fees out of the dues of the rank-and-file membership. In addition, Schmidt and his cocounsel have so far claimed sums amounting to $210,000, plus expenditures exceeding $17,000, for services as plaintiffs' attorneys.

Judge Letts' modification order, aside from postponing the election to which the Teamsters' membership was entitled, granted to the monitors unlimited authority to investigate the international union and its locals, and even to institute disciplinary proceedings leading to expulsion of its duly elected officials. The court avowed that the plaintiffs had proved that the 1957 convention was "rigged" even though the case had been voluntarily settled without a single word of testimony on behalf of the defendants.

Hoffa and his fellow union officials appealed the modification order in vain; the court of appeals sustained the power to prohibit an election, although at the discretion of Judge Letts rather than of the monitors. If this determination is a sound precedent, it would appear that any litigant is ill-advised to settle his lawsuit, but should always fight his case until final judgment.

While generally upholding Judge Letts, the court of appeals did find that Schmidt had been guilty of conflict of interest, in that while serving as a monitor, he further profited by representing numerous employers in their negotiations with the Teamsters. Forced to resign as monitor, he was permitted by Judge Letts to appoint Lawrence T. Smith, a member of his own law firm, as his successor. And until last week, he continued as plaintiffs' counsel. (Judge Letts has now also dismissed Smith, and the original three-man monitorship has been reduced to one.—EDITOR.)

Despite the extraordinary national and legal importance of a case involving denial of due process through judicial deprivation of the right of 1,600,000 union members to a free election, the U.S. Supreme Court has refused review. Attorneys for the plaintiffs have argued persistently that a democratic election was impossible without a prior, undefined "housecleaning" of the union. This aspect has been given widespread coverage by the press. Yet, according to the Election Institute (specialists in the conduct of honest labor elections), and the Honest Ballot Association, a free and democratic election could have been arranged for the Teamsters in 3 months, let alone the long-expired 1-year minimum set by the consent decree.

The refusal of the Supreme Court to act has apparently been construed by Judge Letts and the monitors as a warrant for wide-ranging intervention in the internal affairs of the union. Judge Letts has granted subpena power to the monitors, despite the absence of statutory authority for its exercise. The monitors, for their part, are presently engaged in an attempt to oust Hoffa as president and as a member of the Teamsters. Their chief ground—it is the issue involved in the Hoffa trial scheduled for next month—is that Hoffa was guilty of a conflict of interest in connection with a project in Sun Valley, Fla., for the construction of homes for aged Teamster members. At one point in the course of complicated realty and bank negotiations, Hoffa had an option to purchase stock in the firm which was to construct the homes.

It is ironic that Hoffa and Schmidt, who for so long have been battling each other in and out of the courts, should both stand accused of conflicts of interest. The trial, of course, will fix Hoffa's legal responsibility in the Sun Valley affair. But it seems reasonable to draw a distinction, on moral grounds at least, between the acts charged to Hoffa and those of Schmidt's which resulted in the latter's dismissal as a monitor. Whatever profit Hoffa may personally have stood to gain in the Sun Valley project, his union would have gained an old people's home—certainly a worthy plan. But Schmidt's activities, while of profit to himself and perhaps to the employers in whose behalf he negotiated with the union, can in no way be construed as having profited the Teamsters, whose membership, as a monitor, he was supposed to protect.

The Teamsters' membership has expressed its opposition to the monitorship through the following petition to Judge Letts:

"We, the undersigned members of the International Brotherhood of Teamsters, want an election of officers of the IBT now. We do not want the monitorship which is eroding the foundations of our union by maligning our membership, generating an atmosphere of fear, weakening our organizational functions, and depleting our treasury."

There can be no question of a Hoffa victory if a new election were to be held. The union, as a matter of fact, has "never had it so good." While other unions—notably the Auto Workers, Steelworkers, and Machinists—have been losing membership, the Teamsters gained more than 20,000 new members last year.

The truth is that to deprive union members of the right to vote for their international officers is no more defensible, legally, than to deprive stockholders of their right to elect the officers of United States Steel.

It would seem that if the Teamsters' monitors sincerely believed that a union "housecleaning" was desirable, they would willingly withdraw their opposition to an election, the democratic way for "housecleaning" of any group. Their continued opposition can be regarded as consistent with a general tendency, in recent years, to erode labor's rights.

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed at this point in my remarks a telegram I received from Richard E. Stott, of Indianapolis, whom I believe to be the head of the Teamsters Union in Indiana.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

INDIANAPOLIS, IND.,
April 14, 1960.

Senator CAPEHART,
Washington, D.C.:

I, the undersigned rank-and-file member of Teamsters Local Union No. 135 petition Congress for a redress of grievances, 1, the denial of the right to a convention as guaranteed by the Landrum-Griffin Act and presently being denied by the arbitrary action of the Federal district court, Washington, D.C., and the board of monitors, 2, the

right to a hearing of the denial of the right to elect our own officers as guaranteed by the constitution of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America and also the Landrum-Griffin Act, 3, request that you bring this question on the floor of Congress so that it may be assigned to the Labor Committee immediately all in order to permit a hearing forthwith. Petitions are being drawn up and signed by other rank-and-file members that will follow respectively.

RICHARD E. STOTT.

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed at this point in my remarks an editorial entitled "Monitor Turnover," published in the Toledo Blade of April 5, 1960—2 weeks ago. The editorial appears to be quite critical of the matter and believes that some action should be taken to remedy the situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Toledo Blade, Apr. 5, 1960]

MONITOR TURNOVER

This might be as good a time as any for U.S. District Judge F. Dickinson Letts to dissolve the board of monitors he appointed to supervise operations of the Teamsters Union before the board disintegrates from internal bickering.

Since the monitors were established early in 1958, supposedly to prevent abuses by the union's leadership, it has had precious little time to devote to its knitting, for most of the period has been taken up trying to keep three monitors in office long enough to grasp their function.

The firing by Judge Letts of L. T. Smith, New York attorney, as a monitor and the naming of Terrence McShane, ex-FBI agent, to succeed him are only the latest moves in a bizarre episode of judicial tightrope walking that, so far, has gone nowhere. A week earlier, Daniel B. Maher submitted his resignation (which Judge Letts has refused to accept), and before him came former judge Nathan Clayton, and attorneys L. N. D. Wells, Jr., and Godfrey P. Schmidt—all of whom left the board for one reason or another in little more than 2 years.

Is it any wonder that the monitors have wracked up a record notable for its lack of any concrete accomplishment? And meanwhile, Teamster President James Hoffa, whose disputed election in 1957 led eventually to creation of the monitors, has kept a firm hand on union reins, and shows no apparent signs of slipping from office.

How much better it might have been if Judge Letts had faced up to the question confronting him back in 1958—whether Mr. Hoffa was legally entitled to the union presidency or not—instead of sidestepping a decision by setting up the clumsy monitor arrangement. It was obvious from the beginning to most observers that the three-man board would be in constant disagreement, composed, as it is, of one member recommended by Mr. Hoffa, one by anti-Hoffa forces, and the third by the court.

In view of its dubious record over the past 2 years or so, and the questionable wisdom of setting up such a creation in the first place. Judge Letts could put an end to the whirling dervish atmosphere that has prevailed by withdrawing all monitor appointments, and letting the courts handle any proved violations of law, which is as it should be.

Mr. CAPEHART. Mr. President, I refer Senators to the April 13 issue of the CONGRESSIONAL RECORD, pages 7980 through 7991, where appear speeches and remarks made by a number of Members of the House of Representatives. I do not ask that the speeches or remarks be reprinted in the RECORD, I simply refer Senators to that part of the RECORD of April 13, 1960.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article entitled "Plot To Frame Hoffa Charged to Monitors," written by Robert S. Ball, and published in the Detroit News of April 5, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Detroit News, Apr. 5, 1960]

PLOT TO FRAME HOFFA CHARGED TO MONITORS

(By Robert S. Ball)

WASHINGTON, April 5.—A Teamster lawyer today accused officers of the board of monitors of conspiring to frame James R. Hoffa on charges that he violated the terms of a Federal court consent decree which installed him as provisional president of the union in January 1958.

The accusation was made by Jacob Kossman, representing the Teamsters Union, in the course of taking depositions preparatory to the trial of Hoffa later this month on charges of misuse of union funds.

TARGET OF CHARGES

Target of his accusations was Martin F. O'Donoghue, chairman of the watchdog monitor board, and John Joseph Cassidy, 30-year-old executive assistant to the board.

It was during the questioning of Cassidy that Kossman accused the two of "conspiring to circumvent the orders of the court by not permitting the Teamster executive board to clean up the union, thus causing the court to throw out Hoffa."

"Did you ever say that Hoffa must not be given a chance to comply with court decisions and thus get off the hook?" Kossman asked Cassidy.

"I don't recall," the $10,000-a-year monitor staff member replied.

REFUSES TO ANSWER

When the union attorney asked Cassidy if he formed policy for the monitors, Cassidy refused to answer.

At one point Kossman exploded and accused Cassidy of taking the fifth amendment by his failure to recall earlier action and his slow answers.

"It looks like I'll have to go into district court to get Cassidy to answer questions in order to show that there is a conspiracy to bypass the instructions of the court of appeals," Kossman said.

Meantime, the refusal of the Teamster-designated member of the board of monitors to continue to serve had brought no rejoinder from the court.

Daniel B. Maher, who has been seeking to resign for reasons of health since last January, has been blocked by Judge F. Dickinson Letts, supervisor of the monitor setup, who has refused to accept repeated letters of resignation.

TAKES DRASTIC STEP

Yesterday, however, Maher took the final drastic step of informing Judge Letts by registered mail that "as of this date I shall no longer serve on the board."

It was only last Friday that Judge Letts notified the Teamsters Union that because there was no vacancy its nomination of William E. Bufalino to replace Maher was of no standing.

Sources close to the court have suggested that the 84-year-old jurist—who has sent to the Senate labor rackets committee for a complete file on Bufalino—was jolted by the nomination of the president of jukebox local 985 in Detroit.

MAY FACE PENALTY

Asked by newsmen if he believed Judge Letts has been keeping him on the job to block the nomination of a Teamster member, Maher refused to comment.

Maher, 54-year-old Washington lawyer, faces possible contempt action in the event Judge Letts refuses to permit him to resign.

Maher cited a paragraph of the consent decree—which 2 years ago permitted the provisional seating of Hoffa as Teamster president and created the watchdog board of monitors—which provides:

"In the event of the inability or unwillingness to serve, or other disability on the part of any monitor, he shall be relieved of his duties and discharged of the obligations hereunder."

"I am unable and unwilling to serve further on the board." Maher wrote Judge Letts. "I am likewise disabled from further effective service. I believe I am entitled under this paragraph to be relieved. The defendants (Teamsters Union) likewise are entitled to such relief."

Maher also advised the court that further attempted service by a monitor who is both unable and unwilling would in fact and in law be no representation at all.

"It would destroy the tripartite nature of the board and in my judgment completely nullify future board actions," Maher told the court.

Advised by his physician at least four times since January 1 to terminate his duties, Maher reminded the court that he translated these warnings into communications to the court on March 9 and April 1, but that the court has refused to relieve him of his duties.

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed at this point in the RECORD articles relating to this matter which were published in the Detroit News of April 17, 1960, the Detroit Free Press of April 17, 1960, and the New York Sunday News of April 17, 1960.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Detroit News, Apr. 17, 1960]

HOFFA ASKS JUDGE TO GIVE UP CASE

WASHINGTON.—Teamster President James R. Hoffa, of Detroit, today accused U.S. District Judge F. Dickinson Letts of personal bias and prejudice in pressing a corruption cleanup drive against the union.

Hoffa filed papers aimed at disqualifying Letts from any further handling of the tangled legal case involving an attempt by Letts-appointed monitors to oust Hoffa from the Teamsters' leadership.

Letts, a former Republican Congressman from Iowa, will be 85 on April 26. That is the eve of Hoffa's scheduled ouster trial on charges he misused union funds to promote a Florida real estate venture in which Hoffa had an interest.

Hoffa also is trying to block the trial in other legal moves. Letts is now on a Caribbean cruise.

Attorney H. Clifford Allder, who filed the papers requesting disqualification of Letts, said copies were left in Letts' office and efforts would be made to deliver a copy to the judge aboard his cruise ship.

LEAVES IT TO LETTS

Allder said it will be up to Letts to decide whether to disqualify himself.

He said that if Letts refuses to do so there is no appeal. However, Allder explained, if an appeal later is made from the

final ruling, the denied request for disqualification could be made an issue before the appeals court.

Hoffa said Letts has a personal bias and prejudice against him but in favor of Chief Monitor Martin F. O'Donoghue and Godfrey P. Schmidt, a former monitor and New York attorney, who started the 2½-year-old legal snarl.

JUDGE IS QUOTED

In support of his move to disqualify the judge, Hoffa charged:

Letts has told Hugh Sidey, a member of the Washington staff of Time magazine, that he is going to remove Hoffa from the Teamsters presidency.

When Sidey asked why, Letts said he felt his court was insulted when Hoffa tried to get the judge to appoint William Bufalino as a monitor member representing the Teamsters. Bufalino, a Detroit Teamsters official, has been criticized by the Senate rackets committee.

Letts should have known that Chief Monitor O'Donoghue was biased against Hoffa. Testimony was cited from O'Donoghue that no Teamster cleanup could succeed unless Hoffa was removed. Hoffa also asserted that Letts instructed O'Donoghue to operate on his own without consulting the other two monitors.

MAHER BACKED

By refusing to accept a tendered resignation from Daniel B. Maher as Teamsters monitor, Letts deprived the union of monitor representation. Maher has refused to serve any longer because of ill health.

Letts fired another monitor, Lawrence T. Smith, and named an FBI agent, Terence F. McShane, who had been investigating Hoffa and Teamsters affairs for the Government. Hoffa said McShane also was biased and prejudiced against him—something he said Letts knew.

Letts has failed to dispose of a number of motions and other matters, such as the union's move to disqualify O'Donoghue as a monitor on grounds of conflict of interest.

CHARGES FAVORITISM

Letts has displayed favoritism toward Schmidt, the attorney whose suit in behalf of rank-and-file Teamsters members from New York City resulted in the monitorship Hoffa said Schmidt has represented only employers and is opposed to a number of basic trade union objectives.

Hoffa complained that at one point in the rank-and-file proceedings, Letts, "in the presence and hearing of the original parties plaintiff, put his arm around the said Schmidt and stated in substance, 'You are my kind of lawyer.'"

Hoffa said when Schmidt resigned as monitor—after an appeals court questioned the propriety of Schmidt's serving because of his representation of employers who deal with the Teamsters—Letts named Smith, Schmidt's onetime law partner. Hoffa said Smith had done legal work for the same employers.

So long as Smith sided with O'Donoghue on the monitor board, Hoffa said, no question was raised about Smith's fitness. But when a feud developed between Smith and Schmidt and between Smith and O'Donoghue, Hoffa said, Letts promptly ousted Smith.

Further, said Hoffa, Letts has disregarded the wishes of the original plaintiffs in the case in appointing their representative in the monitor setup.

[From the Detroit Free Press, Apr. 17, 1960]

HOFFA SEEKS TO DISQUALIFY JUDGE LETTS—TEAMSTERS BOSS SAYS HE'S BIASED—CHARGES JURIST FAVORS MONITORS

WASHINGTON.—Teamster Union President James R. Hoffa Saturday accused U.S. District Judge F. Dickinson Letts of personal bias and prejudice in pressing a corruption cleanup drive against the Teamsters.

Hoffa filed papers aimed at disqualifying Letts from any further handling of the tangled legal case involving an attempt by Letts-appointed monitors to oust Hoffa from the union's leadership.

Letts, a former Republican Congressman from Iowa, will be 85 on April 26. That is the eve of Hoffa's scheduled ouster trial on charges he misused union funds to promote a Florida real estate venture in which Hoffa had an interest.

Hoffa also is trying to block the trial in other legal moves. Letts is now on a Caribbean cruise.

Attorney H. Clifford Allder, who filed the papers requesting disqualification of Letts, said copies were left in Letts' office and efforts also will be made to deliver a copy to the judge aboard his cruise ship.

Allder said that under the infrequently used procedure of an affidavit of disqualification it will be up to Letts to decide whether to disqualify himself.

He said that if Letts refuses to do so there is no appeal and the ouster trial will go ahead.

However, Allder explained, if an appeal later is made from the final ruling the denied request for disqualification could be made an issue before the appeals court.

Hoffa said Letts has a personal bias and prejudice against him but in favor of Chief Monitor Martin F. O'Donoghue and Godfrey P. Schmidt, a former monitor and New York attorney who started the 2½-year-old legal snarl.

In support of his move to disqualify the judge, Hoffa claimed:

1. Letts has told Hugh Sidey, a member of the Washington staff of Time magazine, that he is going to remove Hoffa from the Teamsters presidency. When Sidey asked why, Letts said he felt his court was insulted when Hoffa tried to get the judge to appoint William Bufalino as a monitor member representing the Teamsters. Bufalino, a Detroit Teamsters official, has been criticized by the Senate Rackets Committee.

2. Letts should have known that Chief Monitor O'Donoghue was biased against Hoffa. Testimony was cited from O'Donoghue that no Teamster cleanup could succeed unless Hoffa was removed.

3. By refusing to accept a tendered resignation from Daniel B. Maher as Teamsters' monitor Letts deprived the union of monitor representation. Maher has refused to serve any longer because of ill health.

6. Letts has displayed favoritism toward Schmidt, the attorney whose suit in behalf of rank-and-file Teamsters members from New York City resulted in the monitorship.

[From the New York Sunday News, Apr. 17, 1960]

HOFFA HITS JUDGE'S BIAS, ASKS TO BE TRIED BY ANOTHER

(By Jack Turcott)

WASHINGTON, April 16.—Teamsters President James R. Hoffa today accused F. Dickinson Letts, dean of the Federal bench, of deep-rooted bias against him, and asked that the judge be barred from presiding at a trial aimed at ousting Hoffa from his $50,000-a-year post and stripping him of union membership.

Hoffa's nine-page affidavit filed in Federal district court this morning, charges Judge Letts with telling a Washington newsman he intended to throw Hoffa out of the union presidency.

Letts, a onetime Iowa Congressman, is now on a Caribbean cruise. He is due back April 26, his 85th birthday. He has ordered Hoffa's ouster trial to start the next day.

CONGRESSMEN CRITICAL

Twelve Congressmen, including Representatives ABRAHAM J. MULTER, Brooklyn, Democrat, and FRANK C. OSMERS, Jr., a Republican from Tenafly, N.J., on Wednesday questioned Letts' activities in naming monitors to police the 1,677,000-member Teamsters Union.

One of the 12, Representative JAMES ROOSEVELT, Democrat, California, called for a congressional investigation and suggested Letts might have to be impeached.

The Hoffa trial stems from a lawsuit by 13 rebel New York truck drivers in September 1957, to block the union, the world's largest single labor organization, from holding a convention in Miami Beach. Letts prohibited the meeting, but the Supreme Court overruled him.

CHOOSEN OVERWHELMINGLY

The convention overwhelmingly elected Hoffa to succeed Dave Beck as president, but Hoffa's installation was delayed by the suit. Godfrey P. Schmidt, Fordham University law professor, was attorney for the anti-Hoffa men.

A consent decree approved by Letts on January 31, 1958, put Hoffa in as provisional president. The deal called for three monitors, one picked by the union, one by the 13 New York dissidents and one by Letts, to keep an eye on the union. It also provided for a new convention and election any time after a year.

Since then, the Federal courts here have been cluttered with moves by one side or the other to get rid of or to strengthen the monitors. A court official told the News today that no case in the court's history has piled up so many documents. Letts has spent about 90 percent of his working time for the last 31 months on the Hoffa case.

"BIAS TOWARD SCHMIDT"

Hoffa said Letts is also prejudiced in favor of Schmidt and of Martin F. O'Donoghue, the chief monitor, who testified in a deposition last week that "Hoffa has to go. * * * The union cannot be cleaned up while he is president. * * * He ought to be expelled from membership." The U.S. court of appeals 2 days ago rejected Hoffa's plea that O'Donoghue be removed as a monitor.

O'Donoghue, Hoffa's former lawyer, got $5,000 for successfully arguing on Hoffa's behalf in 1957 that the Miami Beach convention should be held. Now he wants the union leader heaved out of organized labor. He asserted that Hoffa put $500,000 belonging to Teamsters Local 299, which he heads, into an Orlando, Fla., bank at no interest to facilitate a bank loan of that amount to a friend, Henry Lower. The loan was to finance a development in which Hoffa had an option to buy 45 percent of the stock.

"YOU ARE MY KIND"

Hoffa's affidavit also accused Letts of showing anti-Hoffa bias by publicly putting his arm around Schmidt's shoulders and telling the New York attorney: "You are my kind of a lawyer."

Besides, added Hoffa, Letts has refused to accept the resignation of Daniel B. Maher, the union-designated monitor, who has pleaded illness. The union wants to replace him with William Bufalino, a Hoffa aid.

Hoffa also asserts that Letts recently fired Laurence Smith as a monitor for refusing to agree to Hoffa's immediate ouster.

Two weeks ago Letts named Terence McShane, an FBI agent who once investigated

Hoffa on a wiretap indictment, to replace Smith.

This, said Hoffa today, was done at Schmidt's suggestion, thereby proving once again that Letts is biased. Smith, who refused to accept his discharge as a $25-an-hour monitor, yesterday lost a plea to the court of appeals for reinstatement.

Mr. BRIDGES. Mr. President, will the Senator yield?

Mr. CAPEHART. I yield.

Mr. BRIDGES. I am glad the distinguished Senator from Indiana has raised this question on the floor of the Senate. I am one of the many Senators who have been receiving communications relative to this situation. They are disturbing. It is difficult to know how to handle the matter.

I think we hoped that the monitors appointed by the Federal court would help to clear up the situation and remove the difficulties which were besetting the Teamsters Union. Judging from the cost which has been incurred, it appears that to date very little, has been accomplished.

I am also reminded, and very forcefully so, of the fact that I was a supporter of the Landrum-Griffin bill, so-called, and voted for it, not because I agreed with everything the bill provided, but because I thought that it covered the situation as well as it could at that time, considering the overall problem which was before us.

I am reminded of the fact that in the bill was the specific statement:

A bill to protect the members of labor organizations within their labor unions; to establish standards and procedures for the election of officers and other representatives of labor organizations in order to protect the right of members of labor organizations to be represented by representatives of their own choosing; to reinforce the rights of members of labor organizations with respect to funds and property, and create fiduciary duties and responsibilities with respect to the administration, disbursement, and reporting of funds of labor organizations by their officials; to prevent abuses in the establishment and administration of trusteeships by labor organizations; and for other purposes.

Now we are being asked, If this is the law of the land, why are its purposes not being carried out? That is a good question, of course.

I have also received copies of a 4-page motion signed by representatives of the Teamsters Union in my State of New Hampshire. I may say that in New Hampshire—and to a large degree in New England—there have been none of the abuses which have occurred in some other sections of the country. Nevertheless, we are being asked direct questions concerning the situation and are receiving petitions that certain actions be taken.

Probably the Senator from Indiana, in raising this question on the floor, is wondering whether the present situation will continue. I must say, in my judgment, the problem is one which warrants attention and I shall be interested to hear what the Senator from Indiana proposes.

Mr. CAPEHART. I am about to suggest that the Committee on Labor and Public Welfare or the Committee on the Judiciary, or both, study the problem; that they investigate it and hold some hearings.

I have been handed some 15 questions. Frankly, I am not a lawyer but I think that the committees might well investigate the overall, long-range problem. I do not say that the questions which are asked are all inclusive; I simply say that the committees should check into the matter. I do not say they should confine themselves to these particular points.

As one who has been a Member of the Senate for 16 years, as a businessman, as one who has dealt with labor, as one who has not been either antilabor or probusiness, or antibusiness or prolabor, I believe my record is quite clear that I have tried to be constructive about these matters. But the situation as its exists today is not compatible with what Congress tried to accomplish in the Griffin-Landrum bill last year.

One million six hundred thousand members of a labor organization are without what might be called any representation. Thousands upon thousands of those members have already petitioned the monitors for an election, as I understand. But the monitors go on from day to day arguing with themselves, arguing with the judge, and resigning; and new monitors are appointed without any apparent changes being made in the organization or in the union. I say that in all fairness to the 1,600,000 members of the union and their officers, the monitors, if you please, and the court itself, that something should be done to improve the situation.

I wish I were wise enough to know exactly what should be done. I do not know that I have that wisdom at this point. I simply make the plea that something be done, and that one or the other of the committees which I believe have jurisdiction—either the Committee on the Judiciary or the Committee on Labor and Public Welfare—investigate the matter and report to the Senators who are not members of the committees, but who are receiving numerous telegrams, letters, and telephone calls, as to how best to answer our mail, our telegrams, and the telephone calls which we receive.

The distinguished junior Senator from Maryland [Mr. BEALL] wishes to join with me in my remarks with respect to this matter.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a list of questions to be answered regarding the deprivation of the rank-and-file rights under the Landrum-Griffin bill by District Court Judge Letts and the monitors.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

QUESTIONS TO BE ANSWERED REGARDING THE DEPRIVATION OF THE RANK-AND-FILE RIGHTS UNDER THE LANDRUM-GRIFFIN BILL BY THE FEDERAL DISTRICT COURT JUDGE LETTS AND THE MONITORS

1. Why are 1,600,000 members of the Teamsters' Union being deprived of their rights to a convention to elect officers of their own choosing as provided by the Landrum-Griffin law?

2. Why have the monitors, after 2 years and at a cost of $1 million of rank-and-file dues money, been unable to establish the basic conditions under which a new election may be held as provided for by the consent decree?

3. Should the Federal court be involved in detailed administration of the internal affairs of a local union when these matters, such as removal and election of officers, are specifically matters delegated to the rank and file by the election provisions of the Landrum-Griffin law?

4. What reason can the Federal court judge and monitors provide for the denial of these basic rights of a convention which are denied by all parties concerning the plaintiffs—the 13 dissident members who brought the suit in the first place—the defendants and the 160,000 intervening members, all of whom are asking for a new convention?

* * * * *

6. On what basis can the monitors justify fees of $45,000 each per year for 156 hours of work, averaging less than 2½ hours per week?

7. On what basis can Judge Letts justify refusing the resignation of Monitor Danny Maher, who has resigned with a doctor's certificate that he has had two heart attacks and is not fit to serve?

8. On what basis can Judge Letts justify accepting the recommendation of Godfrey Schmidt and the appointment of Mr. McShane, former witness against Hoffa, as a monitor representing the plaintiffs after Godfrey Schmidt was fired by 8 of the 12 remaining plaintiffs in this case?

9. On what basis can Judge Letts justify the dismissal of the plaintiffs' Monitor Larry Smith without a hearing and without consultation with the plaintiffs and without a statement of legal cause for dismissal as required by the consent decree?

10. On what basis can the monitors justify the expenditure of $3,000 of union dues money per day when the monitors with their legal and technical staffs have processed less than three cases per week since the inception of the monitorship?

11. On what basis can the Congress and the Senate turn its back on the plea of thousands of rank and file Teamsters who demand their rights under the Landrum-Griffin law enacted by this body?

* * * * *

14. What is the basis for Judge Letts' refusal to hear lawyers of nearly 160,000 rank and file Teamster members who have petitioned the court to intervene in the case?

15. On what basis can the monitors and the Federal courts carry on their work if the plaintiffs have consistently been unrepresented by counsel in at least 17 major occasions where issues affecting the entire membership of the Teamsters Union have been made?

Mr. MORSE. Mr. President, the Senator from Indiana and the Senator from New Hampshire have made some comments on the so-called monitorship problem which confronts the Teamsters Union. I should like to make a statement for the RECORD, because the problem which confronts the Teamsters Union is no small part of the Teamsters Union hierarchy's own making.

There is no doubt about the fact that, having suffered under this monitorship, they have reached the conclusion that they made a bad bargain. Certainly they did. But I say most respectfully that they should have thought about that before they entered into the bargain.

There is also no doubt about the fact that WAYNE MORSE always puts his cards on the table. There is also no doubt

about the fact that representatives of the Teamsters Union would like to have both Houses of Congress take an active interest in their problems; and they certainly have them.

There is also no doubt about the fact that—as previously pointed out—a considerable number of speeches, inspired by the Teamsters Union, were made in the House of Representatives, about the Teamsters Union problem. The union would like to have the Senate give a great deal of consideration to this monitorship problem which now confronts them.

Mr. President, I think that, in justice, the monitorship problem should be righted—there is no question about that—once the facts in the matter are known. But, for the record, I state what I have said to representatives of the Teamsters who have been to see me, too, that they should have thought about some of these problems before they, themselves, initiated a legal procedure which has put them into the difficulty in which they now find themselves.

The April 9 Nation editorial, previously referred to by my colleagues, sets forth rather clearly some of the difficulties in connection with the consent decree which the Teamsters themselves agreed to enter into. Why they did so, I shall always be at a loss to understand.

I read now from the editorial:

MONITORS VERSUS THE TEAMSTERS

(By William Goffen)

Last week's ousting of Godfrey P. Schmidt as attorney for the dissident Teamsters, and the scheduled trial next month of James Hoffa on charges of misusing his union's funds, focus attention on what Justice Felix Frankfurther has called a most unusual manifestation of the equity powers of a court—the monitorship which has ruled the union since early 1958.

Shortly after the union election of 1957, 13 rank-and-file dissidents, then represented by Schmidt, instituted legal action to set the election aside as "rigged." After 22 days of trial, the plaintiffs rested, whereupon the defendants (the union's elected officials), agreed to a settlement without ever having taken the stand in their own defense. The terms were expressed in a consent decree entered on January 31, 1958, by Judge F. Dickinson Letts of the U.S. District Court for the District of Columbia, who had presided over the trial.

The settlement provided for a board of three monitors to serve until a new convention for the election of officers. One of the monitors appointed by Judge Letts was Schmidt. The officials who had been elected at the 1957 convention were to serve provisionally until the new election, which the general executive board of the Teamsters was authorized to call after 1 year, and the balloting was to be held with such guarantees of the democratic process as the secret ballot and supervision by an outside agency like the Honest Ballot Association.

Had the defendants, instead of agreeing to a settlement, gone through with the trial and then lost, the victorious plaintiffs would have achieved no more than the prompt calling of a new convention and an election under court supervision. Since Hoffa, who had been chosen president at the 1957 convention by overwhelming vote, seemed certain to win again in a new election conducted under any conditions, it is difficult to understand why defense counsel consented to the agreement calling for a monitorship.

I digress from reading the excerpts from the editorial on which I wish to comment, to say that I share the editor's feeling that he, too, is at a loss to understand why defense counsel consented to the agreement which called for a monitorship. Certainly defense counsel must have known that when he entered into that agreement, he placed himself under the jurisdiction of the court, so far as concerns any subsequent procedural steps which might be taken, within the power of the court, in respect of any modification of the monitorship. The consent decree did not divest the court in any way from taking total jurisdiction over the subject matter.

What the Teamsters really object to is that the court exercised further jurisdiction, which the U.S. appellate court has held that the district court had a right to do; and, at least up to this date, the Supreme Court has denied a writ of certiorari. That does not mean that the Teamsters Union might not be able to obtain such a writ, upon a further showing of facts which might form a basis for the granting of a writ by the Supreme Court.

I now read further from the editorial, which I believe provides a clear analysis of this situation; and it is on the basis of the analysis that I propose to speak this afternoon:

As authorized by the consent decree, the Teamsters general executive board issued a call for a new convention and election for March 1959. At this point Schmidt, who had signed the consent decree as plaintiff's counsel, nevertheless petitioned Judge Letts to postpone the balloting.

Let it not be forgotten that Schmidt was appointed by Judge Letts to be one of the monitors. In effect, Schmidt had taken the position of prosecuting witness. Yet he was placed by the Federal judge in a judicial position to adjudge the Teamsters Union during the period of the monitorship. I think that action probably led to the disclosures which finally resulted in his removal.

I read further from the editorial:

The judge obliged by issuing a modification order postponing the holding of any new election until such time as recommended by the board of monitors.

This afternoon I do not propose to render a judicial decision on whether that action by the judge was proper. But the U.S. Court of Appeals seemed to think it was; and it has not been passed on by the Supreme Court, because, as I have said, the Supreme Court has not, to date, taken jurisdiction over this very complicated legal problem.

I read further from the editorial:

Schmidt's opposition to a new ballot (which under the terms of the agreement would have dissolved the monitorship and terminated the lawsuit) is understandable for reasons other than his professed concern for the welfare of the rank-and-file Teamsters he represented.

Since February 1958, the board of monitors has taken more than $350,000 in fees out of the dues of the rank-and-file membership. In addition, Schmidt and his co-counsel have so far claimed sums amounting to $210,000, plus expenditures exceeding $17,000, for services as plaintiffs' attorneys.

I digress from the editorial further to point out, Mr. President, the only interest I have in the Teamsters is in the rank-and-file membership of the Teamsters. I am satisfied that if we guaranteed them the democratic procedures they need in order to put their house in order, we can count on the rank-and-file members to put their house in order.

I have said many times, and repeat today, if I were a delegate to a Teamsters convention to elect a new president, there is one man I would not vote for, and his name is Hoffa. In fact, I have said here on the floor of the Senate, I think, in previous debates, that, in my judgment, in the best interests of the Teamsters Union, when these very serious situations developed, he should have resigned his presidency and worked himself up from the bottom again, if he wished to remain in the union and wished to be of maximum service to the Teamsters Union.

But that is not a judgment for me to render, insofar as my being in any position of authority in respect to the affairs of the union. However, I think, most respectfully, when there is a system of monitorship that has taken out of the pockets of the rank-and-file members of the Teamsters Union $350,000 to date, when there is a procedure which is resulting in this cost to the Teamsters Union, it is important that some interest be expressed by those in authority in regard to protecting the rights of the members of that union.

The editorial goes on to say:

Judge Letts' modification order, aside from postponing the election to which the Teamsters' membership was entitled, granted to the monitors unlimited authority to investigate the international union and its locals, and even to institute disciplinary proceedings leading to expulsion of its duly elected officials. The court avowed that the plaintiffs had proved that the 1957 convention was "rigged" even though the case had been voluntarily settled without a single word of testimony on behalf of the defendants.

Hoffa and his fellow union officials appealed the modification order in vain; the court of appeals sustained the power to prohibit an election, although at the discretion of Judge Letts rather than of the monitors. If this determination is a sound precedent, it would appear that any litigant is ill advised to settle his lawsuit, but should always fight his case until final judgment.

I respectfully say counsel for the Teamsters Union should have thought of that before they entered into the consent agreement; but they entered into it and placed themselves in the jurisdiction of the court with respect to the administering of the consent decree, and therefore it seems to me they ought to exhaust their remedies, through the judicial processes of this country, before expecting any legislative investigation in regard to the monitorship.

Mr. President, let there be no doubt what they want. They want a legislative investigation of this matter; and they have not, as yet, exhausted their legal remedies.

As I said to a representative of the union in my office, in my opinion the union ought to exhaust completely its

remedies so far as the judicial processes are concerned. I think the committee of which I am a member, namely, the Committee on Labor and Public Welfare, ought, at this stage of the problem, limit itself to the consideration of legislation which may involve, in its terms, the subject matter of monitorships or receiverships or regulation of unions. Such legislation ought to be considered in wide-open public hearings, with witnesses brought before us, subject to cross-examination, thus letting the union make its case in that kind of a hearing. May I say that is the only type of proceeding in which I would be at all interested. It is the kind of a proceeding, in my judgment, which will best protect the rank-and-file members of the Teamsters Union.

Going back to the editorial:

While generally upholding Judge Letts, the court of appeals did find that Schmidt had been guilty of conflict of interest, in that while serving as a monitor, he further profited by representing numerous employers in their negotiations with the Teamsters.

This bears out a view of my own that he should not have been appointed in the first place. I do not see how it could be said that this man who was appointed in the first place could be clear of a conflict of interest.

In my judgment, I do not see how it could be expected that putting him in the position of what might be termed, in effect, the chief prosecuting force, and then his sitting in a position of judgment, with a known attitude with respect to the Teamsters, could lead to anything but a conflict of interest. His appointment in the first place was most unfortunate, in my opinion.

Going back to the editorial:

Forced to resign as monitor, he was permitted by Judge Letts to appoint Lawrence T. Smith, a member of his own law firm, as his successor.

Which is a remarkable appointment, too. I speak respectfully of the judge, but not of his judgment. I think that if a board of monitors was to be appointed, it ought to have been a board of monitors which had never had anything to do, in any degree whatsoever, with the Teamsters Union. It ought to have been composed of persons who had had no professional relationship whatsoever with any law office which had had anything to do with the Teamsters Union. Apparently the U.S. Court of Appeals took cognizance of that fact when it took the position it assumed on Schmidt.

Going back to the editorial:

And until last week, he continued as plaintiff's counsel. [Judge Letts has now also dismissed Smith, and the original three-man monitorship has been reduced to one.—ED.]

Despite the extraordinary national and legal importance of a case involving denial of due process through judicial deprivation of the right of 1,600,000 union members to a free election, the U.S. Supreme Court has refused review.

I digress to say that does not mean the matter cannot once again get before the U.S. Supreme Court, if the parties in interest can come forward with new facts and new evidence which may have arisen since they made their last petition for writ of certiorari. This is why I say that the Teamsters Union has not as yet exhausted its legal remedies in regard to this matter. I add, we cannot ignore the fact that there is a court trial coming on in the near future.

When a matter is pending before a court, in my judgment, the judicial processes ought to run their course, so far as congressional action is concerned, separate and distinct from the consideration of any legislation. If legislation is pending before us, Mr. President, as I have made perfectly clear to some of the other members of the Committee on Labor and Public Welfare, then, and only then, in my judgment, should the Labor and Public Welfare Committee go to work, by way of hearings, on the merits of proposed legislation.

Going back to the editorial:

Attorneys for the plaintiffs have argued persistently that a democratic election was impossible without a prior, undefined "housecleaning" of the union. This aspect has been given widespread coverage by the press. Yet, according to the election institute (specialists in the conduct of honest labor elections), and the Honest Ballot Association, a free and democratic election could have been arranged for the Teamsters in 3 months, let alone the long-expired 1-year minimum set by the consent decree.

The refusal of the Supreme Court to act has apparently been construed by Judge Letts and the monitors as a warrant for wide-ranging intervention in the internal affairs of the union. Judge Letts has granted subpena power to the monitors, despite the absence of statutory authority for its exercise. The monitors, for their part, are presently engaged in an attempt to oust Hoffa as president and as a member of the Teamsters. Their chief ground—it is the issue involved in the Hoffa trial scheduled for next month—is that Hoffa was guilty of a conflict of interest in connection with a project in Sun Valley, Fla., for the construction of homes for aged Teamster members. At one point in the course of complicated realty and bank negotiations, Hoffa had an option to purchase stock in the firm which was to construct the homes.

I digress further to say that the trial of Hoffa, which deals with an issue as to whether he has been guilty of a conflict of interest and whether he has followed a course of action which subjects him to being found guilty of being in violation of the law is separate and distinct, in my opinion, from what ought to happen about further proceedings in regard to the monitorship.

Mr. President, I am at a complete loss to understand some of the economic and business courses of action of the international president of the Teamsters Union, but I am perfectly willing to let the legal processes of my country take care of that matter. We have before us a question as to whether some legislation is needed by way of amendment to the act which was passed last September concerning the regulation of unions in this country. This is an issue which deals with what was represented to be, at least, a union reform bill. As one of the two Members of the Senate who voted against that bill, I repeat today what I said then, time will prove it is not very effective as so-called union reform legislation.

Mr. President, in my opinion an amendment to the bill is needed with respect to such problems as are raised by the subject matter of the monitorship over the Teamsters Union. Mr. President, it ought to be done by way of a specific proposal. Where is it?

I said to the legislative counsel of the Teamsters Union, "proceed with a proposal for amendment to the act. Then come in and present your evidence in that matter. Then and then only will I judge, after the record is in, whether you have a case or do not have a case."

Mr. President, I read further from the editorial:

It is ironic that Hoffa and Schmidt, who for so long have been battling each other in and out of the courts, should both stand accused of conflicts of interest. The trial, of course, will fix Hoffa's legal responsibility in the Sun Valley affair. But it seems reasonable to draw a distinction, on moral grounds at least, between the acts charged to Hoffa and those of Schmidt's which resulted in the latter's dismissal as a monitor. Whatever profit Hoffa may personally have stood to gain in the Sun Valley project, his union would have gained an old people's home—certainly a worthy plan. But Schmidt's activities, while of profit to himself and perhaps to the employers in whose behalf he negotiated with the union, can in no way be construed as having profited the Teamsters, whose membership, as a monitor, he was supposed to protect.

The Teamsters membership has expressed its opposition to the monitorship through the following petition to Judge Letts:

"We, the undersigned members of the International Brotherhood of Teamsters, want an election of officers of the IBT now. We do not want the monitorship which is eroding the foundations of our union by maligning our membership, generating an atmosphere of fear, weakening our organizational functions and depleting our treasury."

The editorial proceeds:

There can be no question of a Hoffa victory if a new election were to be held.

I disgress to say, that is interesting, if true. Mr. President, for what are we working? I thought we were working in our labor legislation program for the right of free working men and women in this country to exercise their democratic rights. If it is true that we are in a position where, if we give democratic procedural rights to the rank-and-file members of the Teamsters Union, a man such as Jimmy Hoffa would be reelected president of the Teamsters, we ought to find it out. We ought to recognize, also, if it is true that the law on the books will provide democratic procedures for an election, then, whether we like the person who might be elected or not, the rank-and-file members of the union have the right to exercise their democratic choice.

I should like to find out whom the union members would elect president. I do not happen to share the view of the writer of this editorial. I do not believe Hoffa would be elected President, but I would like to see whether under democratic procedures he would be. I think that would be a very interesting fact to find out.

Mr. President, simply because the union members might elect somebody we would not vote for is not justification, in free America, for free men and women in a labor movement not to be allowed to

hold a convention and to elect a president of their own choosing. If that president follows a course of action which brings him into conflict with the law, then, so far as I am concerned, the law ought to be applied to him; I do not care whether he is Jimmy Hoffa or X, Y, or Z.

I feel that in the trial to be held in the near future, if in fact Hoffa is guilty of violating the law, he should be held fully accountable for his violations.

I also say I do not think we ought to get these two problems mixed. I do not think we ought to confuse this problem we are hearing about from the individual Teamsters in our separate States with the other problem. It has been pointed out on the floor of the Senate that a good many communications are coming to us. That is true, Mr. President. I am interested in whether there is a constructive proposal for amending the law which will protect the rank-and-file members of the union from any wrong which in fact may exist, if they can prove it in committee hearings to exist.

I read further from the editorial:

> The union, as a matter of fact, has "never had it so good," While other unions—notably the Auto Workers, Steelworkers and Machinists—have been losing membership, the Teamsters gained more than 20,000 new members last year.
>
> The truth is that to deprive union members of the right to vote for their international officers is no more defensible, legally, than to deprive stockholders of their right to elect the officers of U.S. Steel.
>
> It would seem that if the Teamsters monitors sincerely believed that a union "housecleaning" was desirable, they would willingly, withdraw their opposition to an election, the democratic way for "housecleaning" of any group. Their continued opposition can be regarded as consistent with a general tendency in recent years to erode labor's rights.

I have read the editorial in full, Mr. President, because in my judgment it sets out, as clearly as I think can be set out, the position of the Teamsters in regard to the monitorship problem. It fails, however, to give the emphasis which I would give to what I think is the course of action the Teamsters should follow. It is not a course of action by way of so-called political pressure, but instead a course of action in keeping with established legal procedures in this country; that is, to exhaust the remedies now available, in view of the recent developments which have occurred in the district court, in the handling by Judge Letts of the monitorship problem. There has been a change in the various monitors. There has been a finding in regard to the fact that at least one monitor was guilty of a conflict of interest. Another monitor has been appointed to substitute for him, or to take his place, out of the law firm of the man discharged as a monitor.

The place for review of that question happens to be in the courtroom, under judicial processes, and that is where the Teamsters ought to take it. As I said to their legislative counsel, if the Teamsters have a legislative amendment to existing labor law which they think is meritorious, and they can make a prima facie case for it, I would go even so far as to introduce it by request if I thought a case could be made for it, in order to let the Senate Committee on Labor and Public Welfare conduct hearings on it.

I will not be a party to seeking to interfere with the judicial processes of this country in respect to either rights of appeal or in respect to any action which may be taken against Jimmy Hoffa because of an alleged violation of the law which brings him into conflict with the law.

I am sure, if I correctly interpret the statement of the Senator from Indiana [Mr. CAPEHART], that I do not make any statement that is, in essence, any different from the position taken by him. To make that clear, let me say that no remark I made was meant to be at variance with the observation of the Senator from Indiana, or that of the Senator from New Hampshire.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CARROLL. Does not the able Senator from Oregon agree that we in the Congress ought to be very careful not to leave the impression that we seek, by either legislative or committee action, or by speeches on the floor of the Senate, to intimate that we are in any way attempting to influence the judgment of a court which now has jurisdiction of the case?

Mr. MORSE. Not only is that the burden of my remarks, but also my statement is that that is where the Teamsters should leave the case, too.

Mr. CARROLL. I heartily agree with the Senator from Oregon in his presentation, to the effect that in connection with this matter of such great importance to 1½ million Teamsters, the forum is the court.

The question of whether we should have legislative hearings, or whether we should amend the so-called Labor Reform Act, may arise at a later time. Certainly it would be weeks hence before there could be hearings and a report. As I understand from the press, there will be a court hearing on Mr. Hoffa within a week or two. I think the issue is whether or not he shall remain as president of the union. Is not that the basic issue?

Mr. MORSE. My understanding is, as I put it, that the basic issue in the next trial is as to whether or not he has been guilty of an illegal course of action in regard to certain property dealings in which he has been engaged, and which involved some of the funds of the union.

Mr. CARROLL. Does not that also involve the question of whether or not he might be removed?

Mr. MORSE. Not by the court, in this particular action. In that action the court can only find whether or not he has been in violation of the law, and guilty of a conflict of interest. It would require independent action by those who had jurisdiction to remove him as president of the union. The fact that the president of a union might be found guilty of having engaged in some illegal property transaction would not justify the court in removing him as president of the union.

Mr. CARROLL. It is a curious anomaly that monitors were appointed, stemming from the consent decree, in order to give the monitors jurisdiction to control the union. Now the rank and file, 1,600,000 members, are, in a sense, deprived of the right to hold another election at this time.

Mr. MORSE. We may involve ourselves in a discussion of technical language. However, the monitorship did not give the monitors the power to control the union. It gave the monitors the power to participate in a position of surveillance or supervision, or, to use another phrase, to exercise certain policing powers over the union, but not to run the union. The management of the union remained in the same hands, but the consent decree provided that the monitors should be in a position of surveillance, and that that situation should continue until an election was held.

Mr. CARROLL. And a court of equity was given power to appoint the monitors in this system of surveillance.

Mr. MORSE. That is correct. As I said earlier, counsel should have known that when they entered into the consent decree they submitted themselves to the jurisdiction of the court, for whatever further modification the court might order, within the power of the court. As I have said, the U.S. Circuit Court of Appeals has held so far that the district judge has not exceeded that jurisdictional power.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. CARROLL. Let me continue for a moment along this line. I wish to clarify the situation in my own mind.

I know it must be confusing to many people, especially when we think in terms of the rank-and-file membership, in the sense of their local unions being under surveillance. Now, after almost 2 years, some of the local unions in Colorado are asking, "Why can we not have an election convention?" The irony of the situation is that a great deal of money is being spent today under the monitorship which was established by virtue of the consent decree. This is where I do not agree with my good friend the able Senator from Oregon. I agree with the editorial from the Nation magazine, which the Senator has read. I assumed it was the Nation.

Mr. MORSE. That is correct.

Mr. CARROLL. I think a psychological situation has been created that if an election were now to be held, Hoffa would be elected by a greater margin than ever before.

Mr. MORSE. Then we should find that out.

Mr. CARROLL. The union members are seething with fury at the fact that their money is being spent in large sums. So I think the very purpose of the consent decree, the establishment of the monitorship under the jurisdiction of the court, has been thwarted by the events which have happened since.

I agree with the Senator from Oregon that perhaps, in the democratic process, if that is the way it is to be, we should let the people of the country see whether Hoffa is really going to run the union or

not, and whether the rank and file want him, and if so, why—assuming that the next election may not be rigged.

I do not understand the long delay. Of course there is another side to this question. The delay is not only on the part of the monitorship. As we know, in law there are many delaying, dilatory tactics, and many obstacles are placed in the path of the court.

This is no pink tea party. This is a hard, tough fight, and we can bet our bottom dollar that Hoffa and his lawyers are working night and day devising dilatory tactics. So there are two sides to the story.

The reason I rose to commend the Senator from Oregon for his statement is that we in the legislative branch should not be interfering with the judiciary when there is an important problem before the courts. But, by the same token, the courts should not, under the broad powers of equity, be interfering, in another sense, with 1½ million members who have a right to express their vote under the democratic process.

Mr. MORSE. I think there is no question about the fact that continuation of the monitorship, under its present organization, is bleeding the treasury of the Teamsters, and really taking thousands upon thousands of dollars out of the pockets of the rank-and-file members of the Teamsters, which funds should be used for their own local welfare programs, which seek to strengthen their legitimate rights at the local level. That is why an early election should have been held. As a Congress we should see to it that procedures are available in order to guarantee democratic rights to the rank-and-file members of the union.

Mr. CARROLL. If the Senator from Oregon will yield further, I should like to make this observation. I suspect that if we had full time to examine into the other side of the record, a position could be taken that, if left in the hands of Hoffa and his lieutenants, there could be some bleeding of the treasury, too.

So, as we consider the pros and cons of this important matter, as the able Senator from Oregon has outlined the situation, no small group of men is involved here. We are talking about the rights of 1,600,000 people, and when these people are going to be given the opportunity to assert their rights.

I want to make this one closing point, and I want to repeat it again and again, namely, that we in the legislative branch, through committee action or on the floor of the Senate, or on the floor of the House, must not directly or indirectly attempt to influence the outcome of a judicial decision.

Mr. MORSE. That is the point of view I sought to emphasize.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CAPEHART. Is it not a fact that the monitors have refused to permit an election?

Mr. MORSE. That is correct. The district court, through Judge Letts, has sustained the recommendation of the monitors.

Mr. CAPEHART. The next question is this—and the able Senator from Oregon is a lawyer, and I am not—when and how can this matter be straightened out? Who can force the court or the monitors to hold an election? Could this not go on for 5 or 10 or 15 or 20 years?

Mr. MORSE. If I were back in the private practice of law, as I said to the legislative representatives of the Teamsters, I would not be sitting still in my law office, in view of what has developed since the decision of the circuit court of appeals. I would proceed with a new appeal, on the basis of what has transpired since the circuit court of appeals sustained the decision of Judge Letts, because Judge Letts has taken some different positions since then, and he has issued some new orders since then. In my judgment he has issued some orders that are appealable, and someone ought to start upstairs with them.

Mr. CAPEHART. It is a fact, however, that there is no law which would force the monitors or the judge to permit an election.

Mr. MORSE. Under the consent decree, in my judgment, discretion is given to the judge.

Mr. CAPEHART. It might go on for 5 or 10 or 15 years before an election is held.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CARROLL. Mr. President, I read in the newspaper the other day that an affidavit was filed to disqualify the judge. That is under consideration today. There are many legal delaying tactics on both sides that could be used effectively in an important case. The judge may have many difficult problems to decide. I do not believe, in my opinion, that the monitorship could be held for 5 years, unless there was a long series of chronological events showing intimidation and interference. As a matter of fact, I suspect that if the able Senator from Oregon were in the private practice of law he would go in with another membership group, showing that he represented a group of rank-and-file members, and would ask to intervene in this court of equity. One way would be by saying, "We were not parties to the consent decree." How many plaintiffs were there in the consent decree?

Mr. MORSE. Twelve, I believe.

Mr. CARROLL. How many defendants were in the consent decree?

Mr. MORSE. It applies to the whole membership, in effect.

Mr. CARROLL. It would seem to me that somewhere along the line within a reasonable time the court will make a determination, and that it will not be 5 or 10 or 15 years hence. Even the powers of the court of equity are subject to due process under our Constitution.

Mr. CAPEHART. My point is that there is nothing in the law—and I am not a lawyer—that would prevent them from doing this for 5 or 10 or 15 years, unless, of course, someone took them to court and the court decided to dissolve the monitorship.

Mr. MORSE. They have already done it for 2 years. I think on the basis of what we know about the case so far, that is too long.

Mr. CARROLL. I should like to say that there is the due-process clause in the Constitution, and the court of equity is bound by the due-process clause. I am confident that this cannot go on for 5 or 10 years.

Mr. CAPEHART. If the monitors wanted to deny an election for a period of years—I do not know whether it would be 5 or 10 or 15 years, and perhaps that is too long, or, on the other hand, it may not be long enough—they could deny an election, unless someone takes them to court and gets a decision dissolving the monitorship or ordering the monitors to hold an election. That could be done by the court of appeals or the Supreme Court. However, there is nothing in the law which would force them to permit an election. They have denied an election for 2 years. Perhaps they were right. I am not assuming whether they were right or whether they were wrong. I am merely saying that this is the situation that exists today. That situation is getting perhaps intolerable.

Mr. MORSE. The major point I sought to make is that I have advised the legislative representatives of the Teamsters who have talked to me that they should keep in the right forum. The Senator from Colorado [Mr. CARROLL] has been talking about exhausting their legal remedies. They have not done that so far as the monitor issue is concerned.

So far as this specific case is concerned, they ought to stay in the court room, not in the legislative halls. When we come to the question of labor legislation which Congress may be asked to consider, I must have a specific bill before me, and I must be shown a prima facie case that the bill ought to be subjected to hearing. If that can be shown, then I would be willing to take the position that the Committee on Labor and Public Welfare ought to proceed to give consideration to proposed legislation that may be referred to it, if it is referred to that committee.

Mr. CARROLL. I agree with the Senator 100 percent. This is what I think is the main point. We ought to try to make this point crystal clear.

The other point that I would like to make clear is this. The Senator from Indiana need not worry that there will not be someone pushing the rights of the rank and file Teamsters. From the information that I have received, they are sick and tired and disgusted with what is going on. Because of their frustration and anger, instead of swinging away from Hoffa, because of the psychological factors involved, they are likely to swing in full support of Hoffa, and that if the election were held in the next 3 or 4 months, Hoffa would be elected by a sweeping vote.

Mr. CAPEHART. One of my fears is that if this can happen in a labor organization, it can also happen in a business organization, or any other institution. Here we have a case of conflict of interest between the monitors and the head of the union, with 1,600,000 union members denied the right to have an election, when we spent weeks last year talking about democracy in unions and reforming the unions. Yet here we have a

situation in the largest union—I believe it is the largest union in the country—being estopped from holding an election.

I do not have the slightest idea as to who would be elected. I have not discussed it with Hoffa. I do not know who would be elected. I do know that it is not a good situation.

I agree that it would be better if legislation rather than legal actions were pending on which the committee could hold hearings. I do not know what kind of legislation is needed, but I know that it is a bad situation, as the Senator from Oregon and the Senator from Colorado have pointed out.

Mr. MORSE. I am sure that the Senator from Colorado will agree, if his assumption is correct, that the rank-and-file members of the Teamsters Union are stirred up and angered by what is happening to their treasury and what is happening to the union under the monitorship; namely, that they would reflect Hoffa as their president, that they should not be denied the democratic right to do that if that is what they want to do.

I am sure that the Senator from Colorado will agree with me that they ought to be given the choice of decision, and that the way to protect the public from any union president who may be betraying the trust of his union is through just such legal action as we have been talking about here this afternoon. In respect to the trial that is pending, if the president has followed an illegal course of action, he ought to be prosecuted to the extent that the law permits him to be prosecuted.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. MORSE. Before I yield I do not want the RECORD to seem to show that we can possibly be in disagreement as to whether the union should have the right to have an election if that is what the rank-and-file members of the union want. The editorial from which I have read and the petitions that I have referred to seem to indicate that local after local of that union wants an election.

Mr. CARROLL. I say to the Senator from Oregon that it would almost be humorous if it were not so serious. The very purpose of the suit, at the outset, as I understood from a reading of the editorial, was to set aside a rigged election. The union brought suit in Federal court to have a new election. What happened? The plaintiffs put on their evidence. But before the defendants—the fellow officers of the union—put on one scintilla of evidence, a consent decree was entered.

Mr. MORSE. The Senator is exactly correct.

Mr. CARROLL. A consent decree conferring what? Conferring equity powers upon the court to appoint monitors to sort of resurrect the union, give it surveillance, and do all the things necessary to sustain the political power and the actions of the men who were involved in the rigged elections.

We cannot have it both black and white. If the election was rigged, the court of equity should have acted then. But it did not act then under the consent decree.

So the matter is left hanging in limbo. For how long? A million and a half members want to know what is happening. They see their union treasury being raided for large sums of money, and perhaps by both sides. I am not making an argument against the monitors. I am making an argument in favor of the judge—of the court. The matter is in the judicial process. We, under the Constitution, under the doctrine of the separation of powers, should not interfere with the judicial process either by legislative action or by speeches on the floor of the Senate.

Mr. CAPEHART. Would the Senator from Colorado agree that if the judicial process does not settle the matter in a reasonable period of time, Congress has the responsibility to pass legislation to make certain that it is settled?

Mr. CARROLL. We will cross that bridge when we come to it. As the Senator from Oregon has said, the judicial remedies have not been exhausted up to this point. Whether we should pass legislation is a bridge which can be crossed when we come to it. But we must not by our actions or by our words attempt to influence the court's decision. That is the strong and vital point I want to make.

Mr. MORSE. I thank the Senator from Colorado and the Senator from Indiana. They have been very helpful in making a record as to what our position is on this matter.

Mr. CARROLL. I thank the Senator from Oregon for his excellent presentation and for his courtesy and patience in yielding to my questions and observations.

PROPOSED MEMORIAL TO LATE SENATOR NEUBERGER

Mr. MORSE. Mr. President, some time ago I introduced a bill which proposed to name the John Day Dam in the State of Oregon after my late colleague, Senator Richard Neuberger. The RECORD will show that I introduced the bill as a result of the unanimous action taken by the executive committee of the Democratic Party of the State of Oregon.

I have before me a very thoughtful editorial entitled "Neuberger Memorial," written by the editor of the Oregon Statesman. I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Statesman, Mar. 20, 1960]

NEUBERGER MEMORIAL

Quite a rush of Members of Congress to attach the name of the late Senator Richard L. Neuberger to some geographical feature. Senator MORSE would have the new John Day Dam named for him. Representative NORBLAD proposes applying his name to the Green Peter Dam in the Willamette Basin project. Senators MANSFIELD and KUCHEL would name the proposed Seashore Recreation Area for the late Oregon Senator.

The last seems to the Statesman to be most appropriate. It was the project which he was promoting, mostly all alone, and is of a scale more significant than Green Peter Dam which is on a fork of a fork of a branch of the Willamette. Many others had a hand in promoting the John Day Dam, and anyway this name has real meaning in Oregon history, and may well be retained. John Day was a member of Astor's overland party headed by Wilson Price Hunt. Day and Ramsay Crooks of the party fell behind the others in the Snake River country, but managed to work their way to and down the Columbia. Near the mouth of the John Day River Indians met and robbed them, even of their clothes. They were rescued by Robert Stuart's party which was coming down the Columbia. The name has been given to the dam because of its proximity to the mouth of the river which bears Day's name. It should be retained. We hope Congress settles on the dunes area seashore park as the Neuberger memorial.

Mr. MORSE. The editorial points out that the Senator from Montana [Mr. MANSFIELD] and the Senator from California [Mr. KUCHEL] have introduced a bill to create a seashore recreation area in my State, which it has been proposed to call the Sand Dunes National Park, but which their bill provides should be named in memory of the late Senator Neuberger.

The editorial also states that a proposal has been made to name Green Peter Dam in memory of Senator Neuberger.

The writer of the editorial takes the position that the most appropriate memorial would be the Sand Dunes Park, if established. I, too, think that that would be an appropriate memorial. I believe there is great merit in the reasoning of the editor of the Oregon Statesman that neither the name of Green Peter Dam nor of John Day Dam should be changed. However, I am interested in having a suitable memorial named in honor of my late colleague.

I am satisfied that any one of the three projects mentioned would certainly be suitable, although, as I have said, I believe there is considerable merit in the suggestion that the names of Green Peter Dam and John Day Dam remain unchanged. Nevertheless, I shall continue to ask for the consideration of my bill, because once it is under consideration, then the whole question as to how it should be amended, if at all, can be acted upon by the committee.

I simply wish to comment, though, that the Sand Dunes Park has not yet been created. There is considerable controversy in my State with respect to its creation. In my judgment, the bill as introduced by the Senator from Montana and the Senator from California is in need of amendment. I shall offer an amendment to the bill along the very lines I discussed with constituents in Florence, Oreg., last Wednesday. In Florence, I discussed with the two sides to this controversy in that part of my State the pros and cons of the issue.

The most troublesome matter connected with the creation of a Federal national park in the area to be known as the Sand Dunes Park involves the matter of private homes which are at present in the area which would be turned into the park, and the fear of the owners of those homes that the Secretary of the Interior would be given condemnation power over them—and he certainly would, under the language of the Mansfield-Kuchel bill.

I have discussed this matter before. I have also discussed the problem with the national park officials. It does not follow, as I said in Florence the other day, that the objective of a park in any way will be injured or diminished if the owners of those homes are permitted to continue to own them. When the debate on this matter opens, and my amendment has been offered, I shall cite precedents to show that there already are national parks within which there has been a retention of private property rights on the part of some private property owners.

If the Sand Dunes Park shall be established—and I hope it will be, but only after the adoption of amendments which will prevent the doing of wrong to private property owners in the area—I certainly would have no objection to its being named the Richard Lewis Neuberger Park. But there is one person whose judgment, in my opinion, ought to be given great weight in this matter—and, so far as I am concerned, the controlling weight. That is Mrs. Neuberger, the wife of my late colleague. So far as I am concerned, I serve notice today that her judgment will be my judgment in regard to this particular matter.

I point out to the editor of the Salem, Oreg., Statesman, that I do not believe there should be any pressing for the naming of a park after my late colleague when that park has not yet been created, and the use of that proposal to the slightest extent whatsoever as an inducement for creating the park.

There are many other places which can be named as memorials to my late colleague. But when the Sand Dunes Park is created, if it is created—and I hope it will be, provided the protection to the private property owners to whom I have referred is given—then my judgment would be controlled by the judgment of Mrs. Neuberger as to whether or not she would prefer that that park be named after her late husband, or that the name of John Day Dam or of Green Peter Dam be changed, or that some wilderness area in the State of Oregon be named after my late colleague.

On the last point, there are many places which would be exceptionally suitable to be named as memorials to the late Senator Neuberger. I cannot think of any memorial which would be more suitable than to name after him some large wilderness area, because I do not know of anyone who has fought harder, not only in my State, but in the entire country, for the development, the protection, and the creation of new wilderness areas.

THE LOYALTY OATH

Mr. MORSE. Mr. President, as many other colleges and universities have done, the University of Oregon has met to discuss the loyalty oath provisions of the National Defense Education Act of 1958. In a memorial adopted on March 16, 1960, the faculty of the University of Oregon expressed its grave concern over the affidavit of disbelief required of recipients of funds under this act. Says the memorial:

The affidavit of disbelief serves no useful purpose. It violates the settled doctrine of American jurisprudence that an American citizen is presumed innocent unless proved guilty. It is contrary to the sound principles of academic freedom to which the University of Oregon is committed.

The memorial continues to point out the historic hostility on the part of the people of Oregon to discriminatory legislation reflecting upon the loyalty of any American or group of Americans.

In a letter with which he transmitted this resolution, the University of Oregon's president, O. Meredith Wilson, wrote me in part as follows:

In my experience in this and several other institutions, I have never seen an academic faculty discuss any issue with greater care or with greater concern. I believe I would not exaggerate if I were to say that the entire faculty regrets deeply the inclusion of a requirement of an affidavit of disbelief in this or any other Federal legislation relating to education aid.

Mr. President, I ask unanimous consent that this letter from President Wilson, of the University of Oregon, and the memorial adopted by the University of Oregon faculty on March 16, 1960, appear in the RECORD at this point in my remarks.

I also ask unanimous consent that a letter on the same subject, which I have received from the president of Pacific University, in Forest Grove, Oreg., and an attached resolution by the board of trustees appear in the RECORD at this point in my remarks.

A bill reported favorably by the Senate Labor and Public Welfare Committee, S. 2929, would repeal this affidavit of disbelief. I sincerely hope this 86th Congress will not come to a close without passing this bill.

Mr. President, I happen to be a member of the board of trustees of Pacific University, at Forest Grove, Oreg. Although I was unable to attend the meeting of the board of trustees at which the resolution was adopted, I should like to have the RECORD show that I approve of the resolution.

There being no objection, the letters, the memorial, and the resolution were ordered to be printed in the RECORD, as follows:

UNIVERSITY OF OREGON,
Eugene, Oreg., April 9, 1960.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR WAYNE: With this letter I am transmitting a resolution passed by the University of Oregon faculty. I should note that there were those of the faculty who wished a much stronger statement.

In my experience in this and several other institutions, I have never seen an academic faculty discuss any issue with greater care or with greater concern. I believe I would not exaggerate if I were to say that the entire faculty regrets deeply the inclusion of a requirement of an affidavit of disbelief in this or any other Federal legislation relating to educational aid. Only great respect for the intentions of the Congress and a clear recognition of our country's need have counterbalanced their distaste for the offending requirement.

If the members of the faculty thought that the inclusion of the affidavit of disbelief as a requirement for participating in the National Defense Education Act were to become a precedent for a similar inclusion in future enactments intended to support education, they would have voted not to participate in the present act. They have such respect for the U.S. Congress that they are persuaded that this requirement will not be included in future acts, and remain confident that the Congress will yet remove the offending section from the existing acts. I urge you as a U.S. Senator to use all your influence to see that the requirement of this affidavit is removed from existing acts and is excluded from any future legislation relating to education.

I am pleased to record this faith and confidence that our faculty has in the ultimate wisdom of our legislators and public officers. I shall be deeply grateful for all you may do to justify their confidence.

Sincerely yours,
O. MEREDITH WILSON,
President.

A MEMORIAL ADOPTED BY THE UNIVERSITY OF OREGON FACULTY, MARCH 16, 1960

The faculty of the University of Oregon expresses to the president of the university its grave concern that certain recipients of funds under the National Defense Education Act of 1958 and the fellowship programs of the National Science Foundation, the National Institutes of Health, and other Federal agencies are required to file an affidavit of disbelief repugnant alike to the principles of American citizenship and to the traditions of the University of Oregon. The affidavit of disbelief serves no useful purpose. It violates the settled doctrine of American jurisprudence that an American citizen is presumed innocent unless proved guilty. It is contrary to the sound principles of academic freedom to which the University of Oregon is committed. It singles out as objects of suspicion among all recipients of Federal funds one group—members of the academic community—as special objects of distrust.

In his budget message of January 18, 1960, President Eisenhower stated:

"I am recommending repeal of the provision of the National Defense Education Act that prohibits payments or loans from being made to any individual unless he executes an affidavit that he does not believe in or belong to any organization that teaches the illegal overthrow of the Government. This affidavit requirement is unwarranted and justifiably resented by a large part of our educational community which feels that it is being singled out for this requirement."

The requirement of the affidavit of disbelief in the National Defense Education Act is opposed by the Oregon delegation in the Congress of the United States. It has been condemned by faculties and governing boards of the leading universities of the United States and by the leading educational organizations of the United States, including the American Council on Education and the American Association of University Professors. Although individual members of the faculty of the University of Oregon may differ somewhat in the degree of their abhorrence for the affidavit of disbelief, not a single member is known to have risen to its defense.

The people of the State of Oregon have been hostile to discriminatory legislation that reflects upon the loyalty of a small minority of public employees or recipients of public funds. The faculty recalls with pride that a decade ago, when several great universities of this country were torn by dissension over negative loyalty oaths imposed by well-meaning but misguided legislation, the Oregon State Grange, the Oregon Department of the American Legion, and the chancellor of the Oregon State System of Higher Education, with the support of the State Board of Higher Education, went on record as opposed to such oaths and the

legislature itself declined to pass the discriminatory legislation.

If the requirement of the affidavit of disbelief remains in effect, it will tend to fix itself on higher education and to flourish as additional Federal funds are appropriated. It will, as President Robert Goheen of Princeton University has pointed out, in discussing the National Defense Education Act, restrict the university's "right to choose its own students and to accord them aid upon principles which it determines," and it thus involves a principle of great importance, that of "assuring the self-directing integrity of long-established and responsible educational institutions."

Therefore, be it resolved that the faculty of the University of Oregon recommend:

(1) That the president of the university express for the university its official disapproval of the requirement of the affidavit of disbelief in the National Defense Education Act, and concert appropriate action with other university administrators, faculties, and governing boards—notably those of Pacific University, Reed College, the University of Wisconsin, Harvard University, Yale University, and Princeton University, to the end that a sustained presentation of the views of many universities and colleges shall be presented to the Congress.

(2) That the President of the university, with the advice of the advisory council, appoint an ad hoc committee of the faculty to work vigorously toward the elimination of the requirement of the affidavit of disbelief from the National Defense Education Act and the fellowship programs of the National Science Foundation, the National Institutes of Health, and other Federal agencies.

Be it further resolved:

(3) That the ad hoc committee on the affidavit of disbelief be requested to make periodic reports to the faculty on progress being made toward the elimination of the requirement of the affidavit of disbelief.

(4) That the faculty, recognizing the obligation to honor the fellowships and loans now in force, records its deep reluctance to continue participation in those programs of the National Defense Education Act and the fellowship programs of the National Science Foundation, the National Institutes of Health, and other Federal agencies which require the filing of the affidavit of disbelief; and that it therefore recommends:

(a) That, in order to concert action, it communicate these sentiments to the faculties of the several State universities, the communicating agent to be the ad hoc committee on the affidavit of disbelief.

(b) That it recommend to the faculties of the universities joint action to effect the removal of the requirement of the affidavit of disbelief.

(c) That the basis of joint action shall be determined through negotiation and, for the University of Oregon, on recommendation of the ad hoc committee on the affidavit of disbelief and by vote of the faculty.

PACIFIC UNIVERSITY,
Forest Grove, Oreg., April 11, 1960.

Senator WAYNE D. MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: I enclose a resolution of the board of trustees of Pacific University expressing strong opposition to the provisions of the national defense education program which require the students benefiting from loans not only to take the standard oath of allegiance to defend and support the Constitution and laws of the Nation against all enemies, but to take a second oath that they do not believe in, belong to, or support any organization that teaches illegal overthrow of the Government.

I should add that the faculty of Pacific University have taken official action requesting that the administration take steps to make our opposition to such provisions known. The trustees have directed me to transmit to you a copy of the resolution.

It is quite obvious that we at Pacific University—the administration, faculty, trustees, and anyone else attached to the institution—are opposed to communism and all of its insidious forms, but we are equally opposed to the action of the Government which singles out students as suspects and requires of them affidavits that are not generally required of other people. We firmly believe that students in American universities are far above average in their loyalty to the Gavernment of the United States, and we believe the same thing is true of the faculties of these institutions. Indeed, many of us have worn the uniform of the Armed Forces and have shown our readiness to give ultimate sacrifice to testify to our loyalty.

Sending this resolution to you is in no wise an indication of any criticism of any position you may have taken, but it is a registration with our elected representatives in the Senate of the point of view of this university as voiced officially by its board of trustees.

We hope this will provide for you support in any action in which you might be involved seeking to change the provisions of the law. We feel very strongly that the national defense education program and the loans provided by it constitute an important advance and, therefore, we have not refused the loans as have some other universities. We do feel, however, that the law should be amended so that the stigma attached to the loans at the present time is removed.

Please accept our thanks for the fine work you are doing in representing the people of Oregon in the Senate of the United States.

M. A. F. RICHIE.

RECOMMENDATION OF BOARD OF TRUSTEES OF PACIFIC UNIVERSITY

Resolved, That the board of trustees of Pacific University go on record as being opposed to provisions of the national defense education program which require that students benefiting from loans not only take the standard oath of allegiance to defend and support the Constitution and the laws of the Nation against all enemies foreign and domestic, but also require students to file in addition affidavits that they do not believe in, belong to, or support any organization that teaches illegal overthrow of the Government.

In opposing this provision of the national defense education program, it is understood that the board of trustees does not object to students, faculty, or board members themselves being required to make the standard oath of allegiance, but strong objection is registered to singling out a student group as a suspicious one requiring a secondary and negative statement relative to loyalty.

VOLUNTEER WORKERS AT THE DISTRICT OF COLUMBIA GENERAL HOSPITAL

Mr. MORSE. Mr. President, upon a number of occasions I have paid tribute to the work being done by the volunteers who give unstinting service to the men, women, and children who are wards of the District government and who are housed in District institutions.

Recently, I received a letter from Mrs. Jean L. Williams, who is director of volunteer services for District of Columbia General Hospital. She tells me that the work and contributions of the organizations and individuals who serve the sick of the District is equivalent to more than $100,000 a year. The intangible benefits of this dedicated work by volunteers to the patients and the improvement in the morale of the patients, as a result of the work of the volunteers, is beyond measurement by any price criteria.

Mr. President, the scope of these activities in District of Columbia General Hospital alone can be grasped when it is realized that an average of 623 volunteers each month served the District of Columbia General patients in the 1958–59 fiscal year.

Mr. President, accompanying Mrs. Williams' letter was a report of the volunteers services department of District of Columbia General Hospital. I ask unanimous consent that the letter and the report be printed at this point in my remarks.

There being no objection, the letter and the report were ordered to be printed in the RECORD, as follows:

GOVERNMENT OF THE DISTRICT OF COLUMBIA,
DISTRICT OF COLUMBIA GENERAL HOSPITAL,
Washington, D.C., April 1, 1960.

Senator and Mrs. WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR AND MRS. MORSE: I am enclosing a copy of the annual report of 1958–59 of the Volunteer Department of the District of Columbia General Hospital. The work and contributions of the organizations and individuals who serve the sick of the District is equivalent to more than $100,000 and means more than money could buy in improving the morale of the patients who are treated in our hospital.

We still have no budgetary approval for a secretary and recreational program assistants to serve in the psychiatry and children's buildings.

We appreciate your interest in the health and welfare needs of the citizens of the District as well as the whole country. Since meeting you at the party in Fairlington soon after your arrival, I have followed with interest your work on behalf of better services for all of our citizens. I am glad you have chosen to remain on the District committee.

Sincerely,

Mrs. JEAN L. WILLIAMS,
Director of Volunteer Services.

ANNUAL REPORT OF VOLUNTEER SERVICES DEPARTMENT, DISTRICT OF COLUMBIA GENERAL HOSPITAL, JULY 1, 1958-JUNE 30, 1959

I. VOLUNTEER SERVICE GROWS AND SERVES

During the past fiscal year 1958–59, more individual volunteers (average 623 per month) served the patients of District of Columbia General Hospital than any year since volunteer records were established in 1946. The volunteer tasks were varied, according to the needs of the patients and the hospital departments requesting service.

These volunteers were: (1) members of the 19 organizations who make up the Advisory Board of Volunteer Services, (2) individuals who came of their own volition or were referred by the Health and Welfare Council Volunteer Department, and (3) members of groups who put on seasonal parties or become responsible for a regular program of recreation, movies, ward adoption, or service in clinics, central supply, or in directing visitors in medicine, surgery, and psychiatry. These volunteers gave 41,685 hours of service or the equivalent of 23 full-time employees.

Volunteers whose service cannot be measured in hours gave 450 paid memberships in PROPS (Physical Rehabilitation or Patient Services), sewed baby clothes, masks, children's dresses, scuffs, and bedbags at home, not counting the hours.

By word of mouth and the Voice of the Volunteers the story of District of Columbia General Hospital and its needs gets perpetuated in church circles, sodalities, clubs, schools, civic groups, and other organizations of people of good will in a group dedicated to service to others. Without the combined efforts of all these friends, the patients would lack the friendly attention of these volunteers assisting the staff, the movies, the magazines brought to the bedside, the holiday gifts and tray decorations, the materials to make lovely things in occupational therapy, the clothes and carfare on discharge, the layette to take the baby home, the canned milk for a sick child going home.

These services are about equally divided into (1) services to patients, and (2) services to the hospital staff. They will be described in greater detail in the report.

Receipts by the Volunteer Services Advisory Board for hospital projects was $4,188.08 in fiscal 1959 or $383.17 more than the previous year. This increase is due in part to the receipt of $500 from the District employees one fund drive and will mean increased services in the coming fiscal year.

Our thanks go to the groups and individuals who have given so generously to help the sick. Our thanks also go to the hospital staff members who have worked with the volunteers, training and supervising them and helping them to make the best possible use of their time, gaining satisfactions for themselves while helping others.

II. PATIENT SERVICES

Ward adoption

The ward adoption program at District of Columbia General Hospital is the result of many years of service by church and service groups. Over 35 years ago, about the time the surgery building was opened, the organized church women sent a paid worker to serve in the hospital. One of her projects, bed bags and scuffs for patients, is still paying dividends in the form of a constant stream of these articles, and the magazine and religious literature has been systematized with regular bedside deliveries each Wednesday in medicine and surgery and every Saturday in medical annex, with other services picking up magazines and books as needed. The Lutheran Inner Mission has been serving as ward adoption volunteers for 25 years, beginning when a group of women came to trim Christmas trees in psychiatry.

When the Advisory Board of Volunteer Services was organized in 1946, the ward adoption program was formalized with churches of the United Church Women taking floors of medicine, surgery, pulmonary, pediatrics, and the nursery. The Lutheran churches continued to serve psychiatry, and later the Metropolitan Heart Guild took the heart ward and the Kappa Delta alumnae took the crippled children's floor.

Services have included toilet articles, bed bags, scuffs, magazines, holiday parties, friendly visiting, televisions, radio and clothing. Many other churches and groups have sent supplies not assigned to any floor and they are issued as needed to supplement the gifts of the regular group. Other gifts include tray mats and favors, games, toys, playing cards, occupational therapy supplies, layette clothing, linens, sick room equipment, drinking glasses, recreation equipment.

In addition to adoption of a ward and a large contribution to layettes and clothing the Chevy Chase Presbyterian makes about 30 new dresses at Christmas and Easter for the children. The Metropolitan Heart Guild furnishes rubber pants and sox for their ward and the Kappa Delta alumnae furnish shirts for the children to wear under their braces on the crippled children's floor, rubber pants to prevent corrosion of braces and protect padding, and well fitting socks to wear with their special fitted shoes. These above clothing items have never been a part of the hospital or the maternal and child health budget, and the children would suffer if the volunteers did not supply them.

Each ward receives a minimum of $120 worth of supplies for toilet articles, with holiday parties, Christmas trees and decorations in addition. Very seldom is this work the budgeted part of the church budget, but is earned by the women by hours of work on church dinners, bazaars, rummage sales, sale of greeting cards and other merchandise. These hours of service do not show in the statistical report.

Many of the groups have continued since the organization, but many changes have taken place in groups and personnel. The advantage of the group effort is that the work goes on with new faces and new emphasis from year to year, the group taking pride in their project and perpetuating the interest.

An average of 110 United Church Women per month gave 8,393 hours during the year.

Recreational therapy

During the last year further efforts have been made to give recreation to hospitalized patients according to their ability to participate, planned at such times as will not conflict with medical or occupational therapy treatments.

Children's service

At the request of the chief medical officer of pediatrics efforts to staff the pediatrics playroom have been increased with good results.

During the winter six senior girls of the Future Nurses Club of Surratsville High School gave 295 hours in pediatrics on Saturday mornings. In June, 15 girls of the Catholic Youth Organization worked 466 hours. They had previously taken a Red Cross home nursing and first aid course. They will continue during July and August 1959. Thirty-three girls are in the group and many did not get to work in June.

The child care aids of Eastern High School gave 1,894 hours from September through June and 24 different girls served. For their outstanding community service they received the group award given annually by the Abram Simon Chapter of B'nai B'rith, the Second Annual Kronman Award. Their work was chiefly in crippled children's ward.

The D.C. Teachers College students giving 30 hours a semester worked in the playroom with children, as well as in occupational therapy and the outpatient clinic.

In March a student from Vietnam studying under the International Cooperation Administration program was assigned to the pediatrics playroom as a play therapist. Her quiet manner and skills in handicraft soon had the children of all ages from 4 to 12 busily working and playing each morning and afternoon. Many Easter baskets and decorations were made, culminating in an Easter party. Her concentrated work over the month showed what could be accomplished with a regular play therapist, and her departure caused the nurses and children to miss the regular playtime which gave the nurses time to devote to more seriously ill children and kept the active ones occupied until mealtime. We still hope for a full-time worker here.

Many churchwomen, evening club groups have also given volunteer time to children in pediatrics and the crippled children wards, reading stories, having Sunday school classes, movies, parties, or helping with feeding and putting to bed.

Movies

The weekly movie is enjoyed by many groups as well as children. The movie is paid for by the volunteer department from funds contributed for this purpose and supplemented by PROPS memberships. A committee made up of nurses, occupational therapists, patients, and the volunteer director choose the films, making choices which will appeal to all. The film is shown about 10 times a week in the various wards. The nature of the illnesses and the physical separation of the wards makes combinations of patients impractical.

Holiday parties

Christmas and Easter are seasons when an all-out effort is made by the ward adoption groups and the community to see that the hospital is decorated, and that every patient receives gifts and refreshments. The quantity of gifts at Christmas is so generous that many sturdy gifts for the playrooms last throughout the year. Gifts of television, radio, record players, and records are also made so that the patients who come later may also enjoy the gifts.

Pulmonary and psychiatry

Regularly scheduled entertainment has been given to pulmonary patients by Red Cross groups and individuals and groups have helped the patients' recreation committee and the OT department with game nights on Monday and Friday evenings.

In psychiatry the National Presbyterian Church and the Catholic committee have given bingo games, music and singing, game nights weekly to wards able to participate. An evening assistant to the volunteer director is needed to help with these evening recreation programs.

District of Columbia Recreation Department

For the second year the District of Columbia Recreation Department has cooperated with the hospital in supplying recreation workers to work in psychiatry. Two workers have been showing movies 4 nights a week, helping the patients with square dancing, games, activity program with the children's group. Most of the equipment they use is also furnished by the Recreation Department, as well as sports and indoor game equipment for the doctors and nurses. We appreciate the cooperation of another District department in meeting the needs of patients and personnel.

Recreation equipment

Two teeter babe jump chairs to pediatrics from the Defense Department.

Three new covers for jump chairs to pediatrics from the Defense Department.

Four jump chairs for clinic children to pediatrics from Mrs. Joyce Wilkinson.

Two tricycles for children in occupational therapy from the B'nai B'rith Independence Chapter.

One motortruck for children in occupational therapy from the Lincoln Congregational Church.

Sturdy wooden toys for children to pediatrics from the Willing Workers.

One RCA Victor television for pulmonary men from the Third Order of Franciscans.

One Cavalcade radio in occupational therapy from the B'nai B'rith Abram Simon Chapter.

Ten bed lamps for surgery 3 from Mr. and Mrs. Gordon Fisher.

Occupational therapy

For the sixth year the volunteer services has given occupational therapy $500 to provide materials for the patients to make things of leather, arts and crafts, ceramics, wood, clothing. Extra earmarked gifts are also made in the form of food for the kitchen to make refreshments, dress materials, leather, unfinished patterns, upholstery for making scuffs. The Chief Occupational Therapist says the donations amount to hundreds of dollars also.

No money is provided in the budget for expendable materials though equipment is provided. Each Christmas the advisory board of volunteer services assists with sev-

eral days of Christmas sales to gain cash for items produced by the patients. Baked goods, jewelry, handmade toys and other salable items are also donated by the volunteers.

Radios, record players and records have also been given this department for use in workrooms and issuance to patients on loan.

Before there was an occupational therapy department, the volunteers gave the money for the nurses to carry on a diversional therapy program.

The occupational therapy shop in the crippled children's department is also sponsored by one of the member groups of volunteer services. The Twentieth Century Club gives $300 a year for expendable supplies and $100 at Christmas for Christmas stockings.

Social service

Social service was very active in getting an organized Volunteer Service Department at District of Columbia General Hospital because of the many unmet needs of the patients and the shortage of staff to do many of the things needed to provide better patient care. The close cooperation of these two departments in meeting patients' needs has resulted in better service to inpatients and outpatients.

Volunteers furnished the only stamps for psychiatry patients for years until the hospital recognized its obligation to furnish stamps for them. Only recently has the hospital furnished car tokens to enable outpatients to come to the hospital for continued treatment. The volunteers provide $360 a year for carfare and lunches, $100 a year for shoes for patients who need them for continued medical treatment, to get them out of bed or to continue treatment on an outpatient basis. Most of the shoes are for children. Through purchase or donations at least 3,000 cans of evaporated milk are given to Social Service for sick babies, some adults with ulcers, or in some cases of sudden catastrophe in the home with no milk for children.

Layettes were furnished to 482 mothers, and discharge clothing given to many other children to get them home or to Children's Convalescent Hospital or Christ Child Farm for continued care. In addition to the clothing, special funds are contributed which are used for cabfare for mothers to take these children to the treatment homes listed.

At Christmas 50 families not otherwise cared for by Welfare agencies are referred to the Salvation Army Christmas Distribution Center for toys and Christmas dinner. This centralized agency of the Health and Welfare Council has done an excellent job for many years in pooling all agency referrals and avoiding duplication in Christmas giving.

Other patient services

The Gray Ladies of the Red Cross and the church women do many services for patients in the hospital. They deliver mail Monday through Friday to the bedside. They do canteen shopping in medicine, surgery, and psychiatry and in addition withdraw patient funds for psychiatry patients. They write letters, read mail, refer special requests to the volunteer director who then refers them to social service or wherever they should go. Weekly bingo games in neurology and orthopedics were given in the year.

Red Cross staff aids and nurses aids as well as many other individuals help in the outpatient department, speeding the service by answering telephones, readying patients for examination, preparing supplies, doing clerical work. Some volunteers feed patients at noon so they may have their food while it is hot.

The Red Cross motor service gave transportation to 1,154 patients and volunteers as well as student nurses on field trips. The drivers drove 4,952 miles and gave 1,115 hours of service. An average of 15 Gray Ladies a month gave 1,763 hours for the year.

The churchwomen maintained a room on the sixth floor medicine to receive and assort all donated supplies. They made up the layettes, issued clothing to patients being discharged, and to services needing clothes for use in the hospital such as pulmonary, psychiatry, and children's. The churchwomen have had a designated room for over 30 years. The present room is 304 square feet. The one to which we will move is 132 square feet. We will have to decentralize the material received as soon as possible after sorting and repacking. Items counted in 1958–59 were 133,055, a 10-percent increase over the previous year. Many items taken to the wards such as party refreshments, favors, and supplies are never counted.

III. SERVICES TO THE HOSPITAL

Assistance in nursing care

The addition of a daytime nurses aid class in the fall as well as a night class in the spring and fall gave more nurses aids to work in District of Columbia General Hospital. An average of 15 aids a month gave 2,143 hours of service under the direction of graduate nurses. Also five nurses aids were assigned in the outpatient clinic assisting doctors in preparing patients for treatment, and assisting in many ways the clerical workers are not trained to do.

The child care aids of Eastern High, the future nurses and the Catholic Youth Organization groups listed under recreational services also assisted the nurses in working with the children in feeding, toilet and washing routines, bedmaking and putting children to bed. Many of these girls plan to be nurses, and this work under graduate nurses prepares them to make vocational choices in keeping with their interests, teaches them good work habits, and helps the school in giving field work practice in the subject matter learned in school.

The Girl Scouts were willing, but because of the age limit restricted to 16 years of age or older most of those wanting to come did not qualify. The popular age for the hospital aid project with these girls is the 13-to-15-age group.

Ward secretaries

The staff aids of the Red Cross and the volunteers referred by the Health and Welfare Council gave most of the clerical work done. An average of eight staff aids gave 862 hours of service. An average of 45 workers a month gave 7,350 hours working on individual assignments. A large proportion of these workers are clerical. Some show movies and some work with children.

The assignment of full-time unit clerks in the nursing division has cut the need for daytime unit clerks on a volunteer basis, so dayworkers have been channeled to central supply and outpatient department or children's playroom.

Visitor service

Eighteen organizations and churches had regular assignments to assist with visitors on Sunday afternoon from 1:30 to 3:30 p.m. An average of 27 volunteers a month gave 3,215 hours of service.

After 2 years there is a noticeable improvement in the whole atmosphere of the hospital on Sunday afternoon. By omitting the passes and keeping two volunteers on each floor to direct and instruct visitors, and see that only two visitors are at a bedside, the public and patients are cooperating better. There are always a few who will try to crowd as many around a bed as possible, but they are becoming fewer. A concerted effort of nurses and doctors to educate the patients who in turn can tell their families might bring education of the public faster.

The cooperation with the nursing division is excellent, and on some Sundays when the volunteer count is low, the nurses are able to manage without the usual help of the volunteers.

On Tuesday and Thursday evenings the crowds are smaller. The Gray Ladies, staff aids, Catholic Daughters, and some individuals assist in the visitor service.

On Wednesday and Sunday afternoons the Lutheran churches send five volunteers who list visitors, serve as hostesses on the floors and in many ways make the visiting hours from 1 to 3 p.m. more pleasant in psychiatry.

Surgical dressings and sewing production

Over 200 women from 7 Lutheran churches worked on surgical dressings at their weekly meetings. They produced 223,750 surgical dressings. Scuffs by the thousand are produced in a year but are not counted as different groups bring them to the psychiatry service as they come for visitor service.

The Red Cross production service sewed 21,145 garments for the hospital. No hours were counted as many hospitals send work in and it is too difficult to separate the hours given to any one hospital.

The Baptist women assisted by the auxiliary of St. John and other individual volunteers packed 46,855 pairs of surgical gloves for operating and treatment rooms. In outpatient department the volunteers assigned there packed 17,500 pairs of gloves.

Other supplies processed for outpatient department were 500 syringes a week, 100 dental needles threaded a week, 1,000 cotton balls bagged a week, 250 needles for hypodermics packed and 500 long cotton sticks tipped with cotton a week. Central supply which serves medicine, surgery, and the admitting office also received a great deal of help. Five Catholic sodalities gave most of their volunteer hours in these two departments.

Many churches as well as the Lutheran church women converted 2-string masks to 4 strings for operating and treatment rooms, at an average cost of 20 minutes each for making over about 20,000 masks. This was homework for which time was not counted.

Paper towels are cut in four pieces for use in isolation rooms to save towels and to make more usable pieces for handling instruments, doorknobs, etc. One blind volunteer likes this job very much.

Comparison of hours

The recorded hours given by volunteers rose from 40,580 in fiscal 1958 to 41,835 in 1959. The increase in the average number of workers per month rose from 591 to 623.

The distribution of hours between patient services and hospital services remained about 50–50. The older volunteer is more content to work in central supply and pack gloves and work on surgical dressings at her church than the younger woman who enjoys the patient contact, likes to see the hospital from a broader perspective.

The opportunities for the high school volunteers are limited, but those we have used have been excellent. We limit teenagers to those in group who have a sponsor who can help to orient, and supervise the activities of the group. The three youth groups who worked in Children's gave 2,655 hours and the Howard University freshmen gave 656 hours in March in visitor service. Approximately 600 hours were given by the District of Columbia Teachers College students in their community service.

The three church service groups give approximately 50 percent of the hours worked: United Church Women 8,393; Lutheran Inner Mission 6,765; Catholic Committee 4,425. Each of these groups did so many different things it is not possible to separate them by types of service. The combined Red Cross groups gave 5,883 hours of service.

The growth of volunteer hours is to be gained by making better use of the evening hours. Many volunteers are lost because of

lack of supervision on the job in the evening. A professional staff member on duty in the evening with the ability to train and hold the volunteer could increase the hours and help the patients.

IV. COMMUNITY RELATIONS

Since the job of the coordinator of volunteer services is concerned with community organization and group work aspect of social work, there is a great need for the freedom to go to community meetings, go to speak to groups when invited, interpret the needs of the hospital where possible and invite support for programs needing support. The demands of the job also require 12-hour coverage at the hospital if the available volunteers are to be used to the best advantage.

Many tasks can be delegated to volunteers, but no matter how excellent a volunteer is it is impossible to know all the answers that come in by telephone, the best spot to place a volunteer after interviewing her, how to compile the statistical reports after the hours are copied out of the books where volunteers sign.

Choices must constantly be made of which is the most important task to do on a given day, after the emergent needs are met. Meeting with the groups which make up the advisory board at their meetings for honoring volunteers, their annual meetings, committees of the board to plan the annual fund raising event **PROPS**, the annual budget meeting to decide how to spend the money, the nominating committee to decide the new officers are a few on the must list.

Membership on the Health and Welfare Volunteer Roundtable, health section meetings of the Health and Welfare Council, membership in the National Association of Social Workers, and subsection meetings with the group work section and medical social work section are some of the groups the volunteer coordinator has chosen to attend. During the year invitations to be the guest speaker have been accepted at National Presbyterian Church, Sunday Evening Club, sponsor of a recreation program in psychiatry for 7 years, Lutheran Institutional Mission Auxiliary, active in District of Columbia General for 25 years, United Church Women, and various churches sponsoring projects at District of Columbia General Hospital.

Voice of the volunteers

This small 6-page mimeographed newsletter has been devised as a way of getting around when it cannot be done in person. The mailing list consists of 500 PROPS members, 500 churches and clubs who are regular donors, several hundred active volunteers, and about 200 heads of departments, head nurses, and visitors to the hospital. The work of writing and addressing is done by volunteers, the stuffing and stamping by psychiatry patients. Results have been demonstrated by increasing of donations, stabilizing of the PROPS membership and making all donors conversant with what others are doing for the hospital.

Thanks to the community

It is a tribute to the citizens of this community that they support the humanitarian and rehabilitating services carried on by the many programs of Volunteer Services. Instead of saying as some do, "That is a Government hospital; let the Government support it," they give of themselves and their resources so that others may look forward to a life freed from pain and make their own way again in the world. To all who have served, "Thank you."

MRS. JEAN L. WILLIAMS,
Coordinator of Volunteer Welfare Services.

TECHNICAL ASSISTANCE TO SOIL CONSERVATION DISTRICTS

Mr. MORSE. Mr. President, one of the least controversial and most beneficial aspects of our farm program has been the work carried on by the U.S. Department of Agriculture Soil Conservation Service in providing technical assistance to soil conservation districts.

The Soil Conservation Service activities are particularly needed in the Pacific Northwest, and have received tremendous support on the part of farmers who cooperate with the Service, through soil conservation districts.

There is, at the present time, a need for additional funds to provide technical assistance and planning to the districts, not only for the regular Soil Conservation Service program, but in addition, to take care of the interest which has been displayed in the small watershed program.

Mr. President, on March 31, 1960, I received from Mr. Randall E. Grimes, chairman of the State soil conservation committee of Oregon, a letter requesting my assistance in obtaining an increase in the appropriation for the Soil Conservation Service. I am very happy to accede to these requests, and I shall urge that ample funds for these meritorious purposes be included in the 1961 Department of Agriculture appropriation bill.

Mr. President, I ask unanimous consent that the letter to which I have alluded, together with other communications on this same subject, be printed in the RECORD at this point in my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SOIL CONSERVATION DISTRICT,
Rogue River, Oreg., March 30, 1960.

Hon. WAYNE MORSE,
U.S. Senator, Senate Office Building, Washington, D.C.

DEAR SENATOR MORSE: Your support is requested for an increase in appropriations to the USDA Soil Conservation Service for technical assistance to soil conservation dis-

tricts and planning and construction funds for works of improvement under the Watershed Protection and Flood Prevention Act (Public Law 566 as amended by Public Law 1018) for fiscal year 1961.

The board of supervisors, of the Rogue SCD requests your assistance in obtaining an increase in the appropriation for SCS of $5 million for assistance to SCD's. We also urge an increase in small watershed construction funds to $50 million and increase in planning funds be obtained—$5 million. Oregon should be guaranteed the service of one complete small watershed planning party, and not have to share a planning party with Idaho, as is rumored.

We further request your support for an additional $1 million appropriation for technical assistance to the SCS for new soil conservation districts, for fiscal year 1961. If funds for new SCD's are not available, their staffing will further deplete the SCS assistance now available to existing districts.

We urge that you support this action and that you forward this request to the appropriate Senate and House committees. We would appreciate being advised of developments regarding these budget items.

Very truly yours,

CHESTER W. JENSEN,
Chairman.

STATE SOIL CONSERVATION
COMMITTEE OF OREGON,
Corvallis, Oreg., March 28, 1960.

Hon. WAYNE MORSE,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: Your support is requested for an increase in appropriations to the USDA Soil Conservation Service for technical assistance to soil conservation districts and planning and construction funds for works of improvement under the Watershed Protection and Flood Prevention Act (Public Law 566 as amended by Public Law 1018) for fiscal year 1961.

You are aware that all of Oregon's 57 SCD's have signed a memorandum of understanding with the USDA Soil Conservation Service and their programs are largely dependent upon the availability of technical assistance and planning from the SCS. A 1958 survey of manpower needs in Oregon SCD's indicated that supervisors of these districts felt an immediate need for 89 additional SCS personnel. The need for these personnel has increased since that time and many SCD's find a backlog building up on requests of farmers and ranchers for conservation planning, soil surveys, and engineering assistance.

There has also been considerable interest in the small watershed program in Oregon. There are now 26 projects proposed and a number of these are waiting for planning priority. The State committee is also emphasizing assistance to landowners in areas where there are no SCD's organized with a goal to bring all of the State of Oregon within the boundaries of SCD's. This means that there will be a need for SCS technical assistance for these new districts.

Your assistance is requested, therefore, in obtaining an increase in the appropriation for SCS of $5 million for assistance to SCD's. We also urge an increase in small watershed construction funds to $50 million and increase in planning funds to $5 million. It is very important that sufficient planning funds be obtained to guarantee that Oregon will continue to have the service of one complete small watershed planning party. It has been rumored that if the existing budget is passed that Oregon may have to share a planning party with Idaho.

We further request your support for an appropriation for technical assistance to the SCS for new soil conservation districts of $1 million. We estimate that there will be from three to five new districts organized in the State of Oregon in the 1961 fiscal year. If funds for new SCDs are not available, their staffing will further deplete the SCS assistance now available to existing districts.

We urge that you support this action and that you forward this request to the appropriate Senate and House committees. We would appreciate being advised of developments regarding these budget items.

Very truly yours,

RANDALL E. GRIMES,
Chairman.

SILVER CREEK
SOIL CONSERVATION DISTRICT,
Marion County, Oreg., April 1, 1960.

The Honorable WAYNE L. MORSE,
Senator from Oregon,
Washington, D.C.

DEAR SIR: In the Silver Creek Soil Conservation District as in many other districts in Oregon, we are unable to give assistance to all the people requesting it because we are sadly lacking assistance in technical and clerical help in our office.

We would appreciate your assistance in endorsing the appropriation of the Soil Conservation Service budget, particularly concerning soil conservation district work.

Very truly yours,

LEROY RUE,
Chairman, Silver Creek SCD.

TRIBUTE TO SENATOR NEUBERGER

Mr. MORSE. Mr. President, in the April issue of Retirement Life, the publication of the National Association of Retired Civil Employees, there is printed the text of a resolution, adopted by its executive committee, commemorating the services in the Senate of my late colleague, Richard L. Neuberger.

I ask unanimous consent that this resolution be printed at this point in the CONGRESSIONAL RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

At a meeting of the executive committee of the National Association of Retired Civil Employees on March 14 at Washington, D.C., the following resolution was proposed:

"Whereas the more than 100,500 members of the National Association of Retired Civil Employees were shocked to learn of the sudden death on March 9 of the Honorable Richard Lewis Neuberger, Senator from Oregon; and

"Whereas we regarded him as one of the ablest Members of the U.S. Senate; and

"Whereas his outstanding and objective consideration of major legislation for the welfare of all citizens of this country demonstrated his high degree of intelligence and his sincere Americanism, and his passing is a great loss to our country; and

"Whereas his special, his continued, and his very deep interest in the welfare of all civil service retirees warranted our deep appreciation: Now, therefore, be it

"Resolved, That the officers and members of this association express sincere and deep sympathy to his widow, Mrs. Maurine Neuberger, to his father and mother, and the other members of his family; furthermore be it

"Resolved, That a copy of this resolution be forwarded to Mrs. Neuberger and to the members of his family, and that it be published in the April issue of Retirement Life."

THE PORTLAND, OREG., NEWSPAPER STRIKE

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution, adopted by the Oregon Typographical Conference, on the Portland, Oreg., newspaper strike.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE OREGON TYPOGRAPHICAL CONFERENCE

Whereas the printing trades unions of Portland, Oreg., have been on strike and locked out for several months by the two daily newspapers, the Oregonian and the Oregon Journal; and

Whereas Mr. S. I. Newhouse, absentee owner of the Oregonian, has caused the importation of professional out-of-State strikebreakers; and

Whereas, professional strikebreakers are migratory workers, adding nothing to the economy of the community, and certainly detracting from the area by such unethical, despicable conduct; and

Whereas such action constitutes a great threat in the loss of job opportunities to members of organized labor; and

Whereas the importation of out-of-State professional strikebreakers and the high wages paid to them can only indicate that the publishers are disrupting the orderly process of labor-management relations; and

Whereas the men and women involved in the newspaper strike and lockout in the city of Portland are now deprived or limited in their opportunity to contribute financially to the civic, religious, welfare and any and all other humanitarian community efforts: Now, therefore, be it

Resolved, That the Oregon Typographical Conference in session assembled March 12–13, 1960, in Corvallis, Oreg., go on record protesting the importation of professional strikebreakers into any State, and request legislators of the State of Oregon to provide protective legislation against such importation of strikebreakers to replace Oregon State citizens; and be it further

Resolved, That copies of this resolution be printed in the Typo Topics, official paper of the Oregon Typographical Conference, and that copies be sent to Gov. Mark Hatfield, the State labor commissioner, the secretary of the Oregon State AFL–CIO, to U.S. Secretary of Labor James P. Mitchell, all members of the Oregon Legislature and all Oregon Members of the U.S. Congress, and that all members of organized labor be requested to support and actively work for passage of such legislation.

A DISSENTER'S ROLE IN A FREE SOCIETY

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial, entitled "A Dissenter's Role in a Free Society," written by Thomas E. Gaddis, the editor of Northwest Review, a quarterly which is published by the Student Publications Board of the University of Oregon, at Eugene, Oreg.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A DISSENTER'S ROLE IN A FREE SOCIETY

(By Thomas E. Gaddis)

Where a free society exists, there will be found some voice of disagreement, some eye that looks askance. The voice often irritates. The eye offends.

We can be sharing our togetherness with satisfaction, pulling as a team, when someone yanks at the harness. We grow irritated with him. We vote him down. We fire him, we expel him, expose him, and, occasionally, kill him.

This protean individual has many names. He's the maverick, the eccentric, the gadfly. In groups, he's a screwball, a loner, an "aginner." In correctional parlance, this is the "hard case" or "hot air merchant." Sociologically, he's deviant. For psychologists, he's maladjusted, negativistic, narcissistic or even psychopathic.

The term dissenter, first used in a religious context after the revolution of 1688, is now used to include anyone who disagrees with commonly held beliefs in a social group. Nor is dissenter an ill-chosen term, since its true meaning is encysted in the word. Dissent literally means "to feel apart," not to think apart. It is this feeling apartness which is the source and power of the dissenter. He is the natural antithesis of togetherness.

Dissent also connotes expression. The disagreement must be voiced, the protest expressed. Risk is involved—some overt expression that runs contra the establishment.

The dissenter may be Socrates trudging the streets of Athens, mortal but deathless, or some forgotten odd ball in the local PTA. Or even a university president, if he is Robert Hutchins, wearing a white football helmet to an alumni banquet after he has abolished football.

What makes a dissenter? Psychologists agree that we all have a need to belong. The dissenter may have suffered some early despair which made him abandon acceptance. Or, his group may be in his mind, selected from past or future.

Freudians look for the motivation of the dissenter in early, unhealthy relationships with authority figures. But only a few psychologists—notably the late Robert Lindner—have stressed rebellion as man's most typical human attribute. Far from adjusting everyone into conformity, Lindner felt, society should encourage rebellion and utilize it. But this is not the trend.

We live in a society of increasing organization and bureaucratization. Groupness is pervasive and all-embracing, like the sea, around us. As individuals, we swim in a sea of norms. Our separateness becomes an increasing threat to the care, nurture and happy life of growing groups. More and more we are guided, adjusted, coerced and compressed into the group. If we can't get along with groups, we can't work or maintain status. The individual can be ostracized by his company or blackballed by his union or subversively listed by his government's secret police because of what he buys, reads or says.

The newspaper he unfolds is increasingly the only daily in his city. His radio and television are networked. His news magazines present all sides, but all sides of one view. He lives in a world of standardized products, opinions and modes of being; and the forces which determine his life stem from decisions made elsewhere. The visibility of our culture increases hourly. And living under these changes, the lot of the dissenter becomes increasingly forlorn. Dissent is a dangerous luxury for the individual. But is it becoming a vital necessity for society? What is the role of the dissenter?

In the political and legal arena, the dissenter challenges the system. He checks the fabric of the group, the organizational net. He pummels the legal structure and the power combines. The result is exposure of weak spots, the uncovering of evils, the disclosure of places where our great check and balance systems falter. The dissenter's questions cauterize areas of complaisance and corruption in the system.

Legally, the dissenter will sue on principle, and benefit us with a new set of precedents. Strangely, he may never attain his goal; stranger still, his goal may prove unimportant. What is more important is the discovery of something else in the process.

This process of "happening on to" something more valuable than one's original goal is called serendipity. It produces more valuable discoveries and insights than is recognized in orthodox thinking. Like Dr. Roentgen, who stumbled on the X-ray while looking for something less important, society learns about itself through the sometimes irrelevant behavior of its dissenters.

The people who produce these happy but fortuitous improvements may be men of no eminence and great determination, like the identical twin pilots who hijacked an airplane from a Government marshal in order to prove that the Government had illegally seized it. By enraging authority, the dissenter shows how far authority can go—until calmer men in shame apply remedies to restrain authority. Eminence and success may sometimes mitigate, but they do not destroy the "feeling-apartness" of the true dissenter. Cyrus Eaton from his pinnacle in industry outlines the dangers of a bureaucratic secret police. Edward R. Murrow attacked McCarthyism at its source in the most sensitive of public media. He again mined the vein of dissent by disclosing the extent to which prostitution is used in competitive big business.

It cannot be assumed, however, that the fruits of dissent are always valuable per se. But we cannot know at a given time, which are valuable and which not. The value of a dissent is like a signboard, so close to us that we cannot read it. This is why the role of the dissenter in society should be studied, safeguarded, and recognized as a vital function.

It may be that in the attentive study of society in future, the dissenter will be recognized as one of our greatest, and least recognized, national resources.

ADDITIONAL FUNDS FOR THE NATIONAL INSTITUTE OF DENTAL RESEARCH

Mr. MORSE. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a letter requesting my support for a $5 million increase in the 1961 funds for the National Institute of Dental Research. The letter was addressed to me by George W. Redpath, D.M.D., president of the Pacific Coast Dental Conference.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PACIFIC COAST DENTAL CONFERENCE,
Portland, Oreg., April 12, 1960.

Senator WAYNE L. MORSE,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: On behalf of the 13,000 dentists who compose the Pacific Coast Dental Conference we would like to ask your support for a $5 million increase in 1961 funds for the National Institute of Dental Research.

The additional funds could be used for training programs in dental schools, fellowships, and research projects. By this means, the quality of dental education can be enhanced, and the future productivity of dental graduates increased to help solve the manpower problem in serving our growing population.

Your support for this worthy cause is requested.

Sincerely,

GEORGE W. REDPATH, D.M.D.,
President.

INFORMATION ABOUT NAACP GENERAL PUBLIC SHOULD HAVE

Mr. THURMOND. Mr. President, if there is one organization in this country other than the Communist Party of the United States which is fomenting strife and discord at a time when our people should be united as never before, it is the National Association for the Advancement of Colored People. In carrying out its program of racial agitation, this organization, like some other left-wing groups in this country, is playing directly into the hands of the Communist Party, which has been forced to work its will through front groups.

Realizing that the time is not now exactly ripe for a Russian-style Communist revolution, the Communists in this country have in recent years adopted as their principal aim the exploitation of the race issue to the maximum extent possible, with the idea of dividing the American people. FBI Director J. Edgar Hoover made this point in his recent bestselling book, "Masters of Deceit."

Mr. President, judging by the files of the House Un-American Activities Committee, as to the connections of most of the NAACP leaders with Communist, Communist-front, and other subversive organizations, I doubt seriously that the NAACP is playing into the hands of the Communists unintentionally.

Much information has been placed in the CONGRESSIONAL RECORD on the subversive records of many NAACP leaders, but the NAACP continues to lead the Supreme Court, some members of the administration, and some Members of Congress, around by the nose. In order to call again to the attention of the Congress and the country some of the information which has been compiled on the NAACP and its leadership, I ask unanimous consent to have printed in the RECORD an editorial from the April 18, 1960, issue of the Sumter Daily Item, entitled "Information About NAACP General Public Should Have."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sumter Daily Item, Apr. 18, 1960]

INFORMATION ABOUT NAACP GENERAL PUBLIC SHOULD HAVE

Inasmuch as the National Association for the Advancement of Colored People seems to have the ear of the Federal courts and is attempting to take charge of things pretty generally in this country it might not be amiss to acquaint the public with the history of the organization and the people who are running it.

Attorney General Eugene Cook of Georgia made an exhaustive study of it and the facts which he dug up are startling.

The record shows that the association originated in New York City 46 years ago as the brain child of a southern scallawag and Russian-trained revolutionary named William E. Walling.

Of its five founders only one was a Negro—a Communist-sympathizing lawyer named W. E. B. DuBois whose record of participation in Communist, Communist-front and subversive organizations and activities taken from the files of the Committee on Un-American Activities requires eight pages of

single-spaced typewritten copy to outline, so naturally we do not have space here to reproduce same. Among his activities was the donation of his services in the preparation of legal briefs defending ex-Communist spies Julius and Ethyl Rosenberg and the imprisoned leaders of the Communist Party in the United States.

In addition to Walling and DuBois the other NAACP founders—all white—were Dr. Henry Moskofwitz, Socialist Oswald Garrison Villard, and Miss Mary Ovington White. The first president was a white Boston lawyer named Moorfield Storey.

Mr. Cook says that from that day of its organization "South-hating white people with long records of affinity for affiliation with and participation in Communist, Communist-front, subversive and fellow-traveling organizations, activities, and causes have directed and subsidized the NAACP.

"The files of the House Un-American Activities Committee reveal records of affiliation with or participation in Communist, Communist-front, fellow-traveler, or subversive organizations or activities on the part of the following present officials of the NAACP—the president, the chairman of the board, the honorary chairman, 11 of 28 vice presidents, the treasurer, 28 of 47 directors, the chairman of the national legal committee, the executive secretary, the special counsel, the assistant special counsel, the southeast regional secretary, the west coast secretary, the director of the Washington bureau, the director of public relations, and two field secretaries."

Mr. Cook lists some of the organizations to which these men belonged. For example, Thurgood Marshall, the Negro lawyer responsible for the NAACP's court attacks upon segregation in public schools, as late at 1950 was a member of the executive board of the Communist-front National Lawyers Guild which has been described as "the foremost legal bulwark of the Communist Party, its front organizations and controlled unions." Marshall has served as associate editor of the Lawyers Guild Review and has criticized this Nation's loyalty program. He also is listed, Cook says, as a member of the national committee of the Communist-front International Judicial Association which has actively defended Communists and consistently followed the Communist Party line. And he was among a group of attorneys who protested the issuance of contempt citations against pro-Communist Hollywood writers who refused to testify before the House Un-American Activities Committee.

Of the NAACP's 28 vice presidents, the following 11 have records of un-American activities:

John Hays Holmes, 23 citations; A. Philip Randolph, 20 citations; the late Mary McLeod Bethune and William Lloyd Innes, 16 citations each; Oscar Hammerstein 2d, the composer, and Bishop W. J. Walls, 7 citations each; Ira W. Jayne and L. Pearl Mitchell, 2 citations each; and Willard S. Townsend, T. G. Nutter, and Grace B. Fenderson, 1 citation each.

Of the 47 members comprising the association's board of directors, 28 have records of un-American activities. Two other vice presidents and three other directors are well-known apologists for leftwing causes. The two vice presidents are Senator WAYNE MORSE, of Oregon, and Eric Johnston of the motion picture industry. The three directors are Mrs. Eleanor Roosevelt, CIO Leader Walter Reuther and former Senator Herbert H. Lehman, of New York.

A pamphlet outlining the program of the Communist Party of the United States, published in September 1954, made specific reference to a link between the Communist Party and the NAACP. It stated:

"We call upon wage earners, working farmers, the Negro people, small business and professional people, upon the women and the youth, to join hands in a common fight for the democratic demands of the National Association for the Advancement of Colored People."

Former Negro Communist Foster Williams, Jr., testified before the House Un-American Activities Committee about this matter on June 17, 1954, and said:

"The Communist Party very sneakily manipulates the Negro people for their own purposes."

Mr. Cook points out that the racial aims of the Communist Party and those of the NAACP are virtually identical. The Communist program calls for full racial equality, abolition of all laws which result in segregation of Negroes, abolition of laws and public administration measures which prohibit, or in practice prevent, Negro children from attending general public schools or universities and full and equal admittance of Negroes, to all waiting rooms, restaurants, hotels and theaters.

The Georgia attorney general says:

"Through its activities the NAACP is fomenting strife and discord between the white and the Negro races in the South. These activities, carried to their ultimate conclusion, can only result in conflict, bloodshed and internal revolution, delivering this Nation into the hands of international communism."

We believe the sensible people in both races will appreciate getting the information which the Georgia attorney general compiled regarding the background of the leaders in the NAACP movement and that this information will enable them to see that this leadership is a threat to the security of this Nation.

THE PALESTINIAN REFUGEE PROBLEM

Mr. GORE. Mr. President, the Palestinian refugee problem is one of those which has plagued the Middle East since the Arab-Israeli war. Solution of the problem has defied the mediation efforts launched through the United Nations as well as the unilateral efforts of the United States and other nations interested in the welfare of these unfortunate victims and in the preservation of peace in the Middle East. Indeed, realistic discussion of the issues involved as between the Arab nations on the one hand and the Israeli Government on the other has been almost wholly lacking. In addition to the political and economic factors involved, the question is one which is dominated by strong emotions. In many respects, it symbolizes the basic Arab-Israeli dispute.

During the Arab-Israeli conflict, several hundred thousand persons of Arab nationality removed themselves from the area which now lies within the State of Israel. The circumstances under which they removed themselves, the motives and justification for their flight, or voluntary removal, are matters upon which partisans on both sides will argue interminably. The central fact remains, however, that these people did go from what had been their home and the future of most of these persons, as well as that of their descendants, remains unresolved.

Generally speaking, Arab nations have insisted that any settlement of this controversy must be based upon the right of the refugees to exercise a free choice as between monetary compensation and return to the land from which they fled with restoration of their property. On the other hand, the Israeli Government has refused officially to discuss the possibility of a settlement under terms including the right of repatriation. While the foregoing is perhaps an oversimplification of a problem which has many facets, I understand that the central basis of the conflicting positions, insofar as they are publicly stated, is as above set forth.

These hundreds of thousands of refugees streamed into surrounding areas in numbers so great that they could not be assimilated into the local economies. Although some resettlement has taken place, for the most part they have existed in refugee camps supported in large measure by the United Nations Relief and Works Agency, which, in turn, receives about 70 percent of its support from contributions of the U.S. Government. Among other things, UNRWA periodically issues rations to the holders of ration cards which are assumed to identify the bearer as a bona fide refugee.

Of the nearly 1 million refugees now receiving support through UNRWA, approximately 600,000 are within the State of Jordan.

Last fall, as a member of the Committee on Foreign Relations, I visited the Middle East. I was accompanied by the distinguished Senator from Wyoming [Mr. MCGEE], who represented the Committee on Appropriations. I had been asked by the Committee on Foreign Relations during the course of this visit to look particularly into the question of the administration of the refugee program.

Following our inquiry in the State of Jordan, the Senator from Wyoming [Mr. MCGEE] and I sent a cable to President Eisenhower and to Secretary of State Christian Herter, which I wish to read to the Senate at this time:

Refugee program Palestine refugees as presently operated in Jordan is immoral, dishonest and unfair. Fundamental change required before extension justified.

UNRWA officials say fraudulent possession and use of ration cards for Jordanians widespread but GOJ will not permit validation cards now 11 years old. Some officials estimate there may be 150,000 ration cards unjustifiably or fraudulently used. Ration cards have become chattel for sale, for rent or bargain by any Jordanian whether refugee or not, needy or wealthy. These cards used as security for loans from money lenders, for credit from merchants, almost as negotiable instrument. By mortgage foreclosure and various other means including concealment of dead, many have acquired large numbers ration cards which in turn are rented or bartered to others who unjustifiably receive UNRWA rations much of which now in black market.

George B. Vinson, field registration and eligibility officer stationed old Jerusalem told: "We are fully aware we have tens of thousands of nonexistent people with ration cards with which somebody draws rations." When asked estimate extent of such unjustifiable distribution Vinson replied: "20 to 30 percent." Col. Edward Miller, Deputy Director UNRWA said such use ration cards is "quite widespread." Dr. Harry Howard, U.S. representative, UNRWA advisory committee, confirmed this and added: "I have actually seen merchants openly weighing and buying UNRWA supplies from recipients of distribution centers." Meanwhile rations have been denied estimated 100,000

babies born to refugee families since January 1, 1951. This heartless denial excused basis Jordanian refusal permit reasonable validation ration cards.

Dag Hammarskjold, Executive Secretary, U.N., excused both situations in draft report to U.N. on grounds they approximately "equated" each other. This is strange equating—fraudulent blackmarket profiteering on UNRWA rations on one hand and denial of rations to hungry children on the other.

We do not criticize local UNRWA officials. On contrary we admire their effort to obtain improvements. It is GOJ prevents check on holders of ration cards. Their difficulty is appreciated but situation must be corrected.

Future program of relief and rehabilitation direly needed for refugees, the victims of tragic situation, but 10-year extension present program without significant correction would be most unfortunate. Perpetuation present situation can but have corroding effect. It breeds contempt of law and order, promotes and rewards dishonesty.

Relief program only part refugee problem which in turn is only part of strife and conflict that permeates this area. Is necessary however speak out on relief program in particular now because this question now up for decision in U.N. and in budget process of United States.

In confidential report on spot investigation October 6 George Vinson wrote in concluding paragraph: "It will be observed out of 145 ration recipients 61 were found to be ineligible, that is 42 percent." As further illustration extent unjustifiable holding ration cards our investigation showed some Jordanians employed by U.S. Embassy itself at salaries far above average income of Jordanians actually held ration cards.

The baffling, exasperating nature this problem overall and in its various parts appreciated. We were assured by Prime Minister and Ambassador Mills discussions underway looking toward effective solution.

I digress to say that the Senator from Wyoming [Mr. McGEE] and I were accompanied by two other distinguished Members of the U.S. Senate, the junior Senator from California [Mr. ENGLE] and the junior Senator from Delaware [Mr. FREAR], in the conference with the Prime Minister of Jordan. This conference lasted for approximately 2½ hours.

Mr. President, I read further from the cable:

We were encouraged by this. Even so cleanup this widespread dishonesty should be necessary prerequisite any extension present program.

Fundamental change would appear urgently needed. Something-for-nothing policy should be abandoned for those who are able to work. This area in dire need of reforestation, reclamation, road construction, reservoir building, and many other helpful developments. There should be early transition to works program at going wage scale for this area.

At the time the Senator from Wyoming [Mr. McGEE] and I cabled the foregoing statement to President Eisenhower and Secretary Herter, the United Nations was considering a resolution to extend for an additional period the refugee relief program which otherwise would have expired at the end of the current fiscal year. It was my hope that any U.N. action extending the program would be conditioned upon the taking of appropriate action by the local governments concerned to eliminate the fraudulent use and corrupt use of ration cards and to restrict the issuance of rations to bona fide refugees whose need and whose eligibility were clearly established.

Officials of the State Department have expressed their gratification for the cable which the Senator from Wyoming [Mr. McGEE] and I sent, and have stated in public hearings that it was helpful to them in obtaining a provision in the United Nations resolution.

The U.N. resolution which was ultimately passed, extended the refugee program not for 10 years, as proposed, but for 3 years. I was pleased that the language of the resolution at least reflected cognizance on the part of the U.N. of the situation which existed with reference to the distribution of rations in Jordan. The resolution contained language which, in effect, expressed the hope that the situation to which I have referred, and which was described in the joint statement by Senator McGEE and myself, would be corrected. Unfortunately, the language in the U.N. resolution was advisory only.

The Committee on Foreign Relations of the U.S. Senate has had under consideration the mutual security authorization bill for fiscal year 1961. The committee ordered the bill reported to the Senate this afternoon. Among the provisions of the bill before the committee was an authorization for the appropriation of funds to continue the U.S. contribution for support of the UNRWA, including the ration distribution program.

Administration officials testifying before the committee freely expressed their concern about the ration card situation. As I understand the testimony of these officials, the administration hopes that the Government of Jordan can be persuaded to take the initiative and to take some action to clean up the refugee rolls.

Thus far, however, so far as I can ascertain, and I have made diligent and repeated inquiry, no progress whatever has been made in terms of concrete measures to do anything about the situation either in response to the language of the U.N. resolution or in response to whatever unilateral representations our own Government has undertaken. Moreover, unless the United States takes a firm position about the matter, I think there is little if any likelihood that anything effective will be done.

In some respects the situation in Jordan differs from that which pertains in the other refugee areas. I did not find this condition prevailing in other countries—in Lebanon or in the United Arab Republic.

In Jordan the refugees are citizens, and as such they vote. Moreover, the holders of refugee ration cards cast a substantial percentage of the total Jordanian vote. The Government of Jordan is said to be dependent upon the support of the refugee voters. Whether this be true or not, it is at least obvious that the Jordanian Government has evidenced a strong disinclination to take any action whatever that might alienate the holders of refugee ration cards.

Indeed, I was informed by United Nations personnel, employees and officials in Jordan, that upon occasion when they had attempted to inquire into the validity of ration cards the officials of the U.N. were beaten up and the Government of Jordan refused to provide police protection.

After full consideration, Mr. President, I am convinced that the Jordanian Government will not take effective action to alter the status quo so long as financial support to maintain the status quo is continued. Accordingly, I proposed in the Foreign Relations Committee an amendment to the mutual security bill to provide that no U.S. funds be made available for support of the ration program after January 1, 1961, except for the issuance of rations to those refugees whose need and eligibility for relief had been established and certified after July 1, 1960. I am pleased that the committee adopted this amendment. I believe there was only one dissenting vote.

Mr. President, I should like to read this amendment into the RECORD.

After January 1, 1961, U.S. contributions shall not be used for programs of relief which heretofore have been administered on the basis of ration cards except for refugees whose need and eligibility for relief have been certified after July 1, 1960. The provisions of section 548, which relate to the availability of unexpended balances, shall not be applicable to unobligated balances of any funds heretofore or hereafter appropriated pursuant to this section. The President shall include in his recommendations to the Congress for fiscal year 1962 programs under this act specific recommendations with respect to a program for the progressive repatriation and resettlement of refugees and for reducing U.S. contributions to the United Nations Relief and Works Agency for Palestine Refugees in the Near East.

I should state to the Senate that the administration vigorously opposed the adoption of this amendment. Some days ago the committee adopted an amendment similar to this one. Today it was reconsidered, in the light of a letter received from the Secretary of State. In response to this letter the amendment was modified in one respect, but after careful deliberation the committee adopted the amendment by the overwhelming vote which I have stated. The administration argues that withdrawal of U.S. support of the ration program, however strong may be the justification for such withdrawal, might bring about political repercussions in Jordan, and that in such event the present regime might be succeeded by one less friendly or less inclined to cooperate with the West.

This is an old argument, Mr. President. It is the same argument advanced in support of the extension of military aid and economic aid to authoritarian regimes which we have aided around the globe. It is the argument used in justification of support of the regime of Syngman Rhee in Korea despite the flagrant violation by that regime of democratic principles and individual freedom. In short, Mr. President, the argument of the administration in connection with this matter is the argument of expediency.

It seems to me that somewhere, at some time, the U.S. Government, if it expects to keep faith with those who look to us to foster democracy and individual freedom, must take a stand for

moral principles in which we believe. In my opinion, if the U.S. Government continues its support of the refugee ration program in Jordan without insisting upon a verification of the refugee rolls, it will, in effect, for the sake of expediency, be participating in a program so reeking of corruption as to make a mockery of the humanitarian principles which gave birth to the refugee relief program.

I hope that the Senate and the Congress will approve the amendment adopted by the committee.

In some respects this is a moral issue. The United States is mirrored to the world by the programs it supports. The programs which we support must comply wth certain moral and ethical standards, unless the image of America is to be unfavorably blurred.

Aside from the moral question involved, Members of the U.S. Senate have a responsibility to safeguard the expenditure of the money of the taxpayers of the United States.

There are 50 States in which welfare programs are under way. If the situation which prevails in connection with the relief program in Jordan were to exist in any one of our 50 States, the Federal contribution would be immediately terminated and withheld.

The amendment I have proposed would not remove from the relief rolls one Palestinian refugee whose status as a refugee and whose eligibility as to need are certified. Indeed, it would open the way for a certification of approximately 200,000 children born to Palestinian refugees, who are now denied relief on the cruel and strange ground that there are vast numbers of ration cards wrongfully and fraudulently held and used.

I should like to relate a personal experience while in Jordan. I was riding with a high official of the U.S. Embassy, from Amman to Jerusalem. As we discussed this problem, I said to him, "I wonder whether you know whether or not the chauffeur of your automobile holds a ration card." He said he did not know. When we stopped in Jerusalem he called the chauffeur around to the side of the car on which we had alighted and asked him if he was the holder of a ration card. He said no. This was in the evening.

The next morning this official reported to me that the chauffeur, upon returning to the official's residence in Amman, went to his wife and apologized for having falsified. He said to her that he did hold a ration card. It was rented out to some other person whose name I do not now recall.

As the Senator from Wyoming [Mr. McGEE] and I stated in the cablegram, some people who may or may not have been refugees have accumulated large numbers of ration cards. They rent them by the month, as one would rent a house. The person who rents a card from another draws rations, which he either consumes or sells in the black market. That is an intolerable situation. The extent of the practice is alarming. No good can come from such corruption.

I wish to make it perfectly plain that I have the deepest sympathy for the Palestinian refugees. Their situation is a great human tragedy. I wish to promote a solution to the problem. But no solution can come from a perpetuation of this untenable situation.

I am glad that the Committee on Foreign Relations adopted the amendment. I commend it to the attention and consideration of the Senate.

RECLAMATION AND FLOOD CONTROL

Mr. ALLOTT. Mr. President, as some in other parts of the Nation now are learning, we in the West long have realized that water is not only our lifeblood but is the key to our economic future. As recent floods have demonstrated once again, uncontrolled water also can bring suffering and damage.

In Colorado and other Western States, the place which water, properly conserved, holds in our lives is evident on every hand. Arid wastes have been reclaimed. Long electric lines stretch from damsites in deep canyons. New homes and industries and better farms are providing for our exploding population. The local and Federal taxes derived from these new sources provide the funds to care for this booming population—and pay for the costs of the projects far above the direct return from them.

One of the clearest delineations of this subject was printed recently as an editorial in the Pueblo, Colo., Star Journal and Chieftain. It is factual, thoughtful, and instructive. Its contents bear directly upon many pieces of legislation before us.

Mr. President, I ask unanimous consent that it be reprinted at this point in my remarks in the hope that my colleagues may share this splendid, pertinent material.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RECLAMATION, UNLIKE FLOOD CONTROL PROJECTS, REPAYS COST TO GOVERNMENT

The high waters and flood conditions in the Mississippi River Valley have occasioned demands for additional millions of dollars to be spent on flood control. The experience is going to bring forth many proposed projects for authorization by the Congress.

This is an appropriate time to point out the difference between reclamation projects in the West and the flood control projects which have benefited hundreds of millions of persons in other parts of the country.

The first and most important contrast is that reclamation repays the Federal Government almost all of the investment made by the Government, through repayment contracts with water users, most of it with interest, while flood control projects are a gift with no repayment required from the beneficiaries. The same situation prevails for rivers and harbors development.

The National Reclamation Association has issued a report on the great contribution reclamation projects in the West have made to the Nation's economy. In addition to repayment of practically all of the money spent by the Federal Government on reclamation projects, one of the major contributions has been to the economy of the Nation. The crop values for all crops raised on Federal reclamation projects totaled almost $1 billion in the 1959 fiscal year.

Floyd E. Dominy, Commissioner of the Bureau of Reclamation, also reports that the repayment record on reclamation projects would make any banker jealous of such an account. The amount due on September 30, 1959, was $140,294,831 and the amount unpaid on that date was $4,174. The amount that was due and unpaid on September 30 was less than one three-hundredths of 1 percent of the total amount.

All of this money does not come from irrigated crops. Most of it comes from the sale of electric power, municipal and industrial uses.

Because of all year-round growing conditions in some areas, such as California, the amount produced per acre set a record figure of $681 on the Cachuma project. In second place was the Yuma project in Arizona with a per acre crop value of $433. In third place was the Salt River project in Arizona with a value per acre of crops raised of $306. The average of all Federal reclamation projects throughout the West was $146.

The crop which brought the greatest return to reclamation farmers of the West was cotton with a total of $153,136,000. Alfalfa hay was second with $103,886,000 and sugar beets was third with $72,865,000.

The total cumulative value of all crops raised on all reclamation projects from the time the reclamation law was enacted in 1902, up to and including the crop year of 1958, was $14,266 million. This is more than three times the total amount of appropriations by Congress for reclamation since 1902.

This record is in spite of the fact that many of the large projects, such as the Upper Colorado River project for which large appropriations have been made, are still under construction and have not yet started producing.

The total amount of land irrigated on reclamation projects in 1958 was 6,757,000 acres. Of this amount, 3,405,000 acres received a full water supply while 3,254,000 acres received a supplemental water supply from the Federal projects.

Other benefits come from electric power development which finds a ready market. The use of water for cities produces benefits which can't be measured but which make the growth of western cities possible.

One of the outstanding facts about reclamation development which few people realize is that the increase in Federal income taxes from the project areas and the areas supported by them are, in many cases, sufficient to repay the cost of the project about every 4 years.

Dominy comments in his report, "Even though reclamation is in good shape, as the annual report indicates, this is no time for us to be resting on our oars. The combination of a growing population and an increased per capita use of water is skyrocketing our needs. A continued orderly process of reclamation development today will prevent chaos and waste to a crash program tomorrow to fulfill these needs."

This is a record that too many individuals in the East choose to ignore and are likely to classify as being "boondoggling" and wasteful.

A look at any economic map of population growth, industrial change, and expansion will show that the West is exceeding the rest of the Nation by several times in its percentage of development.

Perhaps the eastern sections of the country don't like this westward movement because most of the people are coming from their own sections. However true that may be, the movement West will not be stopped by the wishful thinking of anyone. The refusal to authorize the Federal Government to cooperate in the multiple use of water, which cannot be financed locally, is unwise and harmful to the general welfare of the Nation.

It should also be remembered by those in other sections that we in the West have contributed our proportionate share of the appropriations made by the Federal Government for flood control and rivers and harbors. While there have been great economic values arising from such projects, it is still a record that is far from equal to the record under reclamation because none of that money has been returned to the Federal Government.

The present session of Congress is about to make the worst record on reclamation of any since World War II. There are several conditions which have brought this about, due primarily to the bitterness over the civil rights issue.

But the West and the population explosion cannot wait on the civil rights issue, or any other disagreement. The fact remains that each and every year progress must be made in reclamation development or the troubles will pyramid. A crash program would be necessary which would be much more expensive and far behind the needs of the people.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, April 20, 1960, he presented to the President of the United States the following enrolled bills:

S. 634. An act for the relief of Grace C. Ream;

S. 1856. An act for the relief of Frank Podany;

S. 2434. An act to revise the boundaries and change the name of the Fort Laramie National Monument, Wyo., and for other purposes;

S. 2804. An act to donate to the Keweenaw Bay Indian Tribe, L'Anse Reservation of Michigan, a certain tract of Federal land with improvements located thereon; and

S. 2877. An act to authorize the reconveyance of tribally owned lands by the Muckleshoot Indian Tribe of the State of Washington to the original allottees, their heirs, devisees, or assigns.

ADJOURNMENT

Mr. GORE. Mr. President, under the order previously entered, I move that the Senate stand in adjournment until noon tomorrow.

The motion was agreed to; and (at 5 o'clock and 42 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Thursday, April 21, 1960, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 20 (legislative day of April 19) 1960:

U.S. COURT OF CLAIMS

James R. Durfee, of Wisconsin, to be associate judge of the U.S. Court of Claims.

UNITED NATIONS

Louis Wellington Cabot, of Massachusetts, to be the representative of the United States of America to the 15th session of the Economic Commission for Europe of the Economic and Social Council of the United Nations.

DIPLOMATIC AND FOREIGN SERVICE

Leland Barrows, of Kansas, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the State of Cameroun.

HOUSE OF REPRESENTATIVES

WEDNESDAY, APRIL 20, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Psalm 119: 130: *The entrance of Thy words giveth light.*

Almighty God, who art always speaking unto us through Thy Holy Word, may this verse of Sacred Scripture, with its message of comfort and assurance, be unto us a revealing light and a sustaining power during all the hours of this new day.

Grant that the thoughts of our mind and the meditations of our heart may daily be tempered and disciplined by the entrance of Thy words, giving us the spirit of charity and kindness, of tolerance and patience, as we seek to solve the difficult problems of human relationships.

May Thy divine words illumine and transfigure our loftiest aims and aspirations with spiritual insight and understanding and bring them in tune with a great faith which will enable us to meet the unknown tomorrow, however dark, without fear or confusion.

Humbly we offer our prayer in the name of the Christ, our Lord, in whom Thy word became flesh. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

CALL OF THE HOUSE

Mr. BASS of Tennessee. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 47]

Allen	Ford	Norblad
Andersen, Minn.	Gavin	Powell
	Grant	Prokop
Barden	Holifield	Rogers, Tex.
Bonner	Horan	Rooney
Boykin	Jackson	St. George
Brewster	Kelly	Short
Brock	Keogh	Sisk
Buckley	King, Utah	Taylor
Burleson	McGovern	Teague, Tex.
Carnahan	Mack	Teller
Celler	Meader	Thompson, La.
Coffin	Merrow	Thompson, N.J.
Cooley	Metcalf	Utt
Davis, Tenn.	Mitchell	Willis
Derounian	Montoya	Withrow
Diggs	Moorhead	Young
Farbstein	Morris, N. Mex.	Younger
Fenton	Morrison	
Fisher	Moulder	

The SPEAKER. On this rollcall 373 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

INDEPENDENT OFFICES APPROPRIATION BILL, 1961

The SPEAKER. The unfinished business is the further consideration of the bill H.R. 11776, which the Clerk will report by title.

The Clerk read the title of the bill.

The SPEAKER. The question recurs on the amendment adopted in the Committee of the Whole on yesterday which, without objection, the Clerk will report.

There was no objection.

The Clerk read as follows:

On page 34, line 23, after the word "Code", strike out "$39,100,000" and insert "$75,000,000".

The SPEAKER. The question is on the amendment.

Mr. PELLY. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 218, nays 155, not voting 57, as follows:

[Roll No. 48]

YEAS—218

Adair	Dooley	Lafore

Celler	Metcalf	Utt
Coffin	Mitchell	Willis
Davis, Tenn.	Montoya	Withrow
Derounian	Moorhead	Young
Diggs	Morris, N. Mex.	Younger
Evins	Morrison	

So the amendment was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Short for, with Mr. Ford against.

Mr. Morrison for, with Mr. Hébert against.

Mr. Brewster for, with Mr. Davis of Tennessee against.

Mr. Brock for, with Mr. Keogh against.

Mr. Horan for, with Mr. Buckley against.

Mr. Derounian for, with Mr. Celler against.

Mr. Gavin for, with Mr. Bonner against.

Mr. Fenton for, with Mr. King of Utah against.

Mrs. St. George for, with Mr. Carnahan against.

Mr. Withrow for, with Mr. McGovern against.

Mr. Younger for, with Mr. Rogers of Texas against.

Mr. Sisk for, with Mr. Fisher against.

Mr. Teller for, with Mr. Willis against.

Mr. Allen for, with Mr. Moulder against.

Mrs. Kelly for, with Mr. Anderson of Montana against.

Until further notice:

Mr. Rooney with Mr. Andersen of Minnesota.

Mr. Thompson of New Jersey with Mr. Utt.

Mr. Diggs with Mr. Taylor.

Mr. Morris of New Mexico with Mr. Norblad.

Mr. Powell with Mr. Merrow.

Mr. Prokop with Mr. Meader.

Mr. HAGEN changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

Mr. DADDARIO. Mr. Speaker, the House spent considerable time yesterday and today in discussing and voting on phases of the independent offices appropriations bill. This is as it should be, because the size of this appropriation and the diversity of the Government services it represents touch on all phases of American life.

I have been impressed, however, by the hard work and thorough study evident on the part of members of the Appropriations Committee who have handled the bill. I think we all owe a great deal to the energy and effectiveness of the committee headed by the able gentleman from Texas. We may disagree with specific actions that the committee has taken and attempt to convert the House to our views, but we should express our respect for the detailed study which members of the committee have done in our behalf.

I want to welcome the inclusion in this bill of funds to carry out construction needs in the Federal service across the country. I was disappointed a year ago when what I consider to be a short-sighted executive policy ruled that there would be no new starts in certain Federal construction areas. This delayed the building of a new Federal office building in Hartford, Conn., that has been desperately needed.

The existing building was constructed in the 1930's as a post office and courthouse. The work of both agencies has increased tremendously since that time. in addition, other agencies have grown and have required representation in Hartford. This has crowded working conditions at the present building and has forced the Government to rent outside quarters at what has been estimated as an annual cost ranging from $290,000 a year to $400,000 a year.

More than a dozen agencies are now housed in the present Federal building and others are located at 11 diverse sites around the city in rented quarters. Construction of this building, which has been recommended since 1956, when the Public Works Committee approved it, should solve this problem and result in savings to the Government and greater efficiency for the public it serves.

The action of the House today, then, is a step forward to meeting this need which has long existed. I know the construction of this new building has been programed by Hartford to fit into its plans for a greater city, tying in with redevelopment programs now under way, and I am happy that this 86th Congress has approved the Federal portion of this need. Again let me congratulate the members of the committee and thank the Members of the House.

Mr. COHELAN. Mr. Speaker, the action just concluded on the Saylor amendment is, I believe, unfortunate insofar as it concerns construction of a Veterans' Administration hospital at Martinez, Calif.

Unless the Senate reverses this action, northern California veterans and their families will be far less better benefited than would otherwise have been possible. It is unfortunate that the issues involved in the location of a much-needed VA hospital in northern California have been obscured and confused through a legislative device by which the proposed Martinez project was lumped in the Saylor amendment with other projects in the District of Columbia and the State of Ohio. I recognize that the votes of many of my colleagues reflect a concern with one or the other of the latter projects, not a decision on the merits of the Martinez project.

As a result of the confusion resulting from this omnibus amendment, we have approved construction of a hospital in an out-of-the-way community of far less than 50,000 people with an existing medical community which can only be termed negligible in contrast to others in major population centers to be served by this facility. Indeed, this location was first chosen only because of a long-canceled civil defense dispersal directive and has been questioned by the Veterans' Affairs Committee and opposed by the Appropriations Committee. By this vote we have bypassed years of effort by many of our colleagues to have this proposed site restudied in the light of what are, in fact, the basic considerations; that is, service to the veteran, availability of medical resources and accessibility to those who are to be assisted, the veterans themselves. By this vote we have ignored the thoughtful recommendations of the Committee on Appropriations.

So that the record will be available to our colleagues in the Senate who will now begin consideration of this and other projects in the 1961 independent offices appropriation bill, I wish to have

reprinted the following portions of testimony before the House Appropriations Subcommittee on Independent Offices with reference to the Martinez VA hospital proposal.

The first item is my own summary statement. The second is the transcript of the subcommittee's discussion with Dr. Harold Kay, representative of the two-county medical association which represents the county which includes the city of Martinez, myself and my senior colleague, Congressman GEORGE P. MILLER. The third is the statement of Dr. Hardin Jones of the University of California which includes a letter from Dr. Edward Teller, both indicating the willingness of the university to extend to the Veterans' Administration its vast medical resources, resources which cannot ever be imagined to be paralleled in the small community of Martinez.

STATEMENT OF REPRESENTATIVE JEFFERY COHELAN

Mr. COHELAN. Mr. Chairman, at this juncture I should like to introduce the prepared statement that I have for the record, and I shall make only one or two comments in the interest of time.

Mr. Chairman and members of the committee, for ourselves and for the public officials and civic leaders from Alameda County, Calif., who have traveled from our State specifically to appear here today, we wish to thank Chairman THOMAS, members of the committee, and Staff Assistant Homer Skarin for the courtesy that has been extended in making arrangements for our appearance.

Simply stated, I oppose relocation of the existing Oakland Veterans' Administration Hospital in Martinez, Calif., and urge restudy of the whole question of a site for the new replacement facility. Therefore, I appear today to oppose the President's budget request for funds to construct the new hospital in Martinez.

At the outset, let me say that all of us are primarily concerned with adequate and efficient hospitalization for veterans. We believe strongly that a new Veterans' Administration hospital is needed in the area now being served from Oakland. We subscribe to all arguments showing the need for more hospital beds for veterans. Let there be no mistake about that.

Where we do disagree with those who support the Martinez proposal is on the question of what location will best serve veterans who require hospitalization. I submit that this is the basis on which this long-continuing dispute should ultimately be decided.

Let me list several facts which make the case. Evidence documenting these facts will be presented and our witnesses present today are prepared to answer any questions that may arise.

1. Alameda County, which includes Oakland and Berkeley and several other cities—all part of a single metropolitan complex—is by far and without question the largest single urban area to be served by the new hospital.

2. The medical community in Alameda County is by far and without question the largest in the total area to be served.

3. Relocation of the new hospital facility in Alameda County is supported by municipalities within the county, by veterans groups within the county, and, finally, by Veterans' Administration doctors polled by the medical association which serves both of the two counties under consideration.

4. The one single reason why a site for the new facility was sought in an out-of-the-way location like Martinez in the first place no longer remains valid, i.e., dispersion for reasons of civil defense.

Those who seek construction of a new VA hospital in Martinez point out that the area to be served extends eastward into the Sacramento Valley and then northward even to the Oregon border, and would have us conclude from this that a hospital in Martinez, which is just far enough away from Alameda County's metropolitan area to be inaccessible by public-operated transportation, would somehow better serve communities 50, 100, and even 200 and more miles away than would a hospital in Alameda County.

The fallacy in this argument is that they would take the hospital away from the largest metropolitan area to be served with its unusual complex of medical and educational facilities, take it away just far enough to pose special transportation problems for veterans and their families, and still not provide a location appreciably more convenient to those other faraway areas.

Alameda County alone has a population of 899,200, while the next three most populous counties in the area to be served—specifically, Contra Costa County, San Joaquin County, and Sacramento County, which includes the city of Sacramento, the State capital—have a total combined population of only 1,105,900 spread over many, many miles indeed. These totals are official estimates of population as of June 30, 1959, from the office of the controller of the State of California.

I would add that this argument is also weakened by the fact that it fails to take into account the need for still another Veterans' Administration hospital in the Sacramento area. I believe the committee is well aware that the ratio in northern California is 742 veterans to each hospital bed, whereas the national average is only 183 veterans to each bed.

Another argument advanced by opponents of a new Veterans' Administration hospital in Alameda County is that heavy expenditures have already been made and it is, therefore, too late to pull out. It should be kept in mind that property purchased at Martinez involves a total cost of less than $40,000. Even at that, this property is easily marketable and may well enable the Federal Government to turn a profit rather than suffer a loss in the event that a restudy indicates it should not be used. I cite the testimony of Mr. Robert L. Condon, Martinez attorney and former Congressman from the Sixth District of California, before your committee last year, at which time he said that this land now ranges in value between $3,000 and $3,500 an acre. It was purchased for $1,500 an acre.

The second part of this same argument involves the architectural expenditures of some $400,000 which have already been made. Here, again, it is alleged that this sum would be a loss in the event the Martinez site is not used. The point is refuted in the testimony of Mr. W. Ashbridge, VA Assistant Administrator of Construction, before the committee in February of 1959. On that occasion Congressman YATES asked why architectural planning for a hospital at Martinez was being continued since the Veterans' Affairs Committee might determine that the VA should not go ahead with that project.

Mr. Ashbridge replied, "Most of the plans will be used anyway." He then added, "The upper floors would be the same." The only conclusion that can be drawn from his testimony is that the $400,000 outlay for architectural plans will not be much wasted, in the event that the Martinez project is set aside.

In closing I would like to refer to a letter to Chairman Thomas dated July 2, 1959, from Mr. Donald H. McLaughlin, chairman of the board of regents of the University of California, which has its home campus in Alameda County.

This letter, a copy of which was also sent to my office, advises that the university has for several years invited the Veterans' Administration to consider relocation of the Oakland VA hospital near the university. It further offers to combine resources—to make available the vast facilities already existing at the university—in order to provide a great medical service to veterans and simultaneously provide a clinical resource to the great laboratories of medical science at our university.

Mr. Chairman, I cannot emphasize too strongly that this additional reason for a complete restudy of the question of location of the new hospital is a very singular one and would itself warrant delay of construction at Martinez so that other sites can be considered.

Thank you.

STATEMENT OF DR. HAROLD KAY

Dr. KAY. I represent the Alameda-Contra Costa County Medical Association, which has a total membership of 1,597 medical practicing doctors; 1,284 of them in Alameda County, 313 in Contra Costa County.

There are 394 specialists in Alameda County, 175 in Contra Costa County.

Mr. COHELAN. Doctor, what is your medical specialty?

Dr. KAY. I am a urologist.

From the consultants to the VA hospital in Oakland, 54 come from Alameda County and 7, Contra Costa County at the present time.

Mr. MILLER. Doctor, do you know where these seven come from? Do they come from the western part of Contra Costa County, or do they come from the eastern part?

Dr. KAY. From the eastern part.

The Alameda-Contra Costa Medical Association has no preference as to the location of any governmental facility except insofar as it may affect patient care. It is quite clear and thoroughly agreed upon by all concerned that the veteran patient will be better served in areas in which there is a ready availability of a wide variety of medical specialty skills and a plentiful supply of these skills.

There can be little doubt that the above conditions exist in the Oakland-Berkeley metropolitan area whereas they do not exist to the same degree in any outlying area, including Martinez.

Although Martinez is adjacent to this medical metropolitan area, its location does compromise the ready availability of plentiful medical care of all types because it interposes the necessity of automobile travel.

Mr. THOMAS. In actual traveling time, what is the difference in time from the location of the present facility to the one that is now proposed?

Dr. KAY. Actual traveling time, one way, is approximately 30 minutes.

Mr. THOMAS. One way?

Dr. KAY. One way, sir. I am saying this as from the medical situation in Oakland we have a majority of our doctors and specialists situated in an area called "Medical Pill Hill," which downtown is on approximately 30th Street; the medical facilities are at 14th Street. It is 8 blocks through traffic.

Mr. MILLER. How many hospitals are located there?

Dr. KAY. There are three hospitals located on Medical Pill Hill.

Mr. MILLER. And the Kaiser Hospital is only about 3 blocks away?

Dr. KAY. Yes, sir.

Mr. MILLER. These are the biggest hospitals in the East Bay area.

Dr. KAY. It is approximately 6 to 8 minutes to get to the hospital where from the same spot to get to Martinez would take anywhere from 40 to 50 minutes.

From the standpoint of the doctors presently in a consulting capacity at the veterans hospital in Oakland, a survey which

was made last June informed us that of the 99 VA medical consultants, doctors in practice in Oakland, Berkeley, San Francisco, and Contra Costa County, 55 stated they would prefer to have the hospital remain in the Metropolitan Oakland area. Twelve stated they had no preference and seven indicated they would prefer the Martinez area.

Just as an addition, I might state to you that I am a consultant to the veterans' hospital in Livermore in urology. For the past 8 years, when we have had to do any delicate surgery, such as prostatic surgery, which we feel we should not do too far away, it has been necessary to transfer patients from Livermore Hospital to Oakland, necessitating more money in cost, et cetera, because we as doctors did not feel we should be that far away from that particular type of operation.

Mr. THOMAS. Thank you very much, Doctor. You are a man of very few words, but you pack a lot of punch in them.

Dr. KAY. Thank you, Mr. Chairman.

STATEMENT OF DR. HARDIN JONES

Mr. JONES. Thank you.

I am a general medical scientist. I am not a physician. I range in a number of different departments in our university because of the need for entering into medical problems from basic chemistry, basic mathematics, and all of these things that our university possesses at the moment in a very great wealth. This has been developing over the past 30 years, the fact that medical problems can be entered into directly from the basic sciences, and actually I am a member of the physics department, which is quite a stretch of the imagination. Physics does not usually relate to medicine, and has not for about 400 years. The name "physician" comes from the fact that physicians were usually physicists or scientists. We are getting back to that now. A number of us—Ernest Lawrence, who died about a year and a half ago, had a position formerly with the group I represent. His position was taken by Dr. Teller; the president of our university, chairman of the board of regents, the head of the biology department, Wendell Stanley, Dean Smith of the School of Public Health, and many others in the Berkeley campus, including Michael Goodman, have all gathered together our knowledge and expressions of needs for the university to try to work with the veterans hospital and the Veterans' Administration to show them the advantages of being with the University of California. They have been very sympathetic. As you know, there were commitments at the time we started to the Martinez site, largely arrived at through the Office of Defense Mobilization.

Since that time not only has the situation changed, but it has changed to exactly the opposite. Instead of talking about dispersal, there no longer could be any dispersal protection from the hydrogen bombs, but there can be protection of the metropolitan centers if we have shelters built in the locations where the people are, so that Government buildings, and especially hospitals that are to be newly constructed, ought to have their lower floors built as bomb shelters.

We hope that these would not actually be needed, but they are needed in the sense that there is a certain probability that no one knows precisely how to calculate that we would have to use them this way, and the more such facilities we have, fortunately, the less likelihood we will have of using them because the more defense we really have the less vulnerable we are to attack.

Professor Teller has put these things very eloquently in a letter to you, Mr. THOMAS, some time back.

Mr. COHELAN. May I interject at this point, Mr. Chairman? I have a telegram from Dr. Edward Teller.

Mr. THOMAS. Read it into the record at this point.

Mr. COHELAN (reading):

"I understand that the matter of establishing and locating a veterans hospital in northern California is at present under consideration. It would be a great courtesy on your part if you would present to the Appropriations Committee my letter to you of July 16, 1959, in which I have given reasons for locating the veterans hospital in Berkeley."

I have attached to this telegram a copy of the letter to me in which he sets forth many of the reasons that Dr. Jones is reciting.

Mr. THOMAS. We will put that in the record.

(The information referred to follows:)

LIVERMORE, CALIF., *March 16, 1960.*

Congressman JEFFERY COHELAN,
New House Office Building,
Washington, D.C.:

I understand that the matter of establishing and locating a veterans hospital in northern California is at present under consideration. It would be a great courtesy on your part if you would present to the Appropriations Committee my letter to you of July 16, 1959, in which I have given reasons for locating the veterans hospital in Berkeley.

EDWARD TELLER.

UNIVERSITY OF CALIFORNIA,
Livermore, Calif., July 16, 1960.

Hon. ALBERT THOMAS,
U.S. House of Representatives,
Washington, D.C.

MY DEAR MR. THOMAS: The purpose of this letter is to express to you my interest and concern in the establishment and location of a veterans hospital in northern California. I understand that a location in Martinez has been considered and I also understand that a location close to the Berkeley campus of the University of California has been discussed. I would urge that this second location should actually be selected.

Apart from the extremely important primary purpose of such a hospital, it can also serve a further purpose whose long-range effects may become of the greatest possible significance. The hospital can be utilized as a research center to increase our medical knowledge. It is in such practical research centers that the battles for prevention and cure of disease are won. Such a research center, however, requires the full and close cooperation between the practical approach of the hospital and the more general approach of an academic institution.

By establishing the hospital close to the Berkeley campus of the University of California, cooperation could be established between this important hospital and one of the most outstanding campuses in the United States. Among the many research activities which could contribute to the greatest exploitation of the potentialities of the hospital, I will mention only the virus laboratory and the Lawrence radiation laboratory of the university. In particular, the radioactive substances which have been first produced at the radiation laboratory have been used for many years in the Donner laboratory of the university for the study, diagnosis, and cure of a variety of diseases. The patients of this hospital would immediately profit from such a cooperation and benefits in the future would be even greater.

If you may permit me, I would like to bring up a second issue, in addition to the one I have just mentioned. Although I believe that an all-out nuclear war is, fortunately, not at all likely, it is still my conviction that we must be prepared for this terrible eventuality. I believe that a practical, cheap, and effective measure would be to establish well-protected and extensive shelter areas in the basements and subbasements of big public buildings. In a hospital these shelter areas could be utilized even in peacetime for a number of purposes, and the money invested in the shelter would, therefore, not be wasted even if we never had to take refuge in these shelters. I believe that with the help of advice from people competent in radiation and other effects of nuclear explosives, an effective and relatively inexpensive shelter basement could and should be added to the planned hospital. This would insure maximum safety of the patients and could, in fact, be of some help to the population in the immediate surrounding. More than that, the establishment of each such shelter could be made a step in a meaningful effort at defense, which in the long run would greatly improve the safety of our country.

A hospital properly located in an urban area could be of strategic value. In addition, some of the patients would certainly enjoy the wonderful opportunities of a cultural center like Berkeley. But the main reason why I am urging the location of the hospital in or near the Berkeley campus is the unique opportunity which would be afforded for the improvement of medical knowledge and for longer and happier lives for ourselves and our children.

Sincerely yours,

EDWARD TELLER.

Mr. JONES. Our university could be called a postgraduate school of both medical research and training because we train medical scientists and we do need clinical facilities because all of the kinds of problems that we work on are medical problems. They cannot be dealt with abstractly in the laboratories. They are things that we have to form a wedding between the biochemist or mathematician and the physician who is in charge of the care of patients and looking for new ways of expressing solutions to existing problems.

I met, by chance, Dr. Shapiro, of the Veterans' Administration, in the hall. He is very much interested in the use of veterans hospitals and veterans everywhere to study the problem of aging. We cannot, as a matter of fact, study the problem of aging with regard to laboratory analyses because the need for analyses is so great. We are interested in whether human life can be extended in a meaningful way. My assignment with the University of California is dedicated solely to the problem of aging in human beings. This is the reason we want the veterans hospital located near us at the University of California.

We have, as a matter of fact, worked out a potentiality of sites. If you were interested, you can look at this enlarged map over here. There are at least 20 possible sites that show some feasibility in location near the University of California and near the other facilities that the veterans group would need.

As you know, the Veterans' Administration, since World War II, has looked upon universities, medical science centers, and medical schools as a means of keeping quality of medical care for veterans at the highest possible mark, and associated with it is the policy of using the best talent in medicine that it can, such as Dr. Kay and representatives here with us this morning. These two things together are very important.

Whenever veterans hospitals are moved too far away so they cannot communicate with either medical science or the main streams of medicine, the hospitals then have less quality to offer to their attending patients. This is a sensible combination.

Now, I probably wouldn't be—not interested, I would be interested—but I would not be involved in the problem if it were not for the university need because my time is directed to things that are in science and education.

At the present time, no university, regardless of how wealthy it may be, or how much it may derive income from the tax rolls, can afford to use its income to build

great medical centers. In the past, universities did this. This is because they were not so costly to maintain. At the present time there is a very great increase in cost. For research purposes, it may cost over $100 a day to maintain a person in a hospital for observation.

This, multiplied by a thousand beds, means a very large figure. The State of California perhaps might do it except that there are no State hospitals available at the immediate time. The best opportunity we can see might be this particular veterans hospital. Certainly the Government is not going to build another veterans hospital in this area. This is an opportunity not only to get the best medical care to veterans, but also to have an association with the university which guarantees quality of care for the future and from the standpoint of the university and State needs in higher education, it is making the tax money do several things. I thoroughly believe that in justification of the tax expenditures, it ought to meet several needs simultaneously providing the first need is also cared for.

Mr. THOMAS. Doctor, you have a head full of sense. Go ahead and complete your statement.

Dr. JONES. Well, this is our hope, then, that we can forestall this unfortunate plan to build a veterans hospital where it really does not belong. Even though there is awkwardness in the present sense of asking you to withhold this appropriation—and this is very hard to do because I know veterans in California need hospitals. But it is better not to put the hospital where it will cost the taxpayers perhaps twice or three times as much money to maintain and also rob our State institutions of a very needed gain in education.

The State of California, as you know, is growing very rapidly. The population may double in the next 20 years. Already the University of California is thinking of adding to its campus another medical school. By the time that one is built we will have plans for another medical school because of the rapidly expanding population.

The University of California is also the trainee of larger numbers of medical scientists for countries abroad, a larger number than any other State in the United States. Therefore, it is very important to have the facilities with which to train these people.

I can point out that beginning at the same time that we undertook this project at the University of California a representative of the Veterans' Administration talked with our colleagues at Stanford University who also made the same overture to the Veterans' Administration and today or, perhaps, next week they will formally open the veterans hospital which is to be constructed at Palo Alto, a 1,000-bed hospital, built across the street from the recently established medical center. It can no longer afford to maintain a private hospital and they have built a great medical research center, but across the street is the hospital which provides the critical materials for this entire venture which is the veterans hospital, which has just been completed.

This is the kind of thing we want to do for the University of California. It is rather unfortunate that the Oakland Veterans Hospital, in having been replaced, is moving in actually the opposite situation. Here is a situation where this companion hospital is going to be relatively magnificently equipped but not associated with the Stanford University—whereas, the present plan for continuing this hospital will become something of a veterans hospital constructed 50 years ago where they were out in the woods. We need it near the University of California where it will save millions of dollars of the taxpayers' money.

Mr. THOMAS. That was a very fine statement, Doctor.

Dr. JONES. Thank you, sir.

Mr. RHODES. Dr. Jones, are you speaking for the administration of the University of California?

Dr. JONES. I do not speak directly for the administration but I represent an informal group. The way the University of California has to operate is that these things are dealt with rather informally and, as a matter of fact, invitations have come from both the board of regents and the president of the university. However, after these things are worked to the point of surface solution, then action will be taken by the University of California.

These statements by no means complete the case against the Martinez hospital proposal. Rather, they only serve to point up several salient arguments and will, I believe, cause interested colleagues to read in full the testimony before the subcommittee which occurs on pages 1123 through 1169, of Hearings on Independent Offices Appropriations for 1961, part 2, of the subcommittee of the Committee on Appropriations.

I say again that it is unfortunate for the veterans of northern California that the factual considerations involved in this issue have been obscured.

I sincerely hope that the matter will be carefully reviewed and reconsidered by the Senate Appropriations Subcommittee.

Mr. DOYLE. Mr. Speaker, my vote adverse to the adoption of the Saylor amendment is not because I want the hospitalization program for our veterans to receive less in funds nor less than the very best of facilities and the most modern hospital buildings most advantageously located.

In fact, Mr. Speaker, all during my 14 years in this House I have steadfastly supported advance steps in programs designed for our veterans. This fact is well known to you, my colleagues, and likewise to the veteran leaders and to the veterans themselves.

But our Appropriations Committee has held extensive hearings on this matter and recommend a further study of the site question—Chairman THOMAS says not over 6 months.

This is not too long to make as sure as possible a serious blunder shall not be made.

The hospital should be located available to the veterans and their families and visitors and medical staff, so as to be reached by transportation at minimum of cost and time and trouble to all concerned. The University of California has personnel and facilities which need not be duplicated, if the hospital is on their side of the bay.

Granting the proposal by the Saylor amendment would earlier mean, possibly, commencement of construction, by a few months, the Saylor amendment only provides for 500 beds in a new building at Martinez. The present Oakland hospital has a 750-bed capacity and northern California needs at least 750 beds in any new hospital to be built. This is one reason I vote no. Instead of reducing the number of beds in California for veterans, we need to increase same.

I have received reports frequently from veterans' organizations and veteran leaders about the shortage of hospital beds. It should not be so. But, we cannot improve the very bad need now existing all over our State of California, for more hospital beds, by building a new one with less bed capacity, by 250 beds than the present one, proposed to be abandoned now furnishes.

I want the congressional committee to have the additional 6 months to further study the site to be chosen. I am not unwilling to vote more money for a new veterans' hospital than that proposed.

And, Mr. Speaker, as a great need exists in northern California, so, our need also exists in southern California. The need daily increases. Let us not authorize a hospital with fewer beds than we now have. We need more beds.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATION BILL, 1961

Mr. PRESTON. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 10234) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes, with Senate amendments thereto, disagree to the amendments of the Senate and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Georgia? [After a pause.] The Chair hears none and appoints the following conferees: Messrs. PRESTON, THOMAS, CANNON, BOW, and TABER.

SUBCOMMITTEE ON FAIR LABOR STANDARDS

Mr. LANDRUM. Mr. Speaker, I ask unanimous consent that the Subcommittee on Fair Labor Standards have permission to sit this afternoon during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

MUTUAL SECURITY ACT OF 1960

Mr. TRIMBLE. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 502 and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes, and all points of order against said bill are hereby waived. After general debate, which shall be confined to the bill and continue not to exceed four hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted and the previous question shall be considered as

ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. TRIMBLE. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN].

Mr. Speaker, I yield myself such time as I may need.

The SPEAKER. The gentleman from Arkansas is recognized.

Mr. TRIMBLE. Mr. Speaker, House Resolution 502 provides for the consideration of H.R. 11510, to amend further the Mutual Security Act of 1954, as amended. The resolution provides for an open rule, waiving points of order, with 4 hours of general debate.

H.R. 11510 authorizes $1,318,400,000 for carrying forward certain portions of the mutual security program. In addition to the parts of the program included in this authorization the Executive is requesting total appropriations of $2,720,100,000 against authorizations already in effect, of which $2 billions for military assistance and $700 million is for the Development Loan Fund.

The authorization is $136,500,000 less than the amount requested by the Executive and $41,942,000 less than the amounts appropriated for these same items last year.

The bill contains a number of amendments to the basic legislation intended to tighten the administration of the program as well as provisions giving additional guidance to, or imposing new limitations on, the Executive with respect to future operations.

In evaluating the request for the authorization of additional funds for economic assistance and in reviewing the military assistance program, the Committee on Foreign Affairs gave primary consideration to the administration of the mutual security program. Most of the American people and the majority of the Congress recognize the soundness of the concept of assisting the military forces of nations determined to resist aggression and of providing economic aid to countries when their present status or future development are of importance to the United States.

Although one result of increasing emphasis on review and evaluation of the program has been the disclosure of a number of instances of waste in particular projects or operations, there was also developed encouraging evidence that, in spite of its operating deficiencies in a number of areas, the mutual security program is attaining its basic objectives.

Certain of the newer nations which in an effort to follow a neutralist policy had previously refused or played down U.S. assistance as being inconsistent with the policy of placating the Union of Soviet Socialist Republics have now come to value our friendship and counsel as highly as our material assistance. They now have a better understanding of American policy. They recognize the United States has no objective except to assist them in maintaining their own independence and improving their living conditions. There have been several incidents which have shown that the attitude of the people of several of the nations of Asia toward the Soviet Union and Communist China has changed. The vociferous and occasionally spectacular claims of Communist propaganda have been too often more than offset by the flagrant aggressiveness and disregard of human welfare that have characterized Communist performance.

The obstacles confronting U.S. foreign policy have not been removed nor have final solutions been found for our problems. Nevertheless, there are indications that the governments and people of many of the less developed nations have come to recognize that the respect which we have demonstrated for their sovereignty and the priority we have given to the fundamental and the long range justify their trust.

There are those, however, who, while accepting the validity of the concept of foreign aid, have misgivings as to the ability of the United States to administer effectively a program of the magnitude and complexity of current mutual security operations. The Committee on Foreign Affairs has given a high priority to following up reports of waste and inefficiency in carrying out the program and has initiated legislation to correct some of the major deficiencies.

Mr. Speaker, I urge the adoption of House Resolution 502.

Mr. TRIMBLE. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. WALTER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. WALTER. Mr. Speaker, I am not opposed to H.R. 11510 and I intend to vote for this legislation as I have voted in the past for all measures designed to strengthen the free world in the continuing fight with the encroachments of Communist tyranny and Communist conspiracy.

However, inasmuch as this legislation authorizes the continuation of certain activities of the Development Loan Fund, I wish to bring to the attention of the House an apparently erroneous statement contained in the report of the Special Study Mission of the House Committee on Foreign Affairs regarding certain loans made by the Development Loan Fund for the housing of immigrants from the Netherlands in Australia.

On yesterday I received from my very good friend and former associate in the erection of the Intergovernmental Committee for European Migration, the Honorable Harold Holt, Treasurer of the Commonwealth of Australia, a letter clarifying the matter and under unanimous consent I include Mr. Holt's letter in the RECORD at this point:

COMMONWEALTH OF AUSTRALIA,
TREASURER,
April 13, 1960.

The Honorable Congressman
FRANCIS E. WALTER,
Chairman, Subcommittee No. 1,
Committee on the Judiciary,
House of Representatives,
Washington, D.C., U.S.A.

DEAR CONGRESSMAN WALTER: We have been somewhat disturbed by certain statements contained in the report of the special study mission of the House Committee of Foreign Affairs concerning the loan made to the Netherlands Government by the U.S. Development Loan Fund for the housing of Dutch migrants in Australia.

The relevant sections of the report, as supplied to us by the Australian Embassy in Washington, read as follows:

"UNWISE USE OF DEVELOPMENT LOAN FUND FOR RESETTLEMENT PROGRAMS IN AUSTRALIA

"The study mission had an opportunity to visit several homes built for Dutch settlers in Sydney, Australia. The building of these homes is the result of a $3 million loan from the Development Loan Fund to the Netherlands Government at 4 percent (our Government is paying 5 percent). These homes were supposed to be refugee homes, and we expected to find something similar to our low-rental housing units, but instead, we found two- and three-bedroom brick homes with tile roofs and concrete runways all with carports. These homes are being sold to Dutch settlers by the Australian Government for 20 percent down and 27 years to pay, at 5 percent.

"This loan does not meet the eligibility standards set up for the Development Loan Fund, requiring that loans from Development Loan Fund should be made to underdeveloped countries. The economic condition of both the Netherlands Government and the Australian Government is as good or better than that of the United States. The study mission recommends that the eligibility standards for Development Loan Fund loans not be waived in the future."

Apart from the other misstatements, we were particularly concerned to note the specific reference to the sale of homes to Dutch settlers by the Australian Government. The fact is, of course, that the Australian Government is in no way involved in these transactions.

The homes in question are being erected for Dutch migrants by private builders or the migrants themselves. Finance is being provided from proceeds of the loan and matching funds from the Australian banks, and distributed through the medium of cooperative building societies set up in the respective states for this purpose.

We are assured by the Netherlands authorities that the agreement concluded with the Development Loan Fund stipulated that houses should conform with local building regulations and standards and the agreement incorporated conditions which have the obvious intention of preventing the construction of substandard or refugee-type houses. It is hardly necessary for me to stress that at no time did the Dutch or we contemplate the erection of such dwellings.

The study mission claims that the loan was intended for the building of homes for refugees. I am informed, however, that the agreement stipulates that the homes must be made available to "Dutch immigrant families." Refugees are not mentioned in the agreement, although Dutch migrants from Indonesia qualify for loans.

Less than 25 percent of the houses built in Australia under the agreement are of brick. The majority are timber framed and sheeted with timber or asbestos cement. They comply with local Government and building society regulations including limitation of amount of loan.

Neither the Netherlands Government nor the Australian Government derives any profit from the U.S. loan moneys, all of which are spent for the benefit of migrants.

I felt I should let you know the facts for your own personal satisfaction and also in order that you may be in a position to remove any misunderstanding which has arisen and which may still exist in some quarters as a result of the study mission's report.

With my kindest regards.

Yours sincerely,

HAROLD HOLT, *Treasurer.*

I am glad to note, Mr. Speaker, that Mr. Holt has also written in the same manner to Mr. C. Douglas Dillon, our able Under Secretary of State, who has shown broadness of vision and full realization of the merits of this loan. Mr. Dillon has helped some of us who were interested in this matter to achieve excellent results. He has greatly contributed to the cooperation between the United States and two countries which we are proud to count among our most faithful allies and best friends—Australia and the Netherlands.

Mr. BROWN of Ohio. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, as the gentleman from Arkansas has stated, this resolution makes in order the consideration of the bill H.R. 11510, the so-called mutual security or foreign aid authorization bill. The total authorization contained in the measure is a little better than $4.1 billion.

I know of no opposition to this rule. I am sure that most Members of the House know the position I have taken on this legislation for a great many years, therefore I am not going to discuss that angle.

I call the attention of the House to the fact that once the authorization bill is passed then, of course, the Appropriations Committee will have to bring in, in its own wisdom and under its own power and judgment, an appropriation bill to carry the funds that are authorized by this legislation for mutual security and foreign aid expenditures.

I think it only proper and fair that I call the attention of the Members to the fact the Appropriations Committee has consistently reduced the amount of appropriations far below that which has been authorized for mutual security purposes.

I should also mention the fact that the gentleman from Louisiana [Mr. PASSMAN], chairman of the Appropriations Subcommittee handling the appropriations authorized under this legislation, has notified the various House Members in writing that something like $8.1 billion have been made available for foreign aid purposes during the present fiscal year which ends on June 30. Of course, the present authorization bill deals only with mutual security funds for the new fiscal year which starts on July 1.

Perhaps it may be of interest to the House to also know that in the hearings before the Rules Committee, when the chairman of the Committee on Foreign Affairs appeared requesting this rule, the gentleman from Pennsylvania [Mr. MORGAN], in reply to questions, very frankly gave his views and opinions on certain matters in connection with the foreign aid or mutual security program.

In direct answer to a question propounded to him as to when we in America may expect that an end be brought to foreign aid spending, he advised us that he did not believe an end would come to this program within the foreseeable future, but instead it would have to be continued, in his opinion, for many, many years to come.

Further, in reply to another question in which he was asked how many different governments in this free world of ours were receiving some benefits from this legislation out of the Treasury of the United States, he advised us that there were 72 different countries receiving aid in some form or other under this legislation out of the U.S. Treasury, into which, of course, the American people are paying their Federal taxes.

Then, in answer to another question being put to him as to how many nations or countries in the free world he could name that were not receiving benefits or American aid under this program, he advised us at first that he thought there were a good many but he could recollect only three: Canada, Australia, and New Zealand.

Mr. Speaker, I have taken this time to make these statements because I believe that on legislation of this type the House is entitled to all of the information it can get, and I am sure that the members of the Committee on Foreign Affairs, both the proponents and the opponents of this bill, will explain this legislation very thoroughly.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Iowa.

Mr. GROSS. This is the program that was supposed to have been liquidated and ended in 1952; is that not correct?

Mr. BROWN of Ohio. Well, I think we were advised on different occasions that different aid programs would be ended within 2, 3, or 4 years.

Mr. GROSS. I would like to ask the gentleman another question. Does the gentleman think it is good practice to provide rules on bills of this nature waiving points of order?

Mr. BROWN of Ohio. Let me say to the gentleman that I seldom vote for a rule to waive points of order, and I did not vote for this particular rule.

Mr. Speaker, I have no further requests for time.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

Mr. MORGAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11510, with Mr. MILLS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. MORGAN. Mr. Chairman, I yield myself 20 minutes.

Mr. Chairman, let me begin by saying that H.R. 11510, the bill before us, contains the smallest authorization of funds for assistance to foreign nations that has been submitted to the House in any year since the beginning of the Marshall plan in 1948.

This is a true statement, but it is at the same time a misleading statement. Other true but misleading statements have been made about the mutual security program before, and I am afraid that this will not be the last.

I do not want to mislead anybody about any part of this bill or this program. I am convinced that 90 percent of the opposition to the mutual security program is based on misunderstanding. I believe that there is not any greater service that I can render to this House than do the best I can to bring out the facts about this program and do everything possible to make sure that they are understood.

Let me hasten to make clear what is misleading about my opening statement. This bill does not include authorizations for the largest and most important part of the mutual security program—military assistance. Neither does this bill contain any authorization for the Development Loan Fund. The Executive has requested an appropriation of $2 billion for military assistance and an appropriation of $700 million for the Development Loan Fund this year against authorizations made last year.

The Mutual Security Act as finally approved last year authorized the appropriation for military air of "such sums as may be necessary" for the fiscal years 1961 and 1962 on an experimental basis. This new procedure did not originate in the Foreign Affairs Committee or in the House. The mutual security bill passed by the Senate last year abandoned the practice of annual authorizations for military assistance and provided a continuing authorization of appropriations for this purpose. In conference a compromise was reached which included a specific authorization for fiscal 1959 and such sums as may be necessary for 1960 and 1961. This compromise was accepted by the House and is now contained in the law.

I still have an open mind as to whether this action of last year is a good idea. One reason for doing as we did was that the Executive wanted to include the military assistance appropriation in the regular military appropriation bill. They said that waiting for annual authorization would make this impossible.

Our Appropriations Committee has decided not to follow the Executive recommendation in this respect, and the military assistance appropriation is being handled as part of the mutual security appropriation. I personally favor the way in which the Appropriations Committee is proceeding, although I accepted last year's compromise in good faith and would prefer not to make any change in the authorization procedure during the present Congress.

H.R. 11510 authorizes appropriations of $1,318,400,000. The Executive requested authorizations of $1,454,900,000 for the programs included in this bill and we have made a cut of $136,500,000—about 10 percent. The authorizations in this bill are $41,942,000 less than was appropriated for these same purposes last year.

There are four items in the bill which are greater than $100 million: defense support, special assistance, technical cooperation and the contingency fund.

The largest and most important authorization is $675 million for defense support. This is $49 million less than the Executive request and $20 million less than last year's appropriation. This is economic aid to countries which are carrying on military programs which overtax their economies. There are only 12 countries getting defense support, of which Spain, Greece, and Turkey are the only European recipients. Over half the money is planned for three countries: Korea, China—Taiwan—and Vietnam.

The committee cut defense support by $49 million after going over the program in great detail. I believe that a further cut would endanger the military effort in these 12 countries.

Special assistance is economic assistance of the same general character as defense support, but it goes to a different class of countries. The committee cut the Executive request for this item by $12,500,000, making an authorization of $256 million.

Special assistance is planned for 22 countries which do not maintain significant military forces but which are of special importance to the United States for a variety of reasons.

Included in this group is West Berlin where the interest and prestige of the United States are clearly at stake.

Special assistance is provided to Israel and to Jordan. The United States is firmly committed to assisting both of these nations to maintain their national independence.

Special assistance funds are also provided to several countries in which we maintain important oversea bases. The availability of these bases might be affected if this assistance were not available.

The basic justification for special assistance is political. The committee reviewed the situations in the various countries involved, and we are convinced that a further cut would seriously handicap our foreign policy.

The Executive asked $175 million for the contingency fund to meet unforeseen emergencies. The committee cut this to $100 million. This is $55 million less than was appropriated last year.

The concept of a contingency fund is entirely sound. Past experience clearly indicates that new and unanticipated situations will continue to develop where assistance will be of vital importance to U.S. policy. The drastic cut made by the committee, I believe, is as far as we can safely go. A reduction below the $100 million figure would leave too small an amount to meet the contingencies which are to be expected in a $4 billion program.

The committee made a careful review of the technical cooperation program and made no cut in the request for an authorization of $206,500,000 for this program. This is the basic point 4 operation and includes hundreds of small technical assistance operations in the less developed countries. It is generally agreed that this program is highly successful and that its long-range benefits will exceed its cost many times over.

ADMINISTRATION OF THE PROGRAM

I would like to refer for a few minutes, Mr. Chairman, to the administration and operation of the mutual security program.

I recognize that there are some people who sincerely believe that the whole concept of foreign aid is unsound, that it is wrong to spend the taxpayers' money to assist other nations, and that if we mind our business and save our money, the dangers which now threaten us will pass away and we will find ourselves living in a peaceful and prosperous world without cost or effort on our part.

Needless to say, my attitude is diametrically opposed to this. I firmly and sincerely believe that the mutual security program is vital to our national security and to our future prosperity. The affairs and destinies of other nations are unavoidably intermingled with our own.

I believe that the foreign aid program can be made to work effectively and efficiently.

I believe that it is absolutely essential to the safety and welfare of this country that it does operate effectively and efficiently.

There is nothing in which I am more interested than in improving the operation of the program, and the Committee on Foreign Affairs has accomplished a good deal in this direction. The committee report on this bill sets forth some of the details.

Most of the reforms and improvements which have taken place are not spectacular in nature and their results are not immediately visible. Let me cite one instance.

Mr. GROSS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Seventy-seven Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 49]

Addonizio	Diggs	Morris, N. Mex.
Allen	Farbstein	Morrison
Andersen, Minn.	Fenton	Moulder
	Fisher	Norblad
Anderson, Mont.	Ford	Norrell
	Garmatz	Powell
Anfuso	Gavin	Prokop
Ashley	Grant	Randall
Auchincloss	Hargis	Reece, Tenn.
Bailey	Hébert	Rogers, Tex.
Barden	Horan	Rooney
Baumhart	Johnson, Colo.	St. George
Betts	Kearns	Short
Bonner	Kelly	Sisk
Boykin	Keogh	Taylor
Brock	King, Utah	Teague, Tex.
Buckley	Lindsay	Teller
Burleson	McGovern	Thompson, La.
Celler	Mack	Thompson, Tex.
Coffin	Meader	Utt
Cooley	Merrow	Van Pelt
Daddario	Metcalf	Willis
Davis, Tenn.	Mitchell	Withrow
Dent	Montoya	Young
Derounian	Moorhead	Younger

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill H.R. 11510, and finding itself without a quorum, he had directed the roll to be called, when 356 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

Mr. MORGAN. Mr. Chairman, until 2 years ago it was the practice in administering the mutual security program to obligate funds appropriated by the Congress for a particular project merely on the basis of an agreement with a foreign government that the project would be undertaken. This became one of the major causes of waste in the operation of the economic assistance program. Agreements would be signed and funds committed before the plans for the project had been developed, before the costs were accurately estimated, before the difficulties to be met and the means of overcoming them were known, and before the recipient government had arranged for its share of the financing or taken necessary legal or legislative action.

The result was that funds were tied up for periods of as long as 4 years without being used, while the foreign beneficiary was disappointed and U.S. officials devoted hours and money to futile conferences, surveys and negotiations.

In 1958, at the initiative of the Committee on Foreign Affairs, section 517 was added to the Mutual Security Act, requiring that plans, cost estimates and other preliminaries had to be taken care of before funds could be obligated. The results have been highly beneficial, but you do not see any newspaper headlines about them. You can still find a few bogged down projects in various countries, involving funds that were obligated before section 517 went into effect, but these are being cleaned up.

The point is that this entire area of waste is being taken care of. There is still much to be done and much is being done to deal with the various situations. The Foreign Affairs Committee will continue to push hard in this direction.

In closing, Mr. Chairman, let me say a word about what a vote against this bill would mean.

I am sure there are those who are inclined to believe that ending or drastically curtailing the mutual security program would result primarily in a lot of foreigners having to tighten their belts and that this would not be such a bad idea.

It is undoubtedly true that a lot of foreigners would have to tighten their belts if this happened, but let us forget about the foreigners and think about what would happen to us.

In the first place, our entire military organization and defense strategy depends on foreign aid. Our striking power is dependent on oversea bases. Our major commands include forces of other nations. The only kind of a major war we are organized and equipped to fight is a war in which we depend on the airfields, the planes, the minesweepers, the radar equipment, and the guided missiles manned by our allies. We have no immediate alternative. For several years, even if we started immediately to reorganize, it would be this type of defense or nothing.

It is easy for armchair strategists to discuss what other defense strategies might be possible or desirable. The best military judgment in the country believes in the strategy based on military assistance and, in any case, we have not anything else.

Another easy way out with respect to voting against the mutual security program is to say that if we made no more money available this year, we could coast along for a year spending the unexpended balances and see what happens.

As every Member of the House has been informed, the unexpended balance of mutual security funds last June 30 was $4,837,708,750. The most recent estimate made by the Executive is that there will be an unexpended balance of $4,676,630,000 on June 30, 1960—the end of the current fiscal year.

The meaning of these figures depends on the obligations which have been made against them. If a businessman looks only at his assets and ignores his liabilities, he faces a rude awakening. You cannot measure anyone's financial position by merely looking at the balance in his checking account. You have to know what his current obligations are, his mortgage and insurance payments, and his monthly bills before you know how well off he is.

Against the $4.8 billion of unexpended funds last June 30 must be balanced $4.5 billion of firm commitments to pay for orders already placed, contracts let, and work in progress.

If we decide this year to keep the program going out of unexpended balances, we can continue deliveries for another year or a little longer, but we are really deciding that by 1962 the mutual security program will grind to a halt. There is no way that we can fill up the pipeline by action a year from now so that the missiles and the planes will be available in 1962 and 1963.

I am not ready to gamble that the cold war will be over in 1962. I am not ready to decide today that our foreign bases and the forces of our allies will not be needed in 1962.

Let anyone who wants to gamble on a proposition like that risk his own money, but let me urge him not to gamble with the security of our country and the future of our children.

We hear a lot these days about spenders and savers. There may be those who would like to buy membership in the savers' club by voting against foreign aid. I do not believe that many Americans believe that hibernating is saving. Nobody thinks that going without all food, or all fuel, or all shelter should be called "saving." We do not save by doing nothing instead of doing something. We save by doing what we have to do economically and effectively.

We can cut out military aid and weaken our defenses. If we are willing to do that, we could save a lot more by cutting our defense budget by $10 billion.

The eyes of the entire world are focused on us as we consider this bill—our friends and our enemies. The signs that we are making progress in the cold war are more numerous and more encouraging than they have ever been. There have been widespread and convincing demonstrations that the people of distant nations and different races regard the United States as a friend and look to us for leadership and assistance.

Several nations which have in the past given priority to their efforts to placate the Kremlin have seen the error of their ways and have turned in our direction.

The mutual security program has demonstrated that it is workable and that it is working. If our action on this bill raises doubt in the nations of the world as to where we stand or where we are going, most of what we have gained will be lost immediately.

Let every Member weigh very carefully the meaning of this program. Let no one act on it without taking a new look at where we stand and the alternatives that are available.

I believe the answers are clear and inescapable.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman from Iowa.

Mr. GROSS. Did I understand the gentleman to say earlier in his remarks that the opposition to this bill is based 90 percent upon ignorance?

Mr. MORGAN. No; I said that most of the people who oppose this bill are misinformed about the mutual security program.

Mr. GROSS. Misinformed, then. Being one of the allegedly misinformed, I wonder if the gentleman can explain the necessity for this provision on page 3 of the bill, section 202(c):

> The Fund shall not allocate or commit funds aggregating in excess of $100,000 for use in any country under this title unless (1) an application for such funds has been received for use in such country which is supported by sufficient engineering, financial, or other data to indicate reasonably (A) the manner in which it is proposed to use such funds.

What is the reason for this provision? Is this an admission for the first time in an authorization bill that funds have been wasted in the past because the money has not been properly managed or the programs have not been well set up in advance?

Mr. MORGAN. The gentleman from Pennsylvania has been as critical of waste and inefficiency in this program as has the gentleman from Iowa, and I know the gentleman from Iowa has been very critical of the program. This amendment was adopted by the committee upon the recommendation of the Subcommittee on Government Operations, headed by the gentleman from Virginia [Mr. HARDY]. He testified before the committee, and this is the result of his testimony before the full Committee on Foreign Affairs.

Mr. GROSS. The provision to which I take exception is that it shall apply only to amounts above $100,000. Is not $100,000 important these days?

Mr. MORGAN. This figure is set with the idea of flexibility so that commitments for planning and preliminary engineering work would not be included.

Mr. GROSS. I would say it is an understatement to say that it is flexible.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Mr. Chairman, I would like to express my personal appreciation to the gentleman from Pennsylvania for a very straightforward and practical-minded discussion of this issue and for the light which he shed upon the vital questions which are at stake in this debate. I am particularly appreciative of his mention of section 517 and of the amendment which has been placed in the bill to section 517, appearing on page 10 of the bill. The gentleman will recall that in the 1958 session the House added an amendment to this act in which it was required that public works projects in foreign-aid countries should meet the same benefit-cost standards and feasibility requirements that we have on similar projects in the United States. In offering that amendment, which a number of Members supported, I contended it was essential to give us fair value on our dollar investment, and to prevent some of the waste we all deplore in this program. The amendment was adopted in the House but not in the other body, and it was lost from the bill. I am very pleased to see that similar language appears this time in the bill, as reported by the Committee on Foreign Affairs, and I hope the House will insist upon this language when the bill goes to conference.

Mr. MORGAN. I am sure if we had been more insistent on the gentleman's position in 1958 we would have been ahead. I think this is an important amendment. The author of this amendment in the bill is the distinguished gentleman from Indiana [Mr. ADAIR]. If the gentleman recalls, an almost identical provision is already in the Mutual Security Appropriation Act of last year. The gentleman can be sure the chairman will do his best to protect this provision in conference.

Mr. FEIGHAN. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman from Ohio.

Mr. FEIGHAN. The gentleman will recall that Koslov and Mikoyan, the trade and economic experts from Moscow, were over here preceding Khrushchev, at which time they endeavored to get a line of credit of a billion and a half dollars, for which there was negotiation for the cancellation of the $11 billion which the Soviet Union owes the United States, on the basis of the U.S.S.R. paying us $800,000, which would cancel the $11 billion, and our immediately giving them the billion and a half line of credit.

As I understand, there is no absolute prohibition against the President giving any technical or other assistance, military excepted, to the Soviet Union. I wonder if the possibility was contemplated or envisioned at all by the committee that the President in the future might give technical aid to the Soviet Union.

Mr. MORGAN. Absolutely not. It would be against the fundamental purpose of the whole program. The descre-

tionary authority in the bill is not intended for this purpose and I do not believe that any responsible official of our Government has any intention to do so, except that maybe there would be some dissension or revolution in the Soviet Union where we might want to move in perhaps using the contingency fund for this purpose.

Mr. FEIGHAN. As I understand, there is nothing in the bill that is an absolute prohibition against the President's using his discretion, and giving aid to the Soviet Union.

Mr. MORGAN. That is correct.

Mrs. BOLTON. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, a very real privilege has been given me by the ranking Republican on the Foreign Affairs Committee, the distinguished gentleman from Illinois [Mr. CHIPERFIELD], in his asking me to handle the Republican time on this exceedingly important bill. With him beside me I am happy to do so.

Before I say anything further I want to express my personal appreciation of our chairman, the distinguished gentleman from Pennsylvania, Dr. MORGAN. This is not an easy committee to handle, Mr. Chairman. There are very many divergent opinions. We all get a little hot under the collar every so often. Fortunately we have a very sane, sound, and calm chairman with a sense of humor. I am happy to have this opportunity to express publicly my appreciation of his capacity and his courtesy.

Now it is not at all my purpose to take up more than a little of the time of this House. I am going to speak briefly, and I am not going to speak at all in the same way that our chairman has done. His presentation needs no further words from me. The details of the bill will be enlarged upon by other Members of the minority side. What I want to say is in a different vein. I want first to remind you of the kind of people we Americans are, and to say to you frankly that if we had no Communists in the world and came in contact with the underdeveloped nations in any way that would make us understand their poverty and their need we would have been immeasurably constrained to help them.

I want to remind you that once a very long time ago, it was prophesied there would be Armageddon. The fields of the traditional Armageddon in Palestine are very quickly flown over. I did that a number of years ago and had the privilege of being with a man who knew every inch of it, and made the Biblical story very vivid. Today, I am saying to you, my colleagues, that that small field is far too small to contain the Armageddon that we are fighting today. I do not care what your viewpoints may be but I say to you with deep seriousness that we are fighting Armageddon on a worldwide basis today. It is a battle between the believing world and the unbelieving world for survival.

When someone asks, as some of our distinguished colleagues have asked down through the years: How long is this program going to go on—when are we going to stop it? So many have tried to give specific dates. Every time that has happened, I have wished I had the courage to get up and say: There will be no end so long as Armageddon is being fought. Unless we have the courage and unless we have the capacity to see and to realize what this means to all of the people of the world, there will be no end. We may have to use force so we must be strong. Surely we have not used our best imaginations. We have not let our minds go out into these other countries and tried to understand the people.

We have, perhaps, forgotten that when we came over to this country, we were a tremendously hardy people. We were strong physically. We had a grim determination to be free. Then in many instances, we promptly put the chains on again. But, we were a free people—we were a hardy people. Today, our children do not even walk to school. What is that in itself a symbol of? How are we going to compete with the coming generations of the Communist people if we do not have the physical strength to climb mountains?

Now I want to say to you just this: We have assumed responsibility in the world. Perhaps it was thrust upon us. Perhaps we were forced by circumstances and our own willingness to be decent to other decent people. But now it is ours, and I believe we just dare not go back on those responsibilities. We dare not leave people in the lurch. May I remind you that since the Marshall plan and the Truman plan and the various different nomenclatures under which our assistance went forth not one single country into which we have gone with help has turned Communist. I think that is something some of the Members of this body should think about very, very earnestly. Even where we made big mistakes and did badly, there are magnificent results today. In some of the places where we have received the greatest criticism we have had most startling results.

I want to say to you with all the earnestness of which I am capable, that this is as important a moment in the history of the United States as any moment we have lived through. We may not go backward. We have on our coin "In God We Trust." Do we trust in Him and can He trust us? He has given us a job to do, with a different kind of government from what exists anywhere. We are citizens of States. We are also citizens of the Union that they form. That is rather different. Perhaps we have too good a government. Is it not possible that we have given too much ease to our people? Is it not time that we evaluate what we have been and what we are? Should we not be thinking very earnestly of these basic fundamental qualities that mean human evolution? We cannot separate ourselves from any human beings anywhere in any world. We may want to but we cannot. All people everywhere are made of the essence of the Infinite. We cannot separate ourselves from them.

I would ask you in all seriousness to recognize the changes that have taken place in the countries who make up our opposition. What has happened in Russia in 40 years and a little more? Her people today have a great deal more comfort than they ever had before. The same is true in China, even though the report of the refugees tell us of unimagined horrors. Still their girl babies are not drowned any more, women are paid wages, and so forth, and so forth. I can well believe it might perhaps be tomorrow when China has a bomb of her own; different from ours, perhaps, but a very potent one, and she certainly has potent strength of numbers.

So I would ask you to look at all the facets of this great game of life. Should we not go deeply into our own hearts to be certain whether we are being worthy or unworthy of our Christian heritage? Let us not be unworthy of God's trust in us for He has given us this opportunity.

I beg very earnestly that before you cut one more dollar out of this program you think it over very, very carefully. We as citizens of these United States are being tested in very hot fires. It is my earnest prayer that we may prove ourselves worthy sons and daughters of the living God.

The CHAIRMAN. The gentlewoman has consumed 10 minutes.

Mr. MORGAN. Mr. Chairman, I yield 8 minutes to the gentleman from Wisconsin [Mr. ZABLOCKI].

Mr. ZABLOCKI. Mr. Chairman, in taking the floor in support of the Mutual Security Authorization Act of 1960, I wish, first of all, to commend the distinguished chairman of the Committee on Foreign Affairs [Mr. MORGAN] for his untiring and outstanding work.

Ever since he took over the reins of the Committee on Foreign Affairs he has devoted himself to a continuous study and investigation of the mutual security program, striving with meticulous care and vigor to eliminate waste and to improve the efficiency of this program.

Under Chairman MORGAN's leadership, the committee has recommended numerous improvements in mutual security legislation, both in last year's legislation and in the bill before us. These improvements should have far-reaching effects in assuring that the American people will receive solid and efficient results from every dollar spent on this important program.

Now as to the bill before us.

Having conscientiously attended the lengthy hearings held on it before the Committee on Foreign Affairs, and having studied the evidence submitted by numerous witnesses, by our investigating and other subcommittees, and by the executive branch, I sincerely believe that the authorization it recommends is the minimum consistent with our national interest.

As Chairman MORGAN has pointed out, the bill contains a new authorization of $1,318,400,000, which is $136,500,000 less than the amount requested by the Executive, and approximately $42 million less than the amount appropriated for these same items last year.

In addition, the Executive is requesting total appropriations of $2.7 billion against authorizations already in effect, of which $2 billion is for military assistance and $700 million for the Development Loan Fund.

Further, the bill includes a number of amendments intended to tighten the administration of the program, to impose new limitations on the Executive, and to give additional guidance to the administration with respect to future operations.

I fully realize that this legislation alone will not produce miraculous results. Painstaking investigations of the mutual security program has revealed a number of instances in which wasteful and inefficient use of our resources is in evidence. We have tried to correct those situations, we have achieved a good measure of progress, and we will continue to do the best we can. Much greater effort is needed, however, on the part of the people who administer this program. This effort has to be exerted along the following ways:

First. Elimination of duplication in administrative control.

Second. Simplification of the decision-making processes.

Third. Enlargement of the authority delegated to the person in charge of a particular program in a given area.

Fourth. Long-range planning and the establishment of coordinated intermediate and ultimate goals.

Fifth. And greater emphasis on economic assistance to the underdeveloped countries on a coordinated, multilateral basis, with full regard to the rate at which those countries are able to absorb our aid effectively and efficiently.

The guideposts for such improvements are contained in our report and in the bill itself. We have every hope that they will be heeded and utilized wisely by the Executive.

Apart from this, however, there is one very important fact we must bear in mind: Whatever shortcomings are still in evidence in the administration of the Mutual Security Act, they must be corrected. But the presence of those shortcomings—frequently very human shortcomings—does not and should not justify anyone's action in voting against this vital program.

The mutual security program is an integral part of our foreign policy. It is a vital program. The mutual security program rests on certain fundamental principles which—if we concede that they are sound—demand our support of this legislation. These fundamental principles were outlined briefly by the President in his message to the Congress on the mutual security program. I should like to quote them. They are:

1. That peace is a matter of vital concern to all mankind.

2. That to keep peace, the free world must remain defensively strong.

3. That the achievement of peace which is just, depends upon promoting the rate of world economic progress, particularly among the peoples of the less developed nations, which will inspire hope for fulfillment of their aspirations.

4. That the maintenance of the defensive strength of the free world, and help to the less developed but determined and hard working nations, to achieve a reasonable rate of economic growth, are a common responsibility of the free world community.

5. That the United States cannot shirk its responsibility to cooperate with all other free nations in this regard.

If we hold these principles to be true, and if we admit that communism is indeed a threat to our Nation and to the survival of our civilization, then there is but one course we can pursue: we must be willing to continue our sacrifice by supporting the program embodied in the legislation before us.

I believe that the American people realize this and, regardless of party affiliation, want us to enact this legislation which will strengthen our security and the security of the free world.

I may add that not one witness appearing before the Committee on Foreign Affairs has recommended the elimination of the mutual security program.

And therefore, I earnestly hope that the membership of this body, to every last man and woman, will keep this in mind and follow the course dictated by necessity, by reason, and by conscience, when voting on this bill.

There is one last thing I wish to add: In less than 1 month the chiefs of state of the great powers will meet in a summit conference. We may have divided opinion amongst us about the advisability or merit of such a summit meeting. We may have doubts about its usefulness or outcome. But we cannot have a divided opinion about supporting the President of the United States on the issue of our Nation's foreign policy at this crucial time. We must stand together, united in purpose, and determined to strengthen our security, to attain just and lasting peace, and to enlarge the area of freedom in the world.

On this, our Nation must stand together. And this body, representing as it does the people of the United States, must also stand together.

We can do this by giving this vital and necessary legislation our overwhelming support.

Mrs. BOLTON. Mr. Chairman, I yield such time as he may desire to the ranking minority member of the committee, the gentleman from Illinois [Mr. CHIPERFIELD].

Mr. CHIPERFIELD. Mr. Chairman, I favor the passage of H.R. 11510 commonly referred to as the Mutual Security Act.

I believe this program is necessary for our own security as well as the free world. Since its establishment there has not been a single country to which we have given aid that has gone over to the Communist side.

There has been a cut in authorization request by $136,500,000. This is $41,942,000 less than the amounts appropriated last year for the same items. I think these cuts are justified and show the careful consideration given to the program by the Foreign Affairs Committee.

No one who is familiar with the program can help but realize mistakes have been made. Your Foreign Affairs Committee has recently established a subcommittee for the very purpose of uncovering mistakes and seeing that they are corrected. I am proud to be a member of that subcommittee because I feel it is serving a useful purpose in making the program more efficient.

Last year the committee initiated legislation establishing an Inspector General and Comptroller to evaluate the mutual security operations. This should also be very helpful and their first report and study should be enlightening when it is completed.

I have always thought the military assistance phase of the program is of the utmost importance. Last year we authorized the amounts for military purposes for the fiscal years 1961 and 1962, but the committee again carefully reviewed all the aspects. In my judgment, if it had not been for this phase of the program we would not have been able to contain the Soviets.

One of the reasons we have been able to build up such a tremendous deterrent and retaliatory force for so much less money is because it costs so much less to maintain an allied soldier. Each year it costs the United States, taking into consideration pay allowance, subsistence and individual clothing, $3,859 for every American soldier.

It costs a great deal less to maintain foreign soldiers. For example it costs annually only $167 to maintain a Taiwan serviceman, in Korea $390, in Greece $391, and so forth.

To summarize, between 1950 and 1959 we spent some $384 billion for our own defense. We have almost 900,000 men in the Army, 40,000 aircraft, and 1,600 combatant ships. While for a total expenditure of $179 billion—$23 billion which the United States has spent for all allies since the beginning of the military assistance program and the $156 billion spent by our allies—there are 4.9 million men under arms, 29,000 aircraft, and 2,300 combatant ships.

Mr. Chairman, let us now turn to the field of economic aid. Many feel it is more important than military aid and I believe it is at least of equal importance.

The Sino-Soviet bloc has made credit and grant agreements with some 15 free world countries totaling more than $2 billion. Their goal is to gain control of these countries by economic penetration and then by subversion. It would be folly on our part to ignore this new threat and not take every reasonable step to meet it. To withdraw our support from these economic programs would be to hand over one by one these free countries to the Communists.

I therefore believe both the economic and military programs should be continued for our own self-interest. Without them we might find ourselves standing alone in a hostile world with neither friends nor allies to support us in our resistance to the totalitarian, alien doctrines of the Kremlin. I only hope that we in the Congress have the wisdom to continue the mutual security program and thereby help insure that war is averted.

As President Eisenhower has said:

We must carry forward the never-ending fight for peace, for security, for sound, sane, and progressive government in America.

Mrs. BOLTON. Mr. Chairman, I yield such time as she may desire to the gentlewoman from Illinois [Mrs. CHURCH].

Mrs. CHURCH. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. ADAIR].

Mr. ADAIR. Mr. Chairman, for those who have not already seen it, I would ask that you give consideration to the statement of minority views expressed by the gentleman from Georgia [Mr. PILCHER], the gentlewoman from Illinois [Mrs. CHURCH], and myself, as set forth beginning at page 109 in the report on this bill. In those views will be found some of our reasons for opposing this bill.

I would further like to call the attention of the committee to a typographical error appearing about the middle of page 109 in these minority views. The figure there stated is "$136,500," whereas it should be "$136,500,000."

Mr. Chairman, as pointed out in those views and as we have suggested through the years, those of us who have been critical of this program certainly do not lack any desire for mutual security in the world, or that there may be mutual understanding, or that people may draw together as individuals in order to establish and maintain a better world and better governments. But my view, Mr. Chairman, is—and I think it is shared by those with whom I joined in the minority report—that this bill as now constituted does not accomplish the objectives for which it is designed.

One of the objections to this bill which we have pointed out this year is the fact that it does need a complete revision and restudy. Those of you who have before you copies of this year's bill will have observed that this year, as heretofore, it is in the form of amendments to existing legislation. Simply by reading this year's proposals one certainly would not have a very complete or very definite idea of what the proposals for the mutual security program are. Therefore, in the committee and otherwise, it was suggested and urged most strongly that we do give thought to a complete revision, a complete rewriting of the program. This will have value not only from the technical point of view of making it more understandable to newer Members of this House, but it would cause us, I think, to reexamine the entire program, to correct some of the things which we believe need correcting, and, on the whole, to make a very much better program out of it.

I shall not, Mr. Chairman, attempt to touch upon a great number of the items set forth in our minority views but there is one other factor which is significant and indicative of the growth of the program. That is the way in which this bureaucracy has increased through the years. In the early days of the program, as you will observe in the report, there were something over 2,800 people engaged in this work. Today, according to the best figures which we have available there are 42,000 persons so engaged. This is indicative, I repeat, of the growth of the program, the growth of the bureaucracy which goes along with it.

It has been said here today as it has been said through the years that we do not know how long this program will be with us. And the testimony before the committee, to the distress of some of us, was along that line. But I would like to say to the committee that as long as we keep increasing our personnel who are charged with the administration of such a program at this rate, certainly there is very little prospect of containing it, much less beginning to draw it into more reasonable proportions.

As time has gone on through the years we ask ourselves, what ought to be the responsibility of this country with respect to less developed countries throughout the world? We become aware that many nations which in the past have been beneficiaries of this program no longer need, or no longer need to such an extent, the assistance which it has provided. Not only that, but in a number of instances they are now at the point where in all logic they, themselves, ought to assume a greater portion of the burden. As we have by means of our assistance through the years built up other nations here and there in the world, particularly in Europe, is it not now time that they assume a greater share of the cost of trying to provide assistance to the underdeveloped nations than they have? Is it not time that in this way we give some relief to our own taxpayers?

Finally, Mr. Chairman, there are some things that ought to be said about the Development Loan Fund. Many Members will recall when this Development Loan Fund was established, one of the major arguments used to promote it was that it would decrease the amount of grant aid. It was to be used, as I understood the arguments at that time, for specific projects which were requested by needy countries. In the first place, if Members will note the amount of money asked for grants this year for economic purposes, it is not significantly less than it has been heretofore. So, Mr. Chairman, on that count we find that the Development Loan Fund for which many of us had high hopes—and I must confess I was among those who had hopes for very good things from it—has failed to reduce significantly the amount of money made available or requested for economic grants.

Then there was brought to the attention of the committee by the gentleman from Virginia [Mr. HARDY], the gentleman from Michigan [Mr. MEADER], and others, a practice which has arisen with respect to the Fund. It has become a custom in a number of instances for countries that wanted money to go to the officials of the Fund and ask for an allocation—or the term "earmarking" is generally used—an earmarking of so many dollars. Then after that amount of money was earmarked, if such was the case, it was requested of this country that it provide a list of projects to justify the earmarking.

If there is ever an instance of putting the cart before the horse it seems to me this is it. Instead of coming to the Development Loan Fund and saying, "Here are projects which we think are worth while, which are economically feasible, which have a reasonable relationship to the development of our country, and we need so many dollars for them," in a great many instances, I repeat, the shoe has been put on the other foot, the money has been requested and it has been set aside or allocated and then a search has been begun for adequate projects. This is not only unfair to the Fund itself but it may deprive other nations, which have projects ready to go and which are desirable and in need of funding, of moneys simply because the funds are earmarked for another purpose, although they may not be used for a long time in the future.

Mr. Chairman, for these and many other reasons I feel that the program advanced this year, as in previous years, is not one which will assure the mutual security of the peoples and the nations of the world. Therefore, I register my opposition to it.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield.

Mr. CURTIS of Missouri. I notice in the minority report on pages 112, 113, and 114 a breakdown of the unexpended funds. Previously the minority views have had an estimate of the entire amounts of unexpended funds not in just this one program but also under Public Law 480, the Development Loan Fund, the Export-Import Bank, the offshore program, and whatever we might be doing through NATO and SEATO. Has not a study been made of this program in the context of the whole area of the economics of the countries abroad?

Mr. ADAIR. Such a study has been made, not to the extent we would perhaps have wished because of time and conflicts. The studies that were made resulted in conflicting figures being presented to the committee.

Mr. CURTIS of Missouri. There is nothing in the majority report and there is nothing here. Things like Public Law 480 and the offshore procurement ought to be somewhere in this report. How can the House act intelligently on a report like this?

Mr. ADAIR. The minority tried to approach that problem by including toward the back of our report various tables relating to projects undertaken since 1951 in certain countries. Some of those countries were visited by a study mission last year.

Mr. CURTIS of Missouri. But those were all under the mutual security program, were they not?

Mr. ADAIR. Yes. Of course, Public Law 480 does not fall within the jurisdiction of our committee.

Mr. CURTIS of Missouri. In order to study this matter intelligently your committee should have known what is being done in another area on identically the same program. In the Committee on Ways and Means we get another aspect of this on bills to encourage investment abroad. It is important to know how far those are going. There has been a slogan of "Trade, not aid." I happen to be in favor of that. Also, as the gentleman has pointed out, where aid is given we have argued that it should be loans and not grants. In order to deal with this intelligently we have to know what is being done in the private sector through trade. We have to know what is being done in the area of loans and we certainly have to know what is being done in the area of grants.

Mr. ADAIR. I would like to say to the gentleman, this is a point which has

been discussed many times around the committee table. There is a feeling among almost all members of the committee, that this broad program has been too much fragmented. Many of us feel it should be brought back together under the Committee on Foreign Affairs so that we could get the overall view to which the gentleman has just made reference. I think his is a very valid objection, and it is one which we are trying to correct.

Mr. CURTIS of Missouri. I appreciate that, but I took the floor of the House last time and previous to that and tried to point out the questions that I thought had to be answered, if we are going to deal with this program intelligently. I agree it should be under one committee, but it is not under one committee and, certainly, this committee ought at least to know what is being done in these other areas, otherwise it is meaningless.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield.

Mr. JUDD. Will not the gentleman agree that this is one of the reasons the committee voted in previous years to put at least the economic parts of this program under the Under Secretary of State for Economic Affairs as a coordinator, and that it put on the board of the Development Loan Fund the head of the Export-Import Bank and various other U.S. lending agencies in an effort to get the grant and the loan programs and the short-term and the long-term programs all put together so that we could have that kind of coordinated operation?

Mr. ADAIR. I certainly would agree with that. I repeat, as I said a few moments ago, to the gentleman from Missouri, that this is one of the things that has bothered us because of the difficulty of bringing all aspects of it together so that a complete and comprehensive look could be taken at all these related programs.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MORGAN. Mr. Chairman, I yield 10 minutes to the gentleman from New Jersey [Mr. GALLAGHER].

Mr. GALLAGHER. Mr. Chairman, at the outset I would like to pay tribute to our distinguished chairman for his untiring work and preparation and listening to the various witnesses and in the conduct of our hearings as well as for his patient understanding of all of the members of our committee on both sides including the minority group who filed their report after a patient review of all the facts involved. All of us are certainly aware of the fact that we do live in an age of challenge and an age of tragedy, and, perhaps, an age equally affording of opportunity. We find our world today subject to two magnetic poles of political persuasion—one of the Communist way of life and, the other the way of democracy and freedom. Caught between these two polls of political peruasion are more than a billion people, lost and bewildered, trying to find their own way.

Soon there will be over 100 countries in the United Nations. They are in various stages of political development. Some are basically primitive, but each is conscious enough and desirous of world peace and understanding to send a delegate to the United Nations as a symbol of international status. This consciousness is coupled with an awareness of the political facts of life. Each is seeking a better way of life for its citizens and each is drawn by the magnetic pull of democracy on one hand and the lure of communism on the other. The former offers a slower means to a higher standard of living and productivity, but with freedom. The latter promises the revolutionary progress of the Soviet Union and China at the expense of freedom.

Some of their struggles are new and some are old. Here today, as we open debate and consideration for this mutual security bill, we serve notice on all that we are aware of their struggles, that we are aware of our position of leadership and we are desirous of extending the hand of friendship to all who seek freedom.

Leadership incurs obligations and responsibility. The greatest responsibility that we have is not only to face squarely the ominous hulking threat of communism but, even more important, to face squarely the need to protect freedom for no other reason than the cause of freedom.

And so in this bill we serve a twofold purpose. We maintain our strength to discourage Communist adventurers seeking cheap conquests. But more than that, we serve notice that we recorgnize the old struggles and the new; in the ancient civilizations of Asia and in the new societies of Africa. We demonstrate a willingness to help those less fortunate as we offer our hand of assistance to the underdeveloped nations and underprivileged peoples.

We have an opportunity by passage of this bill to say to all that we seek nothing in the world except to help others enjoy not only the blessing of freedom, but the fruits of freedom.

Our understanding and desire to assist others has made America the greatest Nation in history. It is not our military might, but our ideals that have given us this greatness. By affirmative action on this vital legislation, we shall insure that, on the graph of history, that the 1960's will show the United States still on the ascendency.

In this unrelenting war to stem the threats of communism and thus secure our own freedom and that of other free nations, there is no second place. The decision as to whether freedom or slavery shall prevail, rests not with the Soviet. This decision rests within ourselves.

There is no shortcut to victory in open conflict or in cold war. To gain and to keep our place in the sun has taken the sacrifice of life and treasure in two great wars.

To maintain our position requires further sacrifice, fortunately not in blood or life. This cannot be done with any promise of a reduction in taxes. Continued requirements for expenditures of money is not an appealing subject for anyone in public office to advocate, but this is a matter so grave that we fail in our duty if we approach it with less than a realistic and mature determination. If we do not, and should we allow ourselves to be fooled into a feeling of self-serving complacency, we may find that the leadership has passed from the United States, and with it has passed man's right to be free.

These, then, are the stakes, not a demagogic, impossible promise of a reduction of taxation if this bill is defeated, but a renewed faith in our system and ourselves to remain free by acting responsibly and maturely by voting for the passage of the mutual security program.

Mrs. BOLTON. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. JACKSON].

Mr. JACKSON. Mr. Chairman, at this time I should like to pay my respects to the distinguished chairman of the Committee on Foreign Affairs and to those who have so ably handled this measure on the minority side. I have had the privilege of serving with a number of chairmen during my tenure in the House. I would say, in all fairness and in all honesty, that never have I served with one of greater understanding, who is fairer, or who conducts the committee with greater dedication to the common purpose. I have lived with the Mutual Security Act for 10 years, since its original inception in the 80th Congress. I have known that there have been imperfections in the program in many cases. I have realized that there has been at times a waste of money, but on balance it has appeared to me that during the course of these 10 years the investment we have made in the future of a world has been an investment well made.

As the gentleman who preceded me so well said, we live in an uncertain world of uncertain peoples at the present time. Furthermore, we expect to live in that world for many years to come. This great conflict between a free world and slave may not be resolved during our lifetime. There are emerging on the world today new nations which must necessarily span that great space of time between the oxcart and the missile within a period of a few months or a few years.

For them to emerge into the colonalism of the Soviets from the old colonialism to which their peoples objected would, in my opinion, be one of the great tragedies of our day.

I appreciate the sincere and honest conviction of those who oppose the measure and who have very succinctly set forth their viewpoints in the minority report. I know they are no less dedicated to a world at peace, to a world in which our system will prove to be the system by which the destiny of many peoples will be achieved, but in this instance I cannot go as far as they do in their disagreements.

My great concern, Mr. Chairman, has been whether or not the things we have done as a nation, the physical and financial resources we have poured forth without stint, have actually made a lasting and a deep impression upon those people we were trying to assist; and until last year this remained in my mind a great question mark. Then the President of the United States took an un-

precedented journey. He went into many lands where we have spent our resources. The outpouring of men and women, many of whom in rags lining by the hundred of thousands the routes which he traversed caused me to stop for a moment and think, and to believe for the first time that what we have tried to do has reached the people we were trying to help. The same routes which the President followed had been traveled or were subsequently traveled by Mr. Khrushchev, and in spite of all the promises of delivery of assistance by the Soviets to these people—and in some few instances, to be perfectly honest, the delivery of some material supplies—there was no point along their respective trails where the President of the United States did not receive a warmhearted welcome from these millions of people upon whom we have lavished our largesse to the end that they might in time with our assistance achieve some measure of the things which we all consider to have been responsible for the growth of our great Nation.

Mr. Chairman, I support the bill.

Mr. MORGAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Ohio [Mr. FEIGHAN].

Mr. FEIGHAN. Mr. Chairman, under the 5-minute rule I intend to offer an amendment to provide that no assistance authorized in the bill shall be given to Yugoslavia. The approval of my amendment will stop the use of U.S. funds to further the cause of the international Communist conspiracy.

In the debates on foreign aid in the past, I presented ample evidence concerning the Communist government of Yugoslavia to demonstrate that it was by no means pursuing a policy of national independence or defying and fighting Moscow, the center of the Communist world conspiracy, or that it was in any considerable way and manner helping the United States in the pursuit of a foregin policy of freedom. On the contrary, all the material presented pointed to two basic conclusions: first, that Communist Yugoslavia was part of the Communist world conspiracy, and second, that assistance of any kind to that country was against the best interests of the United States.

It is not a matter of debate but a matter of incontrovertible fact that in the past 12 months the Communists have not changed their basic objectives, nor has their attitude undergone any favorable development in the sense of a compromise with the free world. On the contrary, the Communists, encouraged by their successes, have pressed their offensive in all areas of the world. Adhering to their basic law that the Marxist-Leninist teachings are only a "guide to action" for the conquest of the world, they have used the most diverse weapons to promote that offensive. The slogans of peace and coexistence, visits by leading officials, cultural exchange programs, subversive propaganda, and training of hundreds and thousands of young people at Communist schools for subversion and revolution—all these and many more methods have been used in various parts of the world according to the conditions prevailing in the areas where they were operating. It is thus of the greatest importance to realize the main lines of the Communist world strategy and to take the proper steps to defeat Communist purposes, and to safeguard the national interests of the United States, as well as to promote the cause of freedom.

Let us first establish what are the basic traits of our foreign policy as formulated by our responsible representatives. The Mutual Security Act states explicitly that its purpose is "to advance the cause of freedom." It also states that "peace in the world increasingly depends on wider recognition of the dignity and interdependence of men; and that the survival of free institutions in the United States can best be assured in a worldwide atmosphere of expanded freedom." It finally states that "the Congress recognizes that the peace of the world and the security of the United States are endangered so long as international communism and the nations it controls continue by threat of military action, by the use of economic pressure, and by internal subversion, or other means to attempt to bring under their domination peoples now free and independent and continue to deny the rights of freedom and self-government to peoples and nations once free but now subject to such domination."

The Mutual Security Act also lists 10 general conditions which various countries have to fulfill in order to be eligible to receive assistance from the United States. Besides it states three specific conditions concerning Yugoslavia:

> The President shall continuously assure himself (1) that Yugoslavia continues to maintain its independence, (2) that Yugoslavia is not participating in any policy or program for the Communist conquest of the world, and (3) that the furnishing of such assistance is in the interest of the national security of the United States.

It is my considered opinion, based on the examination of the foreign policy of Communist Yugoslavia, that Tito's regime has failed to fulfill any of the general or specific requirements for receiving U.S. aid.

Yugoslavia does not pursue an independent policy. The Croatian Communist leader, Vladimir Bakaric, stated on April 7, 1959:

> We are Communists and will behave like Communists. We contend that around the banner of socialism wider circles and greater parts of mankind are rallying. These forces are checking the might of imperialism and we must find ways to strengthen them and help them.

According to Bakaric the struggle of the Communists in Yugoslavia was "the best contribution to the strengthening of the international Communist movement and the victory of communism in the world."

At the celebration of the 40th anniversary of the Communist Party of Yugoslavia on April 19, 1959, Tito declared:

> Yugoslavia has been and remained a component part of the world movement toward socialism, it has * * * become one of the active factors in the modern development of the international workers movement and the anti-imperialist forces in general.
>
> We Yugoslav Communists consider that the further development of the international situation will follow * * * the line of growth in all countries of those forces which will carry the historical development in the direction of the strengthening of socialism on a world scale.
>
> We are justifiably proud of our glorious past and our present activity in the building of socialism in our country, and also of the contribution which we are giving to the development of socialism in the world.

On May 6, 1959, the First Vice President of Communist Yugoslavia, Edvard Kardelj, analyzed the differences between the Yugoslav Communists and other Communist regimes, and stressed that they were only an expression of the present phase of Socialist development and not any national specific trait of Yugoslavia. He stressed that the Yugoslav Communists were not nationalists nor had they opposed one dogma by another dogma. He stated:

> We are not against what in the Socialist camp is socialistic, what in it strengthens Socialist solidarity, but we are only against some elements of concrete policy * * * against some tactical forms in the international policy of socialism * * * which in our opinion do not contribute to the full and adequate affirmation of socialism which would correspond to its actual present strength. We are steadfast not only in the building of socialism but in the defense of the principles of Socialist solidarity.

Those basic conceptions are also expressed by the Yugoslav Communist press which consider Communist Yugoslavia as "part of the global world striving toward socialism"—Politika, Belgrade Daily of July 2, 1959.

Communist Yugoslavia has regularly and regardless of its diplomatic relations with the Soviet Union, celebrated with utmost devotion and enthusiasm the Bolshevik revolution in Russia of 1917. This was emphatically so in 1959. Jovan Veselinov, President of the Peoples Parliament of Serbia, declared on October 25:

> The Communist movement in Yugoslavia from its inception to the present day was and has remained a component part of the international workers movement and all progressive forces in the world.
>
> In our struggle for national liberation and revolution our warriors and our peoples fought for their independence and a new Yugoslavia. But in the course of all that military struggle they felt like soldiers of the international workers movement. On our military caps was and remain the five-pointed star, symbol of the international proletariat. Beside our national banners above the heads of our fighters also flew the red banner under which workers have been fighting in all countries since the beginning of the modern workers movement. We sang our new national anthem, but even more rang in our mountains and liberated towns the hymn of the proletariat, the "International." On our banners was written the battlecry of the Communist manifesto: "Proletarians of all countries unite."
>
> All this characterizes in the best possible manner the true sense and the ultimate aims of our revolution.

Edvard Kardelj, the chief theoretician of the Communist Party of Yugoslavia

and of the Communist regime of Yugoslavia, was also very explicit in his presentation of Communist motives for promoting "peace":

Socialism doesn't need Bonapartistic wars. The speed with which its forces will develop will increase with the stability of peace and the relaxation of international tensions. * * * It is in this connection that it is understandable that we have given complete support to the recent initiative of the Soviet Premier Khrushchev for general disarmament. * * * We are deeply convinced of the imminence of the victory of socialism in the whole world.

The Yugoslav Communists, far from being an enemy of the Soviet Union, are constantly endeavoring to stress the importance of the Bolshevik revolution and their solidarity with the Bolsheviks. The leading Belgrade daily Politika glorified the Bolshevik revolution in its editorial of November 7, 1959. After stressing that the Soviet Union "is not what it once was" and that Asia "is not what it once was" and that Africa "is not what it once was," it turns to the free world:

The mightiest capitalist countries also are not what they once were. The crisis becomes deeper, the changes more significant, more frequent, and more inevitable. The strength of socialism is not only in the numerical, material, and military strength of the countries in which revolutionary changes have taken place. The idea of socialism has long ago crossed those limits, regardless of whether they are built of mere material might or of dogmatic schemes which put their trust in power, or rely on it. That is why the ideas of the great October are stronger than the greatest difficulties.

October, as every revolution * * * required sacrifices, but measured by its ideals it was the most humane revolution in the history of mankind. True to the historic ideals of October, Yugoslav revolutionary socialism remains faithful to the universal striving of the workingman who sees in the victory of socialism the full victory of the noblest ideals of human equality and freedom.

Regarding the relations between Communist Yugoslavia and the Soviet Union, Tito declared on October 14, 1959:

With the Soviet Union * * * our relations are good and we wish that they become the best possible. In foreign policy there are few questions in which we differ or disagree. On all main questions we agree and we have always welcomed the actions of Comrade Khrushchev which had the character of the struggle for peace and the policy of active coexistence. We shall support all actions of the Soviet Union which pertain to disarmament and the relaxation of international tension generally speaking.

During the utterly ruthless and inhuman aggression of Red China in Tibet, the Yugoslav Communists forgot all about national independence and self-determination and stressed "the fact that Tibet is Chinese territory and that all that happens on that territory comes under the competence of the Chinese state and sovereignty." The Yugoslav Communists also celebrated the 10th anniversary of the advent of the Communist power in China. They stressed its "huge historical importance." The Communist revolution had "dealt a mighty blow to imperialism, facilitated the anticolonial struggle of the peoples and enormously strengthened the forces of socialism on a world scale." The "carrier and organizer of the peoples actions and victories was the Communist Party of China. Yugoslavia, a Socialist country always approached with the greatest respect the Chinese Revolution and its successes."—Politika, October 1, 1959.

It is highly regrettable, if not tragic, that the free world and especially the United States has failed to take notice of the activities of Communist Yugoslavia in Africa, and the substantial contribution which it is making to the advance of Communist imperialism on that continent.

Yugoslavia took upon itself to credit industrial projects in Ethiopia in the amount of 10 million American dollars. It is no secret that that money came straight from the pockets of American taxpayers. Incidentally, Communist Yugoslavia gave the same sum to Indonesia.

In the course of the last 12 months the Yugoslav Communists have developed in Africa so much activity that it would take volumes to describe them. But they have not even tried to conceal the nature of their activities. As for instance the editorial "The Voice of Africa"—Politika, February 4, 1960—clearly demonstrates, the Yugoslav Communist attitude follows to the letter the precepts of Lenin and Stalin in regard to the undeveloped and "colonial" countries. The Yugoslav Communists never tire stressing the similarity between the "liberating processes" in Africa and the "liberating struggle of the Yugoslav peoples"—Politika, February 4, 1960. The Yugoslav Communists have been very active in Liberia, Sierra Leone, Guinea, Ghana, Nigeria, the Sudan. The purpose of all their contacts was clearly expressed in the Yugoslav press commenting on the independence of the Cameroon:

When Yugoslav leaders and delegations go to west Africa to attend the celebration of the independence of the Cameroon and to visit some African independent states, then it is not only simple courtesy. And it is not courtesy when many African delegations visit Yugoslavia. * * * There is in it deeper sense and symbolism.

Finally, when we consider the attitude of Communist Yugoslavia toward the United States, the developments of the last 12 months only confirm the constant line of their foreign policy, which is to accept whatever assistance they can get from us, but side on all issues with the Soviet Union and the forces hostile to the United States. For instance, the Yugoslav Communist press has consistently praised the regime of Fidel Castro in Cuba and blamed the United States for all the difficulties. According to the Yugoslav press Castro was a man completely dedicated to the best interests of the people of Cuba, while America was only concerned about its material interests. According to Politika, November 8, 1959:

America is a rich and mighty power which shudders at the thought that something is changing in the world. America has been obsessed by efforts to maintain the status quo. Motivated only by its material interests the United States has opposed the ideals for which it once fought and upon which it was founded.

I must regretfully come to the conclusion that our policy of assisting the Communist regime of Yugoslavia is based on arguments, assertions, and claims which are devoid of any factual basis and fly in the face of the basic elements of Yugoslav foreign policy.

For that reason I am firmly convinced that by giving assistance to Communist Yugoslavia we would be aiding and abetting the Communist world conspiracy which is trying to destroy our country, and we would be serving the vile aims and purposes of the Soviet Union, Red China and all Communists.

In the House on June 15 of last year, I set forth an analysis of the activities of Tito and the Yugoslav Communist Party which proves conclusively that Tito is not only wholeheartedly participating in the world conspiracy of international communism, but is doing everything within his power to bring about the victory of world communism to which he is dedicated.

Under unanimous consent granted, my remarks on the floor of the House June 15, 1959, follow:

Mr. FEIGHAN. Mr. Chairman, in the foreign-aid bill which is now before us, there is a provision which would allow the continuation of military and economic aid to the Communist regime of Yugoslavia. This is an issue which disturbs many Members of Congress. On the one hand we are compelled to spend billions of dollars for an adequate national defense, along with additional billions of dollars in foreign aid, all because of the threat to our survival caused by the conspiracy of communism. On the other hand, Congress now finds itself in the contradictory position of being asked to authorize public funds for the strengthening of Tito and his Communist regime in Yugoslavia.

Since its beginning in 1948 I have been a strong supporter of the foreign-aid program. I did so because of my conviction that we serve our own best interests when we assist free and friendly governments to become strong enough to resist internal Communist subversion and militarily prepared to stand up to armed Communist aggression. In the spirit of seeking to preserve a foreign-aid program which would further these original purposes I have engaged in extensive research on the question of where Tito and his regime stand in relation to the international Communist conspiracy which is headed by the Russian imperialists. In this work I have had the assistance of other Americans who have made firsthand studies of Titoism and have personally observed the present Yugoslav scene. Linguists have assisted in the translation of numerous documents and speeches from Russian, Serbian, Slovene, and Croatian into English.

A year ago I presented to the House the results of that study, which many Members of Congress found interesting and edifying.

In the year which has elapsed, Tito's policy has remained the same and our policy toward Tito has—unfortunately—remained the same. Since that policy is based on an indefensible attitude of ignoring the basic facts of the Tito case and since that policy is harming our national interests, I would like to present here again the main findings of the study of a year ago, which have been brought up to date by the most important facts and developments from May 1958 to June 1959.

WHAT IS TITO'S POLICY?

In the course of the last 12 months the promoters of Tito and Titoism as an allegedly "different," better, "democratic," and "independent" brand of communism have pursued with undiminished fervor and disregard for facts, their nefarious work. The best answer to that unrelenting campaign of glorification of a ruthless Communist is to confront it with the incontrovertible facts of Tito's political record of the last few years, which are these:

First, the reconciliation between Moscow and Tito in May–June 1955 during Khrushchev's and Bulganin's visit to Tito took place only after Tito did a unique service to the cause of Communist imperialism by carrying to Asia the message of different, independent, and national communism in 1952–53 and 1954–55. In the course of that campaign Tito openly and repeatedly whitewashed the new Russian leaders, Khrushchev and Bulganin, from all Stalinist crimes and proclaimed them different, well-meaning, peace-loving coexistentialists. It was only after that and on the ground of such services rendered to Communist imperialism, that the Russian leaders came to Belgrade to apologize to Tito and to acknowledge Communist Yugoslavia's right to a separate road to socialism.

Second, during the visit of the late Secretary of State Dulles to Yugoslavia in November 1955, Tito took a stand on the question of Moscow's European satellites diametrically opposed to the U.S. stand. Our position was that they deserved complete freedom from Moscow's domination. Tito's position was identical with Moscow's stand: That the satellites were already free and independent under communism.

Third. At the 20th Congress of the Communist Party of the Soviet Union in February 1956, Khrushchev not only pronounced his violent denunciation of Stalin, but also enunciated three important new points of doctrine: First, that war between Communist and Capitalist countries was not inevitable; second, that the downfall of capitalism, and the victory of socialism were not necessarily to be achieved through violence; third, that various roads and forms of transition to socialism were to be generally recognized for all countries. The important point for our analysis is that those three sensational innovations were neither invented by Moscow alone, nor imposed by Tito, but a result of common Russian-Yugoslav efforts and theoretical work achieved through a number of contributions, such as by Bebler, 1949; Seleznev, 1951; Piyade, 1952; Stalin, 1952; and Molotov, 1956; to name only a few.

Fourth. In June 1956 Tito visited the Soviet Union and sealed his reconciliation with Moscow with new, unequivocal and most emphatic expressions of Communist solidarity. He said that the Yugoslav Communists had never failed in their international Communist duties and obligations; he called the Russian Communists brothers-in-arms and he declared that Communist Yugoslavia and the Soviet Union would march shoulder to shoulder in time of war as in time of peace toward the same goal, the goal of the victory of socialism.

Fifth. On his way back to Yugoslavia, Tito stopped in Bucharest and in an interview with Western newspapermen declared that it was improper to use the term "satellite" when referring to Moscow's colonies in central Europe since the Rumanians were self-governing people.

Sixth. In September and October 1956 Khrushchev and Tito, after a series of airplane flights from the Soviet Union to Yugoslavia and from Yugoslavia to the Crimea, and consultations with a great many European Communists, agreed upon a common plan for the promotion of independent communism. The plan was tried first in Poland, with temporary success, since Gomulka, a ruthless, veteran Communist, was posed as a Polish nationalist and champion of Polish independence. In Hungary the experiment failed, since both Khrushchev and Tito heavily miscalculated with Gero and Kadar, neither of these men could be built into nationalists or Titos because of the open contempt which the Hungarian people had for them.

Seventh. Khrushchev intervened with the brutal use of Russian military might to put down the Hungarian freedom revolution. At that time, Tito spoke of Stalinist mistakes, praised Khrushchev as an anti-Stalinist and justified the Russian intervention, which had, as he said, "saved Hungary for socialism." As for Kadar, Tito said that he was "that which is most honest in Hungary." Everyone knows that Kadar is one of the most detested Russian stooges in Hungary.

Eighth. In January 1957, after Khrushchev had twice in the course of 2 weeks hailed Stalin as a model Communist, a delegation of Yugoslav Communists visited Poland and praised the two Russian-Yugoslav declarations—Belgrade, 1955, and Moscow, 1956—as important and basic, and condemned Western imperialists for what they claimed were attempts to sow dissension in the ranks of the international workers' movement and disrupt it.

Ninth. In February 1958 the Yugoslav press joined Marshal Zhukov and the Russian press in denunciation of President Eisenhower's Middle East doctrine as what they considered an expression of imperialist and colonial concepts and at the same time ridiculed any talk of a danger of Communist aggression in that area.

Tenth. At approximately the same time Tito and Khrushchev executed a strategic maneuver of the joint Russian-Yugoslav agreement. Yugoslavia inquired in Washington whether the United States was going to supply them with more jet planes or not. Then Moscow started criticizing some very subtle point of Yugoslavia's allegedly national communism to show that Russian-Yugoslav relations were strained. Then the Yugoslav Ambassador in Moscow brought Tito a personal message from Khrushchev suggesting that it would be better to discontinue all open polemics and settle all questions amicably within the Communist hierarchy. The prearranged message was received with great enthusiasm by Tito. After that, Tito's friends in the free world, particularly in Washington, could argue that it was obviously necessary to give jets to Tito to prevent his reconciliation with Khrushchev. Other Western supporters of Tito frantically called for help to Tito, claiming that the Russian-Yugoslav relations were as strained as in 1948 and the West should help Tito maintain his independence.

Eleventh. The Yugoslav press unanimously denounced as imperialistic America's membership in the military committee of the Baghdad Pact, in March 1957.

Twelfth. After realizing that his hopes of visiting the United States as a guest of the U.S. Government were finally shattered by the public outcry against it in the United States, Tito declared that Yugoslavia could not possibly pursue a unilateral policy. He then proclaimed:

"We must have good relations with the eastern countries regardless of some minor differences of ideological character."

Thirteenth. Shortly after Khrushchev had prophesied that our grandchildren would live in a Socialist United States, Tito declared that he had come "to the deep conviction that any sharpening of issues between Yugoslavia and the Soviet Union was completely senseless. It is impossible not to have good relations with those countries which are closest to us." He accused some people and newspapers in the West of attempting to put Yugoslavia on bad terms with the Soviet Union. Tito set the record straight again in the following statement:

"But we have no reason to have bad relations with them. * * * We are bound by the same goal; socialism. * * * Therefore, when they achieve successes, we should rejoice; as well as they should rejoice when we progress. Consequently, there is no reason for any conflict."

Fourteenth. To some visitors from Germany—end of June 1957—Tito said about Stalin that he was "crafty and dangerous, but a great man."

Fifteenth. In August 1957, after Tito had allegedly in his CBS–TV interview—June 30, 1957—sided with Red China and taken exception to some statements of Khrushchev, the Soviet Union granted Tito $250 million in credit to be used for the construction of an aluminum factory, a hydroelectric plant and a fertilizer factory. At the same time Tito took sterner measures against Western newspapermen accused of slanting their news from Yugoslavia against what he called Socialist democratic order.

Sixteenth. On August 3, 1957, Tito met with Khrushchev in Rumania and concluded an agreement on the basic problems of the international situation. They reconfirmed their joint resolutions of 1955 and 1956 as the basis for the further development of their mutual relations as well as the relations of all Socialist countries and they reached full understanding on concrete forms of cooperation between the two Communist Parties.

Seventeenth. In August 1957 the Yugoslav press accused the United States of violating the Korean truce agreement, while completely exonerating the North Koreans and Communist Chinese, both of whom had been condemned as aggressors by action of the United Nations.

Tito welcomed Ho Chi Minh, an old comintern agent who is now Russian proconsul in North Vietnam, to Yugoslavia and agreed with him on the necessity of discontinuing all nuclear tests. Some Western observers thought they had detected a serious conflict between Moscow and Tito, in the literary and artistic sphere.

The Yugoslav press, which a few months before had greeted Mao Tse-tung's slogan in favor of the blooming of all flowers and schools of thought, defended his ruthless extermination of the Red Chinese regime's enemies as a necessary measure of self-criticism.

Eighteenth. In September Gomulka, Cyrankiewicz, Rapacki, and Ochab, the leaders of the Communist Party of Poland met with Tito, Kardelj, Rankovic, and Vukmanovic, the leaders of so-called independent Yugoslavia. But instead of demonstrating anti-Russian defiance, which the free press had expected, they stressed their fundamental ideological identity on the basis of socialism and proletarian internationalism, very aptly defined as the Communist term for accepting Russian leadership and following all political directives given by the Soviet Union and the Soviet Communist Party, according to the New York Times, December 9, 1957. Gomulka emphasized Communist dominated Poland's solidarity with the Soviet Union, "the first and mightiest Socialist country," as well as with Red China. He also said since Poland and Yugoslavia were building socialism according to their specific conditions this made them members of the great Socialist family. Polish-Yugoslav cooperation was thus cleared up as a contribution to the strengthening of the Communist movement in the world. Gomulka stated his opposition to the forces of colonialism which he claimed were interfering in the affairs of countries of the Socialist bloc.

Tito wholeheartedly responded:

"We know what we want and we are doing our best to realize it. * * * We are Communists—we collaborate with the Soviet Union.

When we speak of separate roads to socialism, that should not be taken literally, i.e., in the sense that we have a separate road in every respect, in all things. We have many things in common. All of us have the revolutionary inspiration from the great October revolution, which gave us the elements upon which we built what we have today. We are led by the principles of Marxism-Leninism. Today we must do everything which is in accordance with our internationalist obligations."

Tito stressed the great contribution of the Soviet Union to the success of socialism in the world and added that he did not see in general among all Socialist countries any elements which would stand in the way of constructive Socialist cooperation. Tito then explicitly shattered the Western illusion of Polish and Yugoslav national communism, when he said:

"I wish, comrades, that Poland and Yugoslavia—which are much criticized for practicing some national communism, which I consider nonsense—ought to show that they have no use for any national communism."

After endorsing all the main points of Soviet foreign policy—ban of thermonuclear weapons, division of Germany, recognition of the Oder Neisse Polish border, Soviet stand on the Middle East, admission of Red China to the U.N., a status quo—Tito ridiculed those who had expected that a meeting of Polish and Yugoslav Communists would lead to a weakening of the Communist world movement. On the contrary, he said, those two countries had the duty to work for the closest possible cooperation between all Socialist countries and moreover the "active coexistence between countries and peoples with different social systems was profitable to the further development of socialism."

Finally, he proclaimed that former or future Russian-Yugoslav dissensions should not be dramatized, relations between Socialist countries should be such as to give mighty impetus toward creating confidence in the Soviet Union in the whole world.

Nineteenth. On September 20 the Belgrade daily Politika, organ of the Communist Party, published an article which Tito had written for the Foreign Affairs magazine—October issue. In this article, Tito first assailed the lack of confidence with which every move of the Russian leaders was met in the West. He put the blame on the West for the present uneasy international situation which he claimed was characterized by "encirclement, war threats, and aggressive attempts to isolate the Soviet Union."

The NATO has no justification, according to this Tito article. It is a matter of growing distrust and deepening rift between the East and the West. As for the Warsaw Pact, it was of a purely defensive nature and it would cease to exist as soon as NATO was disbanded.

As for the Middle East, Tito assailed free countries for what he called the "policy of interference in the internal affairs of the Arab countries," and particularly the Eisenhower doctrine. Tito added:

"I consider that the present policy of the colonial powers toward the peoples of Africa and Asia is wrong and that it represents a latent danger for war conflicts."

After pleading for the admission of Red China in the U.N., Tito tackled the most delicate question of Communist Yugoslavia's position in the world:

"In the West the question is often asked and various answers are suggested regarding where Yugoslavia stands and where it will stand. The reason for such guesswork lies in the fact that Yugoslavia is a Socialist country, that it is building socialism. Therefore, people in the West think her goal is the same as the goal of the Soviet Union and other countries of the East. Yes, it is true that our goal is the same."

Twentieth. In October, Tito's Communist regime recognized the satellite regime of East Germany and on October 19 Western Germany broke diplomatic relations with Tito. By this act Tito gave additional evidence of his firm adherence to the Moscow line.

Twenty-first. The recognition of East Germany by Tito was the last straw to break the patience of Tito's friends in the free world, who now warned him in very solemn terms that, unless he pulled himself together, he would certainly lose the support, military, if not economic, of the free world. So, a few days after Yugoslavia's recognition of East Germany it was announced that Tito would not go to Moscow to attend the celebration of the 40th anniversary of the Bolshevik revolution.

Twenty-second. While Tito's friends and supporters did their best to convince public opinion of the free world that once again great tensions had developed between Moscow and Communist Yugoslavia, Kardelj, the first Vice President of Communist Yugoslavia, and the head of the official Yugoslav delegation to the Russian celebrations of the 40th anniversary of the Bolshevik revolution, spoke Tito's mind in Moscow. He said:

"Together with you (Russians) we are building relations of friendship and cooperation, based on the great idea of proletarian internationalism. * * * The Yugoslav Communists are delighted at every success of the Soviet peoples, because their victory means a gain for socialism in the whole world."

Rankovic, Tito's chief of the secret police, made similar speeches, stressing the "indissoluble links between our revolution and the great October revolution."

Twenty-third. The celebrations of the 40th anniversary of the Bolshevik revolution comprised, among other activities, a meeting of the heads of all Communist countries, November 14–16, 1957, and a meeting of the representatives of all Communist Parties in the world, November 16–19, 1957. From the first a declaration was issued, which the Yugoslav delegation did not sign. From the second a peace manifesto was issued, which Yugoslavia signed, along with the representatives of 63 other Communist Parties.

Tito's refusal to go to Moscow and his refusal to sign the Moscow declaration were used in an effort to impose on public opinion of the free world the idea that the Russian-Yugoslav relations were constantly burdened by heavy tensions and basic disagreements. Such an interpretation can by no stretch of imagination stand the test of the pertinent facts of the matter.

As far as the declaration is concerned, Tito himself declared in an interview with Mr. Sulzberger of the New York Times—February 28, 1957, published on March 6, 1957—that Yugoslavia refused to sign that document not because of disagreement, but because the document could not contribute to the lessening of world tensions and especially because Yugoslavia was directly involved in some points. At the same time Tito declared that Yugoslavia's refusal to sign that document was nothing tragic and that Yugoslav-Russian cooperation would not suffer because of that.

The Moscow declaration does not contain anything that could possibly cause any serious disagreement between Yugoslavia and the Russians. On the contrary, the declaration contained all the theoretical points evoked jointly and solemnly proclaimed by Moscow and Tito ever since 1955. It spoke of the "tremendous growth of the forces of socialism" in the world. It attacked the U.S. so-called positions of strength policy; it stressed "complete equality, respect for territorial integrity, state independence, and sovereignty, and noninterference" in the relations between Socialist states; it stressed the solidarity of all Communist countries, pursuing Marxist-Leninist international policy and "combining internationalism with patriotism;" it especially pointed to the necessity of applying the "principles of communism in keeping with the specific features" of every country.

Moreover, it reiterated and developed the basic thesis of the 20th congress of the Communist Party of the Soviet Union in a manner which was clearly recognizable in the draft of the new program of the Communist Party of Yugoslavia presented at its 7th congress in April 1958, with accent on the two basic points, first, that socialism had made such progress in the world that in the future the Socialist revolution could be achieved by peaceful means and state power could be won without civil war; second, preparing for any eventuality, the declaration emphasized the old Leninist thesis that the use of violence depended ultimately not on the Communists but on its enemies. If the reactionary circles capitulated, violence would be unnecessary. If they fought back, the transition from capitalism to socialism would be nonpeaceful.

From this development it is now clear that the main document coming out of the Moscow celebrations was not the declaration, but the peace manifesto, which endorsed every major foreign policy proposal of the Soviet Union (New York Times, Nov. 23, 1957). While based on the same premises as the declaration the peace manifesto was sharper and more aggressive. It hailed the fact that the land of the Soviets is no longer alone and isolated and praised its relentless struggle for peace, especially in view of the warmongering attitude of the Western ruling circles which were "under pressure by monopolies, especially those of the United States." This is the document Tito agreed to and which was signed by the Yugoslav Communists.

Twenty-fourth. Only a few days later, Kliment Voroshilov, President of the Soviet Union, sent a congratulatory telegram to Tito, on the 14th anniversary of the Communist takeover of Yugoslavia, in which he spoke of the "brotherly cooperation between our countries based on unity of aims."

Twenty-fifth. In his New Year's message of 1958 Tito declared that "some colonial powers cannot accept the idea that the time of colonialism has passed." Tito thus associates himself in the Russian propaganda campaign to smear the Western powers as colonial and imperialists. He condemned the American reaction to the sputniks. He stated that while the whole world took them simply as a great contribution to the scientific progress of mankind, the United States saw in them a war challenge which required military countermeasures.

Finally he denounced the NATO Conference for concerning itself with military matter instead of what he regards as peace.

Twenty-sixth. On January 18, 1958, the French military authorities seized off the coast of Oran a 150-ton Yugoslav shipment of arms to the Algerian rebels.

Twenty-seventh. One week later Tito, speaking at the Congress of the People's Youth of Yugoslavia, denied that Yugoslavia was smuggling arms, but at the same time declared that "as Communists, the Communist leaders at Yugoslavia sympathize with all the colonial people who want to be masters on their own soil."

Twenty-eighth. The newly elected president of Tito's Communist youth movement made this pronouncement:

"I especially want to emphasize for our comrades from the Arab countries, our comrades from Indonesia, our comrades from India, our comrades from various parts of the globe who are fighting for their national independence, who are fighting against colonialism, that the People's Youth of Yugoslavia will always stand with them."

Twenty-ninth. The Yugoslav press played up the 10th anniversary of the Russian sub-

jugation of Czechoslovakia with this theme, "Socialist Yugoslavia always rejoiced at the successes of the peoples of Czechoslovakia in the struggle for socialism."

Thirtieth. Tito's interview with Mr. Sulzberger of the New York Times is certainly one of the most edifying exposures of Communist Yugoslavia, in which Tito mercilessly shattered all the premises of western Titoism. He proclaimed the military value of the vaunted Balkan pact as reduced to zero, he said that Yugoslavia felt threatened by the creation of U.S. missile bases in Italy, he explained Yugoslavia's recognition of East Germany as a natural consequence of the Yugoslav policy of coexistence. He said that it was impossible for any country today to be neutral. As for national communism, he declared: "I must say that there is no national communism. Yugoslavia Communists are also internationalists. The whole thing is that various countries which are building socialism have different conditions under which the new system is being built. That does not mean that the systems are different, but only that there are differences in the roads which lead to the same Socialist system. As far as our international obligations as Communists are concerned, I must say the Communists of Yugoslavia have never failed to fulfill them."

As for Stalin, Tito declared:

"Of course, I met and admired Stalin. * * * I still esteem some of his qualities."

Thirty-first. In his so-called electoral speech of March 16, 1957, Tito praised the Communist method of electing representatives as truly democratic, whereas the method of the West was the opposite, since there, "the people, the voters, have no part in determining who will be their candidate."

He was full of sympathy for the colonial peoples. He branded the attitude of the United States on the events in Indonesia as warmongering and hypocritical. As for the summit conference, he entirely approved of the Russian strategy, and blamed the West for sabotaging their efforts.

He announced that Russian-Yugoslav relations were good and were developing very well, and the same applied in general to the relations with all Communist countries.

Thirty-second. When Tito, after allegedly struggling with many difficulties and very sensitive problems of his supposedly strained relations with Moscow, addressed the Seventh Congress of the Communist Party of Yugoslavia on April 22, the first thing which he chose to emphasize was that the idea of a crusade against communism was only the work of imperialist aims and colonial subjugation. It was the West which was responsible for the creation of military blocs, which was its answer to the "victory of the Chinese revolution" and to Stalin's inflexible policy. He claimed that the Soviet Union underwent radical changes which exerted a strong influence on the relaxation of international tensions. He then pointed out that as a consequence Russian-Yugoslav relations were closer because the important thing was that "between us there is more confidence; that we understand each other; that there exists a friendly and sincere exchange of opinions and experiences on the basis of which broad cooperation is developing."

Tito rejected criticisms to the effect that the Yugoslav Communists were not internationalists by stressing that internationalism did not depend on some formal adherence or words and propaganda, but on the building of socialism in domestic policy and of practicing Marxism-Leninism in international relations. Speaking of the rift with the Russians in 1948, Tito made the very important and revealing statement that the Russian stand created in the world doubts as to the correctness of the policy of a country "that throughout this whole period was a beacon to the international workers' movement." Because of this he said "the revolutionary blade was blunted" and the enemies of socialism, "the international reactionaries," exploited this Communist predicament to the utmost.

Tito praised the work of the 20th Congress of the Communist Party of the Soviet Union, which, together with the Belgrade and Moscow declarations, renewed the confidence in the Socialist forces of the world. Tito also revealed the essence of the new Communist strategy of soft, different communism by explaining that the new line of the 20th congress and the 1955 and 1956 joint resolutions did not represent a weakening of the Socialist world, "but precisely its opposite—this makes possible the mobilization of all the forces of socialism."

Thirty-third. On the occasion of the 41st anniversary of the Bolshevik revolution in Russia, the Yugoslav Communists were especially cordial in their congratulations and wishes for "new successes in the building of socialism." While some Western newspapers wrote about the alleged seriousness of a new Moscow-Tito rift, the Yugoslav press praised in glowing terms the October revolution. Special prominence was given to Tito's words that "the 7th of November 1917 represents a historical turning point in the life of mankind. That date marks the beginning of the revolutionary process toward the Socialist transformation of the world."

Thirty-fourth. While western Titoists wrote eulogies on the democratic development of Communist Yugoslavia, Tito's regime nationalized, actually confiscated, all real estate in Yugoslavia—December 1958. According to an official spokesman:

"Our road is clear and it leads to socialism and therefore in Yugoslavia private property and private ownership must disappear."

Thirty-fifth. At the height of the concerted campaign of Moscow and Peiping against Tito, the periodical Kommunist, organ of the central committee of the CPY, wrote on January 14, 1959, that Yugoslavia would "continue to support positive diplomatic moves by the Kremlin despite the Soviet bloc campaign against the Tito government."

Thirty-sixth. The true character of Tito's regime was also revealed by the fact, established by the officially appointed Zellerbach Commission on Refugees, that Communist Yugoslavia was "the chief refugee-producing country in Europe today"—March 1959. In the last 2 years nearly 40,000 people escaped from Communist Yugoslavia. Does that indicate that the Yugoslav regime has the support of the people?

Thirty-seventh. In April 1959 the Soviet Communists sent congratulatory telegrams to their Yugoslav comrades, on the 40th anniversary of the founding of the CPY. The Yugoslav Communist leadership seized the occasion to suggest "constructive, comradely discussion," which would "aid the speedier solution of problems facing the international workers movement."

Thirty-eighth. During the celebrations of the 40th anniversary of the CPY, Tito stated that "after the CPSU—Communist Party of the Soviet Union—it was the CPY which most consistently fulfilled its revolutionary role."

"Yugoslavia was and is a component part of the world's movement toward socialism. We Yugoslav Communists consider that the further development of the international situation will follow the line of the growth in all countries of those forces which will carry the historical revolution toward the strengthening of socialism."

Thirty-ninth. The close contacts and coordination of efforts between Moscow and Tito have also been revealed, subtly but unmistakably, in all the recent talks about European economic integration. Khrushchev has on several occasions hinted at the need for a socialist federation which would encompass at least all Communist-ruled countries in Europe. During his recent trip to Albania he spoke of the creation of a "zone of peace" in the Balkans and the Mediterranean. His statements, though not quite precise and concrete, were obviously motivated—as all Soviet policy regarding Berlin, Germany, and Eastern Europe—by the desire of consolidating the existing Communist status quo in half of Europe. While Western observers failed to observe anything, Tito expressed his agreement with the zone-of-peace idea and Kardelj, in his interview with the French weekly, France-Observateur of April 9, 1959, denounced all non-Communist economic integration and strongly pleaded for a "world integration," based on a "program of struggle for socialism."

Fortieth. On May 5, 1959, Kardelj spoke before Yugoslavia's Peoples Front and made these significant remarks:

"The differences between us and some other ruling Communist parties are only the expression of the contradictions which are proper to the whole socialist development, i.e., which do not represent any 'national' specific trait of Yugoslavia.

"Differences have not arisen because we or others were nationalists or people with national limitations, or because we or others would oppose a dogma to another dogma.

"We are not against what in the socialist camp or bloc is socialistic, what keeps the socialist solidarity in it, but we are against some elements of concrete policy. * * * To refuse acceptance of such conception of the bloc does not mean to reject the socialist solidarity, much less to reject socialism itself. It only means that we reject some concrete concepts about the relations between socialist countries * * * because in our opinion, they do not contribute to the full and adequate affirmation of socialism which would correspond to its real present strength. We are consistent not only in the building of socialism but in the defense of the principle of socialist solidarity."

Forty-first. While Kardelj reaffirmed in unmistakable terms the full solidarity of Communist Yugoslavia with Moscow, Tito complained—May 22—about student demonstrations against the regime and declared that "there can be no democracy for those who are enemies of the process of further socialist development in our country."

The facts presented constitute sufficient evidence to support the following conclusions about Tito and where he stands in the international conspiracy of communism:

First. Since 1955, when Tito solemnly reconciled with Moscow, there have been no signs of estrangement or any major strains in Russian-Yugoslav relations. There have been some minor differences in views, but they have always been subordinated by both sides to the common political goal of spreading communism in the world. The Yugoslav Foreign Minister, Koca Popovic himself declared on April 25, 1958, that Russian-Yugoslav relations "need not be harmed" by those differences.

Second. The artificial creation of situations of tension between Russians and Yugoslavs has become a regular feature of the pattern of Russian-Yugoslav strategy for extracting U.S. dollars. Tito's "estrangement from Moscow" occurs each year just as Congress takes up the foreign aid bill.

Third. Yugoslav foreign policy has not undergone any noticeable change since 1955. Tito's statement of February 1955—upon his return from Asia—that "our polcy has never been different from what it is today" and that it was the same as "6, 7, and 8 years ago—nothing has changed"—is clearer today than it was 4 years ago.

Fourth. In the last few years Tito has worked out jointly with Moscow a new strategy, based on the lessons of the Stalin-Tito break of 1948 and adapted it to the new

opportunities which they have created for the spread of communism in the world.

Far from growing further apart ideologically and politically, Tito and Khrushchev have come closer together. Tito has on policy and in practice supported all the most important moves of Russian-Communist foreign policy.

Fifth. Conversely, and necessarily, Tito has constantly taken a stand against the basic principles and moves of the U.S. foreign policy.

Sixth. There can be no talk of any Yugoslav independent foreign policy under its Communist regime. As Tito himself admitted and explained, his foreign policy was only formally independent, but was actually thoroughly devoted to the promotion of precisely the same goal as the Russian foreign policy, supplementing it and spearheading it.

The clash betwen Stalin and Tito on the question of how the cause of communism could be promoted best, led both sides to examine their positions and smooth out their differences. Through combined efforts, Khrushchev and Tito devised a new strategy of equality, independence, noninterference, and separate roads to socialism. Although the hypocrisy of their deal was revealed in the case of the Hungarian revolution of 1956, it is still being used with great success to deceive the free world, to give plausible cover to Communist sympathizers to promote communism by criticizing it and thus promote the interests of Communist imperialism in the most efficient manner.

Seventh. Tito not only is wholeheartedly participating in the world conspiracy of international communism, but is playing a key role in it.

Mr. MORGAN. Mr. Chairman, I yield 20 minutes to the gentleman from Georgia [Mr. PILCHER].

Mr. ADAIR. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Sixty-nine Members are present, not a quorum.

The Clerk will call the roll.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 50]

Addonizio	Fisher	Morris, N. Mex.
Allen	Fogarty	Moulder
Andersen, Minn.	Ford	Multer
	Gavin	Norblad
Anderson, Mont.	Grant	O'Hara, Mich.
	Green, Oreg.	Powell
Auchincloss	Hargis	Prokop
Barden	Herlong	Reece, Tenn.
Barrett	Holifield	Rogers, Tex.
Bass, Tenn.	Horan	Rooney
Bonner	Jones, Ala.	St. George
Boykin	Kearns	Schwengel
Brock	Kelly	Shelley
Broomfield	Keogh	Sheppard
Brown, Mo.	Kilburn	Short
Buckley	King, Utah	Sisk
Burleson	Landrum	Smith, Miss.
Celler	McGinley	Spence
Coffin	McGovern	Springer
Cooley	Mack	Steed
Daddario	Madden	Taylor
Davis, Tenn.	Magnuson	Teague, Tex.
Dawson	Mailliard	Teller
Dent	Meader	Thompson, La.
Derounian	Merrow	Utt
Diggs	Metcalf	Willis
Durham	Mitchell	Withrow
Fallon	Montoya	Young
Fenton	Moorhead	Younger

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. TRIMBLE, Chairman pro tempore of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11510, and finding itself without a quorum, he had directed the roll to be called, when 344 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from Georgia [Mr. PILCHER] is recognized for 20 minutes.

Mr. PILCHER. Mr. Chairman, first, I want to commend our chairman, Dr. MORGAN, even though I disagree with his views on this bill, for giving me so much consideration, and especially for yielding me this time. He had only 2 hours and gave me 30 minutes out of that. He has not only been fair about this, but he has been fair to me at all times. He knows I am not particularly against this bill. If my vote would kill the bill this afternoon, I would not cast that vote. But I am against waste, extravagance, and corruption in some places that can be proven in this program. I am still one who believes that a country has to be strong economically as well as militarily. I think it is time we looked into our own economic affairs.

Our public debt is in the neighborhood of $290 billion. That is $45 billion greater than the total national debt of the entire world, including Soviet Russia. The interest alone on our national debt is fast approaching $1 billion a month. Our farm mortgages are increasing at the rate of approximately $1 billion a year. Our interest rates are continually going up. Some of the countries that we have put back on their feet are now discounting our currency. I do not believe that we can carry the ever-increasing load of the entire world.

The mutual security program was born as the Marshall plan after World War II. We were helping people in Western Europe who had banking and commerce experience, who had industrial know-how, people who did not need anything except to have their factories repaired and they would be back in business. It started with 700 or 800 employees, and at the height of the Marshall plan there were only 2,220 people employed. Today ICA, which administers the mutual security program, has 42,200 people on their payroll. It has gotten so large until it is even shaping our foreign policy in some places. It is one of the largest businesses in the world, and still we change managers every year or so. I think most of our mistakes can be traced to our own people instead of the foreign governments. Since it started, we have spent over $80 billion. We are building the ego of a good many of these little dictators over the world, but we are losing the little people and the masses. Korea is a fair example of this. Cuba is another example within 90 miles of our borders.

The Subcommittee on Foreign Economic Policy of the Foreign Affairs Committee, of which subcommittee I was chairman, traveled 42,000 miles and visited 22 countries on 6 continents. We rode as much as 150 miles a day in jeeps. We rode in taxicabs and helicopters and looked at good and bad projects—the gentlewoman from Illinois [Mrs. CHURCH], the gentleman from Minnesota [Mr. JUDD], the gentleman from Massachusetts [Mr. CURTIS], the gentleman from Delaware [Mr. McDOWELL], and the gentleman from Florida [Mr. FASCELL]. We worked 12 or 16 hours a day, 7 days a week. The gentlewoman from Illinois has more stamina than any person I have ever known. We were up at 6 o'clock every morning, and she was the first one out. I have seen her walk up the mountains in Korea, through the fields in India, and through the factories, and she never missed a single project.

Our first stop was in Tokyo. Japan is one of the most dynamic countries I ever saw. They are 50 percent above their prewar economy today. Their factories are running 24 hours a day, with one building going up right after another. People are well dressed. Everybody has a job. There is no unemployment. We have given Japan only $16,253,000 in economic aid, but we have given her $711,557,000 in military aid. Japan is able to carry her own load now. In fact, her economy is making it pretty tough on some of the industries in the United States at this time, and is going to continue to make it more so. The gap between the balance of trade of Japan and the United States is fast closing.

While in Japan we were told by our Embassy that in Korea, our next stop, we would have to pay our hotel bill in American money. One of the first foreign aid projects we had in Korea was to build the Bando Hotel and give it to the Republic of Korea. I advised the Ambassador that we had reams and reams of Korean money and that we were not going to pay in American money and would stay in Korea until they agreed to accept their currency. He advised me that only a week before, Secretary Dillon, while there, paid in American money. I contended that did not make any difference, that our committee was not going to pay in American money. The Embassy in Korea wired back that they would accept foreign currency in payment for the subcommittee, but that our military crew would have to pay in American money. I told him that the military people received only $12 per diem and that room rent at the Bando Hotel alone was $16 a day and we were all in one group and would not agree to anything except paying in Korean money. They agreed to accept this, and I am glad to state that they are now accepting their Korean currency for all our officials and committees.

Since this program started, through 1959, we have given Korea in economic aid $1,410,709,000, and in military aid, $1,291,947,000. As our subcommittee report shows, they have listed over 300 different projects in Korea. After arriving there, we were told that these had been cut up and they had over 600 projects going in Korea. Anybody with any reasoning at all knows that it is physically impossible to successfully carry out this many different kinds of projects in Korea. They have 25 or 30 different agricultural projects. Yet on the night of our briefing, when the entire staff of ICA was present, including their so-called farm experts, when I began to question them, they could not even tell

me the native grass of Korea. They could not tell us the type of cattle they were raising. On our way to the airport the next day, about 20 miles through an irrigation section we saw people working in the fields in groups of 50 or 60, but there was not a person who could tell me the kind of vegetables they were harvesting or what market they were sending them to.

Several years ago when Mr. Stassen was Director of ICA, he authorized the building of a fertilizer plant there at a cost of $16 million. When they got it started, they found out there was not a phosphate mine nor a sulphur mine within 5,000 miles of it; so it was changed into an urea plant. Urea is a form of nitrogen which has been in use for years, but this particular type of plant is very rare and there are very few in operation anywhere in the world. It will require the finest chemical engineers, electrical engineers, and mechanical engineers to operate such a plant. We have already spent approximately $50 million and they have not been able to start it up yet. I do not believe they can ever start it up until lots of the machinery comes out and a different type is put in.

There are several other large plants which have been converted since the original start and some that have never operated. This is the kind of waste I am opposed to. Now some will argue that all of this money has kept Korea from falling into the hands of the Communists. This is partly true, but the ROK Army on the 38th parallel is not the only reason the North Koreans do not come down. It is the American doughboy stationed down below the ROK Army and the North Korean knowledge that we will fight. The recent revolution and overthrow of the Government is ample proof that all is not well in Korea.

We went from Korea to Taiwan. The first thing we found was another large urea plant that we did not know anything about in Taiwan, which they had been trying to start up for 2 years. There is at least 50 percent of the equipment that has to come out. The Taiwan Government is now suing a New York concern, the same one that is building the plant in Korea, for $12 million.

We then went up through the mountains to look at a project that was headed, "Water Resources." They have already started a dam between two mountains that will be 512 feet high. It will have three 40,000 kilowatt turbines at the boot of it. It has 17 miles of 11-foot concrete and steel tunnels through the mountains at the top for highland irrigation. They claim it will cost $26 million. Any businessman with any knowledge of construction knows that before it is completed it will cost $150 million or more. Just realize that this project is larger than Boulder Dam. The ICA people say that we are not going to pay for much of this, that the Taiwan Government will finance it, but what difference does it make if we prime the pump in one part of the Taiwan economy in order that they can take the money out for a project like this? Are the taxpayers of America able to build such projects as this?

The small projects in most cases are doing a good job. The waste and extravagance is in the large projects. In Taiwan the Joint Committee on Rural Rehabilitation is doing a wonderful job. Some of the finest hogs I ever saw are being raised there and some of the prettiest farming I have seen anywhere in the world is being carried out in this project.

Lots of these programs have gone into the hands of big business, and I am sorry to say that some of our large colleges in this country are in the same category, with all kinds of research programs. I have never heard of as many different kinds of research. We found programs in Japan to teach the Japanese people industrial know-how, programs in Israel to teach the Jewish people business know-how. In Saigon one morning having breakfast, I counted 27 retired college presidents, teachers, retired business executives, all with briefcases under their arms, going out on some kind of a research project. Lots of these programs were such that we could have gotten the same information by mail.

From Taiwan we went to Saigon, Vietnam. Our total economic aid for Vietnam through fiscal year 1959 has been $964,638,000, with $496,265,000 in military aid. We were completely rebuffed on our arrival in Vietnam. It was because last year Mr. Colegrove, one of the Scripps-Howard reporters for the Washington News, had an article in the paper here that the foreign-aid program in Vietnam was a fiasco. After that they had Ambassador Durbrow and Mr. Gardiner, Director of the U.S. Operations Mission in Vietnam, and General Williams fly from Vietnam to Washington. We had hearings in our Far East Subcommittee, at which the gentleman from Wisconsin [Mr. ZABLOCKI], presided. Mr. ZABLOCKI tried every way humanly possible to have fair and unprejudiced hearings and get at the truth of Mr. Colegrove's statements. The ICA officials tried every way in the world to make Mr. Colegrove out a liar or hurt his reputation, but it turned out that Mr. Colegrove was one of the top reporters of the Scripps-Howard papers and had been with them for 18 years. Our study mission proved that everything Mr. Colegrove said about the highway program, the road program, and the water program was true.

Ten days before we arrived in Vietnam we had wired President Diem for an appointment. We had not gotten confirmation of this appointment when we arrived. No Vietnam officials were at the airport. Our Ambassador had a dinner for us, but President Diem refused to let any of his Cabinet or any of his executives attend the dinner. The next day, after some persuasion by General Williams and our Ambassador, he finally agreed to see the committee the last day we were there. Part of the committee went to see him. I refused to go. I said that to have to beg to see the President of any country that we had put a billion and a half dollars into was just out of my line.

Mr. Colegrove said the highway program in Vietnam was a fiasco. Thirty-two miles of this highway is equal to the Jersey Turnpike. The Saigon River Bridge is equal or superior to the Lincoln Memorial Bridge in Washington. The estimated cost of the highway is $1 million per kilometer. I give you below a completely documented history of the entire Vietnam highway program that one contractor on a cost-plus basis is doing the work on, and see if you do not agree with Mr. Colegrove:

Saigon-Bienhoa Highway: This project involves the construction of 32 kilometers of new road, two major bridges (the Saigon River Bridge, 983 meters including approach spans; the Dong Nzr River Bridge, 453 meters including approach spans), six intermediate bridge drainage structures, erosion control and traffic control facilities. The road is asphaltic concrete surfaced, 16 meters curb to curb, in the urban section, and 7.5 meters roadway width with 3-meter stabilized shoulders in the rural section. Approximately 12.5 kilometers of this highway are in swampy terrain lying close to sea level and require a heavy sand blanket to support the roadway. Drainage structures in this area are supported by concrete piles. The estimated cost per kilometer is $1 million. Sixty-one percent of this road is completed and overall completion is anticipated by 1961.

National Route 21, Bannethuot to Ninh Hoa: This project involves the rehabilitation and reconstruction of National Route 21, Bannethuot to Ninh Hoa, 152 kilometers, and the reconstruction of bridges, approaches, and inundated areas along National Route 1, Ninh Hoa to Nhatrang, 12 kilometers. This portion of the project includes the construction of 44 short span bridges and the installation of some 23,000 linear feet of concrete pipe culverts. The Route 1 portion includes also the construction of 15 bridges complete with new approaches and drainage. The roadway will be 6.75 meters surfaced width and 9 meters shoulder to shoulder. Surfacing is a double bituminous surface treatment.

Route 21 and Route 1 are expected to be completed in 1961.

National Route 19, Pleiku to Qui Nhom: This project involves the rehabilitation and reconstruction of National Route 19 from Pleiku to the intersection of Routes 1 and 19, near Binh Dinh, 151 kilometers, and National Route 1 from that intersection to the dock area of Qui Nhom, 16 kilometers. The Route 19 portion of this project includes the reconstruction of the 151 kilometers of road, the construction of 36 new bridges, and the installation of approximately 39,000 linear feet of concrete pipe culverts. The Route 1 portion of this project includes the reconstruction of 16 kilometers of road, the construction of nine new bridges, and drainage structures as required. Double bituminous surface treatment is planned for both of these routes. Overall completion is estimated for 1961.

National Route 14, Bannethuot to Pleiku: This project is being carried out by the Ministry of Public Works and involves the widening and improvement of existing National Route 14 between Bannethuot and Pleiku, 196 kilometers.

Equipment: More than $13 million worth of construction equipment has been imported in support of these U.S. sponsored highway projects, and for the Ministry of Public Works. This includes, besides shops and fixed plants and their equipment, hundreds of road-building machines and other pieces of movable equipment, such as tractors, power shovels, and other pieces of movable equipment. All this will be given to the Vietnam Government when the projects are completed.

Costs: The total cost of ICA dollar assistance for the highway project is presently estimated at $85 million. This figure includes the period extending to the end of fiscal year 1963 when U.S. dollar aid to the highway project is expected to be terminated. As of the end of fiscal year 1959, $48.4 million had been obligated, of which $25.1 million has been spent. Included in the $48.4 figure is $30.1 million for commodities and $17.8 million for contract services. In addition, a total of $35.6 million equivalent in counterpart funds has been obligated through fiscal year 1959.

When it was first proposed to reconstruct Route 1, a 250-mile stretch northward from Saigon, the Capital Engineering Corp. made the survey. On the basis of this survey, bids for the reconstruction of Route 1 were submitted to ICA Washington. Nine companies submitted bids with total costs ranging from $18 million to $45 million. Johnson, Drake & Piper, of Minneapolis and New York, was selected for a cost-plus-fixed-fee contract. The company's bid for actual costs was $14,752,606, plus $2,927,394 for direct material purchases, and an additional fee of $700,000. By the terms of the contract, Johnson, Drake & Piper furnished management and training of local personnel. On the other hand, the United States agreed to pay all costs, which included material, equipment, and salaries.

Before work on Route 1 was begun the original agreement was amended and it was agreed to rebuild the highway from Saigon to Bien Hoa only, and to include the construction of Routes 19 and 21. The engineers were of the opinion that hard surfacing of Route 21 was not needed and that a surface of rock, gravel, and soil was sufficient and would hold up with the usual maintenance. However, after the base of the road was completed, it deteriorated in the wet seasons by reason of the rains and in the dry seasons by the wind and dust. This experience brought about another change in plans—another $500,000 was spent for two layers of asphalt on the road.

As a result of all these changes in the highway program, what has happened to a modest $18.3 million highway project?

The total cost of the highway project is estimated to be $85 million, and may exceed $100 million before completion.

The Johnson, Drake & Piper Co. fee is now $800,000, and they are at present negotiating for a higher fee. As a matter of information, the fee is a net profit to the company and is above all costs to the project. The company undertakes no risks and makes no investments; the salaries of its employees are reimbursable by the U.S. Government, leaving a net profit of $800,000 or more for the company's dividends.

The bid of Johnson, Drake & Piper was unrealistic to begin with. Competency of the survey made by Capital Engineers for a project of this magnitude is questionable because of the fact that it, together with the report thereon to ICA, covered a period of only 60 days. Furthermore, the actual costs estimated by Capital Engineers were twice as much as the bid submitted by Johnson, Drake & Piper on the survey report. It is apparent that preliminary data to make a reasonable estimate of cost at the time of the survey was either not taken into account or was unavailable.

The study mission believes that more roads could have been built for this money. Comparison with road systems in neighboring countries provides ample proof of this fact. Furthermore, there is no traffic survey justifying the construction of this kind of road. Even if it is contended that this road system is for military use primarily, its scope and cost seems completely unrealistic.

ICA is contemplating the reconstruction of another road, not included in original and amendment plans, before the present projects have been completed. The sum of money to be expended has not been made public, but several more millions of dollars are anticipated.

Since this was written, they have acknowledged to the Appropriations Committee, including Public Law 480 funds, they have spent $129 million on the road program, besides the money we are giving the Vietnamese Army through defense support to build roads.

Mr. Colegrove said the radio program was a fiasco. When our officials were brought from Vietnam last year before our committee to discredit Mr. Colegrove's statement, they testified that the towers were up and in operation. This program was started 5 or 6 years ago and is something the Army Signal Corps could have completed in less than six months. At our briefing in Saigon we were informed that the towers were up and in operation. Mrs. CHURCH and I went out to the location with Mr. Gardiner, the ICA Director, and he began to count the towers. He said, "There they are—one, two, three, four, five, six." Then he could not find the seventh one. He said it must be behind the building, and I said, "Mr. Gardiner, that is a pretty high building." We went around and looked for the tower, but of course it was not there. He said it must be on the inside. We went inside and found a painter painting another tower. He said, "There it is." The painter said, "No; this one came in last week." Mr. Gardiner then said, "I am not a radio expert, but he is out here." We went on the outside and found a young man with an armful of blueprints, and after some questioning I said, "Son, how long have you been out here as an expert on the radio program?" He said, "Three weeks." Now the Administration Building is as large as this Chamber of the House of Representatives. It is completely full of cables, transformers, and all kinds of electronic equipment. You name it; they have it. We did not find one single connection made, and nothing is in operation. One section of the entire staff of our ICA people in Saigon is assigned to this radio program. We have spent several million dollars on it. If it is not a fiasco, what would you call it? Our committee said it was in a state of confusion.

Mr. Colegrove said the water program was a fiasco. Here is a complete history of it given in the following paragraphs. You can read them and see what you think.

Everyone agrees Saigon badly needs a new water system, but plans have bogged down in a heated dispute between two schools of thought. On one side is the International Water Corp. of Pittsburgh which believes in deep wells. It has done business in Saigon for 30 years and has drilled most of the city's wells. On the other side is the Hydro-Technique Corp. of New York which believes in dams and pipelines.

Our foreign aid authorities gave the Hydro-Technique Corp. a $200,000 contract for a survey 2 years ago. Hydro-Technique came up with a report favoring a dam and filtration plant on Dang Nai River near Bien Hoa, 18 miles north of Saigon. From this plant a 72-inch pipeline would lead to Saigon. The International Water Corp. made several surveys, all of which showed again that deep wells are quite adequate. What is more, the International Water Corp. said they would be much cheaper and provide water much sooner. The Hydro-Technique pipeline project is estimated to cost $19.5 million to be put in by the United States. The International claims it can give Saigon all the water it needs indefinitely for $12 to $14 million. The Vietnamese seem to favor the dam and pipeline system, but the military of both Vietnam and the United States have raised the question of security. It was at Bien Hoa that two American military advisers recently were killed when Red terrorists tossed a grenade into a movie audience.

It is pointed out that the 18-mile aboveground pipeline could be sabotaged and the already hard-pressed Vietnamese Armed Forces probably would have to furnish daily patrols, as well as guards for the river plant.

In November 1959 the Development Loan Fund approved a $19.5 million loan for the water system and called for another survey. Who gets the contract for this survey and what it will cost, we do not know.

It would not be fair to criticize the highway program, the radio program, and the water program, without stating that in Vietnam we found one of the finest agricultural programs I have ever seen anywhere. Up in the hill country, we visited an experiment station where several young American boys, graduates of agricultural colleges, were living in quonset huts along beside the Vietnamese. This experiment station would do credit to any station in this country. They had planted in experimental plots practically every agricultural crop, including cotton, corn, peanuts, potatoes, grains, all kinds of vegetables, and raefel. In addition to this, they were showing the hill people, who had been given five acres of land and a water buffalo, how to plant and cultivate in rows. These people also were doing a good job in their way and were very happy. The entire project has not cost as much money as one mile of the super highway. This kind of program is helping the little people to help themselves.

We went from Saigon, Vietnam, to the Philippines. Here it was evident that the death of President Magsaysay was a great blow to the Philippine people. His efforts to build the country and his dedication to the cause of good government had offered much promise for the Philippines. We arrived just before the elections and were startled and shocked to find an increase in lawlessness and corruption in the present government. The doorman at the hotel was armed, and we were advised that it would not be safe for us to go downtown at night. Right in the middle of our large naval base, the Philippines have a small boat repair dock. It does not cover over 2 or 3 acres of land. Three years ago they offered it to us for $1 million. Two years ago they wanted $2 million. They now want $3 million. Yet just across the bay we are building for them some of the finest and most modern docks in the world. Why could we not have done a little horse trading and secured the small plot of land in the middle of our large naval base that could some day be very important to us, according to our own Admiral Carson? Since 1950 we have spent approximately one-half billion dollars in the Philippines.

From the Philippines we went to Sydney, Australia, to visit several homes built for Dutch settlers in Sydney. The building of these homes is the result of a $3 million loan from the Development Loan Fund to the Netherlands Government at 4 percent. (Our Government is paying 5 percent.) These homes were supposed to be refugee homes, and we expected to find something similar to our low-rental housing units in the United States, but instead we found two- and three-bedroom brick homes with tile roofs and concrete runways, all with carports. These homes are being sold to Dutch settlers by cooperatives and Australian banks for 20 percent down and 27 years to pay at 5 percent. This loan does not meet the eligibility standards set up for the Development Loan Fund, requiring that loans from Development Loan Fund should be made to underdeveloped countries. The economic condition of both the Netherlands Government and the Australian Government is as good or better than that of the United States.

In India, I do not believe there is enough money in the world to change it overnight, on account of so many different cults and religious beliefs. In Calcutta there are 300,000 men, women, and children who sleep in the streets every night. The children have to resort to being little scavengers, picking up parcels of grain even behind the animals. A certain number die each night and are carted outside the city next morning and burned. Old Delhi is just about as bad.

(1) Grain elevator in India: The study mission had an opportunity to visit Hapur where modern grain elevators have been constructed. The total cost of constructing this modern storage of food grains, with metal buildings and elevators, 20 silos and a huge warehouse, is approximately $600,000, about $415,000 of which was expended by the United States.

A project agreement was signed in 1954 to assist the Government of India in exploring the advantages of new types of construction for the storage of grain. Two 10,000-ton silos, complete with grain elevators, and 50 prefabricated metal storage buildings were to be provided from U.S. project funds at two locations within the country.

In April 1956 the International Cooperation Administration obligated $4 million for the procurement of 500 additional prefabricated storage buildings, and also planned to contribute an additional $3 million in 1957. These plans were made although the project for the 50 buildings was not progressing. When this condition was recognized the sums were deobligated and the $4 million was transferred to another project.

The study mission is concerned with the magnitude of this program and the apparent lack of adequate planning. The grain elevators at Hapur are larger and better equipped than many in the United States, as well as more costly to build than many of comparable size. There was no food grain in the elevator, and there is very little prospect that there will ever be any need for such a mammoth construction. If the same amount of money had been used for constructing smaller elevators in the country, there is the likelihood that more people would be employed and more mouths fed. Large central storage elevators are not the answer for India in view of the small amount of grain grown in comparison to the population, since there is very little, if any, surplus accumulated.

Agricultural college and community development project, India: This is the project which the President visited on his trip to the Far East last fall.

Those members of the study mission who, on previous trips to the area, had found great hope and, in fact, major satisfaction in the projected expansion of the community development plan must confess to a sense of bitter disappointment over what appears to be a change in direction of the program and lack of evidence of sufficient expansion. Although time did not permit a detailed and expanded study of these projects in many sections of India, the members of the study mission feel constrained to express their concern over reports brought to them that the development of the program has not justified earlier hopes. The study mission was further discouraged by the conditions found in a "model village" chosen for their inspection as representing a community development project for the training of local employees to teach the people of the community proper health and sanitation methods. In neither agricultural expansion nor in sanitary provision did the village typify progress. In riding around the "model village," adjacent to the agricultural center, the study mission noted several torn-up tractors. Not 1 acre of tilled soil nor 1 acre of a growing crop was found nor were there any signs of recent crops. Favorable mention should be made of the small school and the native teacher, however. There was little indication that agricultural training had increased the food supply, nor was there any indication by the appearance of the people, and particularly of the children, that any agricultural improvement had led to adequate feeding or that sanitary training had produced ample results. Although the study mission realizes perfectly that it can base no cumulative judgment on one example, it seems significant that this particular village was chosen as a model to be shown to us.

Some reference was made to the fact that the community development plan had swerved away from its original purpose of helping local underdeveloped communities learn self-improvement through their own efforts, which would increase their self-respect as well as their sense of capacity; and that more emphasis had been put in recent years on rural sociology. The study mission would certainly recommend, if this be the case, as seemed indicated, that a return should be made to the more simple and more successful program of "helping little people to help themselves." At this time, the study mission would make the further observation that there seems to be inherent folly in the creation of the wide gap that will persist for years between the grandiose top level and extravagant projects, from which no benefits would dribble down to the people within their lifetime, and that sad, drab level of humanity such as witnessed in Calcutta, where life consists only of a scramble for a seed of grain to appease insatiable hunger.

In Karachi, Pakistan, we found a new Embassy building that covered practically a city block that is still under construction even though the capital of the Government, 2 years ago, was moved to Rawal Pindi, 700 miles from Karachi, where we will have to construct still another Embassy building.

In Laos, a country where it is hard to find one with over a sixth-grade education, one member of the committee found a school which had 16 individual class booths with complete tape-recording system, with a master control up in front, for teaching language. They had 16 people in these individual booths. It would take them 3 months to learn to run the equipment. The tape recorders cost about $400 each, and they had 16. The master panel was as big as a switchboard in an industrial plant and cost ten or fifteen or may be twenty thousand dollars. Probably the only three places in the United States that teach foreign languages this way are Yale, Colorado, and Georgetown. You can find waste and extravagance like this in every country we visited.

Now Mr. Speaker, according to the Department's own figures, we have $4,700 million in the pipeline. This year's request is $4,175 million. In addition to this, they will have $1,500 million from the sale of surplus agricultural commodities. This year this figure amounted to $1,567 million. In addition to that, the taxpayers of America contributed in 1960 to international organizations $144,707,208. This gives them access to $10,500 million. Now in all fairness to ourselves and the other countries and to the American taxpayer, don't you think this bill could be cut at least one and a half billion dollars?

Mrs. BOLTON. Mr. Chairman, I yield 20 minutes to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, I am happy to have the chance to follow my distinguished friend, the gentleman from Georgia [Mr. PILCHER]. He has pointed out one side of the picture, a side which has been true in a greater degree in the past than it is now, and his remarks I hope will help us further to improve the situation. But I must make one or two comments about the specific instances that he mentioned, and then try to get the whole picture in larger focus.

For example, let me refer to a report I made to the House in 1956, when a study mission came back from a previous trip to the same areas in Asia. I am so sorry that the gentleman from Georgia could not have been on one of those earlier trips, for example, to Vietnam, in 1953 and 1955, because if he had seen the country then, he would have found this time that the program there with all its shortcomings has accomplished one of the greatest and most unbelievable miracles in all history. Maybe the doctors did almost everything wrong and wasted some of the blood transfusions; but they saved the patient's life—the patient whom almost nobody gave any hope of survival as late as 1955. He saw the bad features. I, too, saw them and deplore them. We saw the failure of some crash programs that were put into operation in an emergency. Maybe if we had had then all of the safeguards that we now have in the Mutual Security Act and in this bill the bad projects would not have been started—but, very possibly also, the patient would be dead. This is the main point that we need to keep in mind.

Here is what I said on the floor of this House in the debate on the mutual security bill 4 years ago.

In many countries we are doing too many things. And we are trying to do them too fast. * * * In countries that are hanging on by a thread, why not simplify the pro-

gram to the 10 or 15 life-or-death essentials? If the country makes it for 5 years, then we can go ahead with more elaborate developments. The immediate need is the basic programs. Too much beyond them only scatters our efforts, complicates our operations and confuses the people.

In a minority report which I submitted after my trip with the gentleman from Georgia [Mr. PILCHER] last year, I quoted this earlier statement and added:

There is little evidence that much heed was given to such advice. Yet I believe events have demonstrated its soundness.

I have been disappointed at the emphasis in many places on the big and spectacular, with too little emphasis on the smaller and simpler projects, closer to the people.

Mr. Chairman, the gentleman from Georgia made a very eloquent speech on behalf of the kind of simpler program that missionaries working in rural areas learned many, many decades ago is the most effective. For 10 years I lived in the interior of China where I was the only physician at one time for about 17 million people. I could perhaps have gone to Shanghai or Peiping or other larger centers, but I preferred to work out in the grassroots areas because I believed rural areas are the best place and way to bring better health and better education and better agriculture and greater confidence and hope to the people of a relatively undeveloped country.

Too often the earlier ICA programs were like big superstructures without the necessary sound and solid foundations.

But the few bad projects discussed today were almost all started back in 1955, 1956 or1957. They represent some of the wreckage of the beginning years, but no such ill-considered projects have been approved and started in recent years, since those countries got on their feet a little and were not in such urgent dangers from within and without.

Each year our committee has adopted additional measures or refinements designed to correct demonstrated deficiencies. We hope the amendments in the present bill will further tighten up and improve the methods by which ICA carries on its operations.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield.

Mr. HAYS. The gentleman has stated there has been bad administration. The committee has made recommendations which the gentleman says he is disappointed to see no attention was paid to. How are we going to ever make these people do what the Congress wants them to do? Does the gentleman have any idea?

Mr. JUDD. Yes. For example, the provision we adopted a couple of years ago, section 517, requiring that they not embark on a new project above $100,000 without thorough and careful engineering and technical studies ahead of time with cost estimates and financial plans. These can be followed out better where there are stable governments. Sometimes in the earlier years when a government was hanging on the edge of disaster, they had to do things more quickly and with less study.

Mr. HAYS. I appreciate what the gentleman says about 517, because that was my original amendment.

Mr. JUDD. That is right and it has proved sound.

Mr. HAYS. I have long advocated that the Congress set up a watchdog group in the Committee on Foreign Affairs to see that they do follow 517. I believe that is the only way we will ever get them to do it.

Mr. JUDD. The gentleman knows that I also am in support of that proposal. May I add that we set up in the Marshall plan legislation in 1948, a joint House and Senate watchdog committee to do that very thing. I must admit that very few of the members on that committee ever read the reports regularly and completely. They were all too busy. How can there be a real watchdog committee of the Congress if the Members are so busy that they do not have a chance to study the reports in detail, day in and day out? A watchdog committee would not unearth all the situations that should be unearthed, but it would expose more of them, and earlier, than has been the case heretofore. I have long felt that our committee ought to have a larger staff, especially of investigators. We do not have a fraction of the staff that the Committee on Government Operations properly has. Those who make policies in this field should have a staff large and good enough to be able to point out to us where the policies that we formulate are not being followed. I have advocated that for years, but, in part because of space limitations on the gallery floor where the Committee on Foreign Affairs is located, we have not developed such a staff.

Reluctantly I must take issue, and I wish I did not have to, with something which the gentleman from Georgia [Mr. PILCHER], my distinguished friend—and the longer you travel with him the more affection you have for him—said about the President of Vietnam, because I do not believe it should be left to stand in the RECORD unexplained. He said we were rebuffed in Saigon by the President of Vietnam, but he did not tell the whole story. The original rebuff was based on misinformation that had come to the President from the Washington newspaper our colleague mentioned. The news story went out from Washington that the Pilcher subcommittee, with all of our names given, was coming to Vietnam to investigate the Vietnamese Government; going to hold hearings there, take testimony under oath, and so on. What did the President do? He did what any self-respecting head of a government would do under such circumstances. He did not have a red carpet out to receive us. Four members of his Cabinet had already accepted invitations to come to a dinner to be given by our Ambassador. The acceptances were withdrawn.

Now, suppose the London Times came out with a story that a Royal Commission of the British Government was coming to Washington to investigate and hold hearings here on actions of the U.S. Government or the Congress of the United States. There would be high dudgeon in our country and I doubt that our President or the Congress would send a welcoming party.

The President of Vietnam told our Ambassador it would be improper for him to entertain a committee that was going to investigate his government, because that would obviously look as if he were trying to influence that committee in his favor. Was that not a normal and proper reaction?

As soon as it was made clear to the President that the news story was inaccurate, that we were merely one of the regular subcommittees of the Foreign Affairs Committee that go around the world observing all these various projects every year when Congress is not in session, that we were not going to hold hearings on the Vietnamese Government, but were primarily concerned in studying the operations there of our own agency, ICA, it set things in the proper light; and I must say I never knew any Chief of State to do so much to correct a situation when it developed that the facts were not as the newspapers had reported them. He did three special things.

The first was to have a general fly some hundred miles to be where we were going to be the next morning, in order to receive us with an honor guard, and have our chairman review that guard, which our Embassy said was the biggest honor guard it had ever seen turned out for any visiting dignitaries to Vietnam.

Second, the four Cabinet members who had withdrawn their acceptances to the Embassy dinner, called to reaccept. Furthermore, he indicated that since we seemed to be particularly interested in agriculture, he would like to send a fifth Cabinet member also, the Minister of Agriculture. Any Asian would understand this as a gesture of special significance.

Then the President went still further. He sent word that he would like to have us call on him at any time most convenient to us on the following day, and to talk with him as long as we wanted to. Imagine the President of a country giving a group of visiting Congressmen control of his entire day. I do not know how any one could be more gracious. The original action was quite correct in my opinion, on the basis of the information he had, from an American newspaper. When he found the information was inaccurate, he apologized. I must say I thought we Americans ought to be equally gracious and accept the apology.

You have heard about the radio towers, and what a fiasco they turned out to be. But there is more to the story. When the Government of Vietnam first asked for the towers, the idea was to set up a shortwave broadcasting system that would blanket the whole of southeast Asia. President Diem felt that he ought to alert all its peoples to the Communist menace as he had come to know it firsthand. But when it became clear that this was not necessary, and that not many in that area had shortwave sets with which to hear, and

that his first job was to get his own country under control, he realized Vietnam did not need a broadcasting station of that size or character, so the plan was canceled, after the towers had been received. It was turned down as a mistaken concept. Does anyone contend that he and ICA should have gone through with it just because it had been started—adding still more waste? But we must keep our eyes on the main fact. Despite some waste and unwise efforts, the program overall is succeeding in what it was designed to do. It has succeeded thus far in every single country where we have given this kind of aid. Not one of them has gone behind the Iron Curtain and without this aid, nobody can deny that a great many of them would have been completely lost already.

This, however, is not the thing I wanted to talk about today. I am sorry for the diversion.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to the gentlewoman from Illinois.

Mrs. CHURCH. I would say to the gentleman that I have had the pleasure of making several trips with him, two around the world and one to the Far East. I would not take issue with all that the gentleman has said about the value of this aid but I certainly could not agree that the President of South Vietnam apologized and I certainly would not agree that in the years since 1955, the radio towers could not have been used for a smaller but vital radio project. But I am not going to enter into an argument with the gentleman. During our recent trip, a great deal of criticism developed about certain specific projects that the gentleman viewed. I wonder if he would not tell us a word or two about those projects, particularly the one in Laos, that some of us have not had the privilege of seeing.

Mr. JUDD. I think I know the one the gentlewoman has in mind, and I will describe it, but I must still emphasize that there have been 20 good projects to 1 such bad project.

This is one that made me sick. The amount of money involved was not great, but the principle was inexcusable. When Laos got its independence in 1955, it did not have a currency of its own, it did not have a bank, it did not have a mile of surfaced road, it did not have anyone experienced in foreign trade, it did not have a budget, it did not have any tax system. The French had supported the whole of the armed forces and the police force. Then the French moved out. The country faced almost the most impossible task ever taken on by any people, and wholly unprepared for it.

I may say that the State Department, as the gentlemen from Wisconsin [Mr. ZABLOCKI] will testify, came before our subcommittee on the Far East and said: "We do not know whether the prospects are good enough to justfy an effort to save it or not." Buy if you look at the map, you see that Laos is almost as long as the State of Minnesota, pushing down between Vietnam on one side and Burma and Thailand on the other side. If Laos goes down the whole of southeast Asia soon collapses. We said we thought we had to make an effort. So we tried. Actually, it is astonishing how much progress has been made. Some waste and mistakes were inevitable. But how explain one like this? I wanted to visit a teachers training school in the capital, Vientiane, that we had visited in 1953. There was not a school in the country above the 6th grade, and in that little school we had watched youngsters of 16 or 17 years, just out of the 6th grade, being trained to go out and teach other children up to the 6th grade. I wanted to see it now and to find out how much it had progressed. Well, they are setting up a new teachers' training institute, as we had recommended in 1955 that they do. They have one building already built. The American in charge was very proud of it. It is sensibly built. When he showed me the various classrooms, we came to a classroom with about 40 individual armchairs in it. There were two others like it.

I had seen another school in a Buddhist temple that the Lao were operating themselves. They had tables like you find at picnic places along the highway, with a top of plain boards and then boards on either side to sit on. That is all they ever had at home, except when they sit on their haunches. What more elaborate was needed for Lao right out of the villages?

In these classrooms, believe it or not, they had the best student chairs I have ever seen. I got through college with old wooden seats with an arm on the side on which to take notes, and most of you did the same. But these were the latest model expensive individual chairs from Grand Rapids, Mich. They were made of high grade wood with walnut-finished veneer. They had an adjustable back, the arm was supported by a stainless steel shank and was adjustable so that it could swing around or be moved up and down.

Now, the only way you can get goods to Laos is to ship them by boat to Bangkok, Thailand, and then over a rickety railway some 400 miles to Vientiane. It costs, as I recall, about $16 a ton freight to get it to Vientiane after it arrives in Bangkok. There is plenty of wood and cheap labor in Laos. Why should anyone send to Grand Rapids, Mich., to get study chairs for students in Laos, that I do not think are surpassed or equaled in a dozen colleges in the United States, pay all that freight on it, and accustom students to using equipment so unlike anything they have ever known, or will have again in their own environment? Why buy unnecessary foreign things that they are not used to, and make them less likely to want to go back to their villages and help their own people? Who asked for such chairs, I do not know. Who approved such a request, I do not know. It is small, but it is significant. I condemn such things as unqualifiedly as anybody can.

But I am not going to let anything draw my focus of attention away from the main things in this program. We are in a war for survival and we have to keep these countries going, if possible; give them greater capacity to defend their independence. Without this program, most of them do not have a chance.

So this debate today, Mr. Chairman, is not about whether we are to continue the mutual security program. We have got to carry it on. Our whole defense posture is based on the bases and the armed forces around the world, some 4.5 million soldiers, that the program makes possible. It is not this or something better. It is this or nothing. The question is not whether; the question is how—how to make the program more effective and how much is necessary.

I think it has improved enormously in certain areas and in some respects. I was disappointed in other areas that not enough improvement has taken place.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to the gentleman from North Carolina.

Mr. JONAS. Will the gentleman give us some examples of the good projects? We have heard a lot of criticism.

Mr. JUDD. Yes; let me give one. The gentleman from Georgia [Mr. PILCHER] spoke of the Joint Commission on Rural Reconstruction—JCRR—in China. I am proud of that, because I was the author of it in title IV of the Marshall Plan Act of 1948. There were three important things in the name itself. First, it is a joint commission. There are three Chinese appointed by the Chinese President and two Americans appointed by the American President. The Chairman is a Chinese. They work things out together. They have to proceed at a place that the Chinese members believe is acceptable and understandable by their people.

They know their own people better than we do. Our members contribute some things which the Chinese members cannot; they contribute some that we cannot. In these 10 years there has never been a single issue on which there was a major split between the three Chinese on one side and the two Americans on the other. Sometimes the two American experts did not agree as to the proper course to follow; and sometimes the Chinese disagreed among themselves. It is a joint operation.

Second, it is rural. That is where 90 percent of the people are—in the country.

Third, it starts with reconstruction. They were demoralized and their society shattered at the end of the war. You cannot go ahead with fancy improvements or reforms until you get a foundation rebuilt on which people feel reasonably at home and secure. They will grow from there.

The result is that after 10 years of work, at relatively little cost, Formosa has become the showcase in the Far East. More aid has gotten to the common people, and they appreciate it. Less has gone into extravagances. There is a smaller gap between the poor and the rich. There is great industry and pride among the people, almost pride in their austerity. They know they are doing a good job. They have self-confidence. They exported something like $50 million last year more than they

imported. And, if they did not have to maintain, with our approval, some 600,000 men in their armed forces, for the defense not only of Formosa but if necessary, of that whole part of the world, Formosa today would be a self-supporting garden spot. It has become in a few years the second largest producer of sugar in the world, second only to Cuba. There are little clinics in each of the approximately 300 counties, vaccinations against smallpox and other diseases, measures for elimination of rinderpest, control of hog cholera and other animal and plant diseases. Ninety-three percent of the youngsters are in school and good teachers are being trained for them. Fifty percent were illiterate only 10 years ago. This is the kind of pattern that has been outstandingly successful in every sense.

Mention was made of the Shihmen Dam. The Shihmen Dam, already half completed will produce about 80,000 kilowatts of electricity plus irrigation. Its benefit-to-cost ratio is 1.4 to 1. The gentleman from North Carolina is on the Appropriations Committee, and he knows how few of the many projects here at home for which we appropriate money have that high a benefit-to-cost ratio.

I agree that we Americans out there are just as we are at home. We like big things; we want to build monuments; we want enormous and fast development—at the top. Often we have not been willing to get down to the grass roots as we ought to, and as a result we do not go as fast at the top as we could. This is the kind of searching study that your committee tries to make. We want to accomplish more at less cost. The real way to save money is not to cut out the program but to cut the waste out of the program. The way to save is to make the program succeed. We will not be able to do it by cutting funds below the optimum needed. That would be to abandon the world and abandon ourselves. As it succeeds and countries are able to develop, the amount will be reduced, naturally.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to the gentleman from Louisiana.

Mr. PASSMAN. Is it not true that, in addition to the bill under consideration, there is $1,250 million outstanding from last year in an authorization to the Development Loan Fund? And is it not true also that the Foreign Affairs Committee and the Congress last year removed entirely the ceiling on the military assistance program? Therefore, in addition to the bill under consideration the budget is requesting $2.7 billion that heretofore was carried in this bill, which was authorized last year. So this could be the highest request received in recent years, if they use all of the authorizations that are outstanding. Is that a statement of fact?

Mr. JUDD. That is a statement of fact. And, I myself think that it was right and proper last year to change the policy whereby every year we voted an authorization for the military, and instead put our military assistance to other countries right into competition with appropriations for our own defense forces. Oftentimes Members would get up and say, "Of course the Pentagon favors military assistance to others as long as it is in addition to funds for our own forces. But if the funds for others should mean less for our own, then they will oppose funds for others. Put the two together and we will find out what they really think about the value of military assistance."

Let me read from page 18 of the report what Secretary of Defense Gates had to say on this:

> I know of no more forceful way to emphasize the essential role played by military assistance in assuring the security of this Nation than to cite this fact: Our Joint Chiefs of Staff have recently said, with complete unanimity, that they would not want $1 added to the defense budget for 1961 if that dollar had to come out of our recommended military assistance program.

Mr. PASSMAN. Mr. Chairman, if the gentleman will yield again, I wish to ask how could this be competitive when the Defense Department administers both programs? It is known that in many instances if the Defense Department overstocks, it disposes of the surplus material through the military assistance phase of the mutual security program. This is done at a price sometimes as much as 200 percent of the original cost, and provides, in effect, a new appropriation for the Department's own use.

Mr. JUDD. The gentleman has had a very great and vast experience with bureaucracies in this Government. The gentleman knows that the Pentagon bureaucracies will take all that they can for themselves, unless they genuinely believe that to get more for their own operations, their own forces, at the expense of foreign aid, would cripple seriously the overall defenses of the United States. When they put foreign aid on a par with funds for our own forces, I am certain that such foreign aid is giving us full value, and is not a waste or giveaway.

Mr. Chairman, I must say just a little, before I conclude, about what I originally intended to discuss. I had hoped to talk about facts and figures in this bill, but I did not get to them. Let me sketch the overall situation in which we find ourselves. Fifteen years ago, at the end of the war, there was chaos and disaster, poverty, and impending collapse in many parts of the world. We concentrated on Europe. That was understandable. It had the greatest potential power. Our ancestors came from there. It also was easier to do. We merely had to restore a wrecked industrial plant; they had the skills. So we started the Marshall plan for Europe and it succeeded.

How many at that time thought that Italy and Greece, Austria, and even France were going to be able to pull through? We put our minds and our resources to it, we developed a fundamentally sound program, although with a lot of waste, to be sure, and we succeeded.

During that period, we tried to disengage ourselves from even more difficult problems elsewhere. We said that we were not going to have any involvement in China. We withdrew our forces from Korea, inviting the attack we wanted to avoid. We did not make any effort to save Asia, comparable to the efforts in Europe. Then came the Korean attack. We recognized that the loss of Asia would be disastrous, even to our efforts in Europe. So, belatedly, 10 years ago, we started the same kind of program in Asia, adjusted to local conditions there. Well, we are succeeding there too. The corner has been turned in Asia. It is almost unbelievable, to people who have lived there in the past, to see those countries now. Almost without exception they are better off economically; they are better off militarily; they are better off politically. Some are not much more than holding their own and one or two, possibly, have gone back. But, by and large, that whole area, which was in mortal danger of being lost to the Communists, has been saved.

Let me use my hand as a rough map of Asia. China is the palm of the hand. It has 14 fingers, peninsulas and island groups, running out from it from Japan and Korea through Formosa, the Philippines, 6 countries in south Asia and 4 across the southern border of China; Burma, India, Pakistan, Afghanistan.

Mr. Lenin, almost 40 years ago, said that the way to Paris is through Peiping and Calcutta. The Communists did not forget.

Day before yesterday the baseball season opened. To get China for the Communists, was to get on first base. A man runs to first base—in order to get to second base. Second base is the 14 countries around China in which live one-third of the people of the world. That is what the Communists want, and what we must not let them get. China is a deficit country, except for manpower. Where are the great natural resources, the riches of Asia? In these southern peninsulas, where there are tin, oil, rubber, and rice surpluses. What else do they need? They need industry. There it is in the Japan finger. If, in addition to the Chinese manpower and central base, they can get the resources of southeast Asia and the industry of Japan, they will have the greatest potential industrial complex in the world.

What is our foreign policy in Asia trying to accomplish? It is trying to keep Red China from getting to second base. Of course we would like to pick off the man on first base too. Everybody tends to talk about and focus attention on Communist China. We cannot do much about that directly for the present. The main task is, do not let Red China get to second base. He will die on first base eventually, if we do not let him get to second base. The foreign aid program is what has enabled the second base countries to stay free all these years.

If communism gets to second base, does it stop? No; it drives for third base, the Middle East and Europe. And then it heads for home plate, which is, of course, the United States.

This is the overall setting in which we have to consider this program. It is complicated by the fact that since the war 33 new countries have come into being, through the Balkanization of old

empires. These countries are new. Their peoples for the most part are inexperienced in self-government. They do not have a sound or developed economy. They do not have trained defense forces. Illiteracy is high and annual income as low as $30 per capita. They do not have people trained to administer. We complain about bureaucrats here; but try to run a government without a handful of people who understand taxes, budgeting, and accounting. These 33 countries cannot make it without a lot of friendly advice and assistance, especially technical training and moral support.

In addition to the 33 new countries that have attained independence, 10 old, established countries have lost their independence; mature peoples, with magnificent histories, and traditions, have been absorbed into the Communist empire.

The problem consists, first, of the strength and the unity of the Communists. They know what they want. There is not the slightest evidence that they have deviated a single iota from their planned objective of getting control of the world by one method or another; perhaps I should say by one method and another. Second, is the weakness of all these new countries—mostly in Asia and Africa. And third, is the disunity and division among the older and stronger countries, mostly of the West.

Naturally, the strategy of the Communists is to subvert the weak and divide the strong. Naturally, our policy has to be, Do not let them divide the strong, and do not let them subvert the weak, if we can help it. If we can hold England and Germany and France and Italy and so on, together with Canada and ourselves, we can confront them with military strength that will deter aggression.

How can we keep them from subverting the weak? Help the weak become strong.

This is what the mutual security program is designed to do.

First. Do not let the Communists win any more victories—political, economic, diplomatic, military—that will make them stronger and make others lose faith and confidence in us so they are forced to come to terms with Communist China, for instance.

Second. Do not let them divide the strong, if we can keep their attention focused on essential things.

Third. Help the weak become strong.

Let us work as hard as we can to tighten up, to improve the administration of mutual security, as we have tried to do in the bills of the last 2 years, and as I think we have done in this bill. But, in the midst of the difficulties, do not forget that the program has succeeded thus far in what we set out to do: increase the capacity of people to maintain their own independence and to begin to improve the living conditions of their people.

It has saved us billions of dollars—net. Because without this program we would have had to increase our own Armed Forces to such greater proportions, if we want to live as free men, that it would make the cost of this program seem small by comparison.

It is, indeed, a heavy burden to appropriate $3 billion or $4 billion each year for mutual security, but without mutual security our burden would be far heavier. Our choice is not between this and something less costly, it is between this and something more costly. Knock this out or cripple it, and we shall have to increase enormously our own budget for arms here at home, plus American boys to carry and man the weapons.

Overall the program has been brilliantly successful these last 12 years. The patient is stronger fundamentally. Now we have to clean up those organs that have some TB, or cancer, or infection, or paralysis, or wasting away, here and there, so as to make the free world healthier and stronger, until the day comes when the urge of man to be free, within the Communist-dominated countries forces those regimes to make such concessions, or at least to keep so busy at home that they have to give up their dreams and plans of world domination.

Mr. MORGAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Florida [Mr. HALEY].

Mr. HALEY. Mr. Chairman, regardless of the fine speech that the gentleman has just finished I do not think the moneys we poured into the ratholes of Europe and Asia have ever done this country one bit of good. I think this is the poorest program the American people have ever been called upon to subsidize. I have never voted for it. The gentleman has not convinced me.

Mr. Chairman, I rise in opposition to this bill. While I am aware that we are going to again pass a measure approving the pouring of billions of dollars down the drainpipes of foreign nations, I am more confident than ever that when I oppose continuation of this program, I am speaking the will of the people of this country.

I do not believe that the people of the United States favor further extension of the foreign aid program. Certainly they do not favor extension of the authority of the Government to waste their hard-earned tax dollars in boondoggling projects in 73 nations around the world, with no indication that this country is deriving any tangible benefit in the way of what we call—hopefully and wishfully—mutual security.

The mail in my office, from the people of my district on the southwest coast of Florida and from people all over my State, shows that in heavy majority, they are not just unhappy about this foreign aid giveaway. They dislike it, and they want to be rid of it.

I believe that if it were possible to conduct a survey of the mail in the office of every Member of this body—yes—in the offices of Members of the other body also, this survey would show that it is the overwhelming sentiment of the people of the United States—the taxpayers of the United States—that we should abandon the program. I would doubt that there is a Member sitting here today, from whatever district he may come, whose mail on this subject indicates that his constituents favor the bill before us.

For that matter, I would doubt that there is a Member sitting in this House this afternoon who is himself satisfied with this bill, or with the program it will extend another year. I do not believe that even the most ardent proponents of continuation of foreign aid are satisfied in their hearts with the program as it exists today. I do not believe that the most sincere of my colleagues who favor a permanent foreign aid program believe that the present bill—authorizing extension of a hodgepodge and a mish-mash—in any way guarantees a program which can be of proven benefit to this country, or, for that matter, to the countries which receive this aid.

There is uneasiness in this Congress about this program. It is a justified uneasiness. It is not a whim from the blue. It is an uneasiness which reflects accurately the current of sentiment, I might even say tide of sentiment, which is sweeping strongly over our entire country, as our people—the people to whom we are responsible—realize not just the burden imposed upon them, but the futility of their assumption of this terrific economic load.

I am so thoroughly convinced of the mounting strength of this tide, Mr. Chairman, that I believe that, if a national referendum could be had on the proposal to continue foreign aid, the proposition would not just be defeated, but would be crushingly defeated.

I am so thoroughly convinced that if I were running for membership in this House against an incumbent who voted for this bill, I would base my campaign on that one vote—and would win, hands down. The tone of my mail from my own constituents is such that I would be ashamed to face them if I should vote to extend this program.

I am sorrowfully persuaded that, even though we all know this program is not what the people want and that it is not accomplishing any material good for the Nation, a sufficient number of you will vote to pass the foreign aid bill. But, I warn you, my colleagues on both sides of the aisle, that the time is running out on foreign aid—that if we pass this bill, we may face public reaction so strong that it will sweep some of you out of office.

But if I am swept out of office—and I do not expect to be—it will not be because I voted for this bill. I shall not vote for it. If I did vote for the bill, I would think that was good and sufficient ground for me to vote even against myself, as the representative of my district, in this year's elections.

This bill represents an attempt to fool the people of the United States. I do not blame this on our colleagues on the Foreign Affairs Committee who have labored long and hard to bring out this bill. But what they have produced is essentially the administration's own bill—prepared not by President Eisenhower but by the staff of that somewhat strange and mysterious agency, the International Cooperation Administration, which will be supported and nurtured by this bill. They are the people who are trying to fool the American public.

The report on this bill which has been handed to us would, at one point, lead us to believe that it is an authorization

for only $1.3 billion to carry forward the foreign aid program. At another point, getting somewhat closer to the truth, we are told that the bill authorizes expenditures of $4.1 billion. But nowhere are we told the cold, harsh fact that there are billions of dollars in foreign aid funds which do not even appear in this bill—that the amount of foreign aid funds available for the next fiscal year which are not included in the bill actually exceeds the amount which is included.

I am by profession an accountant, and I have reason to believe that I am a pretty good one. Accountants are supposed to be able to understand and ferret out all manner of twisting and juggling of figures—but I say in all candor that I do not believe there is in this country an accountant who could track down all of the money that we are pouring into this cornucopia, this horn of plenty, that we call mutual security. It may be mutual security, but it certainly is not financial security for the United States.

I am confused by the gobbledygook which surrounds this whole program, and I certainly do not think that the people of our country could be other than confused about it. Last year, for instance, we supposedly made available, by appropriation, $3,225 million for foreign aid. That is what it said in the bill—and that is what the people read in the newspapers.

But what are the facts? The facts are that there was available for foreign aid in the current fiscal year—the year for which we were providing when we took this up last year—a total of $8,111 million. In other words the appropriation we approved, the appropriation that was announced to the world, was only 40 percent—less than half than the amount actually available for the foreign aid spenders.

If the foreign aid administrators already have—in what they fancifully call their pipeline but which actually is their checking account at the Treasury—one and a half times as much money as they come up here and tell us they need to operate the program, it would occur to me, that we could reasonably declare a moratorium for a year or a year and a half on any new appropriations at all.

For myself, I wish we would. That is a mutual security program I could support, because we would, for the first time, be getting something by salvage from this monster. I would doubt, however, that we will have the courage and the wisdom to do what I believe all of us know we should do.

Mr. MORGAN. Mr. Chairman, I yield such time as he may desire to the gentleman from Texas [Mr. WRIGHT].

Mr. WRIGHT. Mr. Chairman, I want to congratulate the committee on having included the language which appears on pages 10 and 11 of the bill relating to the standards to be used hereafter in determining the feasibility of water resources development programs under the Mutual Security Act.

As the committee may recall, it was 2 years ago, in 1958, that the gentleman from Oklahoma [Mr. EDMONDSON] and I, along with others, proposed an amendment to this effect. That amendment was adopted by the House but deleted by the Senate.

Unless this provision or something substantially similar appears in the final version of the legislation this year when it comes back to us from the Senate, I do not expect to support the bill at that time.

Like many of you, as I said in 1958 when discussing this particular matter, I have supported this legislation in years past and feel a sense of responsibility to support it again, because I feel that we in the Congress owe something more to the President of the United States than mere carping criticism of his conduct of our international affairs.

I have supported it and feel a continuing sense of responsibility to support it in spite of my own misgivings over certain specific activities carried out under the program and in spite of its unpopularity among many people, because in a world where apparently only the strong may remain free, we need to contribute to the strength of those who sincerely wish to remain free.

Yet there is a complete double standard in the matter of water development projects. There are two entirely different sets of criteria, one for projects in our own country and another for projects which we help finance in foreign lands.

For those who may not be familiar with the language contained in the section to which I refer, it is subsection (2)(b) beginning on page 10 of the bill, and it reads as follows:

(b) All nonmilitary flood control, reclamation and other water and related land resource programs or projects proposed for construction under titles I, II, or III (except sec. 306) of chapter II, under section 400, or under section 451 of this act, shall be examined by qualified engineers, financed under this act, in accordance with the general procedures prescribed in circular A–47 of the Bureau of the Budget, dated December 31, 1952, for flood control, reclamation, and other water and related land resource programs and projects proposed for construction within the continental limits of the United States of America. In all cases the benefits and costs shall be determined, and a copy of the determination shall be submitted to the Speaker of the House of Representatives and the Foreign Relations Committee, and the Appropriations Committee of the Senate. No such program or project shall be undertaken on which the benefits do not exceed the costs and which does not otherwise meet the standards and criteria used in determining the feasibility of flood control, reclamation, and other water and related land resource programs and projects proposed for construction within the continental limits of the United States of America as per circular A–47 of the Bureau of the Budget, dated December 31, 1952.

The purpose of this language is to require flood control, navigation, and water resource developments financed in foreign lands through our mutual security program to comply with the same standards which are so rigidly and inflexibly applied by the administration against domestic flood control, navigation, and water resource developments.

At the present time, there are two yardsticks—as different as night and day. When it comes to our domestic water development needs in the United States, no matter how big or how small the projects, the Bureau of the Budget imposes an arbitrarily rigid and completely inflexible yardstick.

For 3 years now, since devastating floods ravaged two rather large residential areas in my district, I have been feverishly trying to speed up the long, laborious process through which construction of needed flood control works is authorized. The average time lapse between initial authorization and final construction of projects in the United States is 10 years and 8 months, all because of the painstaking detailed step-by-step procedures required for domestic projects.

When it comes to water developments to be financed in foreign lands, there has been no requirement whatever that they be reported individually to the Congress, no requirement that they measure up to the criteria of economic feasibility, absolutely no report on a benefits-to-costs ratio, and no hard and fast requirement whatever that funds be matched locally where local land enhancement and domestic water benefits accrue.

Each of these requirements has been applied with a vengeance by the Bureau of the Budget against every water resource development proposed in the United States. This all-powerful executive Bureau has assumed to itself the right to overrule the Corps of Army Engineers and the duly delegated committees of this Congress. When it comes to water resource developments in the United States, this appointed agency has enormous power, and the full extent of this power is appreciated when we realize that this Bureau caused the President of the United States twice to veto our rivers and harbors bill, passed by such an overwhelming majority by both Houses of the Congress, for the simple reason that the mature judgment of the Congress differed from the hard and arbitrary yardstick applied by this appointive agency in just 3.6 percent of the total financial authorizations in that bill. On one occasion, such a bill was vetoed, even though the Corps of Engineers had officially approved all but six-tenths of 1 percent of the financial authorizations.

Now, contrast that if you will with the complete flexibility and utter lack of financial accountability to the Congress which has characterized water developments in foreign lands financed under this mutual security program by the International Cooperation Administration. In the previous Congress a subcommittee of the House Committee on Government Operations, under the able chairmanship of our respected colleague the gentleman from Virginia [Mr. HARDY], undertook to make a thoroughgoing study of such projects and made some amazing revelations concerning the absolute lack of any yardstick whatever.

Permit me to read a few comments from the report of that House committee upon the annual budget presentation of the ICA:

The agency possesses almost unlimited flexibility in the transfer of funds. This arises from a combination of the broad authority conferred upon the agency by the

basic mutual security legislation, and the absence of specific details (an outgrowth of the illustrative budget) in the annual appropriation acts. Unless this excessive flexibility is curbed, improvement in the mechanics of the budget presentation alone would not assure the Congress that the programs and projects listed therein would be carried out.

Obviously, when these various programs are lumped together into a single package, the ultimate result can be nothing but confusion. Undoubtedly, many of the programs undertaken by the ICA are wholly justifiable from an economic standpoint. Many of them probably are. Perhaps even all of them are. But the point is that it has been utterly impossible for the Congress of the United States to examine the budget presentation of the ICA and to know anything whatever of the economic feasibility of the individual projects therein contemplated.

Our task in attempting to understand and to justify these expenditures is made the more difficult by the practice of this agency in presenting a pure illustrative budget. There is no requirement, as there is in our domestic public works program, that we list the individual projects. Instead, the ICA simply sets forth various activities and types of activities as merely illustrative of the kind of program it intends to carry out.

The lack of congressional control of these funds, indeed the lack of congressional identification of the individual projects contemplated, becomes startlingly apparent. Not only does the ICA operate under the cloak of vagueness, but it enjoys almost unlimited freedom to change its course in midstream, to alter during a fiscal year the direction of its programs, to transfer funds from one project to another, from one country to another, and indeed from one basic type of activity to another.

I should like to quote at this point from the fifth report by the House Committee on Government Operations entitled "Review of the Budget Formulation and Presentation Practices of the International Cooperation Administration":

> Because of the broad authorities conferred upon the agency in the basic mutual security legislation, and since its appropriations are not made on a country or project basis, ICA is not legally bound to hold to the country programs or levels of aid proposed. For example, so long as the funds appropriated for the category "Development assistance" are used for that general purpose, the director can decide not to pursue any of the country programs presented to the Congress, and embark on entirely new programs in a different set of countries. If such new programs cannot be financed entirely from funds available within the appropriate category, ICA can invoke an unusual statutory authority which, within a very broad range, empowers the President to transfer funds between categories (for example, from development assistance to defense support), whenever he considers it necessary to do so in order to meet emergency situations which might arise.
>
> Since such emergencies are frequent, ICA has made it a practice to hold appropriated funds in reserve to meet them. Substantial amounts of funds appropriated on the basis of specific programs are thus immobilized. These funds, when not used for the contingencies for which they were reserved, are released for hasty programing late in the fiscal year for which they were appropriated. This has a deterring effect on the orderly and expeditious use of funds and a retarding effect on advance program planning.

Moreover, the committee concluded that:

> With respect to foreign-aid projects, the budget presentation lacks information on such significant items as the total estimated cost, length of time required for completion, recipient country contributions expected and received, and reasons for delays in execution.

Mr. Chairman, I realize that there must be some flexibility in the administration of the mutual security program if it is to be effective. I know that we must be able to take advantage quickly of situations which suddenly and unexpectedly develop in foreign lands. I realize that we cannot in justice to our own national self-interest handcuff ourselves to a completely inflexible position, and that it is impossible to foresee 12 months ahead exactly what the exigencies of the international situation may be.

I do have the strong feeling, however, that the American people and the American Congress need to understand much more clearly exactly where it is proposed that these dollars will be spent, particularly with regard to development of the economies of foreign nations. This type of development, as characterized by the development of water resources, is not a sudden, hit-or-miss type of undertaking. And it is the height of inconsistency for us to handcuff ourselves to such a completely hidebound and wholly unyielding set of criteria in regard to the development of our own latent resources while having no specific knowledge whatever of the nature or the direction of the proposed developments of an identical character for which we are authorizing expenditures in foreign lands.

For these reasons, I congratulate the committee on having incorporated this language in the bill, substantially as it was suggested by the gentleman from Oklahoma and myself 2 years ago, and I should like to reiterate that, unless the other body sees fit to retain this language in the final bill, it would not be my intention to support it.

Mr. MORGAN. Mr. Chairman, I yield 10 minutes to the gentleman from Connecticut [Mr. BOWLES].

Mr. BOWLES. Mr. Chairman, I rise in strong support of the mutual security legislation. In doing so I realize that mistakes have been made. Indeed, as I listened to the long parade of stories about the mutual security bill I was reminded of the days when I held the Office of Price Administrator and had to hear a similar parade of stories about the OPA. Many were true but after all the complaints were aired, we realized that OPA was still a basic and indispensable program as long as there was a war. As a result, it always had the full support of this Congress.

Similarly, we are discussing a program here today where mistakes are easy to point out. There are obviously too many of them, and they should have been, and must be, corrected. But that fact should not blind us to the major questions with which we are dealing.

I think one reason there is a great deal of confusion about this program is the fact we have been given superficial short-run reasons for what must be a broad, long-term program. Indeed, I am confident that it has been the absence of effective leadership in the field of foreign aid during the past few years which has led to the doubts and confusion which now exist.

Time after time the administration has taken the easiest way out. It has "sold" or attempted to "sell" its annual foreign aid program with the wrong reasons and with an inadequate presentation.

We have been told that foreign aid is needed as long as the Communist menace exists—an argument which demeans our own motives and which fails to recognize that the problems of economic growth, social betterment, and human dignity would be the problems of the 20th century throughout the underdeveloped areas of the world even if Karl Marx had never lived.

We have been told that foreign aid is needed to win friends and influence people to vote on our side at the United Nations or to stick with us in fragile alliances—an argument which neglects the fact that genuine friends cannot be purchased nor can reliable loyalties be based on such shallow grounds.

We have been told that special attention in our aid program should be given to those countries which have the largest local Communist minorities, but this turns a local Communist minority into a natural resource like petroleum or uranium: if you have some Communists, you can get money from us, and if you do not have any Communists, you cannot expect any money.

It is no wonder that Mr. Khrushchev went to Burma and said:

> You should thank us Russians not only for the aid that we give you, but also thank us for the aid the Americans give you because they themselves say that they would not give you this aid if it was not for us Russians.

We have been told that foreign aid is necessary because hungry people once fed will become stalwart supporters of the status quo—an argument which ignores the fact that better fed people in underdeveloped countries may become even more interested in upsetting the status quo unless they are given a sense of participation, identification, and belonging in the context of the societies in which they live.

It is inadequate appeals such as these which have helped to erode our foreign aid program. It has been the failure of our leadership and not the blindness of the American people which has fostered our uncertain attitudes toward foreign aid.

The situation today, more than ever, calls for leadership from the President to clarify America's stake in foreign aid and to expound our real position in connection with this program.

In foreign aid, as in foreign policy, generally, we have one central overriding

objective, the creation and maintenance all over the non-Communist world of free societies dedicated to providing growing opportunities for their own people to make their own decisions in determining their own future.

This is the objective which should be stated and restated as the generating motive of American policy: we stand for giving people everywhere the chance to make their own choices. I think the record shows clearly that when people have this chance, they will almost always choose the free way.

There is no evidence yet that any people really prefer communism. People become Communists because they feel forced into it. They become frustrated. They feel there is no other answer. I think it is very important that we remember the vital reasons for our foreign aid effort—to give people the chance to make their own choice.

I would like to refer to the contest between Communist China and democratic India, about which we hear so much. I think this contest illustrates some of our problems in dealing with our foreign aid program.

In China you have a totalitarian government. You have a tremendously dynamic people—650 million of them—crowded in an area with too few natural resources and with militarily soft neighbors on several sides.

This is a classic situation making for aggression. This was the basis of Japanese aggression—too many people, inadequate resources, and soft neighbors. It also was the basis for the aggression of Nazi Germany. There were the same factors—to many people, not enough resources, soft neighbors, and totalitarian leadership.

China has this very situation. Because of her totalitarian government, China is able to save something like 22 percent of her gross national product. This means she can put 22 percent of all the goods and services that she produces back into building up the future of China.

China only consumes about 78 percent of what she produces. On this basis, many people say that China by the year 1970 may be the third industrial nation in the world. China threatens all of Asia just as the gentleman from Minnesota has pointed out.

Over the long haul, the only possible balance to China in Asia is likely to be India.

India through democracy naturally wants to give here people a better and bigger break. India can only save about 8 percent of her gross national product. On that basis, saving only 8 percent for reinvestment against China's 22 percent, India is bound to fall behind, disastrously behind, unless we are prepared to help.

Too many of us are inclined to think, I believe, that these people are not doing enough to help themselves. Let me mention just two examples with which I am personally familiar.

The Bakhra-Nangal Dam in India is the highest dam in the world. It will irrigate some 10 million acres in the northwestern part of India. It will produce 1½ million kilowatt-hours of electricity. Not one single American dollar and not one single pound sterling has gone into developing that dam. It has all been done through and by Indian resources, earned in the markets of the world by selling Indian products. This is one of the biggest dams in the world. It is a totally indigenous development and accomplishment as far as capital is concerned. An American engineer, Harvey Slocum, had a great deal to do with it. He is paid $100,000 a year by the Indian Government for his services.

Let me also mention the whole development program in Indian villages. Today three-fourths of the Indian villages have a rural extension program quite similar to our program. It is not nearly as fully developed, of course, but events are moving rapidly to bring a better life to the Indian villages. These developments, too, are almost totally Indian in makeup, organization, and finance.

But the 400 million people of India need help just as other nations need help. They must have it if they are not going to be frustrated and forced to take the totalitarian shortcut—a prospect which would lead us Americans into growing isolation in the struggle with communism.

Inevitably we do many things which are necessarily negative. Most of the things we do around the world have become to a large extent expedient.

There are only a few programs that are vitally creative and constructive. One is the educational and cultural exchange program. Another is the technical assistance program. But most important of all these programs is the development loan program.

There is much criticism of the Development Loan Fund and some of it is justified. But basically I think the DLF is fundamental to building the kind of world we would like to see.

Finally, let me refer to the timidity of those of us who say we cannot afford to do in these coming years the things that clearly we must do. I respectfully disagree with their premise.

America has a gross national production of $500 billion. We are allied with Western Europe with $280 billion more. Opposing us is the Soviet Union, with some $220 billion. If they can afford to move out and maneuver positively in behalf of world communism, certainly we can afford to meet that challenge head-on in behalf of the dignity of man.

I simply cannot accept the recurrent assumption which we hear one day on the floor of this House and the next day from a presidential press conference that foreign aid is an unpopular and politically vulnerable program. Not only the confirmed opponents of foreign aid reiterate this point, but many of the most important and dedicated champions of mutual security seem to operate on this same assumption.

I take strong exception to this proposition. I am impressed with the fact that this is a presidential year and yet there seems to be no temptation for any candidate in either party to adopt an anti-foreign-aid position. I feel completely confident that if a sizable segment of American public opinion was unalterably opposed either in principle or in practice to the concept of foreign aid, one of the aspirants for presidential nomination would surely consider it to be politically profitable for him to espouse this view.

Instead, there is a remarkable degree of unaniminity of opinion on foreign aid among all of the declared candidates and the undeclared possibilities for the presidential nomination.

Both Mr. NIXON and Mr. Rockefeller are on record repeatedly favoring not only the maintenance of the present scale and size of our foreign aid program, but an increase in the scope and effectiveness of this program.

All of the Democratic possibilities—Senators KENNEDY, HUMPHREY, SYMINGTON, and JOHNSON, as well as Governor Stevenson—are likewise fully committed to the importance of foreign aid. Many of these gentlemen have been instrumental in improving the focus and direction of foreign aid over the years. Many of them have proposed new and constructive changes in the foreign aid program with vigor and imagination.

It is hard for me to believe that the leading contenders for the presidential nomination are underestimating the American people. On the contrary, I am sure that they recognize what most other thoughtful observers recognize—that the American people are waiting for leadership, waiting to be challenged.

The thoughtful Members of this body, Republicans and Democrats alike, know that just because this is an election year we have no reason to think that we can afford to take a year off from world affairs. We know that next year our new President, whoever he may be, is likely to stand before us seeking—and justly so—an expansion and a reinvigoration of this concept which is so basic to all of us in the non-Communist world: mutual security.

Mrs. BOLTON. Mr. Chairman, I yield 15 minutes to the gentleman from Michigan [Mr. BENTLEY].

Mr. BENTLEY. Mr. Chairman, during the 8 years I have been a Member of the House of Representatives, and also a member of the House Committee on Foreign Affairs, I have lived with this mutual security program at considerable length. This will be the last year I will be appearing in the well of the House to speak on mutual security legislation. I shall miss mutual security legislation in the House very much. I shall miss service on the Foreign Affairs Comtee, the members of which committee have all been more than helpful to me. I want to express my deep appreciation to them.

In the 8 years I have been a committee member, this is one of the first years that I have not collaborated in signing the minority views on the committee report. Instead I have offered supplemental views of my own, and, to those who may be interested, they can be found on page 107. The reason I did that was because I felt that the program, although to my way of thinking is still perhaps deficient in certain respects, it has been greatly improved to the point where I could lend it some degree of support.

I feel strongly that the entire program, which, of course, is the basic legislation, the Mutual Security Act of 1954, as amended, is overdue for review. I raised the question in the committee a year ago. Early this year I introduced legislation of my own which would, had it been adopted by the committee, have provided for such a thorough study by our committee. Unfortunately, I suppose the time element of the present session was partly to blame, the committee did not feel able to undertake the research at this time, although I understand certain commitments have been made with respect to such review and study this coming year.

I still would like to see such a review and study of the overall program made this year. For that reason I voted against reporting this bill, H.R. 11510, out of committee, and if a straight recommital motion to send it back to the committee for further study is offered I will feel compelled to support the motion. Should that motion not prevail, I, however, will vote for the passage of this legislation, even though, as I say, there are certain aspects of it that seriously disturb me. Two particular aspects in that respect I would like to dwell on for a few moments, because to me they represent serious deficiencies in what is a program that has great room for improvement but has generally greatly improved over the past several years. I believe in the trend from grants to loans in the field of economic assistance. Credit is due to our committee and other committees of the House with respect to improvement in the administration of the program, an improvement which I certainly hope to see continue in the forthcoming year.

Two areas have concerned me, especially the field of military assistance. Actually, Mr. Chairman, we are not dealing with military assistance here in discussing this bill today. As members of the committee will recall, last year in conference the House conferees agreed to a provision which would provide for an open-end authorization for military assistance for fiscal 1960, 1961, and 1962. Fiscal 1961, of course, is the fiscal year ahead of us. It is the second of those 3 years of open-end military authorization. The third year will still be forthcoming. I will say that it is my intention when the bill is read for amendment to offer an amendment to terminate that open end authorization after fiscal 1961, and to require the Executive to come before our committee next year and seek a new authorization for military expenditures.

The thing that concerns me about military expenditures in the very substantial sums of money that are being spent in various parts of the world for the support and maintenance of certain armed forces in those areas. I hesitate to designate the type of armed forces there are in certain parts of the world as conventional armed forces, whether they are army, or navy, or air force. That is a controversial subject.

Further, there is military assistance going into areas which is in excess of the ability of those areas to use but which has been sent for other reasons than internal security, or regional, or world defense.

I imagine many members of the committee have probably not had time or opportunity to study the hearings before our committee on this legislation, but the hearings, of course, are available. They are very voluminous, some 1,200 pages, 1,100 pages, give or take a few, and, of course, it is impossible for the average member to completely absorb those facts and figures and details in the limited amount of time that has elapsed since the hearings were printed. But I would seriously recommend to anybody who wants to know something about this program, not only currently, but over the past several years, to turn to pages 114 and 115 of the hearings, because on those two pages are listed with respect to the military assistance program the total value of the programs and deliveries through the previous years from 1950 to fiscal 1960 by area and country. I think this is the first time we have ever had an opportunity to break down by amounts military expenditures, and by countries, since I can recall. There may be a question as to whether or not these figures should or should not be released, but they were released by the executive branch, and they are included in the hearings, and those people who are interested in making a study of the military assistance can now do so by the information furnished on pages 114 and 115 of the hearings.

It might be interesting to recall that during the fiscal years 1950 to 1959 we spent on programs and deliveries, on a worldwide basis a total amount of just a little over $26 billion.

This was broken down: Europe had $13.5 billion. I think probably most of that military assistance to Europe was justified. Those armies are providing a very substantial part of our defense in the NATO area of Western Europe. So I would not begrudge in most respects where the money has been used in Western Europe.

With respect to the Far East, many of the countries in the Far East such as Vietnam and Korea, being on the periphery of Communist Asia, a total amount of $6 billion have been expended between fiscal 1950 and fiscal 1959. I think that in many cases, perhaps not in all, this aid was also justified to a certain extent.

Now, we turn to three other areas which are listed in these charts. In the Near East and South Asia we find a total expenditure for military purposes of $3,769 million. Again in certain areas, such as Greece and Turkey, I believe that much of this money could be justified. But I question figures such as the $49 million for Iraq. I am afraid we are not getting much return on that now. There is a figure of $12.5 million for Jordan, a figure of $7.5 million for Lebanon, an unknown figure for Saudi Arabia, which is listed here under a half-billion dollars of undistributed funds.

I question the value of all those amounts.

I also question figures for certain countries in Latin America. Take the figure of $16.5 million which we have sent to Cuba in the past few years. How much return are we getting?

I am not going to take the time to review all of these figures. They are available to the Members if they want to take the trouble to look at the hearings. But particularly with respect to Latin America and also the $48.5 million which has been spent in Africa, which areas are not threatened by international communism, I seriously question whether or not a similar amount in economic assistance would not be more desirable, raising the living standards of those people, in place of the large amounts of military aid which I am sorry to report have not been wisely spent. There are certain instances where this money was spent for reasons of internal prestige of this country or that ruler, as I say, reasons completely unrelated to either military security or regional or hemispheric defense.

The other part of the mutual security program which does concern me very much is with respect to the amount of local or soft currencies which we have been creating not only through this program but through other programs during the past several years. It must be pointed out that the mutual security program while responsible for part of the administration of soft currencies or local currencies is not responsible for all of them. According to the testimony of executive witnesses certain examples of soft currency creation which are not under the supervision of the mutual security program, are things like the Cooley amendment funds, section 104, administered by the Export-Import Bank; funds involved in sales agreements; U.S. funds covering Fulbright grants; building and operations and general expenses of the Government. Nevertheless, the mutual security program does have a responsibility for a large part of the foreign currencies which are created abroad, including those created under Public Law 480.

I stated in my supplemental views that I regret the fact that the Foreign Affairs Committee does not have more jurisdiction over the programs which are responsible for many of these currencies. The reason I say that is because I seriously fear we are in certain cases creating local currencies in such an amount that not only are they far beyond the possible absorption capacity of those countries in the near future, but they also by their presence there tend to stimulate and create inflation in those areas which is the last thing we want.

In the presentation books which we have on the committee tables, for local currency balances which are controlled by the mutual security program as of last June 30th, we have a total amount unexpended as of last June 30th of $1,763,788,000 equivalent in local currencies, which, as I said at the end of the last fiscal year, remain completely unexpended, unused, lying around various parts of the world. Now, I seriously question programs which go to build up these soft currencies, and we have apparently been unable to think of ways adequate for their expenditure.

Mr. Chairman, as I said earlier, there are still serious shortcomings in this program. There are serious deficiencies. All of us, I think, want to improve

the program. All of us, I think, who are realistic know that the concept of the program is here to stay regardless of the administration in power after the November elections. Both political parties are committed to this concept. But, I think, to be realistic, we should endeavor to cut out waste and inefficiency wherever possible. We should try to work out means to improve and work for its betterment. And, if we are realistic, I think we have to realize that this program is going to be a part of our foreign policy for some time, and therefore it behooves all of us, people like myself, who have opposed this program, to plead for a review of the program and perhaps to review in some respects their own prior commitments and support the program but at the same time endeavor strongly to point out its shortcomings, its weaknesses, and its deficiencies and work where we can to improve it and strengthen it, because thereby we will be improving our own foreign policy program, which I think we all devoutly hope and pray for.

Mr. Chairman, I very much appreciate the courtesy to speak at this time, because I have a prior commitment I made, but I do intend to be here tomorrow to offer a few amendments to strengthen the program. I particularly appreciate the courtesy of our minority Member, the gentlewoman from Ohio [Mrs. BOLTON] for giving me this time to make these few remarks about the program.

Mr. CURTIS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield to the gentleman from Massachusetts.

Mr. CURTIS of Massachusetts. Just to keep the record straight and emphasize something which the gentleman said, I call attention to the fact that he spent most of his time criticizing the military aid part of this program. Will the gentleman agree that anything that he said on that subject has nothing to do with whether we should approve this particular bill or not, because there is no authorization in this bill for any military aid?

Mr. BENTLEY. I understand, and I pointed out when I made my earlier remarks—perhaps the gentleman did not listen to me—that I intended to offer an amendment to terminate the open end authorization at the end of the current fiscal year.

Mr. CURTIS of Massachusetts. The other point which the gentleman emphasized was the generation of local currency in large amounts. I want to ask the gentleman if most of that does not come from the Public Law 480, 83d Congress, program, which is not within the jurisdiction of the Committee on Foreign Affairs?

Mr. BENTLEY. I certainly agree with the gentleman, but the expenditure of local currency generated by Public Law 480 funds is within the jurisdiction of the mutual security program. So I feel, of course, it is a relative topic to discuss.

Mr. CURTIS of Massachusetts. I thank the gentleman.

Mr. MORGAN. Mr. Chairman, I yield such time as he may desire to the gentleman from South Carolina [Mr. HEMPHILL].

Mr. HEMPHILL. Mr. Chairman, when I awoke Tuesday morning and heard on the radio of the rioting and shooting in Korea, I immediately thought of the Mutual Security Administration bill the American taxpayer is going to be saddled with again. I wondered how much American tax money was used in the shooting of opponents to Syngman Rhee who want nothing more than free elections, and deserve nothing less. Where are our friends in Korea and who are our friends?

Syngman Rhee is not our friend. No man who claims the association and support of the American people could deny his people free elections and claim that helped America, much less his own country. If he were really our friend he would show the world that that friendship incited and inspired free elections as the political vehicle in Korea, even if it meant the defeat of Syngman Rhee. No. Syngman Rhee loves only Syngman Rhee, and endorses any hypocrisy to make sure the United States is misled into thinking him a friend.

I greatly admire the people of Korea. They deserve much praise and I wish them well. I wish for them democracy, freedom, prosperity, and happiness. I believe in our country helping them in many ways, but I do not believe we are helping Korea by supporting Syngman Rhee. I believe we are doing the people of Korea a disservice.

Now, some might say that I should not speak as I am not an expert in foreign affairs, much less in Korea. Well, I have been up here 4 years and every expert I have seen is a brainwashed, timid soul. I am an expert on the fact that the people of my district are sick and tired of being taxed for a foreign policy program which has not worked, is not working, and will not work.

Is South Korea to be another Cuba? Why did we not learn the lesson of Batista? I wonder if the hungry of South Korea blame the United States like the hungry of Cuba are being taught to do?

What about Trujillo? Is he doing us any good? I fail to believe he is, he can, or he will.

No my friends, the world knows you cannot buy friends—that is, all the world except the U.S. State Department, and those who champion its pattern of paternity for every nation which has brought about the accelerating decline of American prestige all over the world.

Meanwhile, we spend, and spend, and spend. We continue the patronage of the "Ugly American" all over the world, the most wasteful bureaucracy in the history of the modern world. The riders of the diplomatic cocktail circuits abroad do us daily harm. We have not won a major, or minor, diplomatic victory in the last decade. We have bought trouble for our generation and unjust debt for those to come after us.

We have so few real friends. We interfered in Suez, where we had no business. We thus doublecrossed our longtime friends, France and Britain, alienated or angered most of the Arab world, and angered the Jews. I have heard a little rumor that we pleased some mighty big oil folks that way, that greed had a hand, a stronger hand than diplomacy, a stronger hand than the best interest of the people of the United States.

Then is our foreign policy based on greed? Are certain special interests dictating the terms every year, saying what shall be contained in the so-called mutual security legislation? Mutual security—what a misnomer. Is there any security in losing friends and losing face, more and more, year after year? Is there any security in the gradual loss of hope by the enslaved peoples of the world, such as the Hungarians?

Then, who does this spending benefit? Surely it does not benefit the peoples of the countries, else we would arouse some real friendship. And if it benefits the dictators of the world, can the American people afford the enmity of all those who hate the dictators? Can we afford the spending and the hate? Surely we have the hate, and it is largely our fault.

You know how it is. Your enemies can call you names and say all manner of mean things about you and it does not hurt much. People expect your enemies to run you down. But do some fool or ridiculous or wrongful act yourself and you are judged by that. So it is with the world today. We are in trouble because of what Americans have been doing. The Communists just sit back, spend little, and laugh at our mistakes.

Not one nickel of foreign aid should be voted until this program is revised and reformed to make it honest; maybe then I could vote for it. I would like to substitute consideration for our Latin and South American friends for others who are generating hatred for and suspicion of the American people and their Government.

All of my friends who have been abroad tell me we have few friends there.

No; our mutual security program is a program of retreat, retreat from security, retreat from common sense, retreat from world position. If we are losing—and the Communist gain is our loss—then why continue a program that is a losing proposition? It does not make sense and it is wrong.

I am opposed to further wasting the money of the American people in this program of waste, foolishness, and corruption. I shall vote against this legislation.

I thank the very distinguished and able chairman of the committee for yielding this time to me.

Mr. MORGAN. Mr. Chairman, I yield 8 minutes to the gentleman from New York [Mr. FARBSTEIN].

Mr. FARBSTEIN. Mr. Chairman, I have listened with great interest to some of the statements made here today, especially the criticisms that we heard about the mutual security program. Now, there is no doubt that so long as humans are made of flesh and blood, just so long will there be mistakes. When the millenium arrives, then no longer will we be concerned about the errors that were performed and perhaps will be performed until the end of time. But, I

say, let us not burn down the house to get a mouse.

Mr. Chairman, I wonder if those of us who oppose the mutual security program are aware that the Soviet Union's foreign aid program for underdeveloped countries, which is 5 years old, is now beginning to undertake substantial commitments and make great strides. Originally only a small number of major political targets were aimed at by Khrushchev, but now he is going to town. During January and February of this year the Soviets signed agreements extending $694.4 millions in easy credits to five countries—the United Arab Republic, Indonesia, Cuba, Guinea, and Afghanistan. Where the Soviets have loaned or granted for economic and military purposes over $3 billion to 20 countries since 1955, they have granted almost three-fourths of a billion the first 2 months of this year.

Aid extended from the China-Soviet bloc as a whole—$740 million from eastern European satellites and $140 million from Red China—is now about $4 billion. Small compared to the $32 billion we have provided in the way of military and economic assistance since 1948; but our assistance has been scattered among 55 countries and, with the newly emerging countries of Africa, will be spread even further.

In January and February 1960, $287 million was loaned to Egypt's Nasser for the second stage of the Aswan Dam, $250 million to Indonesia, $100 million to Castro's Cuba, $22.4 million for Afghanistan, $35 million for the Guinean Republic. Last summer Ethiopia got a credit of $100 million.

In the face of the foregoing, how can we even consider denying or reducing further assistance to our needy friends?

In our battle for the minds of men let us not forget that the contest will be determined in the uncommitted, underdeveloped areas of the world—Asia, the Middle East, Africa, and Latin America. The economy and the well-being of the underdeveloped nations must be built up. They must also be convinced that our way of life is best. Let us not now lose the gains we are making throughout the world and especially in Asia. As reported by visitors to Asia, the tide is turning in our favor due, in part, to Communist policies and actions—by Peiping and Moscow.

At this point, I would like to quote the findings of Ernest K. Lindley, a well-known writer, whom I had the pleasure of listening to while he testified before the Committee on Foreign Affairs. I believe that what he writes about Asia pretty much applies throughout the underdeveloped world:

The turn of the tide is due in considerable part to Communist policies and actions—by Peiping, Moscow, and local Communist leaders. Among the most important:

1. The suppression of Tibetan autonomy in violation of Peiping's public pledges and Chou En-lai's personal assurances to Nehru. This has had its sharpest impact in Indian and the Buddhist nations of southeast Asia.

2. The Chinese commune system, with its ruthless regimentation and assault on the family. This has cooled enthusiasm for the New China among the overseas Chinese who are important minorities in every southeast Asian nation. It has also opened the eyes of many other Asians who formerly tended to regard Chinese communism as a possibly acceptable short cut to industrialization and a better economic future.

3. Growing realization that Peiping's boasts of enormous economic gains last year were wildly exaggerated. This is underscored by Peiping's backtracking now—in modifying some of the extreme commune features and abandoning the vaunted backyard steel production. (It would be a grave mistake though, to underrate Communist China's overall industrial advance.)

4. Failure of the Communist assault on the offshore islands last year. This deflated several myths about the Red Chinese.

5. The Communist threat to Iraq, which alarmed the Arab world, shifted Nasser's line, and now seems to have aroused el-Kassem.

6. The conduct of local Communists where they achieved power—as in Kerala and in the Cabinet of Ceylon—and obviously menacing internal Communist gains in such countries as Laos, Burma, and Indonesia.

7. Moscow's suppression of the Hungarian revolt and the subsequent execution of Nagy.

8. Many smaller incidents, such as the Soviet defections in Burma.

All these have had their impact on Asian opinion, but the United States, too, is partly responsible for the turn of the tide.

The favorable turn of the tide in free Asia is not due exclusively to reaction against the Communist policies and deeds. Side by side with more realism about the Communists there is better understanding of American purposes and, more widely than before, friendly attitudes toward us. This is due, Mr. Lindley says, in part to:

Time and experience having gradually convinced many doubting Asians that American policy really is anti-imperial, that it sincerely seeks to help the free peoples of Asia preserve their independence and achieve a better life. Most Asian governments now want the help of American private capital and management, although not all have taken the steps necessary to attract them.

Our policy of extending economic and technical aid, with no political strings attached, to the neutralist countries has improved their attitude toward us.

Year by year, there are more Asians who have had part of their education or training in the United States or under American guidance in their own countries. There are now scores of thousands of them—military officers, public health experts, agricultural specialists, teachers, all manner of occupations. Overwhelmingly—a few go sour—they are friendly to us and give others a sympathetic view of America.

With the passage of time and the completion of some projects which took several years, the results of our economic aid program are more visible and more widely appreciated. We have made mistakes but overall our aid program is a success.

Our defensive alliances and military aid program have helped to generate confidence and stability, especially in the frontline countries. Generally there is a good, comradely relationship between Asian officers and the Americans who work with them. SEATO is increasingly valued even in some of the nations which for various reasons have not joined.

We further reassured our friends by two actions last year: Sending troops into Lebanon and supporting Nationalist China in the Red assault on the offshore islands. Our Asian allies sometimes wonder whether we will come when needed. Evidence that we will, bolsters them. They find reassurance also in the SEATO military exercises, in which Western forces take part.

Our refusal to recognize the Peiping regime is paying better dividends, now that the commune system and Tibet have shocked so many formerly neutralist Asians.

Many more individual Americans and Asians have come to know and like each other. Most Asians like American informality. Americans find that most Asians, when approached as equals and in a friendly way, respond cordially. Gradually we have built up a corps of people who understand the various Asian peoples and have won their confidence. Officially we are well represented. We have sent some misfits in the past and undoubtedly have some in Asia now. But on this last tour I encountered only a few and they were in minor posts.

It is time to discard the ugly fiction that we have bungled in Asia. We have made mistakes but, on the whole, our policies are sound, reasonably well executed, and productive of heartening results.

We should continue aiding our friends who are in need of assistance for reasons other than political. A healthy well-fed, well-housed man thinks not only of food and shelter; he thinks of some of the better things of life. He will not think of clothes and some of the other comforts of existence when he has need for food and shelter. So let us feed him, saving thereby storage costs for agricultural products. When the economy of his country is built up, work may be found for the individual. When he earns some money he may find need for products we manufacture.

It is simple economics; by assisting the people of the coutries that are developing we can make good customers for our products. How can the representative of a state manufacturing X products that benefits from the sale of those products throughout the world possibly be against a bill that will help build up a country to want more X products?

How can we better create a climate where a demand will be created for our products than to so conduct our foreign policy that economic progress can be promoted back in the countries who receive our assistance as well as in our own country. How better can we exhibit our desire not to resist the revolution of rising expectations of people than to assist them in finding a better way of life?

H.R. 11510 should prevail.

Mrs. BOLTON. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania [Mr. FULTON].

Mr. FULTON. Mr. Chairman, I rise to support the mutual security program this year, as I have in past years. I am glad to note the decrease in the appropriations requested, and wish to compliment the International Cooperation Administration on the management steps it has taken for efficiency.

In support of my position favoring this legislation I quote from the message of February 16, 1960, from the President of the United States relative to the mutual security program, wherein he points out the real need for the program:

A year ago in my message to the Congress on the mutual security program, I described it as both essential to our security and important to our prosperity. Pointing out that our expenditures for mutual security are fully as important to our national defense as expenditures for our own forces, I stated that the mutual security program is not only

grounded in our deepest self-interest but springs from the idealism of the American people which is the true foundation of our greatness. It rests upon five fundamental propositions:

(1) That peace is a matter of vital concern to all mankind.

(2) That to keep the peace, the free world must remain defensively strong.

(3) That the achievement of a peace which is just depends upon promoting a rate of world economic progress, particularly among the peoples of the less developed nations, which will inspire hope for fulfillment of their aspirations.

(4) That the maintenance of the defensive strength of the free world, and help to the less developed, but determined and hard-working, nations to achieve a reasonable rate of economic growth are a common responsibility of the free world community.

(5) That the United States cannot shirk its responsibility to cooperate with all other free nations in this regard.

It is my firm conviction that there are only a few in the United States who would deny the validity of these propositions. The overwhelming support of the vast majority of our citizens leads us inexorably to mutual security as a fixed national policy.

The mutual security program is a program essential to peace. The accomplishments of the mutual security program in helping to meet the many challenges in the mid-20th century place it among the foremost of the great programs of American history. Without them the map of the world would be vastly different today. The mutual security program and its predecessors have been an indispensable contributor to the present fact that Greece, Turkey, Iran, Laos, Vietnam, Korea, and Taiwan, and many nations of Western Europe, to mention only part, remain the homes of freemen.

* * * * *

The mutual security program is a program essential to world progress in freedom. In addition to its mutual defense aspects, it also is the American part of a cooperative effort on the part of freemen to raise the standards of living of millions of human beings from bases which are intolerably low, bases incompatible with human dignity and freedom.

* * * * *

Equally with military security, economic development is a common necessity and a common responsibility. An investment in the development of one part of the free world is an investment in the development of it all. Our welfare, and the welfare of all freemen, cannot be divided—we are dependent one on the other. It is for each of us, the strong and the weak, the developed and the less developed, to join in the great effort to bring forth for all men the opportunity for a rewarding existence in freedom and in peace. World economic expansion and increase in trade will bring about increased prosperity for each free world nation.

* * * * *

For the total mutual security program I ask $4.175 billion. The need for these amounts has been examined and reexamined with great care in the executive branch. I am entirely satisfied that the needs for which funds are sought are needs which must be met and that the funds sought are the most reasonable estimates of requirements we can produce. There is no question but that the Nation can afford the expenditures involved; I am certain we cannot afford to ignore the needs for which they are required.

I quote from the testimony of Hon. Thomas S. Gates, Jr., our competent and able U.S. Secretary of Defense, when he appeared before the Foreign Affairs Committee on Tuesday, February 23, 1960. I call special attention to the emphasis he has placed on the security aspect of this program for the United States and the free world:

At that time I indicated that this budget of $43 billion would provide for a U.S. military structure of approximately 2½ million men. I now emphasize to you that the $2 billion included therein for military assistance will facilitate the effective utilization of an allied military structure of over 7 million men.

I know of no more forceful way to emphasize the essential role played by military assistance in assuring the security of this Nation than to cite this fact: our Joint Chiefs of Staff have recently said, with complete unanimity, that they would not want $1 added to the Defense budget for 1961 if that dollar had to come out of our recommended military assistance program.

* * * * *

My last point concerns the return we receive on our investment.

I know of no program which rewards us better. In terms of actual military strength, the results are impressive. In 1947 every nation had to go it alone for want of strong leadership which only the United States could give and therefore the entire free world was no stronger than the weakest link.

Today we and our allies are in a far better posture. The armies receiving military assistance have increased from 3½ million to 5 million men; allied navies have increased from 1,000 to 2,200 combat ships; allied air forces have increased from about 17,000 to over 25,000 aircraft, about half of which are jet. All allied forces are better trained, better equipped, and better able to perform their assigned missions in the framework of our total strategy. Their self-confidence is strong. Their determination to resist has become steadily firmer. They know that the United States stands with them and, accordingly, when the going gets tough—as it can be made tough by the Communists even in time of peace—they do not falter or fall back.

I want to outline the justification for the current defense support authorization under the U.S. mutual security program.

The executive branch requested $724 million in new obligational authority for fiscal year 1961 for defense support. The House Committee on Foreign Affairs has voted a cut of $49 million in this figure and reported the pending bill which authorizes $675 million.

This level is justified in terms of the concrete actions it is aimed to accomplish which have been presented by the executive branch in great detail and thoroughly reviewed by the committee. This level is also justified in terms of the longer view which has been directed by the Congress.

The House, last year, initiated an amendment to require the development of plans for the progressive reduction and, where practicable, the elimination of grant economic assistance such as defense support.

Last year the conference report on the Mutual Security Act of 1959 had this to say regarding the forward plans required by section 503(c):

The committee feels that such plans are essential to assure that programs do not simply perpetuate themselves by limited planning from year to year, but that they have definite goals toward which they are directed and toward which progress can be measured.

In response to section 503(c) the executive branch has developed and submitted an extensive multiyear analysis of defense support needs and of steps required to secure the above objective. The amendment both required and permitted the taking of a multiyear perspective which is a prerequisite to sound U.S. planning and to effective negotiation and joint planning with the other nations. Two-thirds of the defense support country programs are currently scheduled to reduce in fiscal year 1961. More extensive reductions may reduce the possibility of satisfactory termination. Such a rate of reduction almost certainly will put off the date by which successful termination can be reached.

Progressive reduction has and is taking place:

Fiscal year	Amount	Reduction from prior year
1959	$808,000,000	
1960	766,000,000	$42,000,000
1961 (executive request)	724,000,000	42,000,000
1961 (committee bill)	675,000,000	91,000,000

I should like to point out the accomplishments of the U.S. defense support programs under the Mutual Security Act.

SUMMARY

Defense support, with other U.S. national security and foreign policy actions, has contributed to:

First. The successful maintenance of a deterrent to general war.

Second. The protection of vulnerable areas against local aggression.

Third. The restoration and maintenance of internal security.

Fourth. The survival of a number of nations whose continued independence without assistance was doubtful.

Fifth. The provision of a minimum of economic stability as a basis on which these countries will have an opportunity to move toward self-sustaining growth.

ACCOMPLISHMENT BY COUNTRY

SPAIN

The defense support program, along with other forms of U.S. assistance, has helped maintain a spirit of cooperation which permitted smooth and efficient construction of the bases and the transition to an operational base complex; made available outside resources which helped to keep inflation within tolerable limits and which permitted economic development resulting in a real increase in gross national product of about 6 percent per year since 1953, an increase in per capita gross national product from about $230 in 1953 to about $300 in 1959; encouraged adoption by the Spanish Government of an economic stabilization program which has resulted in sounder fiscal and monetary policies, stable internal prices, import liberalization, and a sharp reversal in the steady loss of foreign exchange reserves.

The defense support program specifically has contributed to the following, during period since signature of the defense and economic aid agreements in 1953:

Strategic rail lines and highways have been strengthened and rehabilitated; for

example, railroad freight carrying capacity has increased by 10 percent.

Hydroelectric and thermal power generating capacity has been increased by more than 3 million kilowatts, thus making electricity cutoffs the exception rather than the rule.

The electric power transmission system has been greatly improved, line losses having been reduced from about 25 percent to 18 percent.

Land under irrigation has increased by 500,000 acres, or 100 percent; peseta value of agricultural production has increased fivefold in some areas placed under irrigation.

Crude steel production more than doubled; steel sheet production increased by 25 percent and the production of tin plate doubled.

GREECE

Greece has accepted as an objective the achieving of NATO force goals established to permit fulfillment of an important strategic role in European and Western defense. The role of the defense support program is to assist Greece in making progress toward these goals while maintaining political stability. Defense support in Greece provides local currency support to the Greek defense budget and supplies the equivalent in goods to the economy to counteract the inflationary impact of the additional defense spending. It thus makes possible a higher level of defense preparedness than could otherwise be maintained without increased inflationary pressure or decreased investment for economic development. The U.S. financed imports are made available to private importers for the equivalent in local currency. The Government of Greece deposits the local currency in a counterpart account from which withdrawals are made, with U.S. approval, for the defense budget. Thus the assistance adds to the resources available for expenditure by the government. The government has steadily increased its revenues from direct and indirect taxes but not enough to permit expenditures for the defense budget sufficient to meet NATO defense objectives. Greece is now devoting 5 percent of gross national product to defense—a larger proportion than most NATO countries despite the fact that Greece is one of the poorest of the NATO countries. Greece has been able in recent years to make some degree of progress in achieving both quantitative and qualitative improvements in its defense posture while simultaneously carrying out a substantial development program. Defense support assistance has been an important element in making possible these two areas of progress.

IRAN

Iran's present degree of internal stability and economic growth are attributable in very large measure to the size and effectiveness of U.S. financial assistance provided over the period fiscal year 1954 through fiscal year 1957. Agricultural output and productivity have increased, diseases have been brought under control, old schools have been enlarged and new ones have been established, and government administration has been somewhat improved. Therefore, no defense support in grants for general budget support has been provided since fiscal year 1957. Since fiscal year 1956 a small amount of defense support has been provided annually to generate local currencies to help cover local costs of joint United States-Iran technical cooperation projects and also Iranian-developed and controlled agriculture, health, education, and community development programs. In fiscal year 1959, a rural development program was initiated, for the support of which the government of Iran and the United States made matching local currency contributions.

PAKISTAN

Despite political tensions, changes in administration and recurrent economic difficulties, Pakistan has maintained an encouraging degree of national stability and has remained a friend and ally of the United States. Without U.S. assistance the living standards would have deteriorated markedly. Our aid program since 1952 has made it possible substantially to maintain the level of per capita gross national product. The defense support program provided the means to import essential raw materials and equipment to keep the economy running. Without the substantial imports of food grains under the Public Law 480 program, nutritional standards, already among the lowest in the world, would have been further depressed or scarce foreign exchange would have been used at the expense of other essential imports. Political stability, which appears to have increased, could not have been maintained if living standards had deteriorated markedly.

The Pakistan rupee proceeds of commodities imported under defense support and Public Law 480 proceeds are important sources of noninflationary financing for the country's military expenditures and development projects.

TURKEY

Turkey is emerging from a decade during which internal economic conditions deteriorated to a critical point, Middle Eastern regional politics were in ferment, and revolutions in neighboring countries created dangerous international crises. Overly ambitious investment activity brought Turkey to a financial crisis of serious proportions during the 1955–58 period. In the summer of 1958, the Turkish Government adopted a stabilization program to control credit, stabilize the currency, restore trade and reduce inflationary pressures.

Despite the retarded rate of progress in recent years, Turkey has nearly doubled its gross national product and its agricultural production since the beginning of the mutual assistance program in 1948. The number of industrial establishments increased by 144 percent, industrial production by 80 percent, the generating capacity of electric power by 211 percent, mineral production by 59 percent. The base for development has thus been laid. Further gains are possible if Turkey pursues appropriate policies to maintain and extend the initial favorable impact of its stabilization measures.

CAMBODIA

Defense support assistance provided through fiscal year 1959 has enabled Cambodia to preserve its independence and maintain economic stability. U.S. economic aid also has enabled Cambodia to strengthen its Government administration and to improve and expand the country's productive base, thereby helping to insure Cambodia's future as a free, independent state.

A Cambodian military force, financed in large part with defense support funds, has upheld the authority of the national Government and bolstered confidence in the nation. With the defense support assistance provided to date, basic training has been given to 2,500 police; a new Royal Police Academy was opened early in 1960 with an initial class of 250; surveys for a national police radio network have been completed; and 180 jeeps and other police equipment have been delivered and placed in operation.

Defense support assistance has made possible substantial rehabilitation and expansion of Cambodia's transportation network, particularly of the highway system, which had deteriorated as a result of wartime damage and neglect. The 130-mile long Khmer-American Friendship Highway was officially opened to traffic in July 1959. This new two-lane all-weather highway connects the capital, Phnom Penh, with the new French-financed seaport at Sihanoukville, on the Gulf of Siam, where a new city is developing. The new highway and the new port provide direct access to the sea and free Cambodia from its historic dependence on foreign ports. The new highway is also accelerating the development of agriculture and forestry in the area through which it passes. An additional 1,250 miles of major roads and 65 bridges have been rehabilitated with U.S. help.

Other aid-financed improvements to basic transportation facilities include provision of two 40-ton ferryboats to handle traffic across the Mekong River and four dredges to keep the river channels and Phnom Penh Harbor navigable. All-weather runways have been completed at three strategically located airfields which handle both military and commercial aircraft. Similar construction is in progress at two more locations.

Rehabilitation of Cambodia's irrigation facilities, which has absorbed about $2.5 million of U.S. aid, has helped to expand the agricultural production base of the economy. Through repair of existing canals and restoration of several long-abandoned systems—including the ancient Barai Occidental, near Angkor Wat—irrigation has been restored to 212,000 acres of farmland. Heavy construction machinery, valued at $700,000, imported for restoration of the Barai and other systems, is now being used to maintain and add to the country's basic irrigation facilities.

Protection of Cambodia's 9½ million acres of forest reserves, one of the country's most valuable resources, is being provided by construction of firebreaks covering 2½ million acres and of nearly 100 miles of timber access roads. Recently completed aid-financed aerial mapping surveys provide the basis for

development of a complete inventory of national timber resources, the first for Cambodia.

Campaigns against two of Cambodia's major national health hazards—malaria and water-borne diseases—have been launched and sustained largely with local currency proceeds of Defense Support aid.

After 5 years of spraying which has protected 1 million residents in malarial areas, the project has advanced to the "surveillance" stage. Improvement of urban water supply systems at 5 provincial capitals is in progress, and more than 600 wells have been sunk in rural areas. U.S. technicians have expedited installation of village wells by devising new self-help drilling methods and designing a simple hand pump, now locally produced.

As major construction projects financed by ICA have been completed, and as other aid activities have begun to make an impact on the Cambodian people in terms of improved health and education and higher income, the Cambodian Government has demonstrated a growing appreciation of U.S. assistance and greater understanding of U.S. policies and motivations.

CHINA (TAIWAN)

Defense support assistance helped transform into effective military units the GRC forces that came to Taiwan from the mainland in 1949. It assisted directly in the build-up of military strength by financing the local costs of military construction, certain other nonrecurring costs and raw materials, and also helped maintain the economic stability which must underpin military strength. Increases in agricultural and industrial production, employment and exports, and the beginnings of economic diversification have been made possible in an important measure by defense support.

Defense support-financed imports of capital equipment were instrumental in achieving a 125 percent increase in industrial production from 1952 to 1959. The expansion of plants producing chemical fertilizer was a major factor in the sizable increases in agricultural output during the same period.

KOREA

Supplied during this period as nonproject aid, ICA-financed improvements in irrigation and flood control facilities have helped to stabilize production. Progress also has been made in the reforestation of denuded lands to improve fuel and lumber supplies; and uplands development has encouraged crop diversification, reduced losses due to erosion, and is providing food for increased livestock production.

The provision of supplies and equipment for fishing boats and modern processing and marketing facilities have enabled the fishing industry to make progress in regaining its important prewar position. Although the fishing fleet and shore facilities were severely damaged by Typhoon Sarah in September 1959, output of fish and other marine products in 1959 is estimated at nearly 400,000 tons, only slightly less than the postwar peak in 1957. The steady gains which are being made in industrial output, both in physical volume and in the variety and types of goods produced, are attributable almost entirely to equipment and supplies and other assistance financed with defense support funds. Korea now produces some types of paper, tires and other rubber products, asbestos, pesticides and other chemicals, plastics, glass, shoes, textiles and clothing. However, Korea is still heavily dependent on aid-financed imports of the raw materials needed for some of these industries.

The largest of the chemical plants, the fertilizer plant at Chungju, was completed in December 1959. Since then it has been producing ammonia for use in making urea fertilizer. The urea section of the plant is expected to begin operations shortly. When the plant is operating at full capacity, output should meet about one-third of the country's fertilizer requirements and save foreign exchange amounting to $10 to $12 million annually.

Many small and medium-size, privately owned plants, designed to produce a wide range of basic commodities, are in various stages of completion. The next 5 years could see a sizable expansion of industrial output which would enable Korea to meet a substantially larger share of its requirements from domestic sources.

Improvements in transportation are contributing to the growth of the economy. Since the close of the Korean war, Korea's railway system has been almost completely rehabilitated and approximately 220 miles of additional main and spur lines have been constructed. Maintenance shops have been rebuilt and additional locomotives, rolling stock and other equipment provided, including 95 diesel engines and 1,900 freight and passenger cars.

The primary road system has been undergoing continuous improvement, largely through the institution of regular maintenance schedules and the use of more modern equipment. By the end of 1959, practically all of the war-damaged streets and roads had been repaired and more than 200 miles had been paved. A total of 400 bridges of various sizes have been rebuilt and an additional 200 are in the construction or planning stage.

Shipping has been facilitated by the rehabilitation of piers, wharves, unloading facilities, revetments and breakwaters, and the installation of navigational aids at major ports. Silting in Korea's major harbors has been reduced through dredging and flood control measures.

Communications services have been rebuilt and expanded to help meet military and growing industrial requirements. These installations, now approximately 90 percent complete, include teletype circuits and equipment, intercity toll lines and additional central office facilities in major cities, as well as an offshore radio system. As a result of improvements in Korea's electric power generating and distribution facilities, electric power output has tripled between 1954 and 1959. However, generating capacity still falls short of requirements.

Measures to help overcome the acute shortage of housing are beginning to show results. Financing has been provided through new and existing credit institutions for low and moderate cost housing. Interest has been stimulated in simplified housing design, reduction of construction costs and increased use of local materials to save foreign exchange. More than 30,000 applications have been received from potential homeowners; nearly 6,000 of these applications have been approved, and approximately 4,500 homes have been completed or are now under construction.

Financial assistance has also been given to the Armed Forces Assistance to Korea—AFAK—project. Utilizing the technical skills of U.S. military personnel and aid-financed commodities, this project has made a significant contribution to the repair and construction of schools, dispensary facilities, and other public buildings.

Educational and health facilities also have been aided directly with materials and equipment. Emphasis in these fields has now shifted from physical plant improvements to technical assistance, funded under the technical cooperation program.

LAOS

That Laos has remained free is attributable largely to U.S. aid. With ICA support, the Lao army was enlarged and, in the summer of 1959, succeeded in countering armed insurrection. The joint United States-French military training program, established just before the outbreak of hostilities, is developing the army into a more effective force.

Since ICA aid began in 1955, the strength of the civil police force has grown from 600 to 3,200 men. An intensive training program is now under way at the National Police Academy, established in February 1959 with U.S. help.

ICA financial assistance has enabled the Lao Government to control inflation and eliminate currency speculation, to achieve financial stability, and to improve government services and fiscal administration. With the achievement of a sounder currency, capital flight from Laos has ceased to be a serious issue.

Progress also has been made in improving the deficient and disrupted highway system. With ICA technical and financial help, the roads linking Vientiane, the administrative capital, with the most important provincial centers have been extended to a total of almost 500 miles.

As part of the drive to increase food production and meet dietary deficiencies, eight irrigation and diversion dams have been completed with ICA aid, bringing new acreage under cultivation.

The training of Lao Government malaria service staff has continued on schedule and 87 Lao technicians are now actively participating in the program. House-spraying goals have been surpassed and protection is being provided to 950,000 persons, almost half of the total population.

Operation Brotherhood teams, under a program jointly sponsored by the Philippine and Lao junior chambers of commerce, and assisted by ICA, have combined to provide medical and public

health services to some of the remote rural areas. Teams of Filipino doctors and nurses—now totaling 80 persons—are operating 7 outpatient clinics and providing medical care to approximately 40 percent of the population, principally villagers who otherwise would be without these services.

PHILIPPINES

Many of the projects included in the military construction program, which is financed in part from local currency generated by defense support aid, are in various stages of use, construction, or design.

Under the defense support program in past years, the Philippines received significant amounts of machinery and equipment both for industry and agriculture, as well as essential raw materials, including surplus agricultural commodities. These have contributed to notable increases in agricultural and industrial production and to substantial improvement of the transportation system.

Defense support assistance has made possible the reconstruction, rehabilitation, and expansion of the College of Agriculture at Los Banos; the nationwide demonstrations of the value of chemical fertilizers; and the completion of more than 300 large pump-irrigation and 13 large gravity-irrigation systems, which provide water for more than 300,000 acres. Food production on this newly irrigated land is expected to be a significant factor in the country's total food supply—approximately enough to feed 1.6 million people or about 6 percent of the present population.

More than 450 miles of roads and 150 bridges have been built on the large and undeveloped island of Mindanao. Settlement and agricultural development have followed, underscoring the importance of roads in fostering economic growth. Defense support assistance also has made possible considerable road rehabilitation and construction elsewhere throughout the country, and has helped to improve harbors and other elements of the transportation network.

Through the Industrial Development Center, an agency of the Philippine Government, technical advice and loans of defense support generated local currency have been extended to several hundred industrial firms. This assistance has been an important factor in increasing production of cement, textiles, plywoods, and veneer.

Defense support assistance has made possible a more extensive and accurate survey of the mineral and other natural resources on which the future industrial development of the Philippines will so largely depend. Extremely promising laterite and other mineral deposits have been identified and mapped. Other accomplishments of the defense support program include rehabilitation, modernization, and equipment of schools, hospitals, and other public buildings; and improvement and expansion of community water supplies.

THAILAND

Most of the defense support assistance provided in the past has been used to help Thailand develop its primary highway system. The 90-mile Friendship Highway, completed in 1958, is a major segment of the road from Bangkok to Nongkai on the border of Laos. The Friendship Highway not only has speeded communications between the Thai capital and Laos, but also has served to stimulate economic development of the relatively depressed northeast region of Thailand through which it passes. Construction of about half of the East-West Highway has been completed. This 80-mile road from Pitsanuokel to Lomsak in north-central Thailand is also opening a previously isolated area for development.

In addition to these major construction projects, the Thai have undertaken a program for general rehabilitation and improvement of the highway system. Over 700 modern bridges have replaced dangerous wooden structures, thus enabling heavy trucks to use roads previously impassable to them. Improvement of the highway system has been reflected in an increase in traffic and in the development of areas which previously were almost completely isolated.

With ICA assistance, the Thai railways have been rehabilitated and modernized. The 33-mile extension of the railway from Nongkai to the Laos border on the Mekong River has greatly facilitated the movement of goods into that landlocked country.

To meet a critical shortage of power for both domestic and industrial uses in the Bangkok area, ICA financed the procurement of 10 diesel 1,000-kilowatt generators. These units were put into service in September 1959. When power from the Yan Hee Dam becomes available, the generators will be relocated in various provincial centers to supply power to rural areas not served by national transmission lines. ICA assistance also has been instrumental in the development of a lignite mine which will provide fuel for an adjacent 12,500 kilowatt thermal powerplant. When completed this year, this plant will provide urgently needed power to three cities in northern Thailand.

Air navigation and communications equipment, and other airport equipment provided by ICA, has been installed at Bangkok and 21 Thai provincial airports. This equipment has enabled 23 international airlines to use the Bangkok airport and has contributed to significant development of commercial air transportation within Thailand, thus increasing accessibility to relatively isolated areas and speeding commerce throughout the country.

VIETNAM

When the Indochina war ended 6 years ago, Vietnam seemed to have little chance of survival because of serious internal political factionalism, complete disruption of the economy, and widespread subversion directed against the new pro-Western government. The United States was faced with the choice of providing the large-scale support necessary to preserve Vietnam from total collapse or allowing this strategic area to fall behind the bamboo curtain. Following a decision that the preservation of Vietnam's independence was important to the United States, large-scale military and economic aid was provided. Since then, Vietnam has made substantial progress and is now one of the strongest supporters of U.S. policy in Asia. This recovery results from Vietnamese Government efforts and U.S. support.

Defense support assistance has helped to preserve Vietnam's independence by enabling the country to maintain adequate military forces, rehabilitate war-damaged facilities, undertake essential economic development projects, and provide basic public services to the people.

Large-scale provision of commodity imports through commercial channels has helped to control inflation and has enabled the Government to maintain living standards. It has also helped to promote private investment through the importation of machinery and raw materials for local production of consumer goods, such as glass and textiles, and other essentials such as jute sacks for rice.

With the exception of silted canals in rice-producing areas, which were abandoned during the war, wartime neglect and destruction have been largely repaired. Much of the road network has been rehabilitated and improved, resulting in increased mobility of the security forces and the settlement and development of new areas. In August 1959, after an interruption of 13 years, through rail service was resumed from Saigon to Dong Ha near the 17th parallel, a distance of 700 miles.

Popular support of the Government has been strengthened through ICA-assisted activities in the fields of health and education which directly affect the welfare of the people. Health stations have been established in 2,660 villages. Approximately 400 wells have been drilled to provide potable water supplies. More than one million houses have been sprayed under the malaria eradication program, previously wholly supported by defense support but now supported in part from the worldwide malaria eradication fund. With ICA help, the Government has also constructed 1,400 elementary classrooms which make it possible for an increasing number of Vietnam's children to receive at least a basic education.

A concerted effort has been made to develop civil police forces to carry out regular police functions and also to help meet internal security requirements. Almost 60,000 men have been trained, some of them in the United States.

Finally, I would like to point out and compliment our good friends, the people of Israel, on their fine and intelligent progress to this time. The Government and people of Israel have accepted the benefits of the U.S. mutual security programs with a deep responsibility for efficient use of the funds and agricultural commodities they receive. We should continue our U.S. aid to Israel in the 1961 fiscal year through the Development Loan Fund, through U.S. Public Law 480 distribution of U.S. agricultural surplus products, and we should continue our special assistance-type programs at the same rate of $7½ million

as Congress had authorized for the current fiscal year ending June 30, 1960. We in the United States must remember that the State of Israel is a basic foundation of our U.S. foreign policy in the Mideast, and the freedom and progress of the people of Israel are keystones in the building of a free, prosperous, and secure world.

Mrs. BOLTON. Mr. Chairman, I yield 15 minutes to the gentlewoman from Illinois [Mrs. CHURCH].

Mrs. CHURCH. Mr. Chairman, it would not be fitting for me to speak even 1 minute on this very important bill without first expressing my appreciation to the chairman of our committee and to the Members who so graciously permit disagreements within their ranks. That graciousness, I would say, has grown during the chairmanship of the gentleman from Pennsylvania. We who signed the minority report appreciate tremendously the courtesy that has been shown to us and the demonstrated willingness to listen—willingness, I might say, Mr. Chairman, in recent years even to think that our position was significant enough to be considered. For all of that, we are grateful.

Mr. Chairman, I come today with no eloquent plea. During the 8 years that I have been a member of the House Committee on Foreign Affairs—during the 8 years that I have in my humble way assisted in trying to make this bill as good as it could be—never once have I come before the House trying to influence any Member as to how he or she should vote or as to how he or she should judge this bill.

Mr. Chairman, indeed, as I sat here this afternoon listening to the debate, I have been impressed with how much I could agree with so many of the statements made by those who favor this legislation—or rather, the goal of this legislation. The peace of the world and the rise of people and nations to their heritage of freedom are indeed jointly held desiderata. Equally, the safety and economic well-being and in fact the survival of our great free country, in this troubled world, is for all of us a common goal.

Mr. GROSS. Mr. Chairman, the gentlewoman from Illinois [Mrs. CHURCH] is making a very important speech and I believe more Members should be present to hear her so I make the point of order that a quorum is not present.

Mrs. CHURCH. Mr. Chairman, may I ask the gentleman from Iowa to withdraw the point of order?

Mr. GROSS. Mr. Chairman, I insist on the point of order.

The CHAIRMAN. The Chair will count. [After counting.] Forty-nine Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 51]

Addonizio	Barden	Burleson
Allen	Barrett, Pa.	Cahill
Andersen, Minn.	Bass, Tenn.	Celler
	Bolling, Mo.	Coffin
Anderson, Mont.	Bonner	Cooley
	Bowles	Daddario
Auchincloss	Brock	Davis, Tenn.
Bailey	Buckley	Dent
Baker	Burdick	Derounian
Diggs	Kelly	Prokop
Dooley	Keough	Rogers, Tex.
Evins	Kilburn	Rooney
Fallon	King, Utah	St. George
Fenton	Kluczynski	Sheppard
Fisher	Lafore	Short
Flood	Landrum	Sisk
Foley	McGovern	Smith, Miss.
Forand	McIntire	Staggers
Ford	McMillan	Taylor
Garmatz	Machrowicz	Teague, Tex.
Gathings	Mack	Teller
Gavin	Madden	Thompson, La.
Glenn	Magnuson	Thompson, Tex.
Grant	Meader	Utt
Hargis	Merrow	Vinson
Harrison	Metcalf	Walter
Hays	Mitchell	Wharton
Hechler	Montoya	Whitten
Holifield	Moorhead	Williams
Holland	Morris, N. Mex.	Willis
Holt	Morrison	Withrow
Horan	Moulder	Young
Inouye	Norblad	Younger
Jones, Ala.	Oliver	
Kearns	Powell	

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill H.R. 11510, and finding itself without a quorum, he had directed the roll to be called, when 329 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

Mrs. CHURCH. Mr. Chairman, before the quorum call, I was saying that I had been interested to note how much there was with which I could agree in the words of those who have spoken in favor of this bill this afternoon. This is true despite my earlier statement that as in other years I had felt constrained in committee to vote against reporting out this particular measure.

Mr. Chairman, I am surely not unaware of the world in which we live, and move, and have our being. I know the danger, I know the conflict, I know the insistence of an implacable enemy hostile to everything for which we stand. I know the determination of that enemy to take over the world by economic means if not by military. I know that there is still no peace. Within the last 6 months I have stood with our subcommittee on the 38th parallel in Korea and looked across that thin line which separates our forces from what I still believe to be possible Communist aggression. I have stood at the end of the bridge in the leased territory near Kowloon, and watched others walk across the short line to Communist China. I know the threat of danger under which we live.

I know something else. I know that in the last 10 years there has been the greatest change in the world that history has ever known, an explosive outbreak of freedom which we should swiftly recognize and certainly hail. I know that from that outburst of freedom conditions have arisen which demand new consideration.

I know all that, Mr. Chairman, and I know something more. I know that to this country the world would like to look for sound and right leadership. As I have said in other years and say again, our national well-being lies not in material possessions, nor in our material prosperity, but rather in the endemic strength of our own freedom. We have poured out our substance and the lives of our sons in the cause of freedom—nor have we as a nation or as people ever turned our back on human need.

I face all that. I face also the fact that the committee has labored long and earnestly and sincerely, particularly during the last 2 or 3 years, trying to write a bill that would bring order into the program. Nevertheless, very frankly, in this as in other years, I look at this Mutual Security Act, and I know that no matter what we have attempted, the bill is not adequate, the program is not adequate, the results are not adequate; and I for one am not willing to accept second best. Nor should the American people be asked to condone—and pay at such sacrifice for—a program in which extravagance, waste, and inadequacy of planning, administration, and control are still so evident.

I do not think that we can lightly toss off our responsibility by laughingly referring to "horrors" when waste is pointed out. I would say with very humble sincerity that neither the committee nor the Congress has a right to accept for itself a certain sentence on page 7 of the majority report, which reads:

> The Congress must reconcile itself to the fact that occasional mistakes will continue to be made and some money will be misspent.

Mr. Chairman, we have been forced so far to accept mistakes and waste, but may I never live to see the day when the committee or the Congress "reconciles" itself to the idea that such mistakes and such waste are inevitable. And by the same token, referring to another sentence in the majority report, although I would say to the gentleman from Pennsylvania that in most cases it is an excellent statement of the majority case, I would disagree with the thought behind the sentence on page 6 which says that "no technique has been devised by which only the funds likely to be wasted can be cut from the program in advance."

Mr. Chairman, of course, no one has the gift of second sight to know which funds will be wasted, but certainly a responsible Congress will make sure that every possible effort to control waste is made before admitting defeat. A responsible Congress will make sure that every step is taken that can be taken to eliminate the possibility of such waste of funds.

Mr. Chairman, I am not at this late hour going to go into all the reasons that might be given for just criticism of this measure. I was one of those fortunate people who made that astounding journey around the world with the Subcommittee on Foreign Economic Policy under the dedicated leadership of the gentleman from Georgia; and I doubt if any American ever looked with such clear eyes at the problems of his generation and of his country. I would like to direct the attention of the entire House to the formal report of that subcommittee. I refer to House Report No. 1386, Report of the Special Study Mission to Asia, the Western Pacific, the Middle

East, Southern Europe, and North Africa. I would like the Members of the House to read that report and, particularly, to note the conclusions. I would point out that the report was signed by a very representative group of Members of this body. It was signed by Mr. PILCHER, the gentleman from Georgia, as chairman; Mr. MCDOWELL, of Delaware; Mr. FASCELL, of Florida; Mr. CURTIS, of Massachusetts; and Mrs. CHURCH, of Illinois.

I commend that report to your attention not with any pride in its partial authorship but because it represents a very honest attempt to face the facts, admit the truth, and call for a determined remedy.

Mr. Chairman, I am going, as is my custom, when we get back into the House, to ask permission to include in my remarks the conclusions of the minority group of the Committee on Foreign Affairs who voted against reporting out this bill.

It does not, of course, represent any more than does any joint report the exact and complete reaction of any one of us. It does indicate certain of the reasons why some of us feel constrained to say again this year that despite the best intentions of the committee and despite the improvements in the program that have taken place, this bill is not adequate.

Mr. Chairman, I always have one sentence in mind when I come to a discussion of this legislation. Those of you who have been patient enough to listen to me before may remember it. It goes something like this:

There is more faith in honest doubt, believe me, than in half the creeds.

Mr. Chairman, I am sure that those members of the Committee on Foreign Affairs with whom we are in partial but important disagreement know our sincerity. I hope that we on the committee and other Members of the House will rise to our responsibility in this day and age of danger and face honestly the inadequacies and errors of past attempts. I know—I admit gladly—that much has been done. It would be a sorry thing, indeed, if we had spent over $80 billion and tried so hard, without some noticeable results.

I am reminded nevertheless of the ancient words of Pericles:

I am more afraid of our own mistakes than of all the devices of our enemy.

We cannot run from our responsibilities. We must find a new and realistic approach to our problem. There is ground for suspicion that we are dealing with wornout tools; and in this day and age, wornout tools, Mr. Chairman, are not enough to meet the threat that we recognize.

I am inclined to feel that the closing sentence of our report, on page 118, is all too true:

To refuse to face the facts and in the very name of mutual security and freedom fail to demand adequate remedy for current deficiencies would be a negation of our congressional responsibility.

The time is long overdue when we must take out that part of the program which is useless, eliminate the waste, and get ahead with problems that face us and do the best we can with them until such time as the program can be rated unnecessary. We should not be willing to make of this program so sacred a cow that to criticize it is to bring upon oneself opprobrium, that to insist on improvement is considered to be nonrecognition of a need. I think that the time has come when even the Congress in its entirety should not be content annually just to pour out billions and use the action as an anesthetic under which to forget the program until another year rolls around. I repeat that it is time to face up to the need, face up to the danger of what we are not doing, and the time for us to decide between now and next year to give the program and the policy and the legislation a complete review and revision. If we can come in here next year with waste and inadequacies eliminated, with inefficiency rejected, with congressional control of the program once more in our hands, then we will have a right to come to you and say: This is the best that we can do. This year, five members of the committee voted against reporting out this bill. Three signed the minority statement which I here include:

MINORITY VIEWS OF MR. PILCHER, MRS. CHURCH, AND MR. ADAIR ON H.R. 11510

For some years, as earnest participants on the committee considering the Mutual Security Act, we have felt compelled to be realistic and honest critics, not of what is sought to be done but of the inadequate planning and poor administration of the program. Despite efforts this year to make some improvements in this basic legislation, we can see no indication that the actual planning and administration of the program will be radically changed. As in previous years, we who find this present bill unsatisfactory again assert that we believe in mutual security. We do not believe, however, that the present measure, H.R. 11510, adequately meets the challenge to provide such mutual security. It does not present the new imaginative program which is so necessary to further the efforts of the United States to build peace and progress in this troubled world.

Despite conclusive evidence that, due to obvious uncorrected weaknesses, the program has failed to achieve the anticipated results toward the establishment of security in the free world, H.R. 11510, as reported out by the Committee on Foreign Affairs, authorizes an appropriation of $1,318,400,000, a reduction of $136,500,000 from the Executive request. In addition, there are continuing authorizations, agreed to by the committee last year, for military assistance, the Development Loan Fund, and other smaller items, in the amount of $2,720,100,000. In other words, the total amount proposed to be appropriated for fiscal year 1961 is $4,038,500,000. Furthermore, under Public Law 480, additional funds will be made available to the mutual security program.

Last fall a study mission comprised of members of the Committee on Foreign Affairs completed a 40,000-mile tour to study the impact of U.S. foreign aid programs in the areas around the world. The chairman of this minority report was also chairman of the study mission. Another signer of the minority report accompanied him. In its report the study mission pointed up the reality and justice of our former criticisms. The final conclusions of the report had this to say about foreign aid:

"The study mission is convinced that a realistic review and reappraisal of our aid program is immediately necessary, and that greater supervision must be given to its operations. However noble the purpose or well advised the goal, the quality and success of performance remain an essential criterion of success. We have pointed out in this report specific cases of poor programing and excessive spending. There is indication in more than one instance that, as suggested by the Comptroller General in 1959, the field operations have actually been hampered by an excess rather than a paucity of funds. A far more vigorous effort, moreover, must be made to correct conditions and weaknesses that are known to exist and that have been pointed out again and again. There is some indication that blame for such weaknesses should be placed as much, if not more, on the planners in Washington than on those in the field. In any event, there is ample justification for our insistence that there be a complete revision of programs and operations.

"In fact, there is justification for insistence on a broader vision and a more imaginative approach. Such approach should aim to produce in the peoples of the world greater and more successful self-reliance and stable political institutions under which the people in each country could live in freedom and dignity with full enjoyment of economic progress under democratic institutions.

"What is desperately needed in this world to build sound bodies and sound minds is an adequate food supply and elementary education. In generations to come, grandiose dams and multi-million-dollar fertilizer plans might bring ultimate benefit, but we express again our fear of the inconsistent and strikingly dangerous gap between such grandiose projects at the top and the millions of human beings still starving, still untaught, who have neither the stamina to undertake nor the capacity to understand self-government. Without such understanding and capacity there is little chance for orderly progress. Such a course only adds to economic dislocation and confusion. Premature advance toward industrialization not only seriously strains the present capacity of countries but is bound to produce an insecure economic base. We would urge, therefore, that primary attention be given to food production and the teaching of at least elementary knowledge.

"Since the end of World War II, the United States has spent well over $80 billion in aid to the nations of the world. The program has assisted in the effort of keeping them free and improving their economic position. In recent years changing conditions in the United States and in the world require reappraisal and revision of the program. The struggle to maintain freedom and encourage economic development involves the future of all free nations and, therefore, must be regarded by them as a joint responsibility.

"The financial condition of the United States makes an expenditure each year of $3 to $4 billion an extremely difficult burden to carry. Such an effort can be justified only if the programs and obligations succeed in achieving their objectives. The American citizen today is paying more peacetime taxes than ever before. Interest on the public debt is taking approximately one-twelfth of all taxes collected. The American dollar, once the strongest and most-sought-after currency in the world, is selling at a discount in some countries (e.g., Canada, Switzerland, Belgium). Our gross national debt is approximately $292 billion.

"Those nations which the United States helped to rehabilitate after World War II, and which are now financially strong, should make every effort to assist, both militarily and economically, in strengthening the less developed countries. The United States should no longer carry so large a share of the military and economic assistance to the other free nations of the world.

"Furthermore, since 1947, the United States has so given to other countries its technical know-how and the dollars to develop it, that its own formerly unchallenged economic supremacy of the free world is under successful attack. The United States faces stronger economic competition than ever before—a competition that can have an immeasurable effect not only on our trade but on our industrial prosperity and the high living standards of our workers. Every possible wise step must be taken to protect our own position in world trade as well as the stability of the American dollar.

"These facts, in addition to the findings of the study mission, underlie our insistence for an immediate detailed examination and careful review and revision of programs and operations.

"In particular, the study mission comes back impressed by obvious evidence that ultimate failure is inherent in the program unless we can somehow develop plans and operations that will reach down to the people themselves of each country."

Paul G. Hoffman, in his pamphlet, "One Hundred Countries, One and One-Quarter Billion People," succinctly states the problems confronting underdeveloped countries:

"The underdeveloped countries need high level manpower just as urgently as they need capital. Indeed, unless these countries are able to develop the required strategic human resources they cannot effectively absorb capital. But human resources of the less-developed nations have been shamefully neglected. Only a very small percentage of the people who live in these countries have ever had an opportunity to acquire an education and only a few have ever had positions of responsibility. There is a huge need for training of all types from on-the-job training of artisans to training in more complex technological and management sciences.

"Of all the resources required for economic development, high-talent manpower requires the longest leadtime for its creation. Dams, power stations, textile factories, and steel mills can be constructed in a few years, but it takes 10 to 15 years to develop managers, engineers, and the administration to operate them. The existence of such manpower, however, is essential if the countries are to achieve self-sustaining growth.

"Thus, while it is imperative that these countries survey their natural resources and draw up programs spelling out priorities for the strategic investment of capital in their development, so must they draw up some kind of a high-level manpower budget for the next 10 or even 20 years. This should be an integral part of their development plan."

Eugene R. Black, President of the International Bank for Reconstruction and Development, in a speech made at Oxford University, England, on March 3, 1960, stated:

"We think that in administering economic aid quality is more important than quantity; even the most enthusiastic supporters of economic aid recognize that the outside world cannot provide more than a small margin of the resources needed; the really crucial economic and human resources must come from within. Therefore, it is only realistic, we think, to try to use economic aid primarily to promote proper standards in the art of managing a country's resources."

This present legislation in no sense gives the true picture of what is available for mutual security. Attention is directed to the following figures showing mutual security funds by program and amount available for expenditure for fiscal year 1960, which were inserted in the CONGRESSIONAL RECORD of March 31, 1960, by Hon. OTTO E. PASSMAN, chairman of the Subcommittee on Foreign Operations of the House Appropriations Committee.

Mutual security funds by program and amount (available for expenditure (fiscal 1960))

	Total available for expenditure
1. Military assistance:	
Unexpended, June 30, 1959	$2,547,998,755
New funds, fiscal 1960	1,331,247,000
Sale military material, fiscal 1960	30,200,000
Total	3,909,445,755
2. Defense support:	
Unexpended, June 30, 1959	787,500,953
New funds, fiscal 1960	695,000,000
Sale military material, fiscal 1960	500,000
Total	1,483,000,953
3. Development Loan Fund:	
Unexpended, June 30, 1959	782,010,480
New funds, fiscal 1960	550,000,000
Loan repayments, fiscal year 1960	15,700,000
Total	1,347,710,480
4. Development assistance, unexpended, June 30, 1959	97,768,490
5. Special assistance:	
Unexpended, June 30, 1959	173,389,255
New funds, fiscal 1960	245,000,000
Estimated reimbursement, fiscal 1960	100,000
Total	418,489,255
6. President's Asian fund, unexpended, June 30, 1959	85,846,438
7. President's contingency fund:	
Unexpended, June 30, 1959	139,789,149
New funds, fiscal 1960	123,753,000
Total	263,542,149
8. Technical cooperation, bilateral:	
Unexpended, June 30, 1959	158,717,287
New funds, fiscal 1960	150,000,000
Estimated reimbursement, fiscal 1960	700,000
Total	309,417,287
9. Technical cooperation, U.N.:	
Unexpended, June 30, 1959	8,292,101
New funds, fiscal 1960	30,000,000
Estimated reimbursement, fiscal 1960	
Total	38,292,101
10. Technical cooperation, Organization of American States:	
Unexpended, June 30, 1959	1,307,960
New funds, fiscal 1960	1,200,000
Total	2,507,960
11. Joint control, unexpended, June 30, 1959	472,167

Mutual security funds by program and amount (available for expenditure (fiscal 1960))—Continued

	Total available for expenditure
12. Atoms for peace:	
Unexpended, June 30, 1959	$9,280,648
New funds, fiscal 1960	1,500,000
Total	10,780,648
13. North Atlantic Treaty Organization, unexpended, June 30, 1959	1,088,558
14. Intergovernment Committee for European Migration:	
Unexpended, June 30, 1959	10,829,222
New funds, fiscal 1960	7,371,000
Total	18,200,222
15. U.N. Refugee Fund:	
Unexpended, June 30, 1959	1,200,000
New funds, fiscal 1960	1,100,000
Total	2,300,000
16. Escapee program:	
Unexpended, June 30, 1959	6,887,757
New funds, fiscal 1960	4,632,000
Total	11,516,757
17. U.N. Children's Fund:	
Unexpended, June 30, 1959	8,925,635
New funds, fiscal 1960	12,000,000
Total	20,925,635
18. U.N. Relief and Works Agency:	
Unexpended, June 30, 1959	8,956,957
New funds, fiscal 1960	25,000,000
Total	33,956,957
19. Ocean freight:	
Unexpended, June 30, 1959	1,662,992
New funds, fiscal 1960	1,910,000
Total	3,572,992
20. Control Act, unexpended, June 30, 1959	119,101
21. Administrative expenses, ICA:	
Unexpended, June 30, 1959	4,956,497
New funds, fiscal 1960	38,000,000
Estimated reimbursement, fiscal 1960	800,000
Total	43,756,497
22. Administrative expenses, State:	
Unexpended, June 30, 1959	708,341
New funds, fiscal 1960	8,100,000
Total	8,808,341
Grand total	8,111,521,750

RECAPITULATION

Unexpended funds, June 30, 1959	4,837,708,750
New funds, appropriated, fiscal 1960	3,225,813,000
New funds, other, fiscal 1960	48,000,000
Total	8,111,521,750

INADEQUATE PLANNING AND POOR ADMINISTRATION

Since the end of World War II the United States has spent more than $80 billion to

assist nations in remaining free and in improving their economic conditions. Newly independent nations seek to build prestige by building huge dams, steel mills, and super highways before there is need for such grandiose projects. As a result the International Cooperation Administration has acceded to too many requests for such programs and there have been too many projects begun without proper planning, determination of need, or benefits to be derived. Too often the people at the grassroots do not derive any immediate benefits from these grandiose projects—but continue to live in poverty and hunger under circumstances which certainly are not conducive to economic well-being or the development of democratic processes. Too much emphasis has been placed on meeting the personal desires of the political leaders of the recipient governments and too little emphasis on the needs of the little people who, after all, determine the potential and the future of each country.

There is a true need for technical assistance in all of the underdeveloped nations, but such assistance should be given on the basis of a smaller number of better selected projects. A study mission, of which two of the signers of this minority report were members, found more than 600 projects in being in one country and more ready to be started before completion of the existing projects. The criticism that a multiplicity of projects has been undertaken is justified by the appended compilation showing aid to and projects in countries which the study mission visited.

In too many instances inadequate planning has resulted in the undertaking of impractical and unsuitable projects in underdeveloped nations which have led to excessive spending and waste of U.S. funds. We cite the following examples in support of these charges: A highway program in Vietnam on which the costs have skyrocketed from $18 million to $85 million, and may exceed $100 million before its completion; a fertilizer plant in Taiwan, started with foreign aid money and estimated to cost approximately $34 million, which is nonoperable because some of the equipment does not meet the specifications for the desired operations, and on which the Taiwanese Government has instituted proceedings against the manufacturer for contractual noncompliance; radio towers installed in Saigon which have never been put in operation because their utility is undetermined and their location in doubt.

As a further illustration, it seems worth while at this point to go into the problem of the Saigon water program in detail, and quote from the previously mentioned subcommittee report:

"Everyone agrees Saigon badly needs a new water system, but plans have bogged down in a heated dispute between two schools of thought. On one side is the International Water Corp. of Pittsburgh which believes in deep wells. It has done business in Saigon for 30 years and has drilled most of the city's wells. On the other side is the Hydro-Technique Corp. of New York which believes in dams and pipelines.

"Our foreign aid authorities gave the Hydro-Technique Corp. a $200,000 contract for a survey 2 years ago. Hydro-Technique came up with a report favoring a dam and filtration plant on Dang Nai River near Bien Hoa, 18 miles north of Saigon. From this plant a 72-inch pipeline would lead to Saigon. The International Water Corp. made several surveys, all of which showed again that deep wells are quite adequate. What is more, the International Water Corp. said they would be much cheaper and provide water much sooner. The Hydro-Technique pipeline project is estimated to cost $19.5 million to be put in by the United States. The International claims it can give Saigon all the water it needs indefinitely for $12 to $14 million. The Vietnamese seem to favor the dam and pipeline system, but the military of both Vietnam and the United States have raised the question of security. It was at Bien Hoa that two American military advisers recently were killed when Red terrorists tossed a grenade into a movie audience.

"It is pointed out that the 18-mile aboveground pipeline could be sabotaged and the already hard-pressed Vietnamese armed forces probably would have to furnish daily patrols, as well as guards for the river plant.

"In November 1959 the Development Loan Fund approved a $19.5 million loan for the water system and called for another survey. Who gets the contract for this survey and what it will cost, we do not know."

The most urgent need in many of the underdeveloped countries is the employment of manpower, which is one of their greatest economic resources. There is intense need for development of the agricultural regions and the implementation of small industries so that this excessive supply of manpower may be put to productive use, instead of the multimillion-dollar projects carried out by contract with large business firms only interested in making a profit, with little or no regard for the utilization of local manpower.

LOSS OF CONGRESSIONAL CONTROL

We regret that each year there is further shrinkage in the degree of control exercised over the program by the Congress. Progressive loss of control of funds inevitably leads to loss of administrative control. In the face of our repeated criticisms over the years of the administrative deficiencies in the foreign aid program, the executive branch this year requested an appropriation of $4,175 million for mutual security. During fiscal year 1959 total U.S. mutual security expenditures were $3,898 million. Despite the fact that we are being asked to continue to pour vast sums of money into the program, this request for funds in fiscal year 1961 makes no suggestion for strengthening congressional control over the programing and expenditure of funds. Nor is any recognition seemingly given to the fact that many of the projects do not have economic justification, let alone a defense requirement.

It is true that the bill for this year contains no authorization for military assistance. The mutual security law was changed last year so as to provide that for fiscal years 1961 and 1962 such sums as might be necessary could be appropriated for military assistance. This is an open-end authorization. There is no possible way to indicate just how much will actually be spent for the military under the unlimited amount authorized. We definitely feel that such authorization further weakens the control of the Congress over the funds and over the program.

In our judgment, the Congress made a serious mistake when it changed the pattern of congressional action as regards the military aid programs which previously had prevailed for nearly 10 years. It is urgent that we return to the original procedure whereby military assistance funds were annually authorized and annually appropriated.

BUREAUCRACY IN MUTUAL SECURITY PROGRAMS

The foreign aid program is administered by an increasingly large number of personnel without any noticeable increase in efficiency. This has led to the creation of an entrenched, self-perpetuating bureaucracy, still growing in size, power, and inefficiency. In this regard, the figures speak for themselves. In December 1948, a total of 2,858 persons were employed in the economic aid program. Today there are more than 42,000 personnel employed in the administration of the mutual security program.

INADEQUACY OF INSPECTION

The Office of Inspector General and Comptroller was created in last year's mutual security legislation to undertake the required actions to correct a program warped with waste and inefficiency. It was hoped that the creation of such an office would bring to the program a fresh review through impartial inspection by competent personnel whose judgment would not be prejudiced through longtime association with the practices and operations under consideration. It was brought out in the hearings on the program this year that personnel who have worked with the International Cooperation Administration in various capacities throughout the years are now being employed in this new Office of Inspector General-Comptroller. We find no personal fault with those administering the Office of Inspector General-Comptroller but we do feel that the decision to place the inspection of the program in the hands of those who have been intimately associated with its development was a wrong decision.

DANGERS IN THE DEVELOPMENT LOAN FUND

The Development Loan Fund continues to be an adjunct of the foreign-aid program for the making of loans rather than grants. When the Development Loan Fund was created, many of us were given the impression that the making of loans to underdeveloped countries for economic development would result in a reduction of economic grant assistance. There has been no appreciable reduction in the use of economic grant assistance funds.

Testimony received during the hearings indicates that money in the fund has been earmarked for certain countries without having received from those countries specifications and plans for particular economic projects. As a result of this unorthodox and inefficient procedure, many countries with worthy projects have been denied the assistance that they require because of the lack of funds. Until sound methods are utilized, the Development Loan Fund cannot possibly achieve maximum success.

NEED FOR REVIEW AND REVISION OF MUTUAL SECURITY PROGRAM

In prior years we have expressed our strong conviction that a realistic and objective review of the mutual security program and the legislation by which it is implemented should be immediately undertaken. Although annual revision of the act has been made, the basic legislation has not been thoroughly considered or rewritten since 1954. We are hopeful that the entire mutual security legislation will be reviewed by the committee in the next session of Congress.

Again this year we urge a thorough study, a reappraisal, and a redefining of foreign policies and methods. What is needed is a deeper understanding of the fundamental problems, better programing, and more efficient administration. To continue to vote large appropriations for the mutual security program is not enough. To refuse to face the facts and in the very name of mutual security and freedom fail to demand adequate remedy for current deficiencies would be a negation of our congressional responsibility.

Mr. MORGAN. Mr. Chairman, I yield 8 minutes to the gentleman from Alabama [Mr. SELDEN].

Mr. SELDEN. Mr. Chairman, the authorization in this bill as reported by the committee is $1,318,400,000. This is a reduction of slightly less than 10 percent from the amount requested by the executive branch. This is just about the same percentage by which the committee reduced the executive branch request last year. I hasten to add that the committee

does not regard 10 percent as a sacred percentage; the repetition is strictly coincidental.

The amount of this year's bill is, of course, considerably below that of other years because the military authorization and the Development Loan Fund authorization were voted last year. The fact that authorization for these two programs had previously been approved did not deter the committee from going into both of those programs thoroughly. If one examines the hearings, he will note that we have had responsible witnesses address themselves to our military aid program and to the work of the Development Loan Fund just as though they were part of this year's bill. The reason for this was not idle curiosity. It is simply that the mutual security program is a package of related programs that take on meaning only as all the component parts are explained. For example, defense support, an economic activity which is in the bill before the House can only be justified in relation to the military assistance that is not in this bill. The same may be said of special assistance. To cite another example, the extent of our grant aid is determined, in part, by the size of the programs that can be financed from the Development Loan Fund.

Under the able guidance of the chairman of the House Committee on Foreign Affairs, Dr. Thomas Morgan, the committee hearings ran over a period of 17 days. More than 70 witnesses from the executive branch, from the legislative branch, and from private organizations appeared. The result of our work will be found in the printed hearings totaling almost 1,200 pages. These do not, of course, contain all the testimony given. In matters touching upon security there are the usual deletions. But the Members of the House should know that this year, as a result of committee insistence, the deletions have been much fewer than in any year since I have been a committee member.

The hearings were followed by several weeks devoted to the committee's markup sessions when all parts of the bill were discussed in great detail. Out of those deliberations came the committee's recommendations cutting the executive branch request by $136,500,000. These reductions are confined to three programs—defense support was reduced $49 million; special assistance was reduced $12,500,000; and the contingency fund was reduced $75 million.

I may add that I supported all of these reductions. It was my amendment that reduced the contingency fund from $175 million to $100 million. As the name implies, it is a fund that cannot be programed in advance as can other parts of the program. It is designed to meet emergency conditions that can be expected to arise during the next year. For the current year the appropriation for the contingency fund is $155 million.

The request of the executive branch for fiscal 1961, for the contingency fund in the committee's opinion, can be safely reduced. In the first place, there has been more careful planning throughout the whole program as evidenced by the presentation material. Contingencies, of course, cannot be planned for; but barring some unusual circumstance, the amounts available for the programed activities should be adequate to carry them out and thus permit the contingency fund to be used for the unexpected. Second, the transfer authority of section 501 makes possible the transfer of limited amounts of funds from one type of activity to another.

The reduction in special assistance of $12,500,000 is a reduction of 5 percent from that requested by the executive branch. Defense support was reduced slightly over 7 percent. Last year Congress inserted in the Mutual Security Act a new provision, section 503(c), requiring a report of the plans of the executive branch for progressively reducing and terminating, wherever practicable, bilateral grants of economic assistance in the defense support and special assistance categories. Pursuant to the law Under Secretary of State Dillon submitted such a report. Additionally he gave to the committee a more detailed classified version. Mr. Dillon's principal conclusions included:

> Defense support assistance is being provided to 12 countries; substantial special assistance is being provided an additional 10 countries. Furthermore, small programs of special assistance are being extended to nine countries.
>
> For the last group, the limited size of the programs and their special purposes are such that it is not feasible to prepare meaningful plans for their reduction or elimination. They should and will, of course, be subject to an annual assessment of their continuing value in promoting basic U.S. interests. Decisions to modify or eliminate will be taken in the light of that annual review.
>
> Of the remaining 22 programs, progress has been sufficient in 10 of them so that the possibility of terminating grant assistance can be foreseen within a period of 5 years. In the case of eight more programs, our plans call for progressive reductions in grant aid.
>
> Finally, there are three countries in which the situation as of this moment seems intractable, and where I, therefore, consider it to be unrealistic to attempt planning beyond the current fiscal year.

Of course, events over which we have no control may prove Mr. Dillon a false prophet. But this is the first candid appraisal we have had of how we are doing and how soon, in some cases, we may expect to terminate our assistance.

During the past several years the committee's focus has been not only on the dollar amounts but has extended into the whole range of management and organization of the mutual security program. The Office of Inspector General and Comptroller was established last year as a result of the committee's efforts. Unfortunately, this office has been slow in getting under way in the job that we hoped it would accomplish. Also, the Inspector General and Comptroller in building up an organization has drawn to a large extent on personnel already connected with the mutual security program. This, I believe, is unwise. These facts have been pointed out in the committee report with the observation:

> Unless the Inspector General and Comptroller clearly demonstrates the effectiveness of his operation during the months to come, the committee intends to take further action to assure that deficiencies in the operations of the program are detected and remedied.

As a result of our committee's work, acting through a specially constituted subcommittee for mutual security review, ICA has reviewed its procedures to require, as a general rule, full readiness for implementation before obligations are incurred. After our subcommittee found large unsubobligated amounts in selected projects, ICA has undertaken a systematic review of projects and has been able to reduce unsubobligated funds from 54 to 23 percent. We noted that there was a lack of adequate local commercial interest on entrepreneurial-type projects. ICA established an Office of Private Enterprise to develop local entrepreneurial interest and action. The Development Loan Fund has emphasized this aspect as shown in securing private participation in a Turkish steel mill project. In Taiwan the expansion of the private sector of the economy has been given greater emphasis.

Those who will examine the classified volumes on the committee table will find they are far more complete than in previous years. Moreover, they contain detailed information showing for countries receiving defense support funds all the relevant factors taken into account to determine the size of the program for that country.

But despite continuing efforts on the part of both the executive and legislative branches of our Government to eliminate waste in the mutual security program, we are all aware that unnecessary expenditures continue. Therefore, as long as the program is necessary for the safety of our Nation, the problem of wasteful spending must be constantly attacked. A vital part of that attack is a careful and continuing review by the legislative branch of our Government.

It may appear painfully commonplace to say that communism is still a threat to our security. World leaders are commuting and communing all around the world. High-level meetings are going on almost continuously. But for all the hustle and bustle I have not been able to detect any positive accomplishments. I must reluctantly conclude that the conditions that I described in this House last year still exist today.

While I fully realize the mutual security program is not all pluses or minuses, I am convinced that it would not be in the national interest to discontinue this program at the present time. Therefore, Mr. Chairman, in again supporting the mutual security bill this year I do so because I am convinced this program is still a necessary part and parcel of the defense effort of our Nation and the free world.

Mrs. BOLTON. Mr. Chairman, I ask unanimous consent that the gentleman from New Hampshire [Mr. MERROW] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentlewoman from Ohio?

There was no objection.

Mr. MERROW. Mr. Chairman, it is my privilege to speak again in behalf of

the mutual security program of the United States. I have supported this most important legislation ever since its inception. It is a source of genuine satisfaction to me that it has not only become a major tenet of U.S. foreign policy but of the fabric of security of the free world. I believe just as strongly today in its essential validity as I did when I first examined the initial bill.

FORCE OF MUTUAL SECURITY PROGRAM IN THE WORLD TODAY

Mr. Chairman, we are considering the mutual security program for 1960 today in the dawn of a new decade of the affairs of nations. As we look out into the span of the next 10 years, most of us, I am certain, share my conviction that the present peace of the world can only be maintained through a continuing posture of strength by the United States in the field of foreign affairs.

We see no relaxation in the thrust and purpose of Soviet policy. We know all too well the effects of that policy on the lives of free people. We have seen the military, the political, the economic and the psychological aspects of that policy in action. We have seen one or more of these instruments operate to the disadvantage of the free world in the struggle between democracy and communism for the political organization of men.

We have also seen these techniques turned against the Communists in situations in which the military or political or economic threat to a specfic country has been counterbalanced with outside assistance when the capabilities of the threatened country were clearly inadequate. This has been the great force of the mutual security program in the postwar period on the international posture of the United States and its allies.

SUMMARY OF 1960 PROGRAM

The new program is based on the action of Congress last year in authorizing the military assistance program for 3 years running through fiscal 1962 with such funds as may be necessary, the Development Loan Fund for 2 years running through fiscal 1961 up to $1.1 billion, and three special assistance programs totaling $20.1 million.

This is a total previous authorization of $2.7 plus billion through fiscal 1961. The new program for fiscal year 1961, therefore, sought a new money authorization of $1,454,900,000 for the defense support, technical cooperation, and special assistance elements of economic assistance, plus the contingency fund. The appropriation request is for $4,175 million, making a difference of $2,720,100,000 for which no authorization is required.

The principal money elements of the program requested break down as follows:

Chapter II, economic assistance:	
Title I, defense support	$724,000,000
Title III, technical cooperation	206,500,000
Title IV, special assistance	349,400,000
Total	1,279,900,000
Chapter III, contingency fund	175,000,000
Total	1,454,900,000

The Committee on Foreign Affairs cut $136,500,000, or 9 percent, from the $1,454,900,000 total request. The cut breaks down as follows:

[In thousands]

	Administration request	Committee action	Decrease
Chapter II—Economic Assistance:			
Title I. Defense Support	$724,000	$675,000	−$49,000
Title III. Technical Cooperation	206,500	206,500	
Title IV. Special Assistance	349,400	336,900	−12,500
Total	1,279,900	1,218,400	−61,500
Chapter III—Contingency Fund	175,000	100,000	−75,000
Total	1,454,000	1,318,400	−136,500

I hope the House will accept these figures without further reductions. They have been carefully considered in committee and arrived at after due deliberation. The committee is convinced that they will not seriously hamper the administration in the execution of the program.

ADMINISTRATION OF THE PROGRAM

It has become increasingly apparent that the difficulty with the foreign-aid legislation is not the basic validity of the program or the purposes of the categories of assistance, but the administration of them. The administration of the mutual security program must be under constant surveillance. All errors should be corrected immediately and every effort exercised to bring about proper, efficient, and economical handling of the various projects.

CRITICISMS OF THE PROGRAM

On page 969 of the hearings, as a part of Under Secretary of State Dillon's testimony before the Committee on Foreign Affairs on February 18, will be found various examples provided by ICA of justified criticisms, overdramatized criticisms, and unsubstantiated criticisms. I know of no program conducted by the U.S. Government that has been so thoroughly criticized as has the mutual security program—some of it with justification; some of it without any basis in fact. It has become the whipping boy for about everything one can think of. I have no brief for errors or mistakes, but it seems to me that if we are to approach this matter realistically we must conclude that the remedy is certainly not the scuttling of the program or arbitrarily slashing it to shreds but is in improving its administration.

Secretary Dillon lists five examples of what he calls justified criticisms, two in Vietnam dealing with highways and bridges, and radio towers; two others in Japan and Korea on logistics, and one in Pakistan concerning cantonment construction.

Examples of overdramatized criticisms, as a result of motivated or overzealous newspaper reporters, deal with ship repairs in general, logistics in the Middle East, deep freezers in Vietnam, the Helmand Valley Dam in Afghanistan, and aircraft storage in Iran.

Examples of simply unsubstantiated criticisms, also appearing in the press, following exhaustive Executive investigations, deal with racial discrimination and inequitable distribution of aid in Pakistan, the loan program in Nepal, the American Highway and success of Communist aid in Cambodia, the university project in Laos, transportation costs in Ethiopia, the alleged 84-year supply of oil in Germany, and nylon stockings for WAC's in Korea.

Secretary Dillon's discussion of these criticisms has been intelligently handled and will assist the Members in their review of the program. It will contribute to their understanding of some of the difficulties under which the Executive labors in its administration of a program of this magnitude and complexity.

Mr. Chairman, the Committee on Foreign Affairs has been actively examining the mutual security program since the close of the last session of Congress. I wish to make special mention of the efforts of its subcommittee for the review of the mutual security program and its staff survey team who spent almost three months on a trip around the world, examining particularly the programs in Korea, in Thailand, and in Iran. The team reported generally favorably on their observations of the program in action. They did, however, inquire into several questionable aspects of administration and were particularly successful in pointing up the need for remedial action in Korea and in Iran.

MUTUAL SECURITY FUNDS AS ESSENTIAL AS OTHER DEFENSE EXPENDITURES

Mr. Chairman, I attempted to accomplish one thing in the hearings on the mutual security program this year with each of the executive principal witnesses. I asked one compelling question. That question was, "Do you feel that the funds which we spend on the mutual security program are as essential for our national security as funds we spend in any other area of defense?"

I want to draw your attention to the specific answers as they appear in the committees' record of the hearings. On page 10, Secretary of State Herter replied on February 17, as follows:

> I think they are both an essential part of our security. Obviously we have to have sufficient military strength to deter any sort of aggression on the part of the Communists.
>
> In addition to that, though, we require this type of a program if the process of nibbling away at countries by peaceful means, bit by bit, is something that isn't going to faze us. * * *
>
> This is a problem that we cannot escape. It is one that the free world must cooperate in trying to meet. * * *
>
> If we should abandon the military assistance, I think we would find very soon that our own military expenditures, from the point of view of our Department of Defense budget, would have to be increased many, many times over that which we spend for the military assistance.

Again, on page 54 of the hearings, we hear from Under Secretary of State Dillon: In response to my question if there are any areas in the proposed legislation that cannot be reduced without great risk to our security, Mr. Dillon stated:

> I think it is all absolutely required. * * * It is all equally important and equally necessary, and I think it is a minimum amount for the best interests of the United States.

Again, on page 76 of the hearings, Secretary of Defense Gates has stated:

I think it is equally important and equally vital.

On the next page on the same day, General Lemnitzer, Chief of Staff of the Army, speaking for the Chairman of the Joint Chiefs of Staff, says in response to my question:

So long as the threat retains its present scope and magnitude * * * the Joint Chiefs of Staff, in looking at the overall problem, both of our own capabilities and the capabilities of our allies under the mutual security program, believe this figure makes military sense and, as a matter of fact, economic sense. We feel that if any smaller amounts are appropriated, as was the case last year, some very important programs will have to be reduced—reduced below what we believe to be the minimum level at which they should be maintained, and it may be necessary to eliminate some programs in their entirety.

These programs are the very minimum as we see them. These are the programs which the Joint Chiefs of Staff have gone into thoroughly. There will be a reduced level of defense resulting from any reductions in this program. We feel that and feel it very strongly.

These statements, Mr. Chairman, are most persuasive. I am convinced that these witnesses are sincere in what they say. The President has stated, and they have stated, that this is an absolutely vital program to the security of the United States. While they naturally are opposed to any reductions, I am certain that the administration can live with the recommendations of the Foreign Affairs Committee. I opposed the reductions but I am prepared to accept them. My only concern is that no further cut be made in the program at this time.

AID TO CUBA

Mr. Chairman, I wish to invite the attention of the Members to one other matter in connection with this bill. That is the matter of terminating aid to Cuba. I supported the committee's amendment terminating all remaining economic assistance to Cuba, once we had learned that the administration itself had terminated all military assistance.

Even though the amount of economic assistance programed is small, I share the feeling of my colleagues on the committee and millions of Americans who see no hope for improvement of relations with Cuba while Castro is in power. By this action we are hopeful that the Cuban people will recognize this measure as a rebuff to the Government and not to their economy and take appropriate steps to remedy a rapidly deteriorating situation. Provision is made for escape from the restriction if the President determines that it is in the national and hemispheric interest of the United States.

The time has come when we must indicate to Castro, in no uncertain terms, that we do not approve of his unreasonable, intemperate, and flagrant criticism of the United States. Castro must be made to understand that we are fed up with his actions and that we do not intend to give economic assistance—whether under the Mutual Security Act or in the purchase of sugar—while he continues his present policies and vicious attacks on the United States.

Mr. Chairman, the mutual security program is one of the most important pieces of legislation before the Congress. It is a vital and significant instrument of U.S. foreign policy. I hope the House will pass overwhelmingly H.R. 11510.

It has been my privilege to discuss the mutual security program in many sections of the United States. I have found that a large majority of people everywhere are in favor of its continuation. They want it administered effectively and are for the immediate termination of errors. They feel that the mutual security program is one of the most valuable instruments of our foreign policy and believe it is a vital part of our defense in the universal struggle which is joined around the world. We must, in the interests of U.S. security, continue this program with full and adequate funds to make it increasingly effective.

Mrs. BOLTON. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. HOFFMAN].

Mr. HOFFMAN of Michigan. Mr. Chairman, this bill calls, I have been told, for a rather large appropriation; I ask the gentleman from Iowa whether that is right.

Mr. GROSS. Oh, yes; just $4 billion-plus.

Mr. HOFFMAN of Michigan. Four billion?

Mr. GROSS. That is all.

Mr. HOFFMAN of Michigan. I knew the gentleman had the facts for no one reads the hearings with better result.

Mr. Chairman, it occurred to me that perhaps we should look at the amount with a rather critical eye because, in view of a recent decision by the U.S. Supreme Court last Monday, there is a possibility that we will need far more money here at home. We are all aware of the fact that there are several million people in this country who will need assistance by way of medical care, probably hospitalization—many things. Then, of course, there are the postal workers, the schoolteachers, Federal aid to education, and I can think of a number of additional proposals calling for other additional billions.

Mrs. BOLTON. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN of Michigan. Gladly.

Mrs. BOLTON. Just to correct the record, this bill calls for $1,318,400,000, not the figure of $4 billion that the gentleman mentioned.

Mr. HOFFMAN of Michigan. Will the gentleman from Iowa [Mr. GROSS] accept that correction? I am sure he will.

Mr. GROSS. Oh, I will accept any correction by the gentlewoman from Ohio that has to do with foreign spending.

Mr. HOFFMAN of Michigan. So will I. We know the amount is large. But, when this decision came down—it was printed last night and I read it again this morning—I reached the conclusion that we will need more money here at home. Now, why?

Here is one of the reasons.

There was a time when employees were at the mercy of employers.

Congress recognized the situation and wrote the Wagner law in 1935. Experience demonstrated the need for amendments and, in 1947, the Taft-Hartley Act was enacted.

To further protect and aid workers Congress gave us—45 U.S.C. 151–164—the Norris-La Guardia Act to protect employees. Section 4 of that act specifically withdrew jurisdiction from a district court to prohibit any person or persons from "ceasing or refusing to perform any work or to remain in any relation or employment in any case involving or growing out of any labor dispute."

Congress declared the policy of the Interstate Commerce Act to be, in part, "to promote economical and efficient transportation services at reasonable charges" and the Court has declared that "it is a primary aim of that policy to secure the avoidance of waste."

In another decision, the Court said:

Congress has long made the maintenance and development of an economical and efficient railroad system a matter of primary national concern.

The power of the unions to enforce their demands has now grown to such an extent that the life of a business, small or great, depends upon the extent of the union's demands, the ability, not the will of the employer to comply.

For several years I have, time and again, often to the annoyance of my colleagues, requested, tried to insist, that the Congress repeal the Norris-La Guardia Act or make it applicable to labor organizations which were being unduly protected by it.

Though almost insistently calling attention to what has happened, to the need for the enactment and the enforcement of legislation which would bring about some degree of equality, at least a semblance of equal justice under law, a request for legislation obviously not only needed, but necessary if private enterprise is to survive, I have not been able to even get a hearing before the Committee on Education and Labor, a committee of which I am a member, much less action by the Congress on the bills introduced.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield.

Mr. PASSMAN. Of course, the gentleman understands that you must add to this bill now under consideration the amount of the advance authorization that the Foreign Affairs Committee and the Congress granted last year, which was a departure from the manner in which this bill had been handled in the past. So, the appropriation, to carry out the advance authorizations and the new authorizations provided in this bill, would be in excess of $4 billion for the fiscal year 1961, if such an amount should be approved in the appropriation bill, which is now being considered by our Subcommittee on Foreign Operations Appropriations. I am confident that I can say, however, the Appropriations Committee shall not recommend and the Congress shall not approve any such fantastic amount as that.

Mr. HOFFMAN of Michigan. I shall now get back to the thought that I had

which was that the Supreme Court, in a way, has turned the tables on us. Congress and Congressmen individually have been rather critical of some of the decisions of the Supreme Court. The Court in this decision has acknowledged that there is this very, very bad condition that exists in connection with labor disputes and legislation and says that something must be done. The judges who wrote the opinion and those who dissented agree that the obligation for needed legislation rests upon, not the Court, but the Congress.

It was last Monday, the 18th, that the U.S. Supreme Court handed down a decision in the case of the Order of Railroad Telegraphers, et al., petitioners, against Chicago and North Western Railway Co., a corporation, which shows the need for the legislation which has been suggested by me.

The Chicago & North Western Railway Co., a corporation, operates a rail system of over 9,000 miles in nine States. It is an integral part of the nationwide railway system which is important to the transportation of passengers and freight in interstate commerce. The railroad has twice been involved in bankruptcy; during the last quarter of 1956, operated at a loss of $8 million.

Under laws enacted by the Congress and the States, it was found that it was operating certain sections of its lines at a loss and secured permission to close those sections of its road.

The union threatened to strike. The company sought an injunction restraining the calling of the strike because, as it alleged, under Federal legislation it was for an unlawful purpose. The Supreme Court held that a labor dispute was involved and overruled the decision of the Court of Appeals for the Seventh District, which had made the injunction permanent.

It is obvious that, if the railroad cannot exercise its option to abandon the unproductive portions of its system, it must go out of business, but that the remedy lay in legislation by the Congress.

The majority opinion stated:

It may be, as some people think, that Congress was unwise in curtailing the jurisdiction of Federal courts in railroad disputes as it did in the Norris-La Guardia Act. Arguments have even been presented here pointing to the financial debilitation of the respondent Chicago & North Western Railroad and to the absolute necessity for the abandonment of railroad stations. These arguments, however, are addressed to the wrong forum. If the scope of the Norris-La Guardia Act is to be cut down in order to prevent waste by the railroads, Congress should be the body to do so. Such action is beyond the judicial province and we decline to take it.

It is conceded that, if the section of line which the company desires to abandon is closed, the jobs now held by certain union men will end. The union insisted that, under present legislation, that could not be done even though some of the employees who would lose their jobs now worked as little as 12 minutes a day, though the average daily work time on its one-man stations is only 59 minutes; that all receive a full day's pay and that in some cases the hourly rate was as high as $300 per hour.

If it be argued that union employees should be permitted to strike—unless the company submitted to its demands—it might be well to read the statement of Mr. Justice Clark as hereinafter printed—which is, in effect, that granting the union the right to tell the company when it presents its request to negotiate to go to ——. See the second paragraph of Justice Clark's opinion as hereinafter printed.

To me, a pertinent observation is to ask the five members of the Supreme Court to justify the strike as to just where the company is to get the funds to comply with the demand of the union if and when it calls a strike. Will the Court issue process and follow through to the resources of the individual stockholders or will the union come to Congress with a demand for an appropriation of funds sufficient to enable the unneeded nonworking employees to continue to do nothing at public expense? If that be true, should we not save a part of the money called for by the pending bill for future use?

Realizing the utter futility of inducing this Congress to enact obviously needed, obviously necessary remedial legislation, I will not longer take the time of the House, other than to read an editorial from the morning Chicago Tribune which gives a concise and accurate view of the problem. It reads as follows:

ANOTHER BLOW AT THE RAILROADS

No matter what the railroads do, some agency of the Government tells them it's wrong.

Two years ago a Senate committee bawled out the railroads for not doing enough to help themselves. Among the things specifically recommended by the committee was abandonment or consolidation of nonpaying branch and secondary lines. About the same time the Chicago and North Western railway, which was in poor financial shape, sought to better itself by eliminating full-time agents at several hundred little-used stations. Permission to do so was obtained from the public utility commissions of South Dakota, Iowa, Minnesota, and Wisconsin.

The railroad did not propose to throw out all the superfluous agents without notice and without compensation. It suggested to the telegraphers union several means of cushioning the effects. The agents no longer needed might be transferred to other jobs or granted severance pay, or have their jobs abolished only through death, retirement, or resignation. The union countered by threatening to strike unless the North Western promised that no job existing on December 3, 1957, would be abolished except by agreement between the railroad and union.

The North Western sued for an injunction to restrain the strike. The Federal district court in Chicago refused to issue an injunction, but the court of appeals reversed the lower court, holding that "this is an attempt by the union to arrogate to itself the prerogatives that have been traditionally and rightfully management's, while, at the same time, assuming none of the corresponding burdens and responsibilities."

Now the U.S. Supreme Court, in a 5-to-4 decision, has reversed the court of appeals. The majority opinion, written by Mr. Justice Black, noted the railroad's contention that station abandonments were necessary but held that, under the circumstances, the courts were barred by the Norris-La Guardia Act from enjoining a strike.

"If the scope of the act is to be cut down in order to prevent waste by the railroads, Congress is the body to do so," the Court held.

Mr. Justice Whittaker, who wrote the principal dissenting opinion, concluded that a lawful labor dispute was not involved and that therefore the Norris-La Guardia law was not applicable. Mr. Justice Clark, in a separate dissenting opinion, said he did not believe Congress intended to put the railroads in such a situation.

In view of the Court's decision, it is obviously the duty of Congress to clarify this matter without delay. On the one hand Congress cannot berate the railroads for being inefficient while at the same time requiring them by law to be inefficient.

The question here goes far beyond the telegraphers on the North Western Railway. All the railroads and their employees are involved. The question is whether a railroad must get the consent of a union whenever it wishes to abolish a job made unnecessary by changing conditions or technological improvements. As Mr. Justice Clark said, "Everyone knows what the answer of the union will be."

If the unions are to have veto power over the abolishment of jobs there is no chance for the railroads to help themselves.

The decision to which reference has been made by me and by the Tribune reads as follows:

DECISION

(Supreme Court of the United States—No. 100—October term, 1959; *The Order of Railroad Telegraphers, et al., Petitioners,* v. *Chicago and North Western R. Co., a Corporation;* on writ of certiorari to the U.S. Court of Appeals for the Seventh Circuit.)

(April 18, 1960)

Mr. Justice Black delivered the opinion of the Court.

According to the verified complaint filed in a United States District Court in Illinois by the respondent, Chicago & North Western Railway Co., against the petitioner, the Order of Railroad Telegraphers and its labor union officials, "This is an action for injunction to restrain and enjoin the calling and carrying out of a wrongful and unlawful strike or work stoppage on plaintiff's railroad." Section 4 of the Norris-La Guardia Act provides, however, that "No court of the United States shall have jurisdiction to issue any restraining order or temporary or permanent injunction in any case involving or growing out of any labor dispute to prohibit any person or persons from (a) Ceasing or refusing to perform any work or to remain in any relation of employment."[1] The main question in this case then was, and still is, whether this prohibition of the Norris-La Guardia Act bars an injunction in the circumstances of this case.

Respondent railroad, owning and operating a rail system over 9,000 miles in the States of Illinois, Wisconsin, Iowa, Minnesota, Michigan, Nebraska, South Dakota, North Dakota, and Wyoming, is an integral part of the nationwide railway system important to the transportation of passengers and freight in interstate commerce. When the railroad began operations, about 100 years ago, traffic was such that railroad stations were established about 7 to 10 miles apart. Trucks, automobiles, airplanes, barges, pipelines, and modern roads have reduced the amount of railroad traffic so that the work now performed at many of these stations by agents is less than 1 hour during a normal 8-hour day. Maintenance of so many agencies where company employees do so little work, the complaint alleges, is wasteful and consequently in 1957 the railroad filed petitions

[1] 47 Stat. 70, 29 U.S.C., sec. 104.

with the public utility commissions in four of the nine States in which it operated, asking permission to institute a "central agency plan whereby certain stations would be made central agencies * * *," and others abolished. The plan would necessarily result in loss of jobs for some of the station agents and telegraphers, members of the petitioner union. A few weeks after the State proceedings were filed and before any decision had been made, the petitioner union, the duly recognized, certified, and acting collective bargaining agent for the railroad's employees, notified the railroad under section 6 of the Railway Labor Act, 45 U.S.C., section 156, that it wanted to negotiate with the railroad to amend the current bargaining agreement by adding the following rule:

"No position in existence on December 3, 1957, will be abolished or discontinued except by agreement between the carrier and the organization."

The railroad took the position, according to its complaint, that this request did not constitute a "labor dispute under the Railway Labor Act," that it did not raise a bargainable issue, and that the union had no right to protest or to seek relief except by appearing before the State public utility commissions which had power to determine whether station agencies could be discontinued, a power which private parties could not thwart by entering into a bargaining agreement. The respondent added that maintenance of the unnecessary agencies was offensive to the national transportation policy Congress adopted in the Interstate Commerce Act, 49 U.S.C., sections 1–27, and that the duties that act imposed on railroads could not be contracted away.

The union contended that the District Court was without jurisdiction to grant injunctive relief under the provisions of the Norris-La Guardia Act because this case involved a labor dispute, and that the railroad had refused to negotiate in good faith on the proposed change in the agreement in violation of section 2, First, of the Railway Labor Act, 45 U.S.C., section 152, First, which requires the railroad to exert every reasonable effort to make and maintain agreements concerning rates of pay, rules and working conditions. Therefore, the union argued, an injunction in Federal court is barred if for no other reason because of section 8 of the Norris-La Guardia Act which provides:

"No restraining order or injunctive relief shall be granted to any complainant who has failed to comply with any obligation imposed by law which is involved in the labor dispute in question, or who has failed to make every reasonable effort to settle such dispute either by negotiations or with the aid of any available governmental machinery of mediation or voluntary arbitration" (29 U.S.C., section 106.)

See *Brotherhood of Railroad Trainmen* v. *Toledo, P. & W.R. Co.*, (321 U.S. 50).

After hearings, the district court found, so far as is relevant here, that the railroad "refused to negotiate, confer, mediate or otherwise treat with defendant telegraphers on the proposed change in agreement set forth in the section 6 notice," although the railroad "did show willingness to negotiate upon the central agency plan, including a possibility concerning severance pay:" that the proposed contract change referred to in the section 6 notice "relates to the length or term of employment as well as stabilization of employment" and that collective bargaining as to the length or term of employment is common place; that "the dispute giving rise to the proposed strike is a major dispute and not a minor grievance under the Railway Labor Act, and no issue involved therein is properly referable to the National Railroad Adjustment Board";[2] and that the contract change proposed in the section 6 notice, related to "rates of pay, rules and working conditions," and was therefore a bargainable issue under the Railway Labor Act. On its findings and conclusions of law, the district court granted temporary relief but declined to grant a permanent injunction on the ground that it was without jurisdiction to do so.

On appeal the court of appeals did grant a permanent injunction upon its decision that "the district court's finding that the proposed contract change related to rates of pay, rules, or working conditions, and was thus a bargainable issue under the Railway Labor Act, is clearly erroneous."[3] It held that the Norris-La Guardia Act did not apply to bar an injunction against this strike,[4] and we granted certiorari (361 U.S. 809), to consider this important question.[5]

We hold, with the district court, that this case involves or grows out of a labor dispute within the meaning of the Norris-La Guardia Act and that the district court was without jurisdiction permanently to enjoin the strike.

Section 4 of the Norris-La Guardia Act specifically withdraws jurisdiction from a district court to prohibit any person or persons from ceasing or refusing to perform any work or to remain in any relation of employment in any case involving or growing out of any labor dispute as herein defined.[6] Section 13(c) of the act defines a labor dispute as including "any controversy concerning terms or conditions of employment, or concerning the association or representation of persons in negotiating, fixing, maintaining, changing, or seeking to arrange terms or conditions of employment, regardless of whether or not the disputants stand in the proximate relation of employer and employee."[7]

Unless the literal language of this definition is to be ignored, it squarely covers this controversy. Congress made the definition broad because it wanted it to be broad. There are few pieces of legislation where the congressional hearings, committee reports and the language in the legislation itself more clearly point to the necessity for giving an act a construction that will protect the congressional policy the act adopted. Section 2 of this act specifies the public policy to be taken into consideration in interpreting the act's language and in determining the jurisdiction and authority of Federal courts; it is one of freedom of association, organization, representation, and negotiation on the part of workers,[8] The hearings and committee reports reveal that Congress attempted to write its bill in unmistakable language because it believed previous measures looking toward the same policy against nonjudicial intervention in labor disputes had been given unduly limited constructions by the courts.[9]

Plainly the controversy here relates to an effort on the part of the union to change the "terms" of an existing collective bargaining agreement. The change desired just as plainly referred to "conditions of employment" of the railroad's employees who are represented by the union. The employment of many of these station agents inescapably hangs on the number of railroad stations that will either be completely abandoned or consolidated with other stations. And, in the collective bargaining world today, there is nothing strange about agreements that affect the permanency of employment. The district court's finding that "collective bargaining as to the length of term of employment is commonplace," is not challenged.

We cannot agree with the court of appeals that the union's efforts to negotiate about the job security of its members "represents an attempt to usurp legitimate managerial prerogative in the exercise of business judgment with respect to the most economical and efficient conduct of its operations."[10] The Railway Labor Act and the Interstate Commerce Act recognize that stable and fair terms and conditions of railroad employment are essential to a well-functioning national transportation system. The Railway Labor Act safeguards an opportunity for employees to obtain contracts through collective rather than individualistic bargaining. Where combinations and consolidations of railroads might adversely affect the interests of employees, Congress in the Interstate Commerce Act has expressly required that before approving such consolidations the Interstate Commerce Commission "shall require a fair and equitable arrangement to protect the interests of the railroad employees affected."[11] It requires the Commission to do this by including "terms and conditions" which provide that for a term of years after a consolidation employees shall not be "in a worse position with respect to their employment" than they would otherwise have been.[12]

In 1942 this Court held that when a railroad abandons a portion of its lines, the Interstate Commerce Commission has power to include conditions for the protection of displaced workers in deciding "what the public convenience and necessity may require." We so construed the Interstate Commerce Act specifically on the basis that imposition of such conditions "might strengthen the national system through their effect on the morale and stability of railway workers generally." *Interstate Commerce Commission* v. *Railway L. Exec. Assn.* (315 U.S. 373, 378), citing *United States* v. *Lowden* (308 U.S. 225). The brief for the railroad associations there called our attention to testimony previously given to Congress that as early as 1936 railroads representing 85 percent of the mileage of the country had made collective bargaining agreements with their employees to provide a schedule of benefits for workers who might be displaced or adversely affected by coordinations or mergers.[13] In an effort to prevent a disruption and stoppage of interstate commerce, the trend of legislation affecting railroads and railroad employees has been to broaden, not narrow, the scope of subjects about which workers and railroads may or must negotiate and bargain collectively. Furthermore, the whole idea of what is bargainable has been greatly affected by the practices and customs of the railroads and their employees themselves. It is too late now to argue that employees can have

no collective voice to influence railroads to act in a way that will preserve the interests of the employees as well as the interests of the railroad and the public at large.

The railroad has argued throughout the proceedings that the union's strike here may be enjoined, regardless of Norris-La Guardia, because its effort to bargain about the consolidation and abandonment of railroad stations is unlawful. It is true that in a series of cases where collective bargaining agents stepped outside their legal duties and violated the act which called them into being, we held that they could be enjoined.[14] None of these cases, however, enjoined conduct which the Norris-La Guardia Act withdrew from the injunctive power of the Federal courts except the Chicago River case which held that a strike could be enjoined to prevent a plain violation of a basic command of the Railway Labor Act "adopted as a part of a pattern of labor legislation." 353 U.S. 30, 42. The Court there regarded as inapposite those cases in which it was held that the Norris-La Guardia Act's ban on Federal injunctions is not lifted because the conduct of the union is unlawful under some other, nonlabor statute.[15] Here, far from violating the Railway Labor Act, the union's effort to negotiate its controversy with the railroad was in obedience to the act's command that employees as well as railroads exert every reasonable effort to settle all disputes "concerning rates of pay, rules, and working conditions." 45 U.S.C., section 2, first. Moreover, neither the respondent nor anyone else points to any other specific legal command that the union violated here by attempting to bring about a change in its collective bargaining agreement. It would stretch credulity too far to say that the Railway Labor Act, designed to protect railroad workers, was somehow violated by the union acting precisely in accordance with that act's purpose to obtain stability and permanence in employment for workers. There is no express provision of law, and certainly we can infer none from the Interstate Commerce Act, making it unlawful for unions to want to discuss with railroads actions that may vitally and adversely affect the security, seniority, and stability of railroad jobs.[16] And for a number of reasons the State public utility proceedings, invoked by the railroad to obtain approval of consolidation or abandonment of stations, could not stamp illegality on the union's effort to negotiate this whole question with the railroad. The union merely asked for a contractual right to bargain with the railroad about any voluntary steps it might take to abandon stations or to seek permission to abandon stations and thus abolish jobs. Nothing the union requested would require the railroad to violate any valid law or the valid order of any public agency. There is no testimony and there are no findings that this union has set itself up in defiance of any State mandatory order. In fact, there was no State order of any kind at the time the union first asked to negotiate about the proposed contractual change. Even if a Norris-La Guardia "labor dispute" could not arise out of an unlawful bargaining demand, but see *Afran Transp. Co.* v. *National Maritime Union*, 1959 Am. Mar. Cas. 326, the union's proposal here was not unlawful.

The union contends that, whether the State rulings were mandatory or permissive, the States are without authority to order an abandonment of stations that would conflict with collective bargaining agreements made or to be made between the railroad and the union. Whether this contention is valid or not we need not decide since there is no such conflict before us. And the district court expressly refused to find that the union's proposal was prompted by the railroad's action in seeking State authority to put its central agency plan into effect. Instead, the district court specifically found that the dispute grew out of the failure of the parties to reach an agreement on the contract change proposed by the union.

Only a word need be said about the railroad's contention that the dispute here with the union was a minor one relating to an interpretation of its contract and therefore one that the Railway Labor Act requires to be heard by the Railway Adjustment Board. We have held that a strike over a minor dispute may be enjoined in order to enforce compliance with the Railway Labor Act's requirement that minor disputes be heard by the Adjustment Board. *Brotherhood of Railroad Trainmen* v. *Chicago River & I.R. Co.* (353 U.S. 30). But it is impossible to classify as a minor dispute this dispute relating to a major change, affecting jobs, in an existing collective bargaining agreement, rather than to mere infractions or interpretations of the provisions of that agreement. Particularly since the collective bargaining agreement which the union sought to change was a result of mediation under the Railway Labor Act, this is the type of major dispute that is not governed by the Adjustment Board.

In concluding that the injunction ordered by the court of appeals is forbidden by the Norris-La Guardia Act, we have taken due account of the railroad's argument that the operation of unnecessary stations, services, and lines is wasteful and thus runs counter to the congressional policy, expressed in the Interstate Commerce Act, to foster an efficient national railroad system. In other legislation, however, like the Railway Labor and Norris-La Guardia Acts, Congress has acted on the assumption that collective bargaining by employees will also foster an efficient national railroad service. It passed such acts with knowledge that collective bargaining might sometimes increase the expense of railroad operations because of increased wages and better working conditions. It goes without saying, therefore, that added railroad expenditures for employees cannot always be classified as wasteful. It may be, as some people think, that Congress was unwise in curtailing the jurisdiction of Federal courts in railroad disputes as it did in the Norris-La Guardia Act. Arguments have even been presented here pointing to the financial debilitation of the respondent Chicago & North Western Railroad and to the absolute necessity for the abandonment of railroad stations. These arguments, however, are addressed to the wrong forum. If the scope of the Norris-La Guardia Act is to be cut down in order to prevent waste by the railroads, Congress should be the body to do so. Such action is beyond the judicial province and we decline to take it.

There are other subsidiary questions raised with reference to the validity of a second 30-day restraining order issued by the district judge and an injunction pending appeal under Rule 62(c) of the Federal Rules of Civil Procedure. But since we have determined the main controversy between the parties, we think it inadvisable to decide either of these questions now. We intimate no opinion concerning either at this time.

The judgment of the court of appeals is reversed and that of the district court is affirmed insofar as it held that the court was without jurisdiction under the Norris-La Guardia Act to enter the injunction.

It is so ordered.

(Supreme Court of the United States—No. 100—October term, 1959: *The Order of Railroad Telegraphers et al., Petitioners* v. *Chicago and North Western R. Co., a corporation*—On writ of certiorari to the U.S. Court of Appeals for the Seventh Circuit.)

(April 18, 1960)

Mr. Justice Clark, dissenting.

The respondent, suffering from financial headaches, conducted an efficiency survey of its operations. This indicated that it was carrying considerable deadweight on its payroll in the form of local one-man stations. Some of its local agents worked as little as 12 minutes a day and the average daily worktime on its one-man stations was only 59 minutes. All drew a full day's pay. In fact, the pay for time worked, it was found, ran in some cases as high as $300 per hour. Meanwhile, the railroad was facing a slow death for lack of funds—all to the ultimate but certain detriment of the public, the employees, and the management. It then proposed—and, after hearings, four States approved—a consolidation of work so that an agent would have sufficient duties to perform to earn a full day's pay. This would also permit the railroad, without any curtailment of its service to the public, to reduce its employee force over its entire system by several hundred agents. It proposed to negotiate with the union as to the severance pay and other perquisites for those agents whose services would no longer be needed. This the union refused to do, demanding that before any agent's position be abolished the railroad obtain its consent. The union offered but one alternative: "comply with" its demand or suffer a "strike." The railroad, in the face of such a ukase, brought this suit.

[14] *Brotherhood of Railroad Trainmen* v. *Chicago River & I.R. Co.* (353 U.S. 30); *Brotherhood of Railroad Trainmen* v. *Howard* (343 U.S. 768); *Graham* v. *Brotherhood of Locomotive Firemen & Enginemen* (338 U.S. 232); *Tunstall* v. *Brotherhood of Locomotive Firemen & Enginemen* (323 U.S. 210); *Virginian R. Co.* v. *System Federation No. 40* (300 U.S. 515). See also *Textile Workers Union* v. *Lincoln Mills* (353 U.S. 448, 457–459). And see *Steele* v. *Louisville & N.R. Co.* (323 U.S. 192).

[15] The Court cited the following cases to show that unlawfulness under nonlabor legislation did not remove the restrictions of the Norris-La Guardia Act upon the jurisdiction of Federal courts: *Milk Wagon Drivers' Union* v. *Lake Valley Farm Products, Inc.* (311 U.S. 91, 103 (alleged violations of Sherman Act)); *East Texas Motor Freight Lines* v. *International Brotherhood of Teamsters* (163 F. 2d 10, 12 (violation of Interstate Commerce Act and Motor Carriers' Act)).

Of course, a holding here that mere unlawfulness under any law is enough to remove the strictures of the Norris-La Guardia Act, would require a modification or abandonment of our statement that "For us to hold, in the face of this legislation, [the Clayton and Norris-La Guardia Acts] that the Federal courts have jurisdiction to grant injunctions in cases growing out of labor disputes, merely because alleged violations of the Sherman Act are involved, would run counter to the plain mandate of the [Norris-La Guardia] Act and would reverse the declared purpose of Congress." *Milk Wagon Drivers' Union* v. *Lake Valley Farm Products, Inc.* (311 U.S. 91, 103). See also *Lee Way Motor Freight* v. *Keystone Freight Lines* (126 F. 2d 931, 934).

[16] Moreover, this railroad operates in nine States; it has instituted proceedings in the State regulatory commissions of four only and at the time of the district court's decision, only two of these had rendered decisions. Yet the union's proposal was to negotiate for a clause which would apply to respondent's entire system. The railroad's refusal to bargain was not limited, however, to operations in the four States in which proceedings had begun. And even assuming that the order of one State, South Dakota, was mandatory and that this fact is of importance, it would not relieve the railroad from any duty it had to bargain on the proposed contract change in the eight other States involved.

Today the Court tells the railroad that it must bargain with the union or suffer a strike. The latter would be the death knell of the railroad. Hence, for all practical purposes, the Court is telling the railroad that it must secure the union's approval before severing the hundreds of surplus employees now carried on its payroll. Everyone knows what the answer of the union will be. It is like the suitor who, when seeking the hand of a young lady, was told by her to "go to father." But, as the parody goes, "She knew that he knew that her father was dead; she knew that he knew what a life he had led; and she knew that he knew what she meant when she said 'go to father.'"

I do not believe that the Congress intended to put the railroads in such a situation. In fact, its overall purpose has been to prevent the devastating effects of strikes from paralyzing our transportation systems, the efficient operation of which is so vital to the public welfare. As I read the Interstate Commerce Act—the provisions of which were reaffirmed as late as the Transportation Act of 1958—the Congress told the railroads to go to the States—not the union—before abandoning or consolidating its local stations. Respondent went to the States and obtained their approval. The Court today gives to the union a veto power over this action of the States. Until this power is removed, the railroads will continue to be plagued with this situation—so foreign to the concept of a fair day's pay for a fair day's work, which has been the basis of union labor's great achievements.

For this reason, as well as those so ably enumerated by my Brother Whittaker in his dissent, which I join, I am obliged to disagree with the Court. Perhaps the Congress will be obliged, in the face of this ruling, to place the solution of such problems within the specific power of the Interstate Commerce Commission or under the Railway Labor Act, each of which, as well as the courts, is today held impotent.

(Supreme Court of the United States—No. 100—October Term, 1959—*The Order of Railroad Telegraphers, et al., petitioners* v. *Chicago and North Western R. Co., a Corporation*—On Writ of Certiorari to the U.S. Court of Appeals for the Seventh Circuit.)

(April 18, 1960)

Mr. Justice Whittaker, with whom Mr. Justice Frankfurter and Mr. Justice Clark join, dissenting.

The Court concludes, as I read its opinion, that the union's demand for a covenant that no existing position may be abolished without its consent was a lawfully bargainable one under the Railway Labor Act; that the Union did not, by its demand, attempt unlawfully to "set itself up in defiance of" public regulatory orders; that the "union merely asked for a contractual right to bargain with the railroad about * * * abandon[ing] stations * * * and thus abolish[ing] jobs"; that "[e]ven if a Norris-La Guardia 'labor dispute' could not arise out of an unlawful bargaining demand * * * the union's proposal here was not unlawful," and that the Norris-La Guardia Act deprived the court of jurisdiction to enjoin the threatened strike to enforce acceptance of the union's demand.

With all deference, I believe that these conclusions are contrary to the admitted or indubitable facts in the record, to the provisions and policies of acts adopted by Congress, and also to principles established by many decisions of this Court; and being fearful that the innovation and reach of the Court's conclusions will be destructive of congressional policy and injurious to the public interest, I feel compelled to state my dissenting views.

Inasmuch as I read the record somewhat differently than does the Court, my first effort will be to make a plain and chronological statement of the relevant facts.

The Chicago and North Western Railway Co. (North Western) is a major interstate common carrier by railroad. The Order of Railroad Telegraphers (union) is a railway labor union, certified by the National Mediation Board as the representative of the station agents and various other employees of North Western. North Western's lines extend westerly and northerly from Chicago into and serve nine largely agricultural Midwestern States. They were laid out and constructed near the middle of the last century, and, to accommodate that day's mode and conditions of rural travel, stations were established at close intervals along its lines—one every 7 to 10 miles along its branch lines through rural sections—to enable its patrons to travel, by horse or horses and wagon over dirt roads, from their homes to the station and return in 1 day.

Although originally an efficient and profitable railroad, North Western, in more recent years, failed both to maintain and to modernize its lines, facilities and equipment, and also permitted many outmoded, inefficient and wasteful practices to continue—producing the highest ratio of wage and salary expense to the revenue dollar of all major American railroads—resulting ultimately in its inability effectively to compete with new forms of transportation, or even with modernized railroads. In consequence, its net revenues so steadily and extensively declined that it lost $8 million in the first quarter of 1956, and this so reduced its cash position that its payrolls of $330,000 per day to its 18,000 employees were in jeopardy.

Alarmed by these conditions, North Western's new managers undertook a number of steps in the spring of 1956 to improve its physical condition and competitive position, including the elimination of many outmoded, costly, and wasteful practices. It then had several hundred one-man stations, principally located on branch lines from which—due to lack of need, occasioned by the advent of paved roads and motorized vehicles—all passenger trains and many freight trains had been removed and over which the few remaining freight trains passed at hours when many of the agents were not even on duty.[1] Its studies disclosed many instances where such agents were drawing a full day's pay for as little as 15 to 30 minutes' work. Conceiving this to be a wasteful practice and violative of the national transportation policy,[2] North Western promulgated a plan—known as its central agency plan—which contemplated the discontinuance of a full-time agent at most of such stations and provided, instead, for a centrally located agent to perform the necessary agency services at the central station and also at the neighboring station or stations to either side.

Accordingly, North Western filed petitions with the public utility commissions of South Dakota, Iowa, Minnesota, and Wisconsin to effectuate its central agency plan. The first of those petitions was filed with the South Dakota commission on November 5, 1957, asking authority to effectuate the central agency plan with respect to 69 one-man stations in that State. Hearings were held by that commission beginning November 26, 1957, and ending January 17, 1958. The union appeared in that proceeding, presented evidence, a brief, and an oral argument in opposition to the petition. It contended, among other things, that its existing bargaining agreement with North Western prohibited abolishment of any agency jobs without its consent. On May 9, 1958, the commission entered its order. It found that the workload of the agents at the stations involved varied from 12 minutes to 2 hours per day and averaged 59 minutes per day. It further found:

"That the maintenance of full-time agency service at all of the subject stations, because of the lack of public need, constitutes mismanagement, and a dissipation of carrier's revenues which has and will impair its capacity to render adequate railway service to the public at reasonable rates."[3]

Thereupon the commission, electing to act under a South Dakota statute authorizing it to order changes to be made in station operations where necessary in the public interest, directed North Western to make the plan (establishing 16 central agency stations and abolishing 53 full-time agency positions) effective immediately.

On December 23, 1957, about 6 weeks after North Western filed its petition with the South Dakota Commission, the union, purporting to act under the provisions of section 6 of the Railway Labor Act,[4] sent a letter to North Western requesting that their bargaining agreement be amended by adding the following provision:

"No position in existence on December 3, 1957, will be abolished or discontinued except by agreement between the carrier and the organization."

North Western responded the next day, saying that it did not consider the request to be a proper subject of bargaining,[5] but it offered, without waiving its position, to meet with the union's officers and to discuss the

---

[1] The fact that many of these agents were not on duty when the freight trains passed their stations was due to a union requirement that their day's work must begin at 8:30 a.m.

[2] Act of Sept. 18, 1940, ch. 722, title I, sec. 1, 54 Stat. 899, preceding pt. I of the Interstate Commerce Act, 49 U.S.C. sec. 1, titled "National Transportation Policy." In pertinent part, it provides: "It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this act * * * to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers."

[3] The South Dakota commission further found that the expenses of operating the 69 stations involved exceeded related revenues by $170,399 in 1956, and that if the central agency plan had been in effect during that period there would have been a surplus of $58,884.

Hearings were afterward conducted upon the similar petitions before the Iowa, Minnesota, and Wisconsin commissions. The union appeared in each of those proceedings and presented evidence, briefs, and arguments in opposition to the petitions, but each was granted.

The Iowa commission found that the agents at the stations there involved worked an average of 1 hour and 14 minutes per day, a decrease of 28 percent since 1951, and that the estimated average workload under the central agency plan would be 3 hours and 15 minutes per day. It said, inter alia, "Savings must be made by reducing or eliminating service no longer needed. The case before us is a proposal to reduce agency service to the level of actual need." And it found that such was necessary "to insure efficiency, economy, and adequate railway transportation."

The union appealed from the orders of the respective commissions to the courts of the respective States, but the commission action was affirmed in each instance.

[4] 48 Stat. 1197, 45 U.S.C. sec. 156.

[5] North Western's reply stated, inter alia, that, in its view, the union's request was "not a proper subject for a section 6 notice in that it does not in fact concern rules, rates of pay, or working conditions, but instead constitutes an attempt to freeze assignments regardless of the controlling agreement and regardless of the necessity or justification for such assignments."

matter further. Conferences were thereafter held by the parties but no agreement was reached, and the union invoked mediation under the Railway Labor Act. On February 24, 1958, the National Mediation Board began its efforts to mediate the controversy, and its representative conducted a number of meetings between the parties to that end,[6] but was not successful, and thereafter the Board, acting pursuant to section 5, first, of the Railway Labor Act,[7] wrote the parties on May 27, requesting them to submit the controversy to arbitration under the provisions of section 8 of the Railway Labor Act.[8] But both parties declined—the union on May 28 and North Western on June 12—and on June 16 the Board terminated its services and so advised the parties in writing.

On July 10, the union sent to its members a strike ballot under an accompanying letter.[9] The vote was almost unanimous in favor of a strike, and, on August 18, the union called a strike of its members to begin at 6 a.m. on August 21.[10] A renewed proffer of mediation services by the Board was accepted by the parties and, through it, further efforts were made on August 19 to compose the controversy, but without success, and, on August 20, the Board again advised the parties that it had terminated its services.

[6] In the mediation meetings and other meetings between the parties, North Western suggested several means of cushioning the effects of discontinuing these one-man agency jobs, including (1) the transfer of the agents affected to productive jobs; (2) the limiting of job abolishments to an agreed number per year; and (3) the payment of supplemental unemployment benefits to employees affected. The union refused to discuss these proposals.

At a meeting between North Western's chief executive officer and the union's president and its general counsel at Madison, Wis., during the period of the mediation efforts, North Western's official asked if there was any possibility of working out these station-closing matters and the discontinuance of these station agents either on a South Dakota or a system basis. The union's president asked his general counsel for his views on the matter. The latter replied, "I think we are too far apart," and North Western's official then said, "I want you to know that my door is always open."

The union's president testified at the subsequent district court trial that "* * * the only alternative which up to the present I have offered the North Western Railroad was to comply with this rule or strike."

[7] 155 U.S.C. sec. 5, first.

[8] 45 U.S.C. sec. 158.

[9] The union's letter of July 10, 1958, after referring to the efforts of North Western to abolish many of the one-man agency jobs and to the union's efforts in opposition, stated among other things: "However, it became evident at an early date that to meet this onslaught effectively would require strengthening of our agreements. * * * We must prevent a continuance of such a program.

"While we hope the commissions in the other States will be more reasonable than the South Dakota commission, we have no assurance that we will not soon see a repetition in other States of what has happened in South Dakota."

[10] The strike call, after referring to the union's efforts to prevent the abolishment of jobs at one-man stations said, inter alia, that: "The need for the proposed rule has again been tragically demonstrated in the last few days. What happened in South Dakota was repeated in Iowa except that this time 70 positions were abolished and 27 assignments enlarged."

On August 20, North Western filed a complaint against the union and various of its officials in the U.S. District Court for the Northern District of Illinois, alleging that the union's contract demand was not a lawfully bargainable subject under the Railway Labor Act; that the impending strike, called to force acceptance of that demand by North Western, would be illegal; that North Western had a right arising under the laws of the United States, particularly the Interstate Commerce Act and the Railway Labor Act, to be free of such an illegal strike, and it prayed that it be enjoined. The court entered a temporary restraining order on that date. Thereafter, following full hearing, the court held that the union's demand "relates to 'rates of pay, rules, and working conditions' and is a bargainable issue under the Railway Labor Act"; that a strike to force acceptance of that demand would not be unlawful; and, on September 8, 1958, the court entered its decree restraining the strike until midnight, September 19, denying any further injunctive relief[11] and dismissing the complaint. The court of appeals, holding that the union's contract demand was not a lawfully bargainable one and that its acceptance could not legally be forced by a strike, reversed and remanded with directions to enter an injunction as prayed in the complaint (264 F. 2d 254). This Court granted certiorari (361 U.S. 809), and now reverses the judgment of the court of appeals upon grounds which with deference, I think are not only injurious to the public interest but also demonstrably legally erroneous, as I shall endeavor to show.

Congress, in comprehensively providing for the regulation of railroads, their transportation services and their employer-employee relations, has declared its policies in several related acts, including part 1 of the Interstate Commerce Act,[12] the Railway Labor Act,[13] and the Norris-La Guardia Act,[14] and, at least in cases such as this, none of them may meaningfully be read in isolation but only together as, for they are in fact, an integrated plan of railroad regulation. And if, as is frequently the case in such undertakings, there be overlappings, "[w]e must determine here how far Congress intended activities under one of these policies to neutralize the results envisioned by the other" (*Allen Bradley Co.* v. *Local Union* (325 U.S. 797, 806)).

By part 1 of the Interstate Commerce Act, Congress has provided a pervasive scheme of regulation of all common carriers engaged in transportation by railroad in interstate commerce. The declared policy of that act was to promote economical and efficient transportation services at reasonable charges[15] and, as this Court has said, "It is a primary aim of that policy to secure the avoidance of waste. That avoidance, as well as the maintenance of service, is viewed as a direct concern of the public. (*Texas* v. *United States* (292 U.S. 522, 530).) "Congress has long made the maintenance and development of an economical and efficient railroad system a matter of primary national concern. Its legislation must be read with this purpose in mind" (*Seaboard R. C.* v. *Daniel* (333 U.S. 118, 124–125)).

To aid in effectuating that policy, Congress has contemplated the abandonment of railroad lines, stations, depots and other facilities and services when found by designated public regulatory bodies to be burdensome and no longer required to serve the public convenience and necessity. To this end, it has empowered the Interstate Commerce Commission, upon application and after notice and public hearing, to issue a certificate authorizing the abandonment of "all or any part of a line of railroad," and it has provided that "[f]rom and after issuance of such certificate * * * carrier by railroad may, without securing approval other than such certificate * * * proceed with the * * * abandonment covered thereby."[16] And in the Transportation Act of 1958 (72 Stat. 568), Congress has empowered the Commission, under stated conditions, to authorize the abandonment of "any train or ferry."[17] However, Congress has not sought completely to accomplish its abandonment policies through the Commission. Rather, it has sought to make use of State regulatory commissions, as additional instruments for the effectuation of its policies, in respect to the abandonment of some railroad facilities and services. Among others, it has long left to State regulatory commissions abandonments of railroad stations and station agency service; and, in 1958, after extensive review of that subject in the process of enacting the Transportation Act of 1958, it deliberately reaffirmed that policy.[18] Moreover, in its report on S. 3778, which culminated in the Transportation Act of 1958, the Senate Subcommittee on Interstate and Foreign Commerce critically attributed a major part of the financial plight of the railroads to their failure to apply to regulatory bodies for permission to abandon burdensome and needless services in accordance with congressional policy, and strongly advocated that such be done.[19]

For the fair and firm effectuation of these policies, Congress has provided that issues respecting the propriety of an abandonment shall be determined by a public regulatory body. It has contemplated that the carrier shall propose to the proper regulatory body the abandonment of particular facilities or services and that, after notice and hearing—at which all persons affected, including employees and their union representatives, may appear and be heard—the public regulatory

[11] By order of Sept. 16, 1958, the district court further restrained the impending strike pending determination of North Western's appeal.

[19] "The railroad industry has not, in the subcommittee's opinion, been sufficiently interested in self-help in such matters as consolidations and mergers of railroads; joint use of facilities in order to eliminate waste, such as multiple terminals and yards that require expensive interchange operations; reduction of duplications in freight and passenger services by pooling and joint operations; abandonment or consolidation of nonpaying branch and secondary lines; abolishing of unnecessarily circuitous routes for freight movements; improved handling of less-than-carload traffic; coordination of transportation services and facilities by establishment of through routes and joint rates with other forms of transportation; and modernization of the freight-rate structure, including revision of below-cost freight rates to levels that cover cost and yield some margin of profit as well as adjustment of rates excessively above cost to attract traffic and yield more revenue" (S. Rept. No. 1647, 85th Cong., 2d sess., p. 11).

body shall determine whether the proposal is in the public interest, and its order, unless reversed on judicial review, is binding upon all persons. These procedures plainly exclude any right or power of a carrier, at its will alone, to effectuate, or of a labor union representing its employees to veto, any proposed abandonment. Although both may be heard, neither of them, nor the two in agreement, even if their agreement be evidenced by an express contract, may usurp the Commission's decisional function by dictating the result or thwarting its effect. It is obvious that any abandonment, authorized by a proper regulatory body, will result in abolishment of the jobs that were involved in the abandoned service. And, inasmuch as the maintenance of these jobs constituted at least a part of the wasteful burden that necessitated the abandonment, it is equally obvious that Congress intended their abolishment. Yet, here, the union has demanded, and threatens to force by a strike, acceptance by the carrier of a covenant that no job in existence on December 3, 1957, will be abolished without its consent. Certainly that demand runs in the teeth of the recited provisions and policies of the Interstate Commerce Act. It plainly would destroy the public regulation of abandonments, provided and contemplated by Congress in the public interest, and render them subject to the union's will alone. A demand for such a contractual power surely is an unlawful demand.

The union argues, and the Court seems to find, that there is a basis for the claimed legality of the union's demand in the provision of section 5(2)(f) of the Interstate Commerce Act[20] that the Commission in approving railroad mergers or consolidations "shall require a fair and equitable arrangement to protect the interests of the railroad employees affected." Instead of supporting legality of the union's demand, I think the provisions of that section and its legislative history are further proof of its illegality. While that section authorizes the Commission to require temporary mitigation of hardships to employees displaced by such unifications, nothing in it authorizes the Commission to freeze existing jobs. However, in the course of its enactment an effort was made to amend it to that end. On the floor of the House, Representative Harrington advocated the following proviso: *"Provided, however,* That no such transaction shall be approved by the Commission if such transaction will result in unemployment or displacement of employees of the carrier or carriers, or in the impairment of existing employment rights of said employees."[21] While the bill was in conference, the Legislative Committee of the Interstate Commerce Commission sent a communication to Congress condemning the principle of the Harrington amendment in the following words:

"As for the Harrington proviso, the object of unifications is to save expense, usually by the saving of labor. Employees who may be displaced should, in the case of railroad unifications, be protected by some such plan as is embodied in the so-called Washington Agreement of 1936 between railroad management and labor organizations [providing for the mitigation of hardships by the payment of certain monetary benefits for a limited period of employees whose jobs are abolished by such approved unifications]. The proviso, by prohibiting any displacement of employees, goes much too far, and in the long run will do more harm than good to the employees."[22]

[20] U.S.C. sec. 5(2)(f).

[21] 84th CONGRESSIONAL RECORD (1939), pt. 9, p. 9882.

[22] Interstate Commerce Commission Report on S. 2009, Omnibus Transportation Legislation, p. 67 (76th Cong., 3d sess., House committee print), transmitted Jan. 29, 1940.

Congress rejected the Harrington proviso in the form proposed. Yet, the union's demand here is designed to accomplish the very purpose that Congress rejected. Of the Harrington proviso this Court said in *Railway Labor Executives Association* v. *United States* (339 U.S. 142), that it "threatened to prevent all consolidations to which it related [but Congress] made it workable by putting a time limit upon its otherwise prohibitory effect" (339 U.S. at 151, 153). But Congress actually did more. It eliminated any power to freeze existing jobs. It is not to be doubted that a carrier and a labor union, representing the carrier's employees, lawfully may bargain about and agree upon matters in mitigation of hardships to employees who are displaced by railroad unifications or abandonments; but they may not agree, nor may any regulatory body order, that no jobs shall be abolished, and thus defeat unifications or abandonments required in the public interest (*Railway Labor Executives Association* v. *United States, supra; Interstate Commerce Commission* v. *Railway Labor Executives Association* (315 U.S. 373); *United States* v. *Lowden* (308 U.S. 225)).

There is no dispute in the record that the carrier sought to bargain and agree with the union upon matters in mitigation of hardships to employees displaced by the station abandonments. It offered to bargain about (1) transferring the agents affected to productive jobs, (2) limiting the job abolishments to an agreed number per year, and (3) paying supplemental unemployment benefits to the employees affected.[23] Short of foregoing the station abandonments, this is all it lawfully could do. It is not suggested that it should have done more in this respect. Indeed, the union refused even to discuss these proposals.[24] Instead, as its president testified at the trial, the only "alternative" the union "offered the North Western Railroad was to comply with this rule or strike."[25]

This also answers the Court's argument that there is nothing in the Interstate Commerce Act "making it unlawful for unions to want to discuss with railroads actions that may vitally and adversely affect the security, seniority, and stability of railroad jobs." The quoted statement is literally true. But the further truth is that the carrier offered to bargain and agree with the union about those matters, but the union refused even to discuss them. Ibid. The union's demand was not for a right "to discuss" such matters with the carrier, but was, rather, that the carrier agree that no jobs in existence on December 3, 1957, be abolished without the union's consent. And the only "alternative" it offered was: "Comply with this rule or strike." Ibid. The foregoing likewise answers the Court's argument that the union "merely asked for a contractual right to bargain with the railroad about any voluntary steps it might take to abandon stations * * * and thus abolish jobs." Plainly the union's demand was not for a right "to bargain with" the carrier about "abolish[ing] jobs," but was for a unilateral right to prohibit the abolishment of any job without its consent.

The Court fails to find any testimony in the record "that this union has set itself up in defiance of any State mandatory order." Although, in my view, the question is not whether it has set itself up in defiance of any valid existing State mandatory order, but rather is whether it lawfully may demand, and force by a strike, acceptance of a covenant in derogation of the law; yet, in very truth, it "has set itself up in defiance," or, at least, in derogation, of a "State mandatory order." As earlier noted, the order of the South Dakota Commission—the validity of which cannot be questioned here—was a mandatory one. It directed the carrier to make the Central Agency Plan effective in that State and, thereunder, forthwith to abolish 53 full-time agency jobs. That order was entered on May 9, 1958, and if the union's demand, that no job in existence on December 3, 1957, may be abolished without its consent, is a lawful one and may be enforced by a strike, then the South Dakota order is not only defied but defied successfully. Moreover, while such orders of State commissions, like those of the Interstate Commerce Commission, are in the nature of things usually permissive in character, they are nevertheless binding administrative determinations made, as Congress contemplated and Mr. Justice Brandeis said, "to protect interstate commerce from undue burdens," *Colorado* v. *United States* (271 U.S. 153, 162), and may not be overridden or thwarted by private veto.

Section 2, first, of the Railway Labor Act makes it the duty of carriers and their employees to exert every reasonable effort "to make and maintain agreements concerning rates of pay, rules, and working conditions, and to settle all disputes, whether arising out of the application of such agreements or otherwise."[26] Here, the union's demand was simply for a covenant that no existing jobs may be abolished without its consent. It thus seems plain that the demand did not relate to the rates of compensation to be paid to employees nor to their working condition, but, rather, it related solely to whether the employment relation, as to any existing job, might be severed altogether. It, therefore, seems clear enough that the demanded covenant was, in terms, beyond the purview of section 2, first. But even if this conclusion may be doubted, surely it must be agreed that Congress did not contemplate that agreements might be made, under the aegis of that section, in derogation of the commands, policies and purposes of related acts which it has promulgated for the regulation of carriers and their employer-employee relations in the public interest. Here, as has been shown, the union's demand was in derogation of the provisions and policies of the Interstate Commerce Act. It could not therefore be a lawfully bargainable subject within the purview of section 2, first, of the Railway Labor Act. The carrier could not lawfully accept it,[27] and hence a strike to force its acceptance would be one to force a violation of the law.

Surely, in such circumstances, the carrier, in discharging its duty to safeguard the public interest,[28] has a legal right to be free of a strike to force it to accept a demand which Congress has made unlawful. But there is no administrative remedy in such a case, and, hence, the legal right will be sacrificed, and Congress' policies will be thwarted, unless a preventive judicial remedy is available. Certainly Congress did not intend to create and "to hold out to [the carrier and the public] an illusory right for which it was denying them a remedy" (*Graham* v. *Brotherhood of Firemen* (338 U.S. 232, 240)).

Nor does the Norris-La Guardia Act render Federal courts impotent to enjoin unlawful conduct or strikes to force acceptance of unlawful demands. That act, in terms, permits Federal courts to enjoin "unlawful acts [that] have been threatened and will

[23] See note 6.

[25] Id.

[26] U.S.C., sec. 152, first.

[27] *Brotherhood of Railroad Trainmen* v. *Howard* (343 U.S. 768).

[28] *Virginian Railway Co.* v. *System Federation No. 40* (300 U.S. 515). "Courts of equity may, and frequently do, go much farther both to give and withhold relief in furtherance of the public interest than they are accustomed to go when only private interests are involved." 300 U.S., at 552.

be committed unless restrained."[29] This court has consistently held that the Norris-La Guardia Act does not prevent a Federal court from enjoining an unlawful abuse of power conferred upon a labor union by the Railway Labor Act or a threatened strike to force acceptance of an unlawful demand.

In *Brotherhood of Railway Trainmen* v. *Chicago River & Indiana R. Co.* (353 U.S. 30), a union threatened a strike to force a carrier to accept demands which Congress had placed within the exclusive jurisdiction of the Railroad Adjustment Board. Holding that the demands were in derogation of that act of Congress and therefore illegal, a Federal court enjoined the threatened strike to enforce them. The union contended here that the court was without jurisdiction to issue the injunction because "the Norris-La Guardia Act has withdrawn the power of Federal courts to issue injunctions in labor disputes [and that the] limitation applies with full force to all railway labor disputes" (353 U.S., at 39–40). In rejecting that contention, this court said:

"We hold that the Norris-La Guardia Act cannot be read alone in matters dealing with railway labor disputes. There must be an accommodation of that statute and the Railway Labor Act so that the obvious purpose in the enactment of each is preserved. We think that the purposes of these acts are reconcilable" (353 U.S., at 40).

And finding that the union's demands violated the provisions of the Railway Labor Act, this court held "that the specific provisions of the Railway Labor Act take precedence over the more general provisions of the Norris-La Guardia Act," and, reaffirming its decision in *Brotherhood of Railroad Trainmen* v. *Howard* (343 U.S., at 768), it further held "'that the district court [had] jurisdiction and power [to enjoin the threatened strike] notwithstanding the provisions of the Norris-La Guardia Act.'" (353 U.S., at 42).

There, as here, the union's demand was in derogation of the specific provisions of an act of Congress, and here, as there, those specific provisions must "take precedence over the more general provisions of the Norris-La Guardia Act."

In *Virginian Railway Co.* v. *System Federation No. 40* (300 U.S. 515), this court held that a Federal court could lawfully issue an injunction in a labor dispute that was governed by the specific provisions of a Federal statute, and that "[s]uch provisions cannot be rendered nugatory by the earlier and more general provisions of the Norris-La Guardia Act." (300 U.S., at 563).

Steele v. *Louisville & Nashville R. Co.* (323 U.S. 192) involved the unlawful misuse by a union of the powers conferred upon it by the Railway Labor Act. Observing that "there is no mode of enforcement [of the rights that were being denied by such misuse of powers] other than resort to courts," this Court held that a Federal court had the "jurisdiction and duty to afford a remedy for a breach of statutory [rights]" (323 U.S. at 207). On almost identical facts, this Court reaffirmed that principle in *Tunstall* v. *Brotherhood of Locomotive Firemen & Enginemen* (322 U.S. 210). In a similar factual situation, this Court held in *Graham* v. *Brotherhood of Locomotive Firemen & Enginemen* (338 U.S. 232) that a Federal court may enjoin a labor union from unlawfuly using or abusing powers conferred upon it by the Railway Labor Act, notwithstanding the Norris-La Guardia Act. And, after reviewing the then existing cases, the Court concluded:

"If, in spite of the *Virginian, Steele,* and *Tunstall* cases, supra, there remains any illusion that under the Norris-La Guardia Act the Federal courts are powerless to enforce these rights, we dispel it now."

[29] 29 U.S.C., sec. 107(a).

Brotherhood of Railroad Trainmen v. *Howard* (343 U.S. 768) was an action to enjoin a union and a carrier from enforcing the provisions of a contract, made under the threat of a strike, that unlawfully deprived a class of railroad employees of legal rights which this Court held had been impliedly vouchsafed to them by the Railway Labor Act. Finding that the questioned provisions of that contract were "unlawful" and that the injured persons "must look to a judicial remedy to prevent the sacrifice or obliteration of their rights under the [Railway Labor] Act [inasmuch as] no adequate administrative remedy can be afforded by the National Railroad Adjustment or Mediation Board[s]," this Court concluded "that the district court has jurisdiction and power to issue necessary injunctive orders, notwithstanding the provisions of the Norris-La Guardia Act. We need add nothing to what was said about inapplicability of that act in the *Steele* case and in *Graham* v. *Brotherhood of Firemen* (338 U.S. 232, 239–240)" (343 U.S. at 774).

Resting upon its conclusion that the union's demand here was a lawful one, the court relegates the Virginian, Steele, Tunstall, Graham, and Howard cases to a footnote, and says, "None of these cases, however, enjoined conduct which the Norris-La Guardia Act withdrew from the injunctive power of the Federal courts." Does the court mean by this statement that, although it enjoined enforcement of the illegal provisions of the contract which had been forced upon the carrier by "the threat of a strike" in the Howard case, it would not, if asked, have enjoined the strike which forced acceptance by the carrier of that unlawful contract? At all events, it cannot be denied, and the court concedes, that the Chicago River case holds that a threatened strike to force compliance with unlawful demands may be enjoined. There, just as here, a threatened strike was enjoined. There, as here, the injunction issued because the union's demand was not a lawfully bargainable one under the Railway Labor Act. The demands in the Chicago River case were unlawful because jurisdiction over their subject matter had been exclusively vested by Congress in the Railroad Adjustment Board, while in this case the demand is unlawful because jurisdiction over its subject matter has beenu exclusively vested partly in the Interstate Commerce Commission and partly in State regulatory commissions. Today's attempted distinctions of that case were advanced in that case, but were found "inapposite" (353 U.S., at 42). Being "inapposite" there, they are so here. I submit that, on the point in issue, the Chicago River case is indistinguishable from this one, and that if the Norris-La Guardia Act did not prohibit a Federal court from issuing an injunction in that case, it does not do so in this one.

It is to be noted that the Court does not say that the Norris-La Guardia Act prohibits Federal courts from enjoining threatened strikes to force acceptance of illegal demands. It says, rather, that "Even if a Norris-La Guardia 'labor dispute' could not arise out of an unlawful bargaining demand * * * the union's proposal here was not unlawful." If it fairly may be inferred from that statement that the Court would have sustained jurisdiction had it found the demand to be unlawful, then my disagreement with the Court would be reduced to and turn on that simple issue. And as to it, I respectfully submit that the admitted facts show that the demand was in derogation of the provisions and policies of the Interstate Commerce Act. Believing that the demand was not a lawfully bargainable one under the Railway Labor Act, and that the district court had jurisdiction to enjoin the threatened strike, called to force acceptance of that illegal demand, I would affirm the judgment of the Court of Appeals.

Memorandum of Mr. Justice Stewart.

I have strong doubt as to the existence of Federal jurisdiction in this case, for reasons well expressed by then Circuit Judge Minton, dissenting in *Toledo, P. & W.R. Co.* v. *Brotherhood of Railroad Trainmen* (132 F. 2d 265, 272–274). See *Brotherhood of Railroad Trainmen* v. *New York Central R. Co.* (246 F. 2d 114, at 122 (dissenting opinion)). If, however, the Federal district court had jurisdiction, as all my brethren seem to believe or at least assume, Mr. Justice Whittaker's dissenting opinion convincingly demonstrates for me that the district court had power to issue an injunction.

Mr. MORGAN. Mr. Chairman, I ask unanimous consent that the gentleman from Pennsylvania [Mr. DENT] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. DENT. Mr. Chairman, although pressing matters in conjunction with a primary campaign in my home State compel me to leave before the final vote is taken on the subject matter, mutual, or better known as foreign aid, I would be remiss in my duties if I failed at this time to present views and opinions, some my own and some expressed by others.

I have tried in good conscience to bring myself to the belief that this program is now or will be in the future beneficial to the welfare of my country.

This Nation has lived and prospered under a Government best described as Democratic-Capitalism.

Foreign aid is simply a way to make a capitalist country pay for its own funeral.

The point is brought out very clearly in the first report of the Citizens Foreign Aid Committee entitled "Foreign Aid and You." This committee is composed of distinguished Americans. The report is a brilliant exposé of the fallacies of foreign aid. To begin with, the committee is not against reasonable assistance overseas. But it points out that aid "should have one purpose only—to provide for the common defense and promote the general welfare of the United States."

The truth about foreign aid today is that it is impeding the welfare of the Republic.

Let us look at the cost of foreign aid. The Marshall plan, proposing a maximum expenditure of $13.5 billion in foreign aid, was launched in 1948, with a very definite promise from the then President that it would be wound up in 4 years. That first year, the committee notes, some 450 persons were employed by the Government to administer and distribute foreign economic aid. Ten years and $41 billion later this staff has grown to 12,000 employees directing 2,000 projects. In addition, some 9,000 persons are engaged in the military-assistance program which has totaled $23 billion.

Advocates of foreign aid advance the argument that foreign aid strengthens the defenses of the free world. The facts disprove this. "The population of prosperous European NATO countries,"

the committee points out, "is 50 percent greater than ours." And the NATO countries are exceedingly reluctant to furnish troops for their own defense. The French only recently withdrew their fleet units from NATO control. No one in the NATO nations has suggested that the United States withdraw its foreign aid or its military equipment and manpower that protects Europe from Red aggression.

Foreign aid encourages ingratitude and dependence on America at the same time. But the problem goes deeper. A number of Central American, south Asian, and far Pacific countries have received in all more than $10 billion in military assistance. Yet some of these recipients "are hostile to the United States."

Though we are spending billions each year, we are not better loved around the world. Nations have not been won to the cause of freedom by king-size gifts from the United States.

Actually, says the committee, foreign aid "has tended to promote philosophies akin to communism." Foreign aid to Britain after World War II helped British socialists finance the nationalization of private property. "Our dollars," the committee makes clear, "also have assisted Britain to adopt socialized medicine." Yet the President and other proponents are fighting medical care for the aged in this country.

Britain is not the only country in which foreign aid money has helped a bad cause. By giving our money to such countries as India, Poland, and Yugoslavia, we have helped dig the grave of free enterprise in those lands. American foreign aid, says the committee, is "helping establish the very system of state slavery we set out to combat."

For the United States to continue foreign aid is a disservice both to this country and to the countries that receive it. The longer this aid is continued the more we weaken American strength that protects freedom and the more unprepared other countries are to accept the responsibilities of self-sufficiency.

Last year Congressman OTTO E. PASSMAN, chairman of the Foreign Operations Committee, presented figures to this Congress showing an unspent, available sum of $8,766,343,107 for mutual security expenditures for the fiscal year 1959.

How much is still available? That is a good question and again we go to the same authority and find that there is even more money available for fiscal year 1960.

Imagine proponents of this legislative appropriation fighting against aid to education, area redevelopment, public works, medical care for the aged, social security amendments covering lowering of age limits, increasing benefits and further clarification of the disability clause in the act.

These are but a few of the needed and essential domestic issues faced by this Congress and opposed in the main by the argument that "we cannot afford them" or "where does the money come from?"

Too many of us fail to realize that the biggest build up of foreign competitive enterprise has been and is being sponsored under the guise of mutual aid.

The foreign development phase of this legislation is glossed over by the proponents because of the weakness of the whole proposal if we were to really study and know the full effect upon our economic well-being.

To say that this legislation is not part of the whole package consisting of trade agreements, foreign relations, international agreements, and our import-export balance in relationship to our gold reserves is to be blind to the actualities of the situation.

At this point let me read into the record a speech I made to a group of citizens alerted to the basic dangers involved in the passage of aid year after year to countries which have proven their ability to outsell, undersell, and in fact, are now creditor instead of debtor nations.

It has been argued by some that foreign aid has nothing to do with our trade status or that this spending does cost us American jobs. This is not true because the only excuse for economic foreign aid is to build up our "friends", and some who "may become our friends", to build up their competitive industries and after creating these foreign enterprises we must follow through by giving up our domestic as well as our foreign markets in order that these industries can sell their products.

A few examples of the extent of this type of aid given away in markets both here and abroad are contained in just a few examples of foreign raiding of our national economy.

How long can we kid ourselves into the belief that we can become stronger by building up our friends and our enemies to compete against us for the world markets as well as our own markets?

Unless we recognize the importance of full employment at home we cannot hope to help the needy peoples of the rest of the World.

Unless we are fortified with a prosperous economy domestically, how can we possibly sell our friends abroad on our ability to guide them to prosperity?

No Member of Congress really wants isolationism. However, by the same token, no Member of Congress wants unemployment, want, poverty, or depression. Because of our inability to cope with world problems except by opening up our Treasury to the world, giving away American jobs, and building our hopes of peace and security on mercenary troops and subsidized nations we are putting our country into a position of losing control of our own destiny. How many of our foreign missile bases will we be allowed to use in case of war with Russia?

I know and you know that we cannot live in a world of our own. Nevertheless, I cannot see living in a world where Japan and Germany, the conquered nations, are subsidized into prosperity when American workmen in the coalfields, glass, and manufacturing plants, and many other fields of enterprise are dependent upon charitable aid such as unemployment compensation and welfare for their daily bread.

Sharing our wealth is commendable only if we have wealth to share.

If we are so rich, why do we have a national debt greater than all the other nations of the world put together?

If we are so prosperous, why are we taxed to feed millions of Americans who cannot find jobs to take care of themselves?

READ ALL THE NEWS

Too often we read only the news we like or want to read and forget to turn the pages to read the fine print. This can cost us a great deal, not alone in knowing both sides of a problem, but in fact, it can cost us our jobs, our liberty, and our personal well-being. If you buy a paper, read it—read all of it.

A case in point on the above admonition appeared in the New York Herald Tribune recently. One story covered the President's appeal to Americans to invest more money in foreign enterprises and quoted him as saying that the foreign countries needed money for expansion of their economy and this was the only country with money to spare. Another story on the same page showed that this country was short $1 billion of currency in its everyday needs.

Our gold reserves have been depleted by nearly $6 billion by the flight of gold to foreign countries.

To some of we little people it appears as though someone is wrong. Is it the President? I wonder.

Personally, I will not subscribe to the policy that any other country in the world is a better place for Americans to invest their money in. President or no President to the contrary.

OUR OWN BACK YARD

Last year the Westinghouse local union wired me about the loss of an $18 million generator order to England. The Elliott Co., of Jeannette, Pa., lost a $2 million generator contract to Switzerland. We tried to have the administration change the order to our own producers. There is not a set rule on imports. Before Eisenhower was elected, an American company was allowed a 25-percent differential, that is, it could be 25-percent higher than a foreign competitor and still be considered low bidder. Then, to, the labor and economic conditions of the area in which the American bidder was situated was given added consideration. Few Americans lost work under this setup. But now, after Eisenhower issued his Executive order cutting the differential to 6 percent, all the foreign manufacturers are as happy as kids on a picnic while the Americans are on the outside looking in.

A spokesman for Allis-Chalmers, after losing out on a large order, made the statement to the effect that his company might as well quit bidding Government jobs, since it could not meet the foreign prices and still carry American taxes, pay unemployment compensation, social security, workman's compensation, hospitalization, and so forth, on payrolls.

I know he is right because for over 25 years I have fought for better working conditions and higher standards for la-

bor, teachers, public employees, and taxation based upon ability to pay.

How can anyone expect me and others like me to change our position and now vote to lower our American standards.

Ford Motor Co. has been buying tools and dies in Europe because they are cheaper. Chairman E. Breech, of Ford said wages paid Americans averaged $2.44 an hour plus 55 cents an hour fringe benefits compared to $1.05 in England and 69 cents an hour in Cologne, Germany. Ford has a plant in Cologne which, incidentally, luckily missed bombing in the war. Of course, Mr. Breech fails to tell us how American die and tool makers can buy Fords if they are unemployed. He also forgot to mention the difference between gross hourly pay and the take-home pay of an American worker. He forgot that the American worker is the heaviest taxed worker in the world.

Many district auto workers who are layed off will never be rehired according to President R. Leach of local 155 district. This is true because of the imports in both parts, tools and finished cars and the step-up in automation.

The industry leaders feel they can spend about $20,000 in automation for every worker they can eliminate. R. E. Phlaumer of America-Marietta Co. said in part:

> We can economically spend $17,000 to $20,000 on new machinery if it eliminates one worker—I have no emotional problems about replacing those nice guys who've been working on gang No. 2 for 20 years.

There you have it. We wonder how many products of his company will be bought by these machines when all companies and concerns go all the way and we have all automotive machinery.

THE ANSWER

There is no complete and final answer. It is a continuing and perplexing problem.

For the moment, with 5 million (acknowledged) unemployed, the answer must come quickly. My proposal for immediate emergency action would be to:

First. Reduce age limits on Social Security—raise benefits. Retire older workers, give younger workers work. They'll spend more for things they need and the older workers will be able to carry on with a good retirement pay.

Second. Stop imports, unless they are needed for our economic well-being and unless competitive prices are established that recognize our tax burdens as well as our standard of living.

Third. A shorter workweek for industrial workers whose jobs are eliminated by automation.

Fourth. A revision of our income tax law with lower rates and preferred treatment for American investments, rather than the idiotic system of favoring foreign investments.

Fifth. Grant foreign aid only for foreign aid, and not to build up competitive enterprises abroad to flood our American markets with foreign-made goods.

Sixth. Review Federal employment policies and reduce where possible Federal taxes. Especially check the enormous expenditures for defense to wipe out waste, duplication and poor planning.

Seventh. Create public loans to communities, public facilities, and redevelopment programs.

Eighth. Increase public works in cooperation with State and local governments.

Ninth. Rebuild American pride in our own products from clothespins to missiles.

Tenth. Stop talking about the weather and do something about it. At least put up our umbrellas.

While on the general subject it might be helpful if at this time a thumbnail view of our gold reserve situation is presented to the House:

U.S. gold reserve, smallest since 1947, stands now at $20.7 billion.

The law requires, as backing for currency and bank deposits, a gold reserve of $11.9 billion.

Leaving, as free gold in the U.S. stockpile, $8.8 billion.

But financial claims of foreign governments and citizens, if paid off in gold, could take $11.7 billion.

Thus, in the event that foreigners were to demand and get gold for all these financial claims the United States would face a gold shortage of $2.9 billion.

Despite the outflow of gold over the past year, foreigners still hold heavy dollar balances in this country. After offsetting U.S. credits, these foreign balances now total $11.7 billion. Any day that the owners of these dollars want to turn them into gold, they are free to do so. The United States is committed to give an ounce of gold for every $35 presented by another country.

Here, then, is the irony of the situation: these very countries to whom we owe the bulk of our gold reserve are high on the list receiving so-called mutual aid.

If ever the Congress should take time to reevaluate its position in a national policy this is the time.

I repeat, needs of some countries are compelling and for this Nation to close its eyes to these needs is unthinkable.

However, it is our duty as Americans to make sure our aid helps those intended to be helped without destroying or injuring our own ability to continue giving this required aid or in any manner to reduce our American standards of living.

To do this, we must refuse this legislation in the package presented at this time.

We must separate the items and pick out the worthwhile projects and give only to the nations on a basis of internal need.

I regret I cannot have the time required to properly air this entire question. I predict that within the not too distant future this legislation becomes the main issue in American politics and the long-suffering taxpayers will demand what is so obviously needed, a complete reexamination of all programs that are eating away at our national well-being.

Mr. MORGAN. Mr. Chairman, I yield 7 minutes to the gentleman from Missouri [Mr. CARNAHAN].

Mr. CARNAHAN. Mr. Chairman, I rise in support of H.R. 11510. Once again we have our annual consideration of our mutual security program. I consider the mutual security program to be vital to our security and an indispensable arm of our Nation's foreign policy.

As a member of the Foreign Affairs Committee, I have, along with my colleagues, been engaged since February 17, 1960, in holding hearings on the Mutual Security Act for fiscal year 1961. Over 1,100 pages of testimony were taken from responsible citizens and officials of the administration, agencies, and the military. I am sure that not many of you have had the chance to read and digest these hearings. The commmittee report, while only 172 pages long, is still time consuming to study and digest.

My purpose today is to present to you as clearly as I can the reasons why I support this bill and urge its adoption.

All of us in this Chamber feel the heavy responsibility of meeting the challenges with which we are faced in the world. It is evident without belaboring the point that we are indeed living in a world of change. Space exploration opens up new frontiers. New discoveries and inventions call for frequent and oftentimes difficult adjustments. Yet these very changes hold out some of mankind's greatest promise for future growth and development.

In spite of almost daily and constant changes which confront us, there are certain things which seem to change very slowly. The harsh fact is that we are living in a world where but very few of the people live in a system of freedom and prosperity. Today about one-third of the people in this world live under the harsh domination of atheistic communism—a dictatorship of the worst sort. In addition to this ever-constant threat to human dignity there is another fact which will not be denied, namely, that outside the Communist-dominated nations there are literally several hundred millions of people who do not know what it means to go to bed with a full stomach. There is the constant struggle against disease, poverty, ignorance, and fear. These people have either seen or heard of better things and a better way of life and are restlessly seeking some of the world's goods. In many cases they are willing to take what might well appear to be a short cut. Any promise of effective relief from the crushing burden of anxiety, hunger, disease, and downright hunger holds an appeal to them.

There is one other fact not to be denied: In spite of smiles and handshakes and promises of peaceful coexistence the masters of world communism have not deviated one iota from their long-announced declaration to extend their totalitarian control over all the world. The old Marxian theory of the means justifying the end still holds as true today as when it was first promulgated. This means that all ethics are thrown out the window as our Communist adversary seeks to control the minds and bodies of men—especially those struggling to achieve what they consider to be their rightful share of the world's economic goods.

It would be a tragic mistake for us in the free world to ever underestimate the power of the Communist ideology. Just as much as any American at Valley

Forge, Gettysburg, Normandy beachhead, or Inchon landing, these Communists believe in and rely on the power of their ideology. They are fervent in the pursuit of this belief. They are unrelenting in the advocacy of their belief and are ever eager and ready to preach it to the young and old alike. They proclaim to any and all that their doctrine, their political setup, their economic system, will inevitably prevail and that they will become masters of the world. In order to enforce this belief the Communist world of today has thrown the full weight of the state and all its citizens behind the goal of accomplishing this end.

I know that you, my colleagues, share with me the conviction that we cannot ignore this powerful, crusading, and dedicated force. To do so would be inviting peril of the gravest sort. Our own way of life is so far different and our own international aims and concerns so far removed from the announced aims and intentions of the Communists that most Americans have a hard time seeing or believing that this is in fact the aim of the Communists. Therefore, given a brief period of international relaxation of tension it is ever too easy for the average American to discount as mere propaganda the ultimate aim of the Communist. In a word, the Communist believes that it is inevitable that the capitalistic system will fall into decay and be replaced by Communist dictatorship. They further believe that since capitalism and individual enterprise is wrong that they—the Communists—have a right to impose their beliefs on other peoples by any means. Therefore, Americans generally have difficulty in evaluating and comprehending the beliefs, motives, and actions of the Communists.

One thing can be said with absolute certainty about the Communists: They believe in their cause and they believe that any action which advances their cause is morally right. They believe in the dictatorship of the Communist Party of the Soviet Union and that every state must be brought under the control of such organization and that all shreds of capitalism and bourgeois morality must be eliminated from the minds of the people everywhere. Constantly they speak of a classless and stateless society and constantly they seek ways and means to promulgate their belief.

Not only do the Communists promulgate this belief through talk but they employ a variety of means to implement that talk. All of the resources of their empire, human and material, are aimed at the accomplishment of this end—the domination of the Communist system over the political and economic life of all nations. All that they possess, their military strength, their technology, their educational system—all of these are very real support powers which they fully dedicate to the accomplishment of their aims.

It is at this juncture that we as a free people face this great and powerful revolutionary force. We have two choices: First, to stand idly by and watch the rest of the non-Communist world gobbled up bit by bit; or second, we can once again reiterate our firm national policy that this thing has gone far enough, and pledge the resources of our Nation, material, physical, human and above all else one weapon which the Communists do not have—the spiritual—to put an end to the expansion of the Communist empire by force or threat of force. Long ago, we as a nation decided to establish and maintain defensive military strength which will assure us that any aggression will not succeed. This domestic military defense posture was soon expanded to include the concept of a defensive military strength in cooperation with the joint efforts of other free nations determined to remain free. We have long since realized that our own defense is inextricably interwoven with the defense of our friends and allies. This collective power of our Nation and that of our allies has in the past deterred and must be maintained at a level adequate to continue to deter the Communist from seeking to expand his borders through use of force.

At this point in the development of our national policy another aspect came into the picture. We recognized the fact that military defenses alone are not enough to thwart the spread of communism. We learned, and it became a part of our national policy, that the demands of free people for economic security and a decent standard of living are legitimate, and that not only our own healthy economic well being is necessary to the security of the free world but that equally as important is the economic strength and progress of our friends and allies. This led after World War II to the European recovery program that resulted in a free Europe that today is healthy and strong. The problems have been somewhat different in Asia. There is one element in common though between our friends in Europe and those in Asia—a deep and growing desire and determination to improve their lot. Oftentimes the discontented and impatient have been tempted by the radical solutions of communism. It is less than no alternative to these peoples to offer them instead of communism a preservation of the status quo.

This road to a decent life for all peoples everywhere has become a major goal of American foreign policy. However, as we well know, it is not an easily accomplished task. The task is slow, laborious, and oftentimes fraught with disappointments and setbacks. Determination and sacrifice are the key requirements if this goal is to be achieved. However, if many of these nations were left alone to resources available to them, the day of economic liberation would be far delayed into the future to say the least. These people need and deserve help. Since the late General Marshall first publicly announced the program for aiding the marginal and underdeveloped nations of the world as well as helping to repair the wreckage of a world war, it has been our national policy to provide that help. Oftentimes the help has been marginal but just enough to enable these millions of people with their own energy and resources and ingenuity to advance along the paths of their own national self-determination. We have truly adopted almost as a second motto for this Nation since the World War II the injunction of Holy Writ to "be our brother's keeper."

In spite of waste, administrative bungling, and lack of vision and planning, these efforts have been successful. Without this national policy many nations now free would be within the sphere of the Communist orbit. Instead of becoming slaves of the international Communist movement many of the world's nations have become independent and we in the United States have welcomed and encouraged this political evolution because we on this continent believe in the sacred principle of government by consent of the governed.

On the other hand, this newly found independence has created some problems of its own. The achievement of successful economic and political development is not an easy task and the resources of these newly independent nations has been severely taxed. This concern for the advancement and development of the free peoples of the world has been costly but at the same time has been in the enlightened self-interest of the United States. One example is the people of the other American Republics in this hemisphere. No one will deny the fact that it is in the interest of our own security that these sister Republics achieve a more rewarding and fruitful existence. Our first real efforts in this area was the program of inter-American technical cooperation. It stands today as a concrete demonstration of international cooperation among free and sovereign nations. The newly created International American Development Bank is yet another expression of our common concern and determination that together we can achieve our common goals of peace, prosperity and plenty and yet remain a free people in this hemisphere.

The Soviet Union, and its ally Red China, soon realized the importance of this type of program for in 1954 it initiated its own aid program. However, any casual study of the Communist aid program makes it crystal clear that the basic purpose of the plan is to promote the achievement of a Communist world.

In spite of Communist propaganda to the contrary notwithstanding, the purpose of our mutual security program is not to create a series of mimeographed "little United States" throughout the world.

As a part of our traditional creed we have sought to help others who wish to do so to defend themselves, to achieve progress, to learn to utilize their own national resources for the good of their peoples for we believe that it is the right of all peoples and nations to freely choose their own ways of life. The mutual security program is geared around the principle of cooperation, based upon respect; upon the belief in the dignity, rights, liberties, and importance of the individual and the subordination of the State to the interests and will of its citizens. The mutual security program seeks to extend to all peoples what we as Americans have long believed and proved to be right—decision by dis-

cussion and dissent; tolerance; government of laws and peace with justice. This is what our Nation is built on. Therein is its strength and greatness. It is because we do believe this that we are willing to join with others in the defense of these principles. It is because of this that we are willing to tax ourselves and share our resources and our technological and spiritual resources with free people across the world seeking to remain free and strengthen the fabric of their free way of life. We in America believe that because we have been so wonderfully blessed that we have a moral responsibility to share opportunity to others across the earth who wish a like opportunity to enjoy the blessings of a free society.

If one listens to Radio Moscow and digests the various Kremlin pronouncements emanating from Moscow he would be told that America has sinister motives in sending its goods, its know-how, its men and women and the financial fruits of its own labors to these nations. Let us go on record right now once again before the world in announcing that the high purposes of our mutual security program are to defend ourselves and to assure the security of those who desire to be defended; to support the right of every nation and government to freely determine its own national goals and direction; to help within the limits of our own national capability in the progressive betterment of all human beings. Nothing that the Communists can tell the peoples of the world contrary to this bears any semblance of the truth and the Communists know it.

Mr. Chairman, it is for these reasons and others which I do not have time to include at this time, that I have supported our mutual security program. It is for these reasons that I feel we must continue it.

Since February 17, 1960, we of the committee have been carefully considering this Mutual Security Act. I believe it has had as careful consideration as has any legislation ever considered by this body. It represents the very best thinking of your committee. It is a program designed to provide an adequate assurance to freemen everywhere that we in America will pledge our own sacred honor, as well as our tax dollars and other resources, to our fellow men that they too may be free.

The very basic features of this program again this year are twofold: First, the preservation of an adequate defensive strength; second, the encouragement and promotion of human betterment.

Let it be noted that our efforts in the United States are not the only efforts being expended today. The nations of Western Europe and Japan are responding to the desires of other nations to share in the march of material progress. Like ourselves, these nations, who themselves have been assisted by this very type of legislation, share our common objective and help shoulder the common responsibility. This program in 1960 is just as important, if not more so, than when Gen. George Marshall first announced it to a war-ravaged world. Here once again is an opportunity to participate in a mutual effort for peace and progress in freedom.

I urge passage of this bill.

Mr. WOLF. Mr. Chairman, will the gentleman yield?

Mr. CARNAHAN. I yield to the gentleman from Iowa.

Mr. WOLF. I would like to ask the gentleman if he can state for the House how much of the money that will be invested in the mutual security program will actually be spent directly or indirectly in this country?

Mr. CARNAHAN. That is a question which I think a great many of our people do not understand. The records show that approximately 80 cents out of every dollar allotted to the mutual security program is spent in the United States. The dollars themselves never leave the country. It is only the goods that these dollars purchase that leave the country. The products of our farms and our factories and of our mines and our forests are sent abroad.

Mr. WOLF. Would that figure include both the military and economic parts of the program?

Mr. CARNAHAN. That would be an average for both the economic and military. The military is higher than the economic. About 90 percent of the military money does not leave the country.

Mr. WOLF. I thank the gentleman.

The CHAIRMAN. The time of the gentleman has expired.

Mrs. BOLTON. Mr. Chairman, I yield 1 minute to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, I want to correct a dereliction on my part earlier in the debate in not taking the opportunity to pay tribute to the distinguished chairman of our Committee on Foreign Affairs. He has extraordinary capacity to grasp all the details as well as the broad features of a comprehensive and complicated program like this. He has demonstrated great skill in conducting and chairing our committee meetings and in organizing and directing the work of the staff and the subcommittees. He has shown unfailing fairness, poise, good humor, and patience with a committee consisting of 32 members who hold many points of view and hold them strongly. All of us who have had the chance to work with and under him have come to appreciate more and more each month the great abilities and the unusual qualities of leadership of our distinguished friend and my medical colleague, the gentleman from Pennsylvania, Dr. MORGAN.

Mr. BOSCH. Mr. Chairman, I rise in opposition to H.R. 11510, the so-called mutual security authorization legislation now before us. This bill authorizes a total of $4,380,500,000 for the fiscal year 1961 for the various purposes under the, in my opinion, overextended mutual security program.

We find that today there are some 43,000 employees and 10,000 trainees of the mutual security program scattered in some 76 nations in the world.

It would do very little good to here again reiterate what has been demonstrated from time to time to be the utter waste and extravagance experienced over the years in connection with this program in the various countries of the world. It appears almost unbelievable to me that we can glibly consider an authorization of this magnitude, namely, $4,380,500,000 without giving due consideration to the present status of the unexpended funds now in hand. It appears that the total funds unexpended and to be authorized by this legislation total the staggering figure of $12,150,-021,750.

These figures are:

Unexpended fund as of June 30, 1959	$4, 837, 708, 750
New funds appropriated for fiscal 1960	3, 225, 813, 000
New funds—other—fiscal 1960	48, 000, 000
Proposed under this bill—fiscal 1961	4, 038, 500, 000
Total	12, 150, 021, 750

The Comptroller General of the United States has stated that the weakness of the program is too much money, not too little. How in good conscience can we therefore justify foisting upon the American taxpayers this additional obligation.

Now, I know it has been eloquently argued from time to time that without this assistance the nations benefiting under the program would most surely fall into the Communist camp and that this assistance, particularly in the field of military assistance, is our own best defense against the Communist war potential. How do we, Mr. Chairman, then explain away the following facts:

First. In Europe the communistic element is strongest in the very areas that have received the most financial foreign aid.

Second. In the Middle East communism has made substantial progress in spite of the millions we have appropriated. Communism has expanded in Indonesia, Thailand, and India.

Third. In Latin America our lavish gifts have not stopped insurrections in Bolivia, Venezuela, Cuba, Guatemala, Haiti, and the Argentine.

Thus we see that Communist expansion progresses regardless of our foreign aid. Of course, it is accomplished first by infiltration and then seizing the government in power. In truth our billions wastefully thrown to all corners of the globe have not stopped the expansion of communism.

I cannot, Mr. Chairman, in good conscience vote to further authorize this unconscionable amount when the total foreign aid costs, including interest on what we have borrowed to give away to foreign countries, now exceeds $19 billion annually, or results in an approximate cost of $795 for every family in the United States. I am firmly convinced that this program should be terminated; for the experiences of the past have amply demonstrated that we can neither buy friends, goodwill, nor peace.

Mr. REUSS. Mr. Chairman, I should like to take this opportunity to direct the attention of my colleagues to the section of the Foreign Affairs Committee report on the Mutual Security Act of 1960 titled "Point 4 Youth Corps" beginning on page 28 of the report.

The Youth Corps, which I first proposed as an amendment to the Mutual

Security Act in H.R. 9638 introduced January 14, 1960, would give young Americans an expanded opportunity to serve the United States in oversea technical assistance missions.

I am most grateful that the committee has chosen to announce in its report that it will make "a comprehensive survey of the possibilities for such an effort." I am equally grateful that Chairman MORGAN has extended to me an invitation, as the author of the original proposal, to take an active part in the committee's formulation and execution of this survey. The committee report states:

Should this study support the committee's present belief that there is substantial merit in the proposal, the committee will prepare specific recommendations for getting the program underway, and will expect the executive to make a serious and constructive effort to put the program into effective operation.

I originally proposed the Youth Corps as a means of improving U.S. aid programs—particularly in the developing areas of Asia, Africa, the Middle East and Latin America—and at the same time broadening the opportunities for young Americans to serve their country and to gain a better understanding of world problems.

The Foreign Affairs Committee report made much the same points.

The committee stated that its own study missions had found that some of the best American aid projects in the less-developed nations were those using young Americans with technical training in agriculture and similar skills.

The committee noted, however, that under existing limited programs "at least 10 highly qualified young graduates of agricultural colleges have volunteered for each position made available" by the Government.

It would be of great value not only in creating a favorable impression of the United States but also in promoting sound and basic improvements in economic development if more places for such young people were found in oversea operations—

The committee report continues.

The committee believes that the United States is failing to utilize one of its important assets by not developing a program for using such services.

If young Americans with * * * adequate technical training, who are willing to live in the villages and share in the daily work of the people and who would serve with only a minimum salary and subsistence allowance, could be carefully selected and sent to the less developed countries, they could be unusually effective representatives of the United States—

The committee report declares.

The peoples of the developing countries not only need economic assistance, they can also profit from exposure to the ideas of Thomas Jefferson and Abraham Lincoln. Young Americans who are willing to help with an irrigation project, with digging a village well, with setting up a rural school, could be one of our best ways for creating such a picture of America.

Furthermore, young Americans in their late teens and early twenties need a sense of purpose—the excitement and stimulus of taking part in real events. If the evolution of the have-not nations is at once the greatest challenge and adventure of the age, young Americans are going to want to become involved in it.

I am confident that the action of the Foreign Affairs Committee will lead to the establishment of a Point 4 Youth Corps.

Mr. Chairman, the committee's action leads to the following commending editorial in the April 18, 1960, edition of the Christian Science Monitor:

PROGRESS ON THE YOUTH CORPS

With commendable speed and bipartisanship the House Foreign Affairs Committee has opened the way for a Point Four Youth Corps.

The proposed corps—an alternative to the draft which would let qualified young American volunteers serve in the rice fields instead of on the drill fields—deserves equally speedy and serious followup action.

This committee approval moves the proposal into the final study stage. Some foundation or experienced educational agency will now be sought to make a comprehensive survey of the idea, mapping out a system for carrying it out most efficiently, and presumably proposing legisaltion.

The House group lauded the youth corps idea (which this newspaper had previously endorsed). Its report stated that its own study missions had frequently found that the best American foreign-aid projects in developing nations were making use of young, technically trained Americans working at the village level. It said, however, that existing programs were so limited that at least 10 highly qualified young graduates of agricultural colleges have volunteered for each position made available by the International Cooperation Administration.

There has been some evidence of reluctance on the part of the State Department to endorse the program. Professional diplomats understandably are hesitant to become embroiled with, and responsible for, a lot of young amateur diplomats.

But even America's limited experience in this field indicates strongly that the kind of young men and women dedicated to service in the villages of Asia, Africa, and Latin America—service at draft pay and with no PX pleasures—make good ambassadors.

Furthermore, these youths may be expected to form the nucleus of an unusually experienced and vigorous foreign service for the future.

We trust the Foreign Affairs Committee will be able to find suitable foundation support for its youth corps study with no delay.

Mr. CURTIS of Missouri. Mr. Chairman, on July 30, 1959, under special order, I discussed the Mutual Security Authorization Act for 1960 in what I believe to be its proper context: one of many programs of the Federal Government dealing with the economic conditions of non-Communist nations.

We have said our program should be trade, not aid, where possible and when aid is necessary it be loans, not grants. How indeed can we discuss one grant program out of several, the mutual security program, without knowledge of what the other grant programs are doing and without knowledge of what the many loan programs are doing, and without knowledge of what the trade programs in the private sector of the economy are accomplishing? Yet this is exactly what we are doing in the present debate based upon the committee's limited study and the committee's limited report.

Furthermore, what criteria should we use to determine whether all our programs, coordinated or haphazard, are producing the desired results? In my July speech I suggested that the per capita gross national product of the countries we profess to be helping is certainly one meaningful test. Yet during the 4 years, 1955, 1956, 1957, and 1958, referred to in my speech many, of the countries we are supposed to be helping, do not show increases in gross national product. In fact some show decreases.

Under unanimous consent, I include at this point my speech of July 30, 1959, and the tables contained therein:

ECONOMIC WELFARE OF FOREIGN NATIONS

The SPEAKER pro tempore (Mr. IKARD). Under previous order of the House, the gentleman from Missouri [Mr. CURTIS] is recognized for 10 minutes.

U.S. exports to Western Europe

[2] Based on U.S. Customs data.

Mr. CURTIS of Missouri. Mr. Speaker, on June 16, 1959, during the debate on the Mutual Security Authorization Act, I placed in the RECORD a series of questions which relate largely to the fiscal aspects of the entire subject of our foreign relations, not just the fiscal aspects of what is called the mutual security program. These will be found in the CONGRESSIONAL RECORD, volume 105, part 8, pages 10966 and 10967. Through the courtesy of the chairman of the House Foreign Affairs Committee, my colleague, the gentleman from Pennsylvania, THOMAS E. MORGAN, I have received answers to these questions. I think this is material that is of value to the House membership and accordingly I am placing it in the RECORD. This material, of course, to be meaningful must be collated and commented upon. When I obtain additional information I expect to take the floor to discuss the subject matter rather fully.

At the present time there are two points I would like to make:

First. A test of whether or not a country is actually moving ahead economically is the increase of its gross national product but even more important, whether there is an increase in per capita national gross product. It is quite interesting to note that in the 4 years, 1955, 1956, 1957, and 1958, that many of the countries that we are supposed to be helping, do not show increases in gross national product and per capita gross national product. In fact, some show decreases. Certainly we should be asking ourselves the question of what have all the many programs we have in such countries been doing for them if they have not been moving ahead.

Total and per capita GNP, by country—By region

Country		Unit	Calendar years— 1955	1956	1957	1958 (estimated)

[2] Estimated.

The second point I want to stress at this time is one of encouragement, as to whether or not the Development Loan Fund is serving the purpose of cutting down the request for outright grants as it was intended to do. In the answer to my question in regard to this subject there is this statement:

"When the loans made under the older programs are added to those made by the Development Loan Fund we find that only 6 percent of total aid in fiscal year 1956 was on a loan basis. For fiscal year 1957 the figure was 21 percent; for fiscal year 1958, the first year of Development Loan Fund, it was 29 percent; and this year it has risen to 42 percent."

This is very impressive. Herein follows the questions I posed with the answers:

First. What has been the increase or decrease in trade in dollar amounts between the United States and the individual recipients of aid under this program in the past year? Has trade increased or decreased?

The tables indicate U.S. trade with the principal aid recipient countries. Since charges from one year to the next are not very meaningful to indicate trends several years are included in the tables. In general they show a general increase in trade. This is most notable in the trade figures with Western Europe. U.S. exports to Western Europe increased from nearly $3 billion in 1950 to $4.8 billion in 1958. This increase is even more startling when it is considered that unlike in 1958, the 1950 data are predominantly foreign aid exports from the United States. During the past 9 years, the overall OEEC trade gap was reduced from $4.7 billion to $3.4 billion; the gap in trade with the United States was also reduced.

In evaluating last year's trade figures it is well to remember that world trade, including U.S. trade, was subject to sharp temporary disturbances in 1956 and 1957 mainly due to the Suez crisis. Therefore it is more appropriate to compare 1958 trade figures with these of 1955 than with the intervening 2 years. Such a comparison would show a healthy increase of total U.S. exports by 13 percent, an increase in imports of 12 percent, and an increase in the balance on goods from $2,753 million to $3,263 million.

Second. What has the increase or decrease of American private investment been in these countries in the past year in dollar amounts?

It is estimated on a preliminary basis that new U.S. private investment (not including reinvested subsidiary earnings) in the Latin American, Asian, African, and Middle East areas totaled about $1,050 million during 1958. This figure is substantially higher than the corresponding totals for 1954 and 1955, but is well below the totals for 1956 and 1957, about $1,280 million and $1,650 million, respectively, which were abnormally high because of extraordinary petroleum investments.

Third. What has been the increase or decrease in gross national product of these countries? And in per capita gross national product?

Fourth. How much offshore procurement in dollars has there been last year in each of these countries? Has it been increasing or decreasing over a period of the past few years?

I. Total ICA commodity expenditures, and source of procurement

[Thousands of dollars]

Fiscal year	Total	United States	Offshore
1955	984,971	774,861	210,110
1956	1,042,951	706,992	335,959
1957	1,235,907	708,355	527,552
1958	1,012,758	524,004	488,754

II. Total military assistance program offshore procurement contracts placed for equipment and supplies

[Millions of dollars]

Fiscal year:	Total
1955	166.3
1956	72.1
1957	143.1
1958	41.4
1959 (programed)	91.6
1960 (programed)	51.8

Fifth. How much did private U.S. banks lend to investors in the economic endeavors—also social and political endeavors—of these countries?

Preliminary estimates indicate that short term and longer term U.S. private banking claims on foreigners in Latin America, Asia, Africa, and the Middle East totaled about $2.4 billion at the end of 1958 as compared with about $2.1 billion at the end of 1957 and about $1.8 billion at the end of 1956. These figures do not, of course, include credits to domestic enterprises which may, in part or in whole, have been used in their business

activities in the less developed countries; data on such credits are not available.

Sixth. (A) How much did the Export-Import Bank lend last year and what are the balances and record of payments?

Loan commitments made by the Bank in the calendar year 1958 totaled $967 million compared with disbursements of $784 million.

Balances of loans outstanding as of December 31, 1958, were $3,314 million.

Repayments during the year totaled $316.8 million.

Lending activities of the Bank in 1958 were generally higher than in previous years. Loans made to Latin American countries reached the highest dollar volume of lending by the Bank in the Western Hemisphere in the last 25 years.

Sixth. (B) How much did the International Bank for Reconstruction and Development lend last year and what are the balances and record of payment?

Loan commitments made by the IBRD in the calendar year 1958 totaled $770 million compared with disbursements of $540.9 million.

Balances of loans outstanding as of December 31, 1958, were $3,275 million.

Repayments during the year totaled $40.3 million.

Total loans approved net of cancellations:

	Million
1947	$497
1948	28
1949	219
1950	262
1951	207
1952	281
1953	256
1954	273
1955	396
1956	503
1957	472
1958	764
Grand total	4,158

Seventh. What is the ratio of Development Loan Fund loans to loans received from other free world sources?

The rate of loan commitments of the Development Loan Fund during the first year of its effective operation—that is, during calendar year 1958—amounted to about $650 million. A gradual expansion of the operations is expected over the next few years. Because this is a new program, actual disbursements were only a fraction of the commitments; it is reasonable to assume that for at least a year or two the rate of expenditures will lag behind loan commitments.

Bilateral government economic assistance expenditures by the other free world industrialized countries extended to the less developed areas amounted to about $1.2 billion in 1958. This represents an increase from an average of about $650 million in the years 1954–56.

In comparing these magnitudes it should be remembered that about 90 percent of the aid given by the other free world countries goes to the oversea dependencies of the European metropolitan powers and to other areas with which they have close political and economic links. A very small portion of Development Loan Fund loans is likely to go to the same area.

Eighth. Has the Development Loan Fund, indeed, served the purpose of cutting down the requests for outright grants as it was intended to do? Congressman FORD testified earlier this year that this had been the case. What did the committee find the dollar figures to be on the cutback? In relation to the amount of loans?

The amounts used for bilateral economic aid, exclusive of technical cooperation, have been $1,239 million for fiscal year 1956, $1,349 million for fiscal year 1957, $1,068 million for fiscal year 1958, and $1,058 million for fiscal year 1959.

You will note a sharp decline of almost $300 million in fiscal year 1958, the first year of Development Loan Fund operation.

Some parts of bilateral economic aid, excluding Development Loan Fund, have been used on a loan basis. These amounts are $74 million for fiscal year 1956, $283 million for fiscal year 1957, $124 million for fiscal year 1958, and $64 million for fiscal year 1959.

When the loans made under the older programs are added to those made by Development Loan Fund, we find that only 6 percent of total aid in fiscal year 1956 was on a loan basis. For fiscal year 1957 the figure was 21 percent, for fiscal year 1958, the first year of Development Loan Fund, it was 29 percent, and this year it has risen to 42 percent.

Ninth. The committee's report on the operation of the investment guarantee program is ambiguous. On page 44 the committee states that only $160 million out of $500 million remains available and applications now exceed $1 billion. Yet on the very next page the committee quotes, I suppose with approval, the statement of the chief of the investment guarantee division, as follows:

"It is our belief that the war risk guarantee, to make any appreciable contributions to the stimulation of private investment, should be broadened to include revolution, insurrection and civil disturbances arising therefrom."

Well, a program that attracts a $1 billion backlog certainly sounds like one that is making an appreciable contribution. If the division chief thinks $1 billion is not an appreciable contribution I believe the committee and the Congress should have some idea what he thinks the adjective "appreciable" means, $20 billion?

Mr. Warden's testimony was limited to pointing out that the war risk guarantee authority in its present limited form has made no appreciable contribution to the program or even to the volume of pending applications. The billion dollars in pending applications and the contracts written to date are the results almost wholly of the convertibility and expropriation authorities.

If the war risk authority were expanded as indicated it is expected that it would add to the total amount of American investment encouraged to go abroad, although it is improbable that Mr. Warden intended to leave the impression that he could estimate approximately the magnitude of the additional investment which might be so encouraged.

Tenth. What is the total amount of Public Law 480 funds that are presently available for the same purposes listed in the mutual security bill? The committee report seems to list only those funds obligated. What the Congress needs to know is what funds have been generated and how much agricultural surplus there is available that might reasonably be generated into Public Law 480 funds in the ensuing fiscal year?

The United States has concluded as of December 31, 1958, Public Law 480 sales agreements totaling the equivalent of $3.3 billion. Actual sales have been consummated as of that date for which the foreign currency equivalent of $2.5 billion has been paid. Of this, $1.1 billion has already been expended. The balance remaining in Treasury accounts as of December 31, 1958, was $1.4 billion equivalent. Of the total of $3.3 billion of sales agreements, $2.1 billion was earmarked for use within the foreign country, of which $273 million was for military grants, $216 million for economic grants, and $1,646 million for economic loans. Of these amounts $195 million had been dispersed for military procurement, $68 million for grants for economic development, and $493 million for loans for economic development. Thus, there is a potential balance, when all sales have taken place, of the equivalent of $1,378 million in foreign currencies which will be able to be used for military procurement grants, grants for economic development, and loans for economic development.

It should be borne in mind that these currencies do not replace dollars and the mutual security program presented to the Congress takes fully into account the possible uses of these currencies to meet local currency requirements in the countries being assisted.

So far as the future is concerned, this will depend upon the action taken by the Congress in authorizing further Public Law 480 sales and on the negotiation of sales agreements. Again, the mutual security program projects estimates of such sales in the various countries being assisted and takes fully into account the extent to which these availabilities of agricultural commodities reduce the need for financing of imports through dollar grants or loans.

Eleventh. What is the total amount of counterpart funds available for these programs? Again the committee seems to report those which have been obligated, not those which are available. What additional counterpart funds—if any—are still generated and might be generated in the ensuing fiscal year?

Counterpart (country-owned)

Unobligated or uncommitted deposits, June 30, 1959	$127,573,000
New deposits estimated for fiscal year 1960	753,155,000
Total available for obligation	880,728,000

Twelfth. What are the unobligated balances previously appropriated for this program? The obligated but unspent funds are listed but it is hard to figure the unobligated balances.

Unobligated and unreserved balances available in subsequent years

[In millions]

1950	$575.9
1951	873.3
1952	602.0
1953	2,116.3
1954	2,463.6
1955	48.6
1956	338.1
1957	764.2
1958	231.4
1959 (estimated)	[1] 292.9

[1] Forty-six million dollars military and $246,900,000 Development Loan Fund. An additional $14 million could be utilized for programs in fiscal year 1960 if permissive legislation is provided in the fiscal year 1960 Appropriation Act.

Two hundred and forty-six and nine-tenths million dollars of this fiscal year-end figure represents funds which, although not technically obligated in the form of signed loan agreements, are considered to be effectively obligated through issuance of formal letters of commitment constituting a pledge by the United States to make the funds available, and funds thus committed will not be available for any other use.

Thirteenth. What are the dollar balances of trade of the countries benefiting under this program?

These figures appear for each country on the yellow divider sheets which constitute the first page of each country statement in the presentation books.

Fourteenth. On page 64 of the report the committee devotes a paragraph to "Use of Excess Government Property for Economic Assistance" and states:

"There is now authority to utilize excess property under the act either by purchasing it at the price established in accordance with law by GSA or the holding agency, or possibly in special circumstances at no cost in accordance with applicable regulations."

Now we are talking about sizable sums when we get into surplus property. We have been disposing of around $7 to $8 billion of surplus property generated by the Military Establishments a year for several years. In the report of the Appropriations Committee on the military appropriation bill this year, it was stated that there is about $26 billion of surplus property waiting to be disposed of in the Military Establishment. We have been averaging about 8 cents on the dollar on the property sold.

Just how much surplus property in dollar value does the committee think might be channeled into the foreign aid program for this fiscal year? A couple of billion or maybe only a few hundred million?

All material excess to U.S. defense requirements is carefully screened against the needs of the military assistance program. All defense excesses are so screened, but it should be clear that only those excesses can be applied against military assistance program requirements that meet a real need. As pointed out by Assistant Secretary of Defense Irwin on page 134 of the hearings:

"In fiscal year 1959, $331 million of excess materiel is programed for our allies and $85 million in fiscal year 1960."

Mr. ALGER. Mr. Chairman, the fiscal year 1961 foreign aid or mutual security authorization is history repeating itself in the House of Representatives. The same arguments for and against. The same damning criticisms of waste and mismanagement, and unanswered questions, yet the spending goes on and on.

Today's debate points out that the program needs review and reprograming, not habitual continuation; that Congress has lost more control of the yearly military and Development Loan Fund; that dictators, government leaders and industrialists are helped and that the people, nation by nation, all too frequently overlooked; that the bureaucracy in the ICA keeps the program self-perpetuating; that mistakes are being condoned and repeated instead of being corrected. The examples cited by the report of the subcommittee study group and the remarks of the gentleman from Georgia [Mr. PILCHER] amply bear out these points.

Further, the gentleman from Louisiana [Mr. PASSMAN] has outlined the $8.1 billion now in the pipeline and available either unobligated or unexpended. Besides this amount is the money in the Public Law 480, the total of military construction, investments in six or more international banks, foreign currencies we own, cost of use of surplus excess property, offshore procurement—and now this new authorization of $1.3 billion, plus $2.7 billion of military and Development Loan Fund amounts. Then we have the interest on $93 billion of foreign aid at 4 percent which amounts to $3.6 billion. And that's not all.

What is the total cost of foreign aid yearly? Who knows? Our earlier requests for review and study go unheeded by the majority as we rush headlong into more programs and bigger spending.

In fact, my earlier criticisms of the mutual security program of last year are so timely that I shall include them at this point. Only the figures need be changed—that is, added to—the course is always up, to bigger spending.

VIEWS OF 1959 CONCERNING AUTHORIZATION

The Mutual Security Act (foreign aid) passed 271 to 142 (ALGER against) after 3 days debate. Three thousand, five hundred million dollars was involved, mainly allocated to military assistance ($1,440 million), economic ($1,900 million)—which includes defense support ($750 million), Development Loan Fund ($700 million), technical assistance ($209 million), special assistance ($250 million)—and contingency fund ($100 million).

Military assistance goes to 37 countries (26 of these also get economic aid). Our 1,700 combat ships, 42,000 planes, and 900,000 men are increased by our allies by 2,500, 30,000 and 4.9 million respectively. We also maintain 250 overseas military installations to support our far-flung Strategic Air Command (SAC). Since inception in 1949, the United States has spent $22 billion and other nations $122 billion in the joint military effort. (Yugoslavia got $800 million.) NATO (North Atlantic Treaty Organization) gets most of the funds, although South America, the Mideast, Asia, and Far East are included.

Economic assistance ($1,900 million) is dispensed as defense support, Development Loan Fund, technical assistance, and special assistance. Defense support goes to 12 nations—Korea, Republic of China (on Formosa), Vietnam, Philippines, Laos, Cambodia, Thailand, Pakistan, Iran, Turkey, Greece and Spain. Actually, it is twofold: (1) Outright grant to help support economically the increased military capability, and (2) grants and loans to develop economically the industries and standard of living. The Development Loan Fund is continued and expanded by $700 million to provide increased loans, repayable in local currency (so this becomes a gift). Technical assistance is offered to 49 countries and nine territories, designed to introduce innovations and increase skills, also to improve standards of living with emphasis on health, education, agriculture, industry to lay basis for long term benefits. We provide (1) U.S. technical experts, (2) materials for demonstration projects, (3) education in this country for foreign people, (4) U.S. colleges contracting to organize educational institutions in foreign countries. Special assistance provides health and education programs in West Berlin, Afghanistan, Bolivia, Burma, Ethiopia, Haiti, Indonesia, Israel, Jordan, Liberia, Libya Morocco, Nepal, Somalia, Sudan, Tunisia, and Yugoslavia. This is conceived to be "economic aid that is necessary to achieve political, economic, humanitarian or other objectives of the United States." The contingency fund is at the disposal of the President for discretionary use to further any aim of the act as the President may see fit.

Historically, foreign aid extends the lend-lease philosophy of World War II. Earlier, aid in World War I was in the form of loans with interest, some later canceled. After World War II, $3 billion was spent through UNRRA (United Nations Relief and Rehabilitation) in liberated countries to purchase goods for immediate needs. Then the International Monetary Fund was established for currency convertibility, and the World Bank for reconstruction loans. The Marshall plan for European economic recovery provided $5 billion a year for 4 years. Always, the overall purpose was twofold—(1) Survival from aggression, and (2) continuation of our free society. The magnitude of U.S. foreign aid is $124 billion since July 1, 1940, to June 30, 1959, $49 billion through World War II, and $75 billion since then (plus this bill). In addition, we have $3,420 million in international funds.

The area of agreement in debate over foreign aid includes recognition of the need for: (1) Disaster relief to other nations; (2) combatting the threat of Soviet imperialism; and (3) stable economic relationships of the United States and other nations in their respective growths. The area of disagreement embraces everything else. Probably there are as many differing views as there are Members of Congress. Basically, there seem to be two prevalent attitudes. Some believe governmental foreign aid is necessary and permanent in the immediate and long-run interest of the United States, that weaker countries must be aided, that the national interest is in the humanitarianism of our government. Others believe in the "fortress America" argument, that the United States must concentrate on its own military and economic strength, relying less on strong allies, and that humanitarianism or charity begins at home and is not, as now practiced, the role of government.

Perhaps arguments for and against will highlight these differences. For (1) help build a strong free world alliance essential to U.S. security; (2) help U.S. allies build adequate defenses without imperiling their basic economy; (3) provide a more economical defense for United States in money and manpower; (4) help deter Soviet aggression and to meet it more effectively if deterrence fails; (5) help raise living standards in the less developed areas and thus make Communist claims less attractive; (6) lay foundation for world prosperity by building self-sustaining economies; (7) help develop favorable attitude toward United States; (8) help stimulate increased private American investment in underdeveloped areas; (9) help increase American exports and develop markets in underdeveloped areas; (10) help provide employment for Americans.

Arguments against (generally in same order): (1) United States is providing much larger percentage (of its national income) on military contribution than the allies. Are our allies really neutrals? Will these nations use these arms against each other or us? (2) United States is imperiling its own economy by giving away borrowed money. U.S. debt is greater than that of all the world, it operates at a deficit, its gold supply is being drained by these gifts to others, its currency is becoming "soft" in the world market; (3) such outpouring of our wealth therefore is not the economical way. Anything imperiling our basic economic strength weakens (a) our military potential and capability, and (b) our freedom, now and for future generations; (4) we do not deter Russian aggression by spending when one of their own dedicated aims is to "spend us into bankruptcy" (5) the fallacy of communism successfully preying on poverty is not borne out in fact, though many accept it unquestioningly. Raising economic standards does not in itself dispel communism; (6) self-sustaining economies cannot be imposed by U.S. dollars or know-how but by development from within the individual country; (7) the attitude toward United States will not be determined by monetary help. We cannot buy friends or allies; (8) private American investments will result from presence and recognition of opportunity for profit; (9) foreign aid as a subsidy for American business and employment is wrong. On the contrary, such aid has built industries abroad for which taxpayers paid and which now compete with our industries and our employment to U.S. detriment, although it may not be permanent dislocation.

Unanswered questions include: (1) What is effect and relationship between foreign aid gifts and trade balance between recipient nations and the United States? (2) Has U.S. private investment gone up or down in these nations? (3) Have these nations benefited, measured by their economic growth? (4) How much buying is done abroad and in the United States with these foreign aid dollars? (5) How much have private U.S. banks loaned to private investors in foreign economic endeavors? (6) What relationships are there between the Export-Import Bank, the World Bank, and foreign aid's development loan fund to particular nations? (7) Is

the investment guarantee program sound? (8) How much Public Law 480 agricultural surpluses are given away in relationship to foreign aid, and how much and what happens to these local currencies thus generated? As I see it, the foreign aid program is self-defeating and is badly in need of review. We help neutrals or enemies and alienate friends. We rely on materialism when freedom, free enterprise, and deep-seated spiritual beliefs are our ruling precepts. We expound charity, simultaneously manipulating our gifts as instruments of foreign policy. This confuses everyone, including ourselves.

My conculsions are these: (1) Our Government intends that foreign aid shall be continuous and global; (2) the threat of Communist aggression rules out our continuing to dispense lavish foreign aid when our own economy is threatened and our defenses are inadequate; (3) in a number of recipient countries our foreign aid helps to strengthen political systems hostile to our own; (4) our foreign aid speeds rather than retards the growth of communism; it inflates our economy; it is partially responsible for the alarming flight of gold from our control; it is destroying our foreign markets and increasing unemployment among American workers; (5) by the very nature of the foreign aid we extend, it must be inefficient and wasteful; and (6) our governmental foreign aid program is unsound in principle.

My recommendations are these: (1) that our traditional generous private charity and governmental grants to relieve disaster be continued; that we encourage the expansion of our private missionary efforts; (2) that in countries which we are morally obligated to defend and which are directly threatened with Red aggression, military assistance—for the time being—should be continued, but on a realistic basis; (3) that foreign aid which directly or indirectly promotes governments that are hostile to our constitutional concepts of government be terminated immediately; (4) that so long as governmental foreign aid is continued, the recipient should pay a part of the cost of the proposed project; that our aid should terminate when the conditions on which that request is based have been remedied; that private technical, scientific and educational assistance be extended only to friendly peoples who seek our aid on a cash or loan basis; (5) that until foreign aid is terminated, the Congress take steps properly to exercise close supervision and control over the manner in which all foreign aid funds are being spent; that all future economic aid, plus what can be salvaged from unexpended foreign aid funds, be diverted to and handled by the Export-Import Bank; (6) that the $3.9 billion requested by the President for the fiscal year 1960 be reduced $2 billion and that each year thereafter foreign aid be substantially reduced until terminated within 3 years; and (7) that military matters be left to our military and foreign affairs be left to the State Department, and their existing organizations, so we can dismantle the huge 12,500-person foreign aid bureaucracy, and stop the duplication of effort.

VIEWS OF 1959 COVERING 1960 APPROPRIATIONS

Foreign aid: The mutual security authorization has already passed; but we have yet to appropriate the money. I can imagine few Congressmen who could be said to be for or against foreign aid, as such. Many of our military assistance programs are wholly justified, and that's true, too, of some ventures in the field of purely economic aid. In the broad ideological struggle going on today, however, I'm at a loss to know why U.S. taxpayers should have to help finance the undertakings of Communist governments (as in Yugoslavia and Poland) and to subsidize socialist experiments of others the world over. Moreover, to assert that the requested amount is the rockbottom figure acceptable is to ignore innumerable reports by the Comptroller General and others who have pointed out appalling waste and mismanagement in the program. Like the housing bill described earlier, it comes down to how much outrageous boondoggle one is willing to accept in order to continue other admittedly good programs. For one, I'm convinced the foreign aid appropriation can and should be pruned considerably.

The foreign aid appropriation (mutual security) bill and debate was history repeating itself (Newsletters, June 20, 1959, March 4, May 17, 1958). The earlier $3.5 billion authorization (reduced from $3.9 billion request) was cut this go-round to $3.1 billion and passed 279–136 (ALGER against). The component parts are: (1) Military assistance; (2) defense support; (3) Development Loan Fund; (4) development assistance; (5) technical cooperation; and (6) contingency fund.

Facts and figures from debate and hearings (1,781 pages): (1) Of 86 nations in the world, United States has given $82 billion to 76 nations since World War II; (2) U.S. foreign aid personnel has grown from 458 in 1948 to 53,600 in 1958; (3) 67 free nations' debt is $185 billion; the Soviet bloc has debt of $51 billion; the U.S. debt is $285 billion, $48 billion more than all the rest of the world combined; (4) total money available (unexpended $4.8 billion, this bill $3.1 billion) is $8 billion plus foreign currencies we own of $1.5 billion or approximately $9.5 billion (actually there's more); (5) yearly foreign aid includes other military expenditures than in foreign aid bill (over $1 billion) and surplus food gifts ($1 billion or more), approximating $5.5 billion. Add to this the yearly interest on $82 billion of foreign aid now part of the national debt, $3.1 billion, makes actual yearly foreign aid $8.5 billion; (6) over 2,000 separate projects have now been reduced to 1,450, many abandoned as impractical (9 pages, 60 specific projects documented in hearings); (7) Comptroller General of United States has audited and examined foreign aid, found it overprogramed and mismanaged, inefficient, etc., with too much money the chief cause of the trouble.

Random examples: (a) Graft, corruption, and profit from improper distribution and sales of aid materiel by foreign businessmen and officials; (b) military vehicles delivered could not be used, shortage of drivers and maintenance; (c) ammunition and equipment ruined because not properly stored; (d) 44 tires per truck stored in one nation; (e) 185 years' supply of particular ammunition on hand in one country and only one carburetor for trucks for entire army; (f) over 4,000 tons excess ordnance materiel in one country's depot; (g) diversion, pilfering, and thievery until military supplies were short in another country. Etc., etc. (8) Civilian projects of all kinds are financed, many types of which Government cannot provide in our country (list of 113 such projects, p. 940, hearings); aid for education purposes has gone to over 50 countries, including Yugoslavia; (9) classification as secret or other security designation covers up glaring faults of the program; (10) 1,113 audit recommendations by ICA (International Cooperation Administration) and GAO (General Accounting Office) findings all show lack of planning and cost relationship; (11) military assistance, the most justifiable of the component parts, is replete with errors—(a) inadequate estimates of needs and costs; (b) inadequate relationship of cost and objectives to be achieved; (c) improper recordkeeping of total costs by country, and others; (12) groups that enjoy windfalls or are vitally interested are (a) printing and publishing industry, (b) motion picture industry, (c) shipping, (d) manufacturing, (e) export and import firms; (f) commercial banks, (g) colleges and universities, (h) clergy, (i) military. (13) "Loan" of Development Loan Fund is fictitious, repayable 80 percent in local currency which United States can't use; further, Congress has no control over this Fund.

A few, even more than a few, instances of mistakes should not condemn such a program as foreign aid, but the almost endless examples of error, inefficiency, waste, mismanagement, overprograming, lack of objectives, and underplanning, in many countries culminating in aiding our enemies (Yugoslavia, Poland, Indonesia, etc.) and alienating our friends proclaims these as basic faults that need correction, not acceptance and continuation. As a nation, we cannot spend ourselves rich. We cannot make ourselves secure by giving ourselves away. We cannot buy friends; they do not stay bought. The greatest fallacy is to ascribe aid as charity, or "be thy brother's keeper" through foreign aid by our Government. The real Biblical meaning is the practice between individual human beings, not governments, which by nature must be impersonal and realistically self-interested. This fundamental difference and role of government needs to be studied. As I oppose big Federal spending where there is wastefulness or contradiction of purpose, am I negative or anti as adduced in the last campaign?

Mr. Chairman, I want to commend the members of the subcommittee study group that made the 40,000-mile trip through 22 countries. Their report is an excellent contribution. Even more do I applaud those three courageous members who submitted minority views—the gentleman from Georgia [Mr. PILCHER], the gentlewoman from Illinois [Mrs. CHURCH], and the gentleman from Indiana [Mr. ADAIR].

Democratic government and a free society flourish and thrive on the free exchange of ideas. There is nothing sacred or sacrosant about foreign aid spending. This spending program must stand up to the pitiless spotlight leveled by watchdogs of the taxpayers' money and of those determined to preserve our free economy and institutions. Just as charity begins at home so does preservation of moral values and financial solvency begin at home. We cannot buy friendship; we cannot, through dollars, instill moral and spiritual values. We have not even the money to support the world's material needs. We can only bankrupt ourselves. Generosity is one thing. Looking foolish in the eyes of those we would help through squandering our wealth and falsely coloring our motives are another. Only as we operate within a hardheaded, realistic, fiscally responsible program can we win respect and influence people. As for feeding and clothing others we can do neither if we go bankrupt. Our job, then, is twofold or threefold: First, to help others help themselves; second, to preserve and foster institutions and governments of freedom; third, to remain economically strong.

I sincerely believe that our present program fails basically in all these objectives. Yes, there are worthy programs. But the bad outweighs the good. The need, therefore, is to reexamine and replan the entire mutual security program, as the minority views so state.

Mr. MORGAN. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. O'HARA] to close the de-

bate, and yield back the balance of my time.

Mr. O'HARA of Illinois. Mr. Chairman, I feel moved to close this debate with the eternal wisdom of the Scriptures. In the Catholic Standard Version it reads:

> Cast thy bread upon running waters, for after a long time thou shalt find it again.

In the King James Version the passage reads:

> Cast thy bread upon the waters for thou shalt find it after many days.

And the revised Protestant version reads:

> Cast your bread upon the waters, for you will find it after many days.

Mr. Chairman, I am not sure that always the problem of mutual security is approached in the spirit and the wisdom of this passage from Holy Writ. I wish to believe that what we in America do comes from a good heart, because surely I know that the heart of America is good, and we have concern for our neighbors and our friends in all the lands of the world. But with the impulses of a good heart is a concern for self-interest. I am concerned. Automation is making sweeping inroads into the demand for labor. Either we find new markets for the products of our factories or in the foreseeable future we will have an army of unemployed that can only result in disorder and in chaos. That is my approach to this legislation in its economic phase. It is a great rich world in which we live, with millions of people who are just as human as the members of this Congress, people who if they had the means would buy those things that bring comfort and contentment just as our American people buy them.

I repeat, Mr. Chairman, that automation will result in unemployment in this country on a scale never heretofore approached unless we find new markets for our products, and this is a fact that must not be overlooked. We do have a self-interest in economic aid to the less developed nations of the world. I have the confidence that automation will not result in wide unemployment in our country. I have the confidence that our factories will continue to turn out more and more products, that all Americans who need employment in order to live will find employment in our factories and on our farms, but this will come only because we have had the vision and the courage to carve out new markets by helping peoples in the less developed areas to enjoy a buying power.

Man in the perplexities of his problems for countless generations before the formation of a Union of States on American shores has turned for guidance to the eternal wisdom of Holy Writ. May we not in the troubled world of which we are a part, a world in which a wise providence has placed upon us large responsibilities, find in the passage from the Bible I have quoted a directive to our efforts and a guide to the fulfillment of our mission?

The bread we cast upon the waters—the Catholic translation has it running waters—may be the aid we give under the mutual security program to countries less developed. It is an investment in the present of less fortunate lands and in the future of our own land. It is bread that will be returned to us after many days, or as is stated in another version, after a long time, in the markets for our products, new rich markets that will keep open and busy our factories in an age of automation. It is the surest hope we have to combat a future unemployment in our own land that would be catastrophic. We cannot live alone. We cannot long endure in a world of poverty. The bread we cast upon the waters in the days of our affluence will return in the time of our need to make possible the continuance of that affluence. It is that simple.

Mr. Chairman, it would be less than honest for me to say that the bill we have under consideration is satisfactory to me in every respect. I doubt that it is completely satisfactory to any one of a committee of 32 members. But it has been my observation and my experience that the best legislation comes from the compromising of differences. The fact that only 5 members of our committee of 32 members voted against the favorable reporting of the bill should be its strongest recommendation to our colleagues who serve on other committees.

To me it has been an exhilarating experience to serve in two Congresses with a committee every member of which is an individual, has definite concepts and pulls no punches in getting them across. There are no rubberstamps on the Committee on Foreign Affairs. The committee operates strictly under the 5-minute rule so that all members regardless of seniority on the committee have equal opportunity and equal responsibility.

This I emphasize in stressing that which I think is important, that when such a committee working in a complex and uncharted field compromises its differences and comes forth with a bill against which less than one-sixth of the membership of the committee voted, it must have merit.

I cannot give too much credit to our chairman, the distinguished gentleman from Pennsylvania [Mr. MORGAN]. The House has had in the past and it has in the present many outstanding chairmen whose names will live in the legislative history of our country. We on the Foreign Affairs Committee, and there is no exception, believe that. Dr. MORGAN has earned his place on that immortal roll. He has worked long hours, in presiding over the deliberations of our committee, he has been the maximum of fairness and that the committee has come up with a bill to which 5 of a committee of 32 individuals objected is indeed a tribute to our great chairman.

My own approach is one that takes into consideration both political and economic security. I briefly have touched on the matter of an economic security that is based upon the opening of new markets. While I deplore the cost and the risks of a race of armaments, believing that it is far wiser to use our means in helping men to live richer lives than in using them to build armaments to destroy life, nevertheless I cannot set up my own philosophy against the judgment of those charged with the political and physical security of our country in a world of danger.

I will have no part in playing dominoes with the security of our country. The decline of nations starts when there is a diminution of the will to remain strong.

The strength of a nation, however, is not alone in the strength of its armaments. There is a strength in morality that transcends the strength of missiles, bombs, battleships, and infantry.

If you will turn to pages 1 and 2 of H.R. 11510, the very beginning of the bill we have under consideration, you will find a reflection of an intensified stress on morality. Israel is our friend. It is a nation very much a counterpart of our own, standing in the Near East with ideals for which we stand in this hemisphere. It wishes ill to no one of its neighbors.

Just as we have a common interest with our sister nations on the American hemisphere, and realize that what is good for one is good for all so does Israel in the area of the Near East have a common interest in the development and advancement of that area where what is good for Israel will be good for her Arab neighbors and vice versa.

Yet despite the will of Israel to work cooperatively with her neighbors for a common regional benefit, the ships of Israel have been denied passage through the Suez Canal. H.R. 11510 in its statement of policy reaffirms the moral law in language that is definite and the meaning of which no one can mistake. It asserts that this country believes in freedom of navigation in international waterways and economic cooperation between nations and that the very purpose of this act is negated and the peace of the world endangered when nations to which we give assistance wage economic warfare against other nations by boycotts, blockades and the restriction of the use of the international waterways.

This, Mr. Chairman, is a step in the right direction. Whenever we stand on the moral law we will find respect awaiting us. Whenever we compromise with what is right, in the hope of gaining some temporary advantage, we will invite not respect but scorn. I have been much distressed and as an American I have felt humiliated that our great country has permitted some nations to which we give assistance to bar from service in American uniforms some Americans because of their religion. There is no advantage that is worth the gaining if the cost is an abandonment of the moral code that is implanted in our Constitution and by which we live.

Our position in the eyes of the world will again reach the stature of yesteryears when we assert to all nations that none can remain in our good graces when it seeks to force upon us a practice of discrimination intolerable in our own country.

I am most happy that the bill we have before us in its statement of policy makes the good start in a reaffirmation of the moral law as it applies to the right of the ships of all nations, including those of Israel, to have full access to the international waterways. I trust that in the administration of the program the

administration will take the forthright position that into no country under any circumstances will we send American personnel unless the decision concerning that personnel is in our own exclusive determination. No power in the world has the moral right to tell Americans how any American in our service shall worship his God. And, Mr. Chairman, we invite only the scorn of the world when we do in our neighbors frontyard what we would be plagued to do in our own backyard.

As chairman of the Subcommittee on Africa, I am pleased and heartened by the inclusion of a special program for that continent. In the foreseeable future Africa possibly will have as many as 30 or 40 seats in the United Nations. We have a large stake in Africa, and because of misunderstandings arising from our alliance with the European colonial powers we have all but missed the boat.

The new program for Africa largely will be in the educational field. The great need in the new emerging nations of Africa is for trained civil servants. There is not time for long training. The need is immediate. It is a situation comparable to our own when war came to us and there was no time to send young men to West Point and Annapolis for 4 years of officer training. It is my hope that under our new special African program something comparable to our 90-day officers' training schools will be made available to the new African nations for training of needed civil servants. I have discussed the matter with recent visitors from Africa, including Dr. Banda, and the suggestion, I am happy to report, has met with enthusiastic response.

Mr. Chairman, tomorrow when we meet under the 5-minute rule is the day of decision. There is no more important decision we will be asked to make at this session. We shall vote on the future of our country, on its will to remain strong, and to fulfill its destiny under God. I know my colleagues too well, am too close to the beating of their patriotic hearts, am too familiar with their dedication to their country and to mankind, to have any doubt of the decision. Tomorrow the clock will not be stopped. There will be no backward steps, but with faith in the wisdom of the Scriptures and in the purpose of our national existence, and with vision, we wil vote overwhelmingly to go ahead with our mission to build a better world for our own people and the peoples of all other lands.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mrs. BOLTON. Mr. Chairman, I yield back the remainder of my time.

Mr. MORGAN. Mr. Chairman, we have no further requests for time.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mutual Security Act of 1960."

Mr. MORGAN. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND

Mr. JUDD. Mr. Speaker, I ask unanimous consent that all Members may extend their remarks in general debate on the mutual security bill.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

PROF. SEYMOUR HARRIS WRITES THAT IF CONGRESS REMOVED THE INTEREST RATE CEILING ON GOVERNMENT BONDS THIS WOULD BE A SIGNAL TO THE FEDERAL RESERVE TO RAISE INTEREST RATES FURTHER AND FURTHER TO STARVE THE ECONOMY FOR MONEY

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, Prof. Seymour E. Harris has written an extremely plain letter to the Washington Post and Times Herald on the question whether Congress should agree to the administration's request that we remove the historic ceiling on interest rates at which the Treasury can issue long-term bonds. This letter appears in the morning edition, April 20, of the newspaper mentioned.

Incidentally, I feel that the Washington Post and Times Herald is to be congratulated for publishing Dr. Harris' letter. This newspaper is on the other side of the issue and devotes its editorial and news columns to propagandizing for the administration's high-interest and tight-money policies. It reports on the other side of the issue only rarely and with apparent pain.

Dr. Harris' letter is most timely. A month ago it appeared that the drive to repeal the interest-rate ceiling had lost its steam. Both the Federal Reserve and the Treasury were then manifestly concerned over the possibility of a recession. The rosy business forecasts which were quite general at the beginning of the year had lost their bloom. In consequence, interest rates were allowed to sag. The Federal Reserve people allowed credit to ease somewhat; and, equally important, there was a change in the mysterious realm known as "investors' expectations." The important people in Wall Street who buy most of the Government securities had then acquired a somewhat gloomy outlook concerning the future course of interest rates, and concerning prospects of getting the interest-rate ceiling repealed.

RENEWED DRIVE TO RAISE INTEREST RATES

Today, however, we are witnessing a sudden renewal of this drive to repeal the interest rate ceiling. This is really a last desperate effort, as I see it, before this Congress adjourns. Certainly improvements in business conditions and improvements in the business outlook since a month ago have not been too reassuring. We could still have a setback before the November elections.

Even so, the stunt which the Treasury pulled two weeks ago, with its issue of the 4¼ percent, 25-year bond, has greatly revived investors' expectations. This stunt was, in large part, responsible for the spectacular jump in interest rates last week, but it was not wholly responsible. The Treasury also dumped a large and unusual crop of bills onto the market last week, just before income tax payments were due. Naturally these ran into a shortage of money and helped drive interest rates up. The Federal Reserve cooperated to the extent that it maintained Federal Reserve credit to the banking system at a level $284 million below that outstanding in the comparable week a year ago.

On Monday a week ago, April 11, the Treasury accepted bids on its 13-week bills at an average interest yield of 3.622 percent, making a jump of almost a full percentage point in the rate on this bill from the previous week. On that day, the Treasury sold $1.1 billion of 13-week bills and about $½ billion of 26-week bills. These were about the usual amounts which the Treasury sells on its regular Monday bill auction, but in this case the Treasury had already announced that on the next day, April 12, it would auction, in addition, about $2 billion of 52-week bills. Accordingly, when this auction was held, the Treasury accepted average rate of 4.6 percent. Under the circumstances, these fantastic jumps in the bill rates are not surprising. These bills were to be paid for on Thursday, the 14th, only one day before income tax payments were then scheduled to be paid on Friday, April 15.

MILD PANDEMONIUM IN THE MONEY MARKET

Obviously, the Treasury did not need to accept the low bids on its bills which it did accept. In the first place, it did not need the money. It had a balance of approximately $3 billion on deposit with the commercial banks. Of course the Treasury does not like to draw down its balances with the commercial banks and deprive the banks of the free use of these funds. But in this case the drawdown, if the Treasury had cared to use its own funds, would have been quite temporary. With the tax payments being made, these funds and more would have flown promptly back into the commercial banks.

In the second place, if the Treasury had really wanted to avoid creating a

squeeze in the money market last week, it could have sold the bills directly to the Federal Reserve System. It would thus have avoided driving up interest rates on its own securities and driving up all other short-term rates.

Over the last decade or so, both the Treasury and the Federal Reserve officials have repeatedly asked Congress to provide a "temporary" authority for the Treasury to sell securities directly to the Federal Reserve, up to a maximum amount of $5 billion outstanding at any one time. Furthermore, Congress has always granted this request. In fact, Members of Congress have proposed that the authority be made permanent. It has been made temporary only because the Treasury and Federal Reserve people have insisted that it be kept temporary—on a 2-year basis.

Treasury and the Federal Reserve officials have also insisted that this authority should be used only under a certain set of conditions. The specifications for this certain set of conditions, interestingly enough, are precisely the set of conditions which prevailed last week. In other words, the Treasury and the Federal Reserve had exactly the set of conditions which they have repeatedly said would require use of the authority, and they did not use it.

Earlier this year, when Secretary Anderson was before the Joint Economic Committee, I asked him several questions in writing, one of which pertain to the use of his authority to sell securities directly to the Federal Reserve. On March 23, this year, Secretary Anderson finally wrote me, giving his answers. This is what Secretary Anderson said on March 23, in part, concerning the question of selling securities directly to the Federal Reserve:

> None of the authority under section 14(b) of the Federal Reserve Act, which permits the Federal Reserve banks to purchase up to $5 billion in securities directly from the Treasury, is currently in use.
>
> In my judgment, the use of this authority to sell long-term securities directly to the Federal Reserve within the present legal interest rate ceiling of 4¼ percent would be undesirable. The direct purchase authority is properly viewed by both the Federal Reserve and the Treasury as an emergency authority or to facilitate temporary money market adjustments, usually around tax payment dates.

This statement says, in effect, that the Secretary thinks the authority should not be used to sell long-term bonds to the Federal Reserve. He thinks it should be used, and I quote, "to facilitate temporary money market adjustments, usually around tax payment dates."

The question is then, why did he not sell some or all of his bills to the Federal Reserve last week?

Let me add, for those who do not know that in Treasury parlance a Treasury bill is a money market instrument.

Did money market adjustments need facilitating last week? Well, a jump of almost a full percentage point in the bill rate within a week is a most remarkable occurrence. It is about equivalent to what would be expected of some phenomenal event, such as a declaration of war. One of the Government securities dealers, Mr. Aubrey Lanston, than whom there is no greater advocate of the high interest policy, wrote in his weekly newsletter of April 18, that the money market last week was in a "kind of temporary, mild pandemonium."

Normally we would think that a mild pandemonium just before the principal date for payment of taxes would be just the thing the Treasury would wish to adjust—unless the Treasury was deliberately striving for a spectacular rise in interest rates.

Yes; I think we may be sure that Professor Harris' letter is timely. All the evidence points to a new drive to facilitate an adjustment in Congress, to the end that Congress adapts its views to those of the administration and repeals the interest rate ceiling.

I will insert Dr. Harris' letter in the RECORD in the hope that all Members of the House will read it. It is a sound letter. Dealing as it does with monetary matters, and with Federal Reserve and Treasury policies, it deals with a field in which Professor Harris is one of the Nation's foremost experts. But more than that, Dr. Harris' analysis is not confined to the ivory tower of theoretical economics. It shows an acute perception of the practical setting on what we might call the political forces which are at work in the field of economics.

HIGH INTEREST NOT CAUSED BY INCREASED DEMAND FOR INVESTMENT FUNDS

Before closing, there is one point in Dr. Harris' letter on which I would like to make specific comment. While recognizing that the high interest rates are a product of deliberate and conscious policy of the Federal Reserve, Dr. Harris also observes that high rates on Government securities are, in part, a result of increased competition for funds —from other borrowers. He points out not incorrectly, that individuals, corporations, and the State and local governments have, in recent years, increased their debts much more than has the Federal Government, and that many of these borrowers are prepared to pay much more for credit than is the Federal Government.

These observations, if left without further facts, could be taken to support the notion that an increased demand for investment funds has caused the increased interest rates. This is not the fact, although Treasury and Federal Reserve spokesmen frequently make statements which suggest that it is the fact.

By any proper method of comparing the demand for investment funds, we will find, I think, that the demand has been no higher in the recent years of fantastically high interest rates than in years when interest rates were much more modest and reasonable.

You cannot properly compare the demand for investment funds with the demand of 100 years ago, or 20 years ago, or 5 years ago—if you are looking for the influence of demand on interest rates. The question is whether the demand for investment funds is a greater percentage of the Nation's production, or a greater percentage of its income now than it was 100 years ago, 5 years ago, or 2 years ago.

What is the total demand for investment funds?

If we take the total gross private domestic investment as reported by the Department of Commerce and add to that figure the figure for the net combined deficit of the Federal, State, and local Governments, and then add also the net export of funds from this country, we have what is normally considered to be the total demand for investment funds.

On this basis, we will find that the total demand for investment funds was less in 1957, for example, a year of fantastically high interest rates, than in 1952 or 1953, both years of much more moderate interest rates.

This brings me to a related topic. Federal Reserve and Treasury spokesmen have a theory that high interest rates cause the American people and the American business concerns to save a greater percentage of their income. A few years ago these spokesmen were making public statements which presented the theory as unquestioned fact.

Well, there is a great deal of statistical evidence on the question whether the American people who save for a rainy day, to take care of their old age, to send the children through college, to buy a house, and so on, save more or less for such because of changes in the interest rate which they can obtain. There is a similar amount of evidence on the question whether the corporations retain more profits when interest rates are high. But none of the evidence supports the theory. Quite the contrary. The evidence would lend more support to a theory that the Nation saves a larger percentage of its income when interest rates are low than when interest rates are high.

It has been my pleasure to raise some questions with the Treasury and Federal Reserve spokesmen about their theory, and I believe they do not now make statements of such high certainty as they used to do. They have not, however, given up the theory. Rather, they have tried to explain, in response to my questions, that there is really no way to test the theory. The tendency for people to spend more, and save less, when interest rates are high, really results, they say, from the fact that people are more confident and spend more freely in periods when interest rates are high, and this happens to be when business is prosperous. Perhaps so. Perhaps this is a good enough explanation as to why the evidence does not support the theory. And perhaps, also, the theory cannot be supported for the reason that it is an incorrect theory.

Dr. Harris' letter is as follows:

[From the Washington Post, Apr. 20, 1960]

HIGHER INTEREST RATES OR MORE GROWTH?

This is a statement in support of those Congressmen who are not disposed to yield to the President's request for a removal of the interest-rate ceiling on long-term Government securities.

A removal of the ceiling on Government issues would be a signal to the Federal Reserve to raise rates further, and to starve

the economy for money even more than in the past. The Federal Reserve needs no such encouragement. They see inflation everywhere, which they try to contain through restrictions on the supply of money and higher rates of interest.

How much damage can be done by the high rates of money, for which the President is now pleading, is suggested by the following: Growth rate from 1947 to 1952 was 4.6 percent; from 1952 to 1959, 2.3 percent. The dear monetary policy, that is high rates, probably more than anything else, explains the difference. By 1959, the cost of stunted growth since 1952, not in relation to the highest goals but in relation to the achievements under Truman from 1947 to 1952, was about $60 to $70 billion per year.

Why has the Treasury had so much trouble of late?

Obviously, the dear money policy largely induced by Washington is the main source of embarrassment.

Higher rates are partly the result of increased competition from other borrowers. The percentage rise of debt since 1952 has been 42 percent; 116 percent by State and local governments, 97 percent by individuals, 54 percent by corporations, and only 10 percent by the Treasury.

Many of these borrowers are prepared to pay much more than the Federal Government. These competitors to some extent are the Government's doing. In its determination to get everyone heavily in debt but itself, the Government paid in part in an unequal competition for funds.

Here are a few suggestions to improve the market for Treasury issues.

Why not issue securities payable in stable dollars to low-income groups? Why not auction securities? Why not exploit the 4- to 5-year market, of which the Treasury was largely unaware until it was pushed into it by the obtuseness of the Congress? Why not force the Federal Reserve to abandon a "bills only" policy, which means a conscious attempt to abandon the Government bond market, and besides means that the Federal Reserve disarms itself of a potent weapon?

Why not require the Federal Reserve to finance increased monetary needs through open-market operations, which add to the revenue of the Treasury and should increase the market for Government securities by about $600 million a year?

Finally, and most important, why not require financial institutions to put a percentage (varying) of its assets into Government securities? In this manner the Government (the people) would be compensated to some extent for delegating its money creating authority to the banks.

Surely, if the financial institutions in fact are required to purchase securities in wartimes, they should be required to do so as long as we are in great danger.

Dear money has yielded the largest gains to the least productive though useful members of society, the rentier class. Whereas all personal income rose by 36 percent from 1952 to 1959, interest income rose by 120 percent.

The President feared that the ceiling would force the Treasury to issue excessive amounts of short-term issues which the banks would have to purchase with newly created money.

Despite the forced issue of short-term securities recently, the holdings of Government securities by banks have tumbled—a decline of $3 billion in 1959 or from 30 to 25 percent of assets. Actually, a good part of the Treasury's embarrassment arose in 1959 from a net decline of banks' investments in Treasury issues of $7.8 billion even as Treasury debt rose by $7.9 billion.

In the writer's opinion, the Congress would err badly if it acceded to the President's request. The broad limits within which the Treasury is allowed to saddle the taxpayer with interest charges should remain in the domain of the people's representatives. In this connection, Senators DOUGLAS and ANDERSON have shown that the Treasury advisers on prices to be charged for lending to the Government are those who are to lend the money.

Congress, in return for any concessions, should demand important changes in monetary, debt and fiscal policies. Above all, Congress should not validate a rise of ½ percent since 1952 in long-term rates by raising ceilings correspondingly. To do this would be a validation of mistaken policies.

A good part of the improvement in the market rests with the administration. Relaxation of dear money policies and less dependence on monetary policies; more modern therapy for inflation; improved marketing procedures for Government securities; a directive to the Federal Reserve to abandon (1) the "bills only" policy and (2) expansion only by cutting reserve requirements. Then we shall have less recession, more growth, more public welfare, a more equitable relation between the Government and financial institutions, and a larger and more orderly market for Government securities.

SEYMOUR E. HARRIS,
Littauer Professor of Political Economy, Harvard University.
CAMBRIDGE, MASS.

NATIONAL SEASHORES

Mr. MICHEL. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. SAYLOR] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. SAYLOR. Mr. Speaker, I have today introduced a bill which would establish three areas—Cape Cod, Mass.; Padre Island, Tex.; and the Oregon Dunes—as national seashores. This bill takes the place of a bill, H.R. 7407, which I introduced on May 27, 1959, based on an executive communication from the Department of the Interior. My earlier bill provided for three national seashores but did not specify any of the areas involved. My new bill specifies three areas which are now recommended by the Secretary of the Interior.

A year ago there was considerable uncertainty and controversy as to the areas that should be designated as national seashores. Investigations and hearings with respect to Cape Cod, Padre Island, and the Oregon Dunes have proceeded to a point that clearly indicates that these three areas should be selected. Arrangements reasonably satisfactory to most of the interested persons in the local areas have been developed.

These three seashores are well separated and distinctly different in their characteristics. The Cape Cod Seashore combines exceptional scenic and natural interests with a rich historical setting. The Padre Island Seashore is a spacious area useful for many types of year-round recreation. The Oregon Dunes Seashore is a unique combination of spectacular sand dunes and fresh-water lakes.

Secretary of the Interior Fred A. Seaton is to be congratulated in selecting these three locations and in proposing their acquisition and administration for public inspiration and enjoyment.

GENERAL LEAVE TO EXTEND

Mr. LIBONATI. Mr. Speaker, on behalf of the gentleman from Texas [Mr. THOMAS] I ask unanimous consent that all Members have 5 legislative days to extend their remarks on the independent offices appropriation bill.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

CORRECTION

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland [Mr. FOLEY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. FOLEY. Mr. Speaker, a letter which I sent to Members of the House requesting support for H.R. 2331, "To establish the C. & O. Canal National Historical Park and Parkway," inadvertently contained an error. A corrected version is as follows:

DEAR COLLEAGUE: Very soon the House will consider H.R. 2331, to establish the Chesapeake and Ohio Canal National Historical Park and Parkway. A bill substantially the same passed the Senate in July 1957. It has strong bipartisan support in the House, having been reported by the Interior Committee by a large majority on a voice vote.

The C. & O. Canal stretches along the Potomac River for 185 miles from Washington to Cumberland, Md. Built between 1828 and 1850, it is the last, intact survivor of our country's canal-building era. The Federal Government has owned the canal since 1938. The March 1960 issue of National Geographic magazine contains an impressive picture and narrative description of the canal beginning on page 419.

H.R. 2331, in setting aside 165 miles of this unique and scenic relic as a national park, authorizes the Secretary of the Interior to purchase a maximum of 10,000 acres for development purposes. It also provides for a 25-mile parkway overlooking the canal in mountainous western Maryland.

The total estimated acquisition and development cost is $12 million. Of this amount about $8 million would be used by the National Park Service between now and 1966.

The C. & O. Canal National Historical Park and Parkway will provide unusual educational and recreational facilities to over 19 million people within a 150-mile radius.

Your support for H.R. 2331 would be greatly appreciated.

Cordially yours,

JOHN R. FOLEY,
Member of Congress.

THE NATIONAL COUNCIL OF CHURCHES VIS-A-VIS THE AIR FORCE MANUAL

The SPEAKER. Under previous order of the House, the gentleman from California [Mr. JACKSON] is recognized for 30 minutes.

Mr. JACKSON. Mr. Speaker, I ask unanimous consent to revise and extend

my remarks and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. JACKSON. Mr. Speaker, on March 3, the gentleman now addressing the House spoke to the membership in an hour-long speech entitled "Uncertain Trumpets." The speech dealt with the controversial Air Force manual and of certain matters dealing with the National Council of Churches of Christ in the United States, and of the organization's claim to representation of 38 million American Protestants in council-affiliated churches. The requests for reprints of the speech required a printing of 75,000 copies, and an additional order for the same number is presently being prepared. The national response from every State in the Union to the remarks the gentleman delivered here on March 3 served to dispel in his own mind any lingering doubt as to the validity of the council's claim to representation of this large number of Americans. If the factors of time and space permitted, he could document in the RECORD a nationwide protest of greater proportions than any his office has experienced during the 13 years he has served as a Member of this body.

On yesterday three distinguished Members of the House delivered eloquent speeches supporting the position of the National Council of Churches vis-a-vis the Air Force manual. The records of some leading spokesmen for the council were spread upon the record to demonstrate beyond any question of a doubt that these men who have devoted their lives to the service of their churches could not have been Communists. It is interesting to note that no such charge has ever been leveled.

It is not my purpose to defend the charges of Communist association detailed in the Air Force manual. This material has been debated at such great length, and by so many people, that all informed readers have by this time made their own evaluation and determination so far as the allegations themselves are concerned. On this occasion I will go to but a single point in the continuing controversy, and document what I consider to be irrefutable evidence of a continuing blindness on the part of some members of the national council as to the nature and techniques of the Communist conspiracy.

A frugal housewife, in an effort to ease family finances, determines to make herself a dress. To do this she shops around for a pattern she likes, chooses the material with which she wants to work, and proceeds to construct the new garment—always with the fond hope that husband, children, and friends will view the finished product with approval.

The construction of a new social order also requires a pattern—material with which to work—and a sewing machine. In its efforts to build a new world order the architects of the national council have selected some strange material and some clashing colors. That the product emerging from the council's sewing machine does not please all of its church family is daily becoming more evident.

What pattern has the NCC cut for the bright new order. It is not a new pattern, but a familiar one on the world scene since man first emerged, upright and dignified, from the mists of antiquity.

In essence, the pattern is one of benevolent paternalism—that of the father image, and one which indicates that the rank and file of American Protestants are not qualified to make reasonable determinations on social and political issues.

But it is to some of the materials and instruments utilized by the national council that the gentleman wishes to direct the burden of his remarks today. On March 3, he pointed out the inconsistency of any association, at any level, between Christian ministers and known conspirators of the Soviet aggression. The Communist purpose is not the Christian purpose, and the dedicated efforts of Communist spokesmen since Marx and Engles should have demonstrated by this time to all thinking men the nature of the threat posed by atheistic communism to the integrity and the freedom of all churches.

Let us look at some of the instruments chosen by the National Council of Churches in its efforts to construct a new social order. I am willing to rest on the judgment of my colleagues as to the wisdom of hiring arsonists to do construction.

In 1957 the department of racial and cultural relations of the National Council of Churches published a 40-page pamphlet entitled "The Negro American—A Reading List"; 240 works were recommended in the pamphlet.

Alfred S. Kramer, associate executive director of the department of racial and cultural relations of the National Council of Churches, stated in the foreword to the pamphlet that its compilers "have done an admirable piece of work." The pamphlet, he said, contained the names of books "about Negroes which are safe to recommend for children—safe because they qualify as literature."

Edith L. Hussey, who is credited with most of the work in compiling the reading list, states in the introduction to the pamphlet that it is a "careful selection" and "we have tried to save you time by culling the best."

Whether or not blasphemy and obscenity constitute the "best" I must leave to the judgment of the individual reader. I must conclude, however, that those responsible for compiling the list of recommended books on behalf of the National Council of Churches, must have found some material in the Communist-authored books which placed a brick here and there in the new order under construction.

Again, Mr. Speaker, and in connection with the authors whose names and records of activity in and on behalf of the Communist conspiracy I shall include hereunder, I should like to make it clear that I do not assess the blame for inclusion of the material upon the individual members of the national council hierarchy.

I do contend that the blasphemy of a Du Bois has no place in a list of books recommended for teachers and children, nor should passages so lurid and erotic as to cause a U.S. postmaster to bar them from the mail be included in such a recommended list. If the inclusion of the books and the passages to which I have referred stems from lack of supervision by council authorities of material which is recommended in the name of the council, this is one thing. If the works and the excerpts referred to are endorsed by the council after knowledge of the authors and the obscenities are made known to council members, that is quite another thing.

Let us look at several of the authors, whose continuing efforts on behalf of the Communist conspiracy have won them acclaim and awards from Soviet leaders. Their stocks in trade have been and are venom, vilification of the American system, and blasphemy so repugnant that it should not be included in the pages of the CONGRESSIONAL RECORD. Of the obscene passages I shall speak later.

The first of the Communist authors, Victor Perlo, is included in the list of recommended books issued by the National Council of Churches reading list.

The record indicates as follows:

VICTOR PERLO

Perlo's book, "The Negro in Southern Agriculture," is on the National Council of Churches' reading list. This book was published in 1953 by International Publishers, the Communist Party's major publishing firm in this country.

According to a 1945 document of a U.S. intelligence agency, Perlo had served as the head of the second most important espionage group in the U.S. Government. This document identified Nathan Gregory Silvermaster as the leader of the most important group.

According to the testimony of Elizabeth Bentley before the Senate Internal Security Subcommittee in 1952, two espionage rings—and I underline the word "espionage"—made up of Government employees in Washington worked under her. One of them was headed by Silvermaster and the other was known as the Perlo group, because it was headed by Victor Perlo.

Perlo has also been identified as having been a member of the Ware cell, the first Communist cell to be established within the U.S. Government in the early thirties.

Perlo invoked the fifth amendment on present and past Communist Party membership and on espionage activities when called to testify before the Senate Internal Security Subcommittee. That committee's report, "Interlocking Subversion in Government Departments," describes Perlo as "an open propagandist for the Soviet world conspiracy."

Why, and I ask the National Council of Churches, was it felt necessary to go to an identified agent of the Communist conspiracy for works to be included in a bibliography suitable for reading by PTA teachers and schoolchildren?

His book, "American Imperialism," was highly praised in the Communist press and contains vicious smears of the United States. Perlo testified that he was proud of this book when he appeared before the Senate committee. He has also written for Soviet publications.

Perlo also invoked the fifth amendment when questioned concerning espionage activities and Communist Party membership when he appeared before the House Commitee on Un-American Activities in 1948.

HERBERT APTHEKER

Aptheker's book, "A Documentary History of the Negro People in the United States," is on the National Council of Churches' reading list.

Aptheker is one of the chief theoreticians of the U.S. Comunist Party. This statement is attested to by the fact that he is presently director of the Faculty of Social Science, the major open Communist Party school in the United States and the fact that he is also editor of Political Affairs, the Communist Party's official monthly theoretical organ, having been appointed to this position by the National Committee of the Communist Party at a meeting in July 1957.

I ask parenthetically if there are not enough loyal American writers in this country who are sufficiently acquainted with the problems of the American Negro to make it unnecessary for the National Council of Churches of Christ in the United States to employ the services of espionage agents—identified Communists.

He has also served as associate editor of Masses and Mainstream—now called Mainstream—a Communist Party cultural monthly.

Prior to holding his present position as head of the faculty of social science, Aptheker taught at its predecessor, the Jefferson School of Social Science, and also at the Party's School for Democracy.

In 1958 Aptheker was appointed to the Communist Party draft program committee.

Testifying as a defense witness for the top Communist Party leaders in the first Smith Act trial, and also for the Communist Party in proceedings before the Subversive Activities Control Board in 1952, Aptheker stated that he had joined the Communist Party in 1939. In the latter proceedings he stated that the Soviet Union and Red China were on the side of peace, but that he believed the Government of the United States was "the center of war danger in the world."

W. E. B. DU BOIS

Du Bois' book, "Black Reconstruction," is on the National Council of Churches' recommended reading list.

Du Bois has served on the faculty of the Communist Party's Jefferson School of Social Science. He has been a contributing editor for the party's cultural magazine, Masses and Mainstream, and has written articles for the New World Review, a Communist monthly propaganda magazine, concerning the Soviet Union and its satellites, and also for Science and Society, the Communist-Marxist quarterly.

In 1954 he sent his greetings to the Daily Worker on the occasion of its 30th anniversary. He has had works published by New Century Publishers, one of the party's publishing houses. Du Bois has been actively associated with over 75 Communist fronts and causes. He was denied admission to Canada in 1952, and also was refused a passport by the U.S. Government until the time of the Kent-Briehl decision by the Supreme Court.

In 1952 he was awarded the Peace Prize by the Soviet-controlled World Peace Council. This was a reward for his work as chairman of the Peace Information Center, a Communist organization established in New York City to disseminate in the United States, Moscow's world peace appeal. Du Bois was prosecuted by the U.S. Government for refusing to register as the agent for a foreign power while directing the Peace Information Center, but was acquitted on the grounds that the U.S. Government failed to show a contractual relation between him and the Soviet Government.

In 1953 Du Bois bestowed on Howard Fast a peace prize which had been awarded him by the World Peace Council, and opened the ceremonies at which Paul Robeson was presented with Moscow's peace prize.

Receiving a passport, after the Kent-Briehl decision, Du Bois and his wife traveled to the Soviet Union and then, in violation of passport regulations, to Red China. In Peking, on the occasion of his 91st birthday, he was given a dinner by the Chinese Government which was attended by Vice Premier Chen Yi. He received many tributes from leading Communists on this occasion. In a speech he made on this occasion, Du Bois heaped praise on Red China and the Soviet Union. He urged the people of Africa to arise and turn to the U.S.S.R., following the example of China. He also attacked churches and the clergymen, and defamed the United States, which he branded as an enemy of Africa. He told the people of that continent, "Beware Africa, America bargains for your soul."

At the time of the Rosenberg case, Dr. Du Bois spoke of the American people and their Government in the following words:

> We are the murderers hurling mud.
> We are the witchhunters drinking blood.

At the time of his visit to China, Du Bois composed a poem, "I Sing to China." Excerpts from it follow:

Down then, religion and church, temple and pagoda;
Away myth and miracle, creed and dogma.
Rejoice, honesty, God lives again!
But not your God, Europe and America!
Not that, not that;
No Christ to kill, no faith to fan.
What China worships is a man.
A workingman.
Commune, Communes, with the elect of Heaven,
With Mother Earth, daughter of Sky and Sun;
Born of democracy, fertilized by communism,
Parents of revolution, makers of the world.

SHIRLEY GRAHAM

Shirley Graham is the wife of W. E. B. Du Bois. The following books, written by her, are on the National Council of Churches' recommended reading list:

"Booker T. Washington," educator of hand, head, and heart.

"Jean Baptiste Pointe de Sable," founder of Chicago.

"The Story of Phillis Wheatley."

"There Was Once a Slave," the heroic story of Frederick Douglass.

"Your Most Humble Servant," the story of Benjamin Banneker.

"Dr. George W. Carver; Scientist," written by Shirley Graham and George D. Lipscomb.

Shirley Graham has been a contributing editor to the Communist magazine, Masses and Mainstream, served on the editorial board of Paul Robeson's publication "Freedom," and was also on the faculty of the George Washington Carver School, now defunct Communist training institution.

She was a marshal in the Communist Party's 1950 May Day parade, and has an extensive record of affiliation with Communist fronts and causes.

She was identified as a member of the Communist Party by Louis Budenz, former managing editor of the Daily Worker and member of the Communist Party's National Committee, in testimony before the Subversive Activities Control Board, during its hearings on the National Council of American-Soviet Friendship.

She and her husband were received by Khrushchev himself when they visited Russia in 1958 and were entertained by Premier Chou En-lai while in Peiping.

GENE WELTFISH

The book, "In Henry's Back Yard," written by Gene Weltfish and Ruth Benedict, now deceased, is on the National Council of Churches' reading list.

Gene Weltfish has an extensive record of affiliation with Communist fronts. She was dismissed from Columbia University in the spring of 1953, after she had accused the United States of waging germ warfare in Korea, and invoked the fifth amendment when questioned by a Senate committee on the question of membership in the Communist Party.

Prior to her death in 1948 Ruth Benedict had been associated with over 35 Communist fronts.

GUNNAR MYRDAL

Myrdal's book, "An American Dilemma," is on the National Council of Churches' reading list.

This book defames the Founding Fathers of our country and attempts to discredit the U.S. Constitution as evidenced by the following quotations:

> The 150-year-old Constitution is in many respects impractical and ill-suited for modern conditions and since, furthermore, the drafters of the document made it technically difficult to change even if there were no popular feeling against change.
>
> Modern historical studies of how the Constitution came to be as it is reveal that the Constitutional Convention was nearly a plot against the common people. Until recently, the Constitution has been used to block the popular will.

James E. Jackson, Jr., incidentally no relative of mine, is presently editor of the Worker, a member of the National Committee of the Communist Party and

its southern affairs secretary. His wife has written in the past that Jackson collaborated with Myrdal in the writing of "An American Dilemma."

When Jackson testified before the Senate Internal Security Subcommittee in May 1959 he was asked if he had assisted Myrdal in the writing of this book. Jackson refused to answer, invoking the fifth amendment.

E. FRANKLIN FRAZIER

Two of Frazier's books, "The Negro in the United States" and "Negro Youth at the Crossways," are on the National Council of Churches reading list.

Frazier is head of the department of sociology at Howard University. He has been a contributing editor for Science and Society, has written for New Masses, and lectured at the George Washington Carver School. He has been associated with several dozen Communist fronts and causes.

At Turner's Arena in 1949 he praised Paul Robeson as one who "represents the Negro man in the masculine role as a fearless and independent thinker."

His book, "The Negro in the United States," was favorably reviewed by the Daily Worker and the People's World and along with other of his works was sold at the party's bookstore in New York City, the Workers Book Shop.

ALAN LOMAX

"Our Singing Country" by Alan and John Lomax is on the National Council of Churches reading list.

Alan Lomax has been associated with 15 or more Communist-front organizations and has been particularly active as an entertainer for Communist and pro-Communist gatherings.

He served on the board of directors of People's Songs, Party entertainment front, and was an associate editor of the People's Song Book.

BENJAMIN A. BOTKIN

Botkin's book, "Lay My Burden Down, a Folk History of Slavery," is on the National Council of Churches reading list.

Botkin has been associated with 15 Communist fronts and causes.

Like Lomax, he served on the board of directors of People's Songs.

In 1948 he signed a statement supporting the Soviet Union in opposition to the leaders of the United States.

At this point, Mr. Speaker, I come to a very difficult and repugnant task, that of discussing certain passages from several of the books listed as recommended reading by an agency of the National Council of Churches of Christ in the United States. I prefer to believe that no member of the Council has any knowledge of the nature of the passages, and I sincerely trust that when such knowledge is made available to them, they will, with a single voice, require the removal of the offending books from the list.

I am not a bookburner, nor a Puritan in my reading habits, but I have viewed with deep concern, shared by millions of our people, the growing threat of commercial pornography. What an adult reads and what books he selects, is largely a matter of personal choice. What a child reads, and what is directed to his attention, is quite another matter, and to shield the immature mind from obscenity would appear to be a duty of churchmen.

In several of the books on the recommended reading list are passages which I can only describe as shocking. When a housewife in California did some research on the books listed by the National Council as desirable for PTA, school and teacher's work, she excerpted some of the passages and requested her postmaster to give her an opinion as to the mailability of the excerpts. She was informed that under the provisions of section 1461 of title 18, United States Code, the material could not be placed in the mail for delivery. This section of the Code reads as follows:

Obscene, lewd, lascivious, or filthy publications or writings, or mail containing information concerning where, how, or from whom such may be obtained, and matter which is otherwise mailable but which has on its wrapper, or envelope, any indecent, lewd, luscivious, or obscene writing or printing. Any mail containing any filthy, vile, or indecent thing.

Upon receipt of certain excerpts from the books above mentioned, the postmaster addressed a communication as follows:

DEAR MRS. ———: Your attention is directed to the mimeographed circular mailed in this office March 24, 1956, entitled "To the Leaders of the Community," sheet No. 2, March 12, 1956.

The material identified above is nonmailable under section 1461 of title 18, United States Code.

You are cautioned against depositing such matter in the mails in the future.

Very truly yours,

LLEWELLYN D. CRANDALL,
Acting Postmaster.

Mrs. GREEN of Oregon. Mr. Speaker, will the gentleman yield?

Mr. JACKSON. I yield to the gentlewoman from Oregon.

Mrs. GREEN of Oregon. Will the gentleman specify which books the postmaster said were not mailable?

Mr. JACKSON. I do not want to mention them on the floor, but I will be very happy to give the gentlewoman the information she requires.

Mrs. GREEN of Oregon. It seems to me if this accusation is going to be made on the floor, the specific books should be brought in at that particular time.

Mr. JACKSON. Well, I will yield to the gentlewoman. I can think of one at the moment. I have several references.

One is "Without Magnolias."

Mrs. GREEN of Oregon. Will the gentleman give the other ones?

Mr. JACKSON. I would prefer to finish my statement.

Mrs. GREEN of Oregon. If the gentleman will yield further. I have the following letter from the Post Office Department dated April 18, 1960:

DEAR CONGRESSWOMAN GREEN: Confirming the telephonic conversation between Mr. Harrison, of your office, and Mr. Farr, of this office this date, please be advised that our records do not indicate that the Post Office Department has had occasion to rule upon the mailability of the following book: "Without Magnolias," by Bucklin Moon.

Sincerely yours,

LEO G. KNOLL,
Acting General Counsel.

Mr. JACKSON. I am very happy to have the information. The information I have—and I am about to read the letter—is: "You are cautioned against depositing such matter in the mails in the future." This is the information I have. I wish it were possible for me to send the page to the gentlewoman with the excerpts in the books, but this I cannot, and I cannot yield further at the moment.

The tragic part of this matter, Mr. Speaker, is the objectionable material was not mailed by a purveyor of filth, but by a citizen attempting to bring to the attention of her fellow citizens material which concerned her as a parent.

To attempt to insert these lurid passages in the CONGRESSIONAL RECORD would bring down on me the strongest condemnation of all right-minded persons, nor would it avail me anything to protest that I was simply extracting passages from books approved for children by the National Council of Churches.

I shall, however, be willing to furnish the excerpts in question to any representative of the National Council of Churches, or to any other responsible adult. In light of the letter from the Acting Postmaster, I shall not put them in the U.S. mail.

Communists, blasphemers, and pornographers may assist the National Council of Churches to erect a new order, but I think it would be a house which neither the board of the national council nor many millions of American citizens would want to inhabit.

There is enough integrity, sufficient ability, enough talent, among loyal American artists, writers, scientists, and poets to insure thoughtful and conscientious construction of a decent world order. It is not necessary to employ the services of those who owe fealty to a system which is characterized by the degradation of the human soul. Americans are watching the National Council of Churches, and no speeches, in whatever number, on the floor of the House or the Senate will influence one way or another the ultimate decision that must certainly be made.

I would say in conclusion, Mr. Speaker, that I have no animosity toward either the National Council of Churches or to any other ecclesiastical body in this country. My concern goes to the point when any group, whether it be a religious group, a labor group, or a group in education, employs the services of men and women who are known to the security agencies of this country, to the investigating committees of this Congress, to be disloyal, to have engaged in espionage, to have transmitted secrets vital to the security and the welfare of the people of the United States to an enemy. Whether it is sheer blindness which leads to the employment of such people—and I prefer to believe that it is a lack of supervision of what is being done in the name of the National Council of Churches—or whether it be inadvertence, I see it as my duty to bring the facts of the case, as I see them in good conscience, to this Congress and to the people of this country. And, if in ranging myself or in appearing to range

myself against the angels I am committing a mortal sin, then I and I alone shall have to answer for it. But, the tremendous protest which is coming up, the necessity for extended defense on the floor of the House and, I might add, very able defense by men and women for whom I have a high regard, indicates that this protest is not only being generated but that it is striking home. I hope that spokesmen for the National Council of Churches of Christ in the United States will ask to see the passages to which I have referred.

I cannot conceive, Mr. Speaker, that any man who wears the cloth of any church in this country read these lines without repugnance.

We come then to this: If they, themselves, are not doing it, who is doing it? Who is working behind the scenes doing these things? The National Council of Churches and their spokesmen—and I have no reason to doubt them—pledge their loyalty. But there are those represented in their bibliographies who are not loyal, who have gone to jail for disloyalty. Why should they be represented in a publication of a great church organization?

The Congress cannot, and it would be very stupid for it to try to, clean house. We are prohibited from so doing by the Constitution of the United States and quite rightfully. But someone has to clean house and it seems to me this bibliography hands to the National Council of Churches a broom which they could start to work with.

Now, Mr. Speaker, I yield to the gentlewoman from Oregon, if she has further comment.

Mrs. GREEN of Oregon. I would say to my colleague from California that certainly I would be the first one to join him if he is really interested in a drive against obscenity—obscenity in this country as reflected in the magazines at the corner drugstore, the pornographic material given to high school students, and the obscene material going through the mails every day.

I think the gentlewoman from Pennsylvania [Mrs. GRANAHAN] should be congratulated for the very fine job that she has done in calling the attention of the American people to the amount of obscene literature that is being sent through the mails. I do not think there is a single person in this House who would not join the gentleman from California in a drive against obscenity. I am a little bit puzzled whether his speech today is against obscenity itself or whether it is an attack on the National Council of Churches.

Mr. JACKSON. Mr. Speaker, my concern with obscenity equals that of the gentlewoman's. I agree that the gentlewoman from Pennsylvania [Mrs. GRANAHAN], has done a very fine job. But my concern with obscenity on the street corner is no greater than my concern for obscenity when it appears in what one would assume to be the least likely place in the world to find it, I think the gentlewoman would agree, in a publication the foreword of which goes to some considerable length to make its point. And I shall read just one line from the foreword of this book. This is speaking of those who compiled the bibliography.

> Their first thought was that teachers and librarians might profit by knowing what books about Negroes are safe to recommend for children.

I have a child and I would be horrified if I found him with the book "Without Magnolias" in his little paw.

Mrs. GREEN of Oregon. Mr. Speaker, will the gentleman yield further at this point?

Mr. JACKSON. Yes.

Mrs. GREEN of Oregon. I am sure the gentleman from California wants to be fair. I would call his attention to the pamphlet which he holds in his hand, "The Negro American." This is a reading list of books by Negroes and about Negroes.

The SPEAKER pro tempore. The time of the gentleman from California [Mr. JACKSON] has expired.

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent that the gentleman may proceed for 3 additional minutes.

The SPEAKER pro tempore. There are other Members who have special orders immediately following that of the gentleman from California and they would have to consent.

Is there objection to the request of the gentlewoman from Oregon?

There was no objection.

Mrs. GREEN of Oregon. Mr. Speaker, I would say to the gentleman from California that several times during the remarks which he has made he has given the wrong impression when he has said that this is a list prepared and recommended for children. A close examination of this list will not find "Without Magnolias" on the list for children. I repeat it is not on the children's list. This pamphlet lists books for adults, for the intermediate department, for junior high department, for senior high department and for primary. These are five separate lists for five different age groups. They are not books that are all recommended for children. Some are recommended for adults only—such as "White Magnolias," and I would call the gentleman's attention to the last two lines of page 5 of the pamphlet he holds in which it says:

> The senior high school young person is ready for critical thinking; he should be given mental fare to counteract prejudice, and opportunity for discussion under leadership. And the adult who will reserve judgment till he reads and ponders is the hope of our democracy.

And this, Mr. Speaker, is virtually identical to the sentiments expressed by the gentleman from California earlier when he said, "What an adult reads and what books he selects, is largely a matter of personal choice."

Mr. JACKSON. The greatest market for pornography, according to the records, is the junior high school and high school level. This is the area in which the purveyors of filth reap their greatest harvest. I say again that I do not think the members of the National Council of Churches know what is in these books.

Mr. SCHERER. Mr. Speaker, will the gentleman yield?

Mr. JACKSON. I yield to the gentleman from Ohio.

Mr. SCHERER. Would the gentlewoman from Oregon answer a question? Does she believe that the book, "Without Magnolias" is suitable for adults?

Mrs. GREEN of Oregon. I have not read the book. I do not know. I would not be able to judge until I have read it. I think we are getting to a sad place when on the floor of the House we take it upon ourselves to decide what specific books may be read. I suspect this book would be found in any library of any of the colleges or universities of the country or in the public libraries.

I would also call the attention of the gentleman from California and every Member of the House to the fact that this reading list contains also the "Report of the President's Committee on Civil Rights." It contains Booker T. Washington's autobiography "Up From Slavery" and "The Race Question and the Negro" by Father John LaFarge, a Jesuit priest. It contains lots of additional books with which no one could quarrel. The gentleman from California has picked out a few, but in fairness others should be mentioned.

Mr. JACKSON. I take no issue with the gentlewoman on the matter of the worthwhile books. I would not suggest nor would I ask unanimous consent to include this material to which I have referred, and if I did, some of my colleagues who have seen this material would spring to their feet immediately and say, "I object." This is material which could not properly be inserted in the CONGRESSIONAL RECORD of the United States. This is an indictment in itself.

PAYMENT IN KIND ACT OF 1960

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Minnesota [Mr. NELSEN] is recognized for 30 minutes.

Mr. NELSEN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include a brief summary of a bill I am introducing and a copy of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. NELSEN. Mr. Speaker, we are hearing more and more talk about farm programs, realizing that the cost-price squeeze has placed the farmers of America in an embarrassing and difficult position.

In the past, Congress has given a great deal of attention to some of our major commodities—corn, wheat, tobacco, cotton—and a great emphasis also has been directed toward the family-size farm.

In my judgment, however, most of the programs have not been realistically designed to help the small farms of America. The family-size farm has in many, many cases not sealed any grain or participated in any program. This is particularly true of the Midwest, and I know it is definitely true in my own township, where we own and operate a farm.

Today I am introducing a farm bill which I think will make some constructive advances in this field, and will help to correct the overall agricultural problems facing the country at this time.

FARM INCOME

I have no desire, Mr. Speaker, to assume the role of a political Santa Claus, but as things presently stand—surpluses build—costs go up—and the farmer realizes less.

Stated very simply, the problem facing farmers today is that no matter how hard we work, we find it more and more difficult to earn a proper share of the Nation's prosperity.

To win a better price for our work, we must correct the circumstances that depress the price. This is the purpose of the bill I am introducing—to try to develop an orderly approach that will reduce the excessive surpluses, and stimulate an adequate price for our products.

THE GREAT DEBATE

Over the years we have heard the great debate go on as to what kind of a farm program the farmers should have. In 1948 both political parties advocated flexible support prices. This was based on the sound principle that by adjusting price supports, production of commodities could be stimulated or discouraged, and by this process we would not glut the market unduly in any one commodity.

In the 1952 conventions of both political parties, we found a change of thinking of many people, and the great battle then began—shall price supports be fixed or flexible?

From a political point of view, it follows that the higher the figure, the greater would be the voter appeal in farm areas. However, it has become abundantly clear that when huge surpluses exist, no program—whether with flexible or fixed supports—will work.

STAGGERING SURPLUS

As we all now realize, the result of our farm legislation has been that producers moved into a stimulated production program. While acres may have been reduced in some commodities, in keeping with quotas and allotments, planting in other field crops was stimulated.

Today we face a staggering surplus.

Broken down into some of our major crops, the value of our surplus, as of January 31, 1960, stands at $3,447,307,000 in wheat, $2,664,445,000 in corn, $1,187,927,000 in cotton, $509,404,000 in tobacco, and $33,053,000 in peanuts.

Grain sorghum has become a great factor. We now have $809,144,000 in this commodity.

We now have a grand total of $9,239,499,000 in price support inventory and loans, as of January 31, 1960.

DEPRESSING THREAT

This surplus hangs over the heads of the farmers of America and presents a constant depressing threat to the market.

It also has a bad effect on public opinion, which is unfortunately beginning to run against all farm programs.

The storage costs alone on this great inventory will cost our Government an estimated $612 million in this fiscal year, or $1,700,000 per day. The total handling costs—storage, interest, and transportation—are expected to run over $1 billion in fiscal year 1961.

The Government now has storage for about 900 million bushels in bin sites all over the country.

The tragedy is that all of this activity and expense fails to help the family-size farmer.

Very little of the $1.7 million a day in storage fees goes to the farmer, and he gets no benefit from the transportation and interest expense of the program.

PROGRAM HAS FAILED

I cite all of these facts to emphasize an obvious but painful conclusion—the programs of the past have not worked. This is not a political statement. It is a fact, and no one can honestly say that the present program is Republican or Democrat. It is an accumulation of unsuccessful but well intentioned attempts on the part of Congress to correct an economic imbalance so far as the farmer is concerned, and it has failed.

Solving the problem will not be easy.

We have several large farm organizations, and we have found them as wide apart as the poles. It would therefore seem extremely difficult to get a majority agreement among the 437 Members of the House of Representatives.

There are hopeful signs, however. I have attended some of the meetings of the Committee on Agriculture and, listening to the comments of the members of the committee, it is evident that they recognize that compromises must be made by members of the committee, as well as farm organizations and the administration.

I personally feel that the President's statement early this session indicated a willingness to consider a variety of approaches.

FAMILY FARMS

My proposal approaches the problem from the point of view of the family farm.

We have heard a great deal of political talk about the family-size farm, but we have found it difficult to define what a family-size farm is. Certainly the size will vary, depending on the production potential, and the type of crop.

I do feel, however, that my farm in McLeod County, Minn., is truly a family-size farm. We have 280 acres of land, we milk cows, raise some pigs, and here is the important factor: We seldom, if ever, sell any feed crop produced on the farm.

In our operation, the farm programs that we have had do not help, as far as field crops are concerned, but instead they frequently become a burden. Here is why: Our corn acres are all needed to fill our silos and feed our cows and pigs. Our oat crop provides the straw for bedding and nurse crop for alfalfa. Our alfalfa fields are needed for our hay for our cattle.

As a result, out of all of these dollars that have come out of Washington in the form of commodity loans, none has come to my mailbox. The only exception would be some payments on soil practices, which amount to almost nothing. Also it should be added that we have benefited by the bolstering of the dairy market provided in many cases by the Government.

But the big money for crop supports has missed our farm, and our farm operation is typical of many, many farms of America.

SEVENTY-FIVE PERCENT GET NO BENEFIT

In my own State of Minnesota, there are 187,483 farms. But 75 percent of these farms get no direct benefit from the price-support program because they never take a loan or sign a purchase agreement. They operate just like I do on my farm—grow all they can on every available acre—and feed every bushel of it on their own farm.

I wish to make it very clear that it is not my purpose to have Government checks coming to every farmer's mailbox. My hope is that we can straighten out the mess we are in, opening the door to a normal marketing situation that adequately compensates the farmer when his product is sold.

In 1958 there were 100,006 loans and purchase agreements signed in Minnesota. I asked the State agricultural stabilization service in St. Paul to estimate how many of the State's 187,483 farmers participated in this activity.

Allowing for duplication where there are loans in several crops, and for landlord-tenant duplication, they estimated that a maximum of 50,000 farmers were involved, and stated that their best estimate would be that about 25 percent of the farmers are involved in the price-support program.

The remaining 75 percent, as I have already stated, take no part in the program, yet they are the so-called family farmer we hear so much about.

STAYS ON THE FARM

On the nationwide level, I have recently gathered some information as to the total production acres in the United States that are operated by farmers such as myself, and here are some interesting figures based on the year 1958:

Sixty-five percent of all corn produced remains on the farm; 73 percent of the oats; 31 percent of the barley; 26 percent of the rye; 26 percent of the grain sorghum; 86 percent of the hay; and 6 percent of the wheat. It is never touched by our price-support program.

This production for use on the farm amounts to a staggering 156 million acres out of the total of 286 million acres producing our corn, oats, barley, rye, grain sorghum, hay, and wheat. In fact, it amounts to almost half of the grand total of 338 million acres under cultivation for all agricultural production in the United States.

Most of this 156 million acres of production is in the hands of the small family-size farmers.

Here we have 156 million acres with many farmers who produce crops to feed their livestock, milk cows, feed pigs, and chickens—they negotiate no commodity loans—they have no acreage reserve—they just need their total acres to maintain their normal farm operation. They account for a major part of production in the feed crops, but get no benefits from the price supports in these crops.

The operation of these 156 million acres presents, in my judgment, the great hope for a solution of the farm problem—both in terms of income to the farmer, and in terms of solving the problem of overproduction.

PAYMENT IN KIND

My bill establishes a voluntary payment-in-kind program. Under this bill, here is what would happen to the family farmer we have been talking about:

He can retire acres, but he can replace the production he loses by taking feed grains from stored surpluses. Thus he can continue his normal farm operation—milking his cows, feeding his pigs or steers. The community would not suffer an economic blow, and the farmer's gross productive capacity would not be disrupted.

Two things would be accomplished: Surplus feed would be utilized and production cut.

The family farmer cannot afford to donate idle acres. He must pay taxes, interest, on every acre. He has debts to pay, machinery to repair, fuel to buy, insurance to pay, and a family to feed.

If this large group of producers, with the tremendous acreage involved, could be encouraged to cooperate in a program that would assist in reducing production, and at the same time drawing down on the surplus that has a depressing effect on the market and is expensive to maintain, great strides could be made.

My proposal falls in the group of other payments-in-kind proposals under consideration, but I have attempted to simplify administrative requisites to simple, understandable, and workable terms.

The plan does not take away from the farmer the right to make his own decisions. Management is kept where it belongs—with the farmer, and this is a right for which the farmer has traditionally fought.

TOTAL TILLABLE ACRES

In the past we have attempted to deal with individual commodities, and frequently we would solve one problem, only to create another in a different commodity.

I propose that acreage reduction be directed to the total tillable acres of each farm. If our total feed and cash crops are reduced, automatically adjustments will be made, producing for the consumer not only the required food products used in their natural state, but also the production of meat products, which are directly related to total production.

I have excluded the crops now subject to acreage allotments and marketing quotas, such as cotton, rice, tobacco, and peanuts. The other crop which is subject to controls under the Agricultural Adjustment Act of 1933 is wheat. Because of its close relationship with the feed grains, my bill makes it possible for the wheatgrower to come under this program if he so chooses, permitting payment in kind. Whether or not Congress enacts a new wheat program in this session, I feel that the wheat provisions of my bill will be particularly attractive to the 15-acre grower, many of whom raise wheat only for feed.

I believe my bill is founded on two solid economic building blocks which I feel are essential to the success of any farm plan. These are: First, maximum management decisions left on the farm where they belong; and second, a sound market economy.

HOW PLAN WORKS

Under my proposal each farm would be assigned a farm base representing the average plantings of corn, oats, rye, barley, grain sorghum, soybeans, and flaxseed during the previous 3-year period. Farmers who voluntarily participate in the program would be eligible for price supports and payments in kind.

A farmer could retire anywhere from 10 to 50 percent of his acreage and receive payment in kind under this bill. The decision is left to him, and he can even choose not to participate in any way. He will then receive neither price supports nor payment in kind.

The payments in kind would be based on what the farmer actually planted in relation to the amount of land which he idled. In other words, if the farmer idled cornland, he would receive payments in kind for corn, and if he idled oatland he would receive payments in kind for oats. The payment in kind would be for up to 75 percent of his normal yield and would be made by a negotiable certificate. This certificate would be expressed in dollars but could be sold or redeemed in any one of the seven crops the Secretary finds are in surplus. In other words, a farmer would be paid in kind for reducing cornland but he could, if he so chose, either sell his certificate or redeem it for corn, oats, rye, or any of the other surplus crops.

The land which is idled must be completely removed from production. No harvesting or grazing would be allowed. A cover crop must be established and weeds controlled. The idle land would, however, be eligible for ACP—agricultural conservation program—payments. Individual wheat farmers could elect to participate in a similar payment-in-kind program.

TO IMPROVE PRICES

Another important feature of my bill is the provision which prevents CCC from releasing its current stocks of these seven crops into the market at less than 105 percent of parity, plus carrying charges. This provision should substantially improve market prices while the payment-in-kind program is in effect.

My bill also provides that when the Commodity Credit Corporation storage facilities become empty under the payment in kind program, they will be offered for sale to the public, with farmers from the local area having the first opportunity to buy them.

As part of an overall attack on our surplus farm commodities, my bill calls for a 3-year extension of the conservation reserve program, and it authorizes the retirement of up to 60 million acres.

It has been demonstrated that where a large number of whole farms are retired, communities suffer. My bill would, however, require the Department of Agriculture to use extreme caution in administering the program to prevent undue economic hardships on rural communities and businessmen. My bill is designed to keep farm families on the farm.

In order to pay for the expanded program, my bill authorizes the use of surplus wheat and feed grains as rental payments. In addition, existing provisions of law preventing Federal irrigation and reclamation lands from being eligible for price supports and the conservation reserve would be continued.

CONCLUSION

In conclusion, Mr. Speaker, I want to say that I have no notion about being the only one who can solve the farm problem.

I have made it a point not to reject outright any sincere proposal aimed at easing our problems in agriculture. I may disagree strongly with some of the principles that have been proposed, but I realize that a solution, if it is to come, must come from a pooling of all our ideas, weighing each suggestion in the light of the public interest, not its value politically.

I am convinced that we can no longer use the farmer as a political football, and I am equally convinced that if we in Congress, the farm organizations, and the farmers themselves determine to work together for a solution, then a solution will be found.

BRIEF SUMMARY

At this point, Mr. Speaker, I include a brief summary of each section of the proposed Payment-in-Kind Act of 1960:

Section 1: Citation of act as Payment-in-Kind Act of 1960.

Section 2(a): Establishes a payment-in-kind program for corn, oats, rye, barley, grain sorghum, soybean, and flaxseed producers. Sets out the eligibility requirements and necessary practices which must be met.

Section 2(b): Authorizes an optional similar payment-in-kind program for wheat farmers.

Section 3: Sets forth the method of calculating the payment in kind and the value of the certificate which eligible farmers receive.

Section 4: Provides sufficient authority for the Secretary to issue necessary regulations.

Section 5: Prevents current Government stocks of corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed from being sold for less than 105 percent of the full parity price. (Present law sets this release price at 105 percent of the current support price.)

Section 6: Requires that producers of corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed must participate in the payment-in-kind program if they want to be eligible for price supports. The bill does not change current price supports as established by the Agricultural Act of 1949 as amended.

Section 7: When the Government surplus is reduced, the Commodity Credit Corporation would be authorized to sell its bins and buildings now located on farms. Local farmers would be given the first opportunity to bid on these facilities.

Section 8: Sets out a policy statement on how the conservation reserve should be administered.

Section 9: Extends the conservation reserve for 3 years until December 31, 1963, and authorizes a program retiring 60 million acres.

Section 10: Allows the Secretary of Agriculture to use wheat and feed grains as rental payments in kind for the conservation reserve.

Section 11: Continues for 3 more years the provision in existing law which prevents the land in Federal reclamation and irrigation projects from being eligible for the conservation reserve or from receiving price supports.

PAYMENT-IN-KIND ACT OF 1960

The following is a copy of the bill:

H.R. 11841

A bill to improve farm income, reduce surpluses, and decrease Government costs by establishing a payment-in-kind program for producers of corn, oats, rye, barley, grain sorghums, soybeans, flaxseed, and wheat; and by extending and expanding the conservation reserve program; and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Payment-in-Kind Act of 1960."

SEC. 2. (a) Effective beginning with the 1961 crops, the Secretary is directed to formulate and carry out a payment-in-kind program with respect to corn, rye, oats, barley, grain sorghums, soybeans, and flaxseed. To be eligible for such payment-in-kind, the producer shall for a three-year period of time reduce the total acreage on the farm devoted to the production of such commodities in the aggregate by not less than 10 per centum below the average acreage devoted to the production of such commodities and diverted under this Act during the previous three years. The producer shall also designate an acreage of cropland on the farm to be devoted to conserving crops or uses, in addition to the average acreage on the farm devoted to conserving crops and uses or allowed to remain idle during the previous three years, equal to the reduction in the acreage devoted to the production of the commodities included in this subsection. The producer shall be required to establish a protective vegetative cover or other conservation practice on the designated acreage. Nothing in this Act shall be construed to impair the eligibility of such acreage for agricultural conservation program payments. The producer shall not harvest any crop from or graze such acreage and shall take such steps as may be prescribed by the Secretary to prevent the designated acreage from becoming a source of spreading noxious weeds.

The following provisions shall apply to wheat producers who desire to voluntarily participate in the payment-in-kind program:

(b) Effective beginning with the 1961 crop, the Secretary is authorized to formulate and carry out a payment-in-kind program with respect to wheat. To be eligible for such payment-in-kind, the producer shall for a three-year period of time reduce the total acreage on the farm devoted to the production of wheat by not less than 10 per centum below the average acreage devoted to the production of wheat and diverted under this Act during the previous three years. The producer shall also designate an acreage of cropland on the farm to be devoted to conserving crops or uses, in addition to the average acreage on the farm devoted to conserving crops and uses or allowed to remain idle during the previous three years, equal to the reduction in the acreage devoted to the production of the wheat included in this Act. The producer shall be required to establish a protective vegetative cover or other conservation practice on the designated acreage. Nothing in this Act shall be construed to impair the eligibility of such acreage for agricultural conservation program payments. The producer shall not harvest any crop from or graze such acreage and shall take such steps as may be prescribed by the Secretary to prevent the designated acreage from becoming a source of spreading noxious weeds.

SEC. 3. The payment-in-kind shall be made for each year of the three-year period by the issuance of a negotiable certificate which Commodity Credit Corporation shall redeem in the commodities included in this Act, such commodities to be valued at their market price. The certificate shall have a value determined as follows:

(1) First, determine the number of acres with respect to which the producer is eligible to receive payment, which shall be the smaller of (i) the number of acres by which the total acreage of the commodities included in either section 2(a) or 2(b) is reduced below the average acreage devoted to the production of such commodities during the previous three years, or (ii) the number of acres devoted to conserving crops or uses as provided in section 2.

(2) Next, determine the actual per acre yield (a) of each commodity on which the producer applied for a payment-in-kind, and (b) during the year in which the producer applied for the initial payment-in-kind. The producer may elect to receive the payment on any one or more of the commodities produced by him which are included in this Act.

(3) Then, for each commodity on which the producer applies for a payment-in-kind, multiply not more than three-fourths of the yield so determined for the commodity by the smaller of (i) the number of acres of such commodity produced for such year, or (ii) the number of acres for which the producer is eligible to receive payment as determined under (1) above (not used in the calculation of the payment on some other commodity). This is the quantity of the commodity for which a payment-in-kind will be made.

(4) Multiply the quantity of each commodity so determined by the basic county support rate for such commodity. The resulting figure is the amount of the payment which will be made on such commodity.

(5) The sum of the resulting figures for all of the commodities on which payment is made is the value of the certificate. The certificate may be redeemed in such commodities included in this Act as the Secretary designates as being in surplus and such redeemed commodities shall not be eligible for price support. Notwithstanding any other provision of this Act, certificates shall be issued only as long as the Secretary designates as being in surplus any one or more of the commodities included in this Act.

SEC. 4. The payment-in-kind program may include such terms and conditions, in addition to those specifically provided for herein, as the Secretary determines are necessary to effectuate the purposes of this Act and to facilitate the practical administration of the program.

SEC. 5. Section 407 of the Agricultural Act of 1949 is amended by adding, at the end of the third sentence, the following: *"Provided further,* That effective with the beginning of the marketing year for the 1961 crops of corn, rye, oats, barley, grain sorghums, soybeans, and flaxseed, the Corporation shall not sell any such commodity for less than 5 per centum above the parity price for such commodity, plus reasonable carrying charges."

SEC. 6. Notwithstanding any other provisions of law as long as payment-in-kind certificates are issued price support shall be made available to individual producers of corn, rye, oats, barley, grain sorghums, soybeans, and flaxseed only if such producers voluntarily participate in the payment-in-kind program set forth in this Act.

SEC. 7. Notwithstanding any other provision of law, when the carryover of the commodities included in this Act is reduced to a "normal supply" as set forth by Section 408(h) of the Agricultural Act of 1949, as amended, the Commodity Credit Corporation shall offer for public sale by competitive bids unneeded storage facilities to which it possesses title, but which are physically located on farmland not owned by the Corporation: *Provided,* That such facilities shall, thirty days prior to such offer for public sale, be offered for sale by competitive bids to bona fide farmers from the county in which such facilities are located.

SEC. 8. Section 107 of the Soil Bank Act is amended by adding at the end thereof a new subsection (e) as follows:

"(e) As a temporary measure to help farmers in adjusting production to current needs, the Secretary shall, to the maximum extent practicable, develop and carry out a properly designed and administered conservation reserve program which (1) retires land that otherwise would be devoted to crops, (2) keeps land out of production for a long term of years, (3) prohibits harvesting or grazing of land under the program, (4) prevents adverse economic effects on rural communities and discourages whole farm participation, and (5) secures sufficient participation to reduce production substantially, bringing total agricultural production into balance with domestic and foreign demand."

SEC. 9. Section 109 of the Soil Bank Act is amended: (1) by amending subsection (a) to read as follows:

"(a) The Secretary is authorized to formulate and announce programs under this subtitle B and to enter into contracts thereunder with producers during the 8-year period 1956–63 to be carried out during the period ending not later than December 31, 1972, except that contracts for the establishment of tree cover may continue until December 31, 1977."

(2) by amending subsection (c) to read as follows:

"In carrying out the conservation reserve program, the Secretary shall not at any time enter into contracts which together with contracts then in effect cover more than 60 million acres."

SEC. 10. Effective beginning with contracts entered into after the date of this act, section 107(b)(2) of the Soil Bank Act is amended by adding at the end thereof the following:

"The Secretary is authorized to provide for payment of the annual payment through the issuance of certificates which the Commodity Credit Corporation shall redeem in wheat or feed grains in accordance with regulations prescribed by the Secretary."

SEC. 11. Section 211 of the Agricultural Act of 1956 is amended by striking out "three years" wherever it appears therein and substituting "six years".

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. NELSEN. I yield.

Mr. SCHWENGEL. I am glad to note that the gentleman from Minnesota has taken a special interest in this great problem that is plaguing the Midwest agricultural economy. I have visited with him concerning this legislation and I am happy that he has spent the time and effort necessary to prepare this bill and introduce such legislation. It is my hope that the great Committee on Agriculture will get to work immediately on some hearings to consider this proposition along with many others that are de-

signed to resolve this grave problem. I share the gentleman's concern, as do all the Members from the Midwest, over the problem that is plaguing the farmer. I, too, have introduced some legislation. I have introduced two bills recently—one to extend the conservation reserves of the soil bank program for 3 more years, and eventually expand it to reach a 60-million-acre reserve which most agricultural economists feel will bring production in line with demand.

The other bill that I have introduced, I hope will help to solve the wheat surplus problem. The bill would seek to achieve a balance between the production of wheat and our ability to move wheat into domestic consumption and for foreign export.

Mr. Speaker, I commend the gentleman for his remarks and for his interest. I say again, I hope the great Committee on Agriculture will get busy immediately to discuss this problem and to bring out some legislation that will deal forthrightly and honestly with this problem.

Mr. NELSEN. I thank the gentleman from Iowa. I would also like to call attention to the fact that some weeks ago the gentleman from Iowa and other members of the Midwest delegation met at a luncheon meeting to discuss the possibility of some solution to the farm problem. Quite frankly, some of the legislation that has been introduced disturbs me because of the fact that while we recognize the family farm is important in our agricultural economy and in the domestic affairs of our country, yet in some of the legislation that has been proposed, the so-called family-size farm is required to donate 10 percent of the tillable acres before it can qualify for any benefit of any kind.

Remember that on the small farm, the family farm, tax per acre is higher than the tax on the large units because of the capital investment. Interest must be paid on the money that has been borrowed to buy land. Taxes must be paid and the small farmer cannot afford to donate 10 percent of his tillable acres.

I believe the bill I have introduced—and I know the gentleman from Iowa is interested in the same approach—will provide a way so that we can get some feed products to continue our farm operation. This bill has a greater possibility of success and is much kinder to the family farm than other bills that have been introduced.

Mr. Speaker, I yield back the balance of my time.

PREVENTION OF AIR ACCIDENTS

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from Indiana [Mr. BRAY] is recognized for 10 minutes.

Mr. BRAY. Mr. Speaker, everyone is saddened by any disaster that takes human lives. Every day the newspapers narrate the daily slaughter on the highways. The crash of an airliner with many persons on board understandably shocks our Nation. Such disasters can lead to honest efforts to ascertain the causes and work toward the prevention of similar occurrences in the future. On the other hand, they can be the occasion for absurd examples of demagoguery.

There is one certain method of preventing air accidents in the United States—that would be to permanently ground every plane in America. Of course, no one seriously considers such a course.

Let us not be misled by the reckless statements of anyone who is more concerned with a sensational story than with a solution to our air safety problems. Let us consider some facts.

The clear implication of some of these statements has been that the Electra airplane and so-called jetprops in general are not safe aircraft and should be grounded. I do not know how many Members of Congress consider themselves to be aviation experts—I do know that I am not. Not being an aircraft engineer, I do not feel qualified to assess the suitability of this plane or similar planes. We do have, however, the Federal Aviation Administration whose job it is to know about such matters and to take appropriate action when necessary for public safety.

The President appointed as the head of that agency Gen. E. R. Quesada, one of the best-informed men in aviation, a hardboiled man who curries no one's favor, dedicated to his job as our civilian air chief. I have had occasion to differ with General Quesada, but I have never questioned his capabilities, dedication or courage.

I am confident that with no hesitation whatever he would take any action he deems necessary to the public safety. I believe that he, with his extensive background in this field and the advice of many experts and analysts available to him, is in a much better position to make intelligent proposals on this subject than I am.

The FAA has ordered the Electra to be flown within certain speed limits, which give it a structural margin as great, if not greater, than any aircraft used today. It is directing a thorough inspection of all such planes in use, and that investigation is progressing well.

If we were to seriously believe that General Quesada would not exercise every available means at his disposal to prevent future air disasters we should take steps to remove him for he would certainly be derelict in his duty. I am sure he will do his duty, based on the best technical studies and advice, which, I might add, need not include any assessments from laymen such as myself.

Airplanes of this jetprop type are being flown by the Air Force. I have asked about their performance and I am told that the C–113 currently has an accident rating of zero. The C–130, built by Lockheed and powered with Allison engines, has a rating of 4.0. Yet the overall accident rating of the Air Force, which gives you a basis of comparison, is 8.4. In performance for the Air Force such aircraft seem to have a much better than average safety record.

We must be careful with figures; they can be misleading. Surely no one wants to play a numbers game with statistics which concern anything so tragic as the loss of human life. We must remember that the Electra is a large plane and carries more passengers on the average than many other planes. Of five turboprop accidents since 1959 two could have happened to any type of aircraft. Exact causes of the other three are still under investigation.

The reckless statements that have been made reflect on our FAA officials, on the commercial air carriers, and the manufacturers. It is implied that all of these various organizations are heedless of the possible loss of life and unmindful of their great responsibilities in air safety. I think such statements are very unfair and that we in Congress should be slow to use this platform to blacken the reputation of individuals and companies who are doing their best in the public interest.

The Electra airplane is manufactured by one of the Nation's most respected aircraft companies, the Lockheed Corp. It is powered by engines made by the Allison Division of General Motors. The Allison Division has a worldwide reputation for quality workmanship, and it has brought credit to General Motors and to Indianapolis, where it is located. Allison engines were our finest in World War II and Korea. They still are the finest. There are no more capable or dedicated workman than we have at Allison. An engine defect has not been cited in any of the accident reports involving Electras; yet the recent damage to the company's prestige, which is so uncalled for, has caused the layoff of hundreds of workers there.

We hope that the investigations currently under way will reveal steps which can be taken to increase air safety. We may never reach 100 percent, but we want to come as close to a perfect record as we can. I do not think that this important work can be sped nor improved by reckless statements.

We all recognize that the privilege we have of speaking in Congress with immunity is one that carries with it a heavy duty to speak only with responsibility. This can be a power to wreck the careers of any man or woman, or the prosperity of any commercial enterprise.

Congressional immunity should not be the basis of careless disregard for those affected by our remarks, however. We must maintain this important prerogative but we must remember what Justice Holmes said about free speech—that it does not give anyone the right to cry "fire" in a crowded theater.

I now yield to the gentleman from Indiana.

Mr. BARR. Mr. Speaker, I want to join with the gentleman from Indiana in his statement and to commend him on his excellent presentation.

The Allison plant happens to be located in my congressional district, and many of the families in Congressman BRAY's district work at the Allison plant.

Mr. Speaker, over 5,000 families in my congressional district make their living at the Allison plant. The engines powering the Electra are Allison turboprop engines. Naturally this furor over the Electra is a cause of great concern to me and to the district that I represent.

This is no occasion for me to try to make a news story. My job is to try to protect the Allison division and the men and women employed there and still do my duty to the Nation by protecting the passengers who fly on our airlines.

I know of only one way to resolve this personal problem and that is to let the duly constituted authorities of this Government come to a decision in the national interest. I firmly believe that they should be permitted to conduct their deliberations without all of us in the Congress looking over their shoulders. I think that they should be permitted to make their decision in an objective attitude and congressional hysteria on the subject can only hurt. It cannot help the FAA come to a just decision.

We in the Congress passed the law creating the FAA. We appropriated today the money they will need to support their operation. We can and should see to it that they live up to the law. Few if any of us are competent to tell them what they should do in this current situation involving the Electra. If we cannot trust General Quesada and the FAA to come to a decision in the national interest, then our congressional efforts are meaningless.

I am sure that I speak for these Allison employees when I ask that the FAA be permitted to decide what to do without the benefit of public or congressional hysteria.

DORMITORY FOR HOUSE AND SENATE PAGES

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Ohio [Mr. MOELLER] is recognized for 30 minutes.

Mr. MOELLER. Mr. Speaker, in the course of 23 years as an educator and member of the clergy, I have come to realize more and more the great importance of the proper development of our youth. Both prior to and since my election to Congress, I have been associated with several organizations, the purpose of which is to actively promote a better understanding of and a better environment for the young people of my district in particular and the entire Nation in general.

The proper education of our young people is an absolute necessity for their full development into healthy adults and good citizens. Coincidental to a proper education is the prime necessity of good parental attention and a clean and uplifting environment.

The Congress, recognizing this fact, has in past years, through child labor legislation, CCC programs, Federal scholarship grants, and many other major efforts, attempted to provide the greatest impetus possible toward the highest development of the Nation's youth. This trend has been followed by the State and local governmental bodies as well. Indeed the educational and recreational budgets of each of our States and of our local governments comprise a major portion of their annual total expenditures. For in America the education of our young and the healthy development of their minds and bodies has become a matter of our national pride. We want the very best of everything for our young people because upon them rests the future well-being of us all.

For these reasons, I must confess that I was amazed, upon my assumption of office, to discover the poor accommodations provided for the Capitol pages who live, work, and study right here in Washington under our very view. These boys, most of whom are living away from home for the first time in their lives, are thrown out into this city without the slightest protection.

Washington is a city where the crime rate ranks amongst the highest in the country. Into this environment, these young men are thrown and expected to make the most of it.

Because of the lack of proper housing facilities, many of our pages are forced to live in roominghouses in the surrounding area, most of which are entirely unsuitable for students, particularly those of high school age. In addition to the poor facilities available, I have found, after touring several of these establishments, that they are, for the most part, located in a less than desirable neighborhood. Because of the inability to establish any restriction on the hours of the boys, under present conditions, they are often seen roaming the streets quite late at night. I am sure that most of you, my colleagues, would be very hesitant to send your son off to a college where there were no dormitory facilities, where the student would have to depend entirely upon himself for housing and eating accommodations, and for the regulation of his recreation time; yet here at the Capitol of the United States we condone the same situation applying to students of high school age.

I have undertaken a survey of the opinions of the boys, and members of my staff have interviewed certain of them individually. I find that the overwhelming majority of them are dissatisfied with the present system and are in favor of some type of dormitory system which would provide them with the proper study and cafeteria facilities plus decent living accommodations. Further, Mr. Henry DeKeyser, principal of the Page School, has conducted a survey of his own among the parents of the pages and finds that they are 100 percent in favor of establishing some form of residence for the pages. In fact many of them were not informed as to the fact that there were no present supervised facilities available.

The situation is deplorable. Our pages are forced to live in substandard housing with substandard study facilities and are thrown in with, by association, persons not always of the most desirable character. Already one atrocity has occurred since I have been a Member of the Congress. Last year a young page boy was attacked and brutally beaten on the streets just above the Capitol by a street gang. If this boy had had a place to stay, eat his meals and study, and where his recreation could be properly channeled he would not have been out on the street where he would be open to such an attack. And this is not the only such case. I have seen and heard of many of the boys walking the streets at all hours of the night or sitting in bars till quite late in order to watch TV. The really astounding miracle is that something more serious has not happened before this. Indeed, it is a tribute to these boys that they have done as well as they have because Washington is not a small town but a big city with all the temptations and diversions that can often lure young boys off their proper moral track. However, the fact that serious difficulties have not occurred, or have not been publicized, to the present, is certainly not a valid excuse for not correcting the situation. Are we going to wait until one of these boys is seriously injured, molested, or worse before we, of the Congress, take action to provide the proper housing facilities for them? Is it going to take some news shattering atrocity to awaken us, and the public, to the need for improved facilities?

In the past few years the Congress has been appropriating, and I suppose will continue to do so for a great many years to come, great amounts of money for improvements on our own office and service facilities. I do not think that it is too much to expect that these boys who serve the Congress so well should be provided with the proper living accommodations so that they might have at least the minimum of properly supervised study and recreational facilities available to them.

For these reasons and many others too numerous to take the time to discuss at this point, I am introducing today a bill to provide for the housing of the pages of the U.S. Congress. I am well aware that this is not the first such bill to be introduced but I sincerely believe, after studying several others introduced by a number of my distinguished colleagues, that this is the most inclusive and specific bill yet offered.

It is my hope that the Congress will not only adopt this measure but will also enact legislation incorporating the recommendations of Mr. Henry DeKeyser, principal of the Page School. I am including these recommendations in the extension of my remarks today. Because in addition to the complete lack of any type of living quarters for the boys, an investigation of the Capitol Page School itself left me with the impression that the boys are receiving something less in the way of an education than most students taking similar courses at other schools. I found this

fact to be so not because of an inadequate or incompetent teaching staff however. On the contrary, I found the staff of the Page School to be of unusually high caliber. Rather the physical plant of the Page School itself, I found to be of completely inadequate proportions to the needs of a modern high school.

For instance, a survey that I conducted showed that 95 percent of the boys enrolled in the Page School are college preparatory students, yet these students do not have the opportunity to study either chemistry or advanced physics, both essential courses in college preparatory work, because the regulations of the Library of Congress do not permit the establishment of a laboratory in the building. Also, these boys, who are at the age when the proper amount of physical exercise is of utmost importance, do not have any type of physical education program. The only athletic program at all available is the basketball game played between the Senate and the House pages, and this includes only a very small number of the boys. Even these boys must travel to Wilson High School, all the way across town, in order to play this game, since there are no facilities available on Capitol Hill.

All in all the situation is one which badly needs attention. Some action must be taken soon. As I stated previously, I would very much like to see an entire revamping of the page setup, both regarding the schooling facilities and the living accommodations. But I recognize the practical side of the issue and am, therefore, at this time presenting only the page residence bill. I think this is a problem of extreme urgency. We must take action to provide these young men with the type of facilities that will help to build them into outstanding citizens. This chance to serve as a page to Congress is a grand opportunity for any boy, and I wish that I had had the chance when I was a boy, but we can turn this experience into a handicap if we fail to see that these boys have the opportunity of receiving the proper study time and supervision in order to become properly educated, intellectually, morally, and physically. For it behooves the Congress to provide for these young men who serve us the same academic and spiritual atmosphere that we would insist on for our own children when studying away from home.

I hope that this bill, or one similar to it, receives speedy approval by the Congress so that we will no longer have to be ashamed of the fact that our pages have such poor facilities, and so that we will not have to fear the occurrence of another shameful atrocity such as happened to the boy last year. These boys are our responsibility. We are the only ones who can provide them with the accommodations necessary and an atmosphere conducive to making them good students and ultimately good citizens. I most emphatically urge that we do not neglect this responsibility a moment longer. If we fail, the responsibility for the consequences is yours and mine.

CIVIL AND DEFENSE MOBILIZATION

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. IKARD] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. IKARD. Mr. Speaker, I have long been interested in the activities and the program of the civil and defense mobilization. Public Law 85–606 amended the Federal Civil Defense Act of 1950 by providing "that the responsibility for civil defense shall be vested jointly in the Federal Government and the several States and their political subdivisions" and further "that the Federal Government shall provide necessary assistance as authorized."

Consistent with this joint responsibility the act authorizes Federal contributions on a 50–50 matching fund basis for the personnel and administration expense of State and local civil defense organizations. Every State now has a sound survival plan. Under these plans the Governors have assigned to the State departments and agencies emergency responsibilities to be carried out in accordance with the plans. These plans must be kept up to date. In addition, each Governor needs an adequate staff to coordinate the emergency functions of the entire State government and the political subdivisions of the State.

A reasonable level of readiness will not be achieved until the governments of each county as well as city are capable of operating under emergency conditions, whether caused by attack or natural disaster. State and local governments need the assistance of the Federal Government to further the civil defense plans and preparations.

Congress authorized appropriations up to $25 million a year for this purpose. The President on three occasions has recommended appropriations of $12 million for this purpose. The Independent Offices Subcommittee on Appropriations appropriated an item of $3 million to start the program; however, the Appropriations Committee eliminated this item from the independent offices appropriation bill. I am indeed sorry that this action has been taken.

In the past 5 years natural disasters from flood, wind damage and other such disasters have increased. The Office of Civil and Defense Mobilization has certainly been instrumental in saving many lives and much property in these disasters. I sincerely hope that the fund is restored before final passage of this bill by the Congress.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. FORD (at the request of Mr. HALLECK), for April 20, on account of official business with the U.S.-Canada Interparliamentary Group.

Mr. DAVIS of Tennessee (at the request of Mr. EVERETT), for the remainder of the week, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. SCHERER (at the request of Mr. MICHEL), for 30 minutes, on Thursday, April 21.

Mr. LINDSAY (at the request of Mr. MICHEL), for 30 minutes, on Tuesday, April 26.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. FEIGHAN (at the request of Mr. MORGAN), to revise and extend his remarks made in Committee and to include extraneous matter.

Mr. ROOSEVELT and to include extraneous matter.

Mr. HUDDLESTON and to include extraneous matter.

Mr. FULTON.

Mrs. CHURCH, to revise and extend her remarks made in Committee and to include extraneous matter.

(At the request of Mr. MICHEL, and to include extraneous matter, the following:)

Mr. CURTIS of Missouri in two instances.

Mr. WIDNALL.

Mr. AVERY.

(At the request of Mr. LIBONATI and to include extraneous matter, the following:)

Mr. OLIVER.

Mr. GIAIMO.

Mr. LANE.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 634. An act for the relief of Grace C. Ream;

S. 1856. An act for the relief of Frank Podany;

S. 2434. An act to revise the boundaries and change the name of the Fort Laramie National Monument, Wyo., and for other purposes;

S. 2804. An act to donate to the Keweenaw Bay Indian Tribe, L'Anse Reservation of Michigan, a certain tract of Federal land with improvements located thereon; and

S. 2877. An act to authorize the reconveyance of tribally owned lands by the Muckleshoot Indian Tribe of the State of Washington to the original allottees, their heirs, devisees, or assigns.

BILLS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his ap-

proval, bills of the House of the following titles:

H.R. 9307. An act to continue for 2 years the suspension of duty on certain alumina and bauxite, and to extend until July 16, 1960, the suspension of duty on imports of crude chicory and the reduction in duty on ground chicory; and

H.R. 9331. An act to extend and increase the authorized maximum expenditure for the special milk program for children.

ADJOURNMENT

Mr. LIBONATI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 59 minutes p.m.) the House adjourned until tomorrow, Thursday, April 21, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2075. A letter from the Postmaster General transmitting a report which provides an analysis of the historic revenue and expense relationships of the principal classes of mail, showing the circumstances which contribute to the projected postal deficit of $554 million in fiscal year 1961, as shown by the President's budget document submitted to the Congress in January 1960, pursuant to section 105 of the Postal Policy Act of 1958 (Public Law 85-426); to the Committee on Post Office and Civil Service and ordered to be printed with illustrations.

2076. A letter from the Comptroller General of the United States transmitting a report on examination of allowances for Federal excise taxes included in spare parts prices under Department of the Army contract DA-36-039-SC-36529 with Collins Radio Co., Cedar Rapids, Iowa; to the Committee on Government Operations.

2077. A letter from the Chairman, Federal Communications Commission, transmitting a copy of the report on backlog of pending applications and hearing cases in the Federal Communications Commission as of February 29, 1960, pursuant to Public Law 554, 82d Congress; to the Committee on Interstate and Foreign Commerce.

2078. A letter from the Assistant Secretary of the Interior transmitting a draft of proposed legislation entitled "a bill to provide additional lands at, and change the name of, the Fort Necessity National Battlefield Site, Pa., and for other purposes"; to the Committee on Interior and Insular Affairs.

2079. A letter from the Deputy Director, Legislative Liaison, Department of the Air Force, transmitting a quarterly report relating to the number of officers assigned or detailed to permanent duty in the executive element of the Air Force at the seat of government for the third quarter of fiscal year 1960 (March 31, 1960), pursuant to section 8031(c), title 10, United States Code; to the Committee on Armed Services.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. O'BRIEN of New York: Committee on Interior and Insular Affairs. H.R. 10997. A bill to grant to the government of Guam certain filled lands, submerged lands, and tidelands; with amendments (Rept. No. 1527). Referred to the Committee of the Whole House on the State of the Union.

Mr. ASPINALL: Committee on Interior and Insular Affairs. Senate Joint Resolution 150. Joint resolution permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton Federal reclamation project, Wyoming; without amendment (Rept. No. 1528). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CLARK:

H.R. 11832. A bill to amend title II of the Social Security Act so as to increase the minimum amount of the monthly insurance benefits payable thereunder; to the Committee on Ways and Means.

By Mr. DAVIS of Georgia:

H.R. 11833. A bill to amend the act of June 19, 1948, relating to the workweek of the Fire Department of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. GEORGE:

H.R. 11834. A bill to provide a new farm program for certain agricultural commodities, and for other purposes; to the Committee on Agriculture.

By Mr. HALPERN:

H.R. 11835. A bill to amend the Postal Field Service Compensation Act of 1955, as amended, with respect to position descriptions, salary, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. HARMON:

H.R. 11836. A bill to amend the Internal Revenue Code of 1954 so as to provide for scheduled personal and corporate income tax reductions, and for other purposes; to the Committee on Ways and Means.

By Mr. LINDSAY:

H.R. 11837. A bill to amend title II of the Social Security Act to increase from $1,200 to $2,500 the amount of outside earnings permitted each year without deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. MILLER of New York:

H.R. 11838. A bill to amend the act of March 2, 1907, relating to the incorporation of the Hungarian Reformed Federation of America; to the Committee on the Judiciary.

H.R. 11839. A bill to amend the act of March 3, 1901, relating to insurance issued by certain fraternal beneficial associations in the District of Columbia; to the Committee on the District of Columbia.

By Mr. MORRIS of Oklahoma:

H.R. 11840. A bill to dispose of surplus administrative reserves of the former Kiowa, Comanche, and Apache Indian Reservation; to the Committee on Interior and Insular Affairs.

By Mr. NELSEN:

H.R. 11841. A bill to improve farm income, reduce surpluses, and decrease Government costs by establishing a payment-in-kind program for producers of corn, oats, rye, barley, grain sorghums, soybeans, flaxseed, and wheat; and by extending and expanding the conservation reserve program; and for other purposes; to the Committee on Agriculture.

By Mr. SAYLOR:

H.R. 11842. A bill to save and preserve, for the public use and benefit, a portion of the remaining undeveloped seashore of the United States, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. TEAGUE of Texas:

H.R. 11843. A bill to improve the budget and accounting procedures of the loan guarantee program of the Veterans' Administration by establishing a revolving fund; to the Committee on Veterans' Affairs.

By Mr. BOW:

H.R. 11844. A bill to amend the Railroad Retirement Act of 1937 to provide that certain individuals entitled to an annuity thereunder shall receive an increased annuity if they have a child in care; to the Committee on Interstate and Foreign Commerce.

By Mr. LANE (by request):

H.R. 11845. A bill to prohibit certain judicial acts affecting the internal affairs of labor organizations; to the Committee on the Judiciary.

By Mr. WAINWRIGHT:

H.R. 11846. A bill to establish the Fire Island National Park, and for other purposes; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARRETT:

H.R. 11847. A bill for the relief of Chris Dunat; to the Committee on the Judiciary.

By Mr. BOSCH:

H.R. 11848. A bill for the relief of Radoslav Vulin and Desanka Vulin; to the Committee on the Judiciary.

By Mr. DORN of New York:

H.R. 11849. A bill for the relief of Jamil Youssef Haddad and Antoinette El Khwaja Haddad; to the Committee on the Judiciary.

By Mr. FLYNN:

H.R. 11850. A bill for the relief of Zygmunt W. Gutowski; to the Committee on the Judiciary.

By Mr. FRIEDEL:

H.R. 11851. A bill for the relief of Dr. Martino Maines Almogela; to the Committee on the Judiciary.

By Mr. O'BRIEN of New York:

H.R. 11852. A bill to clarify the ownership of certain church properties located in the Virgin Islands; to the Committee on Interior and Insular Affairs.

By Mr. QUIGLEY:

H.R. 11853. A bill for the relief of the York Airport Authority of York, Pa.; to the Committee on the Judiciary.

By Mr. SAYLOR:

H.R. 11854. A bill to clarify the ownership of certain church properties located in the Virgin Islands; to the Committee on Interior and Insular Affairs.

By Mr. WALTER:

H.R. 11855. A bill for the relief of Stefan Antal and others; to the Committee on the Judiciary.

H. Con. Res. 660. Resolution relating to the status of certain aliens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

429. The SPEAKER presented a petition of James B. Friese, secretary, Hawaii Mission of the Methodist Church, First Methodist Church, Honolulu, Hawaii, petitioning consideration of their resolution with reference to requesting an all-inclusive test ban agreement among the nations relating to the testing of nuclear weapons, which was referred to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 20, 1960

Mr. HUMPHREY. Mr. President, this past week it was my privilege to testify before Senator McNAMARA's Subcommittee on Problems of the Aged and Aging in support of legislation to provide medical insurance to our older citizens as proposed in the Forand bill and in my bill, S. 1151.

I ask unanimous consent that my statement be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE HONORABLE HUBERT H. HUMPHREY, U.S. SENATOR FROM MINNESOTA

Senator HUMPHREY. Thank you very much, Mr. Chairman.

First, I want to express my thanks to the chairman and subcommittee not only for the opportunity of appearing at this hearing, but for the splendid work that the chairman and the subcommittee have already undertaken and accomplished in the field of the problems relating to the care of our senior citizens. I believe that the work of this subcommittee has done a great deal to guide the thinking of the Congress in all of these matters of legislation concerning the care of our senior citizens.

Mr. Chairman, I am particularly pleased to see Representative FORAND here this morning and I am grieved to read the announcement of recent date that he would not seek reelection. I might say that the most popular man that I find in America today amongst people who are thoughtful and are concerned about their fellow human beings is Congressman FORAND and it is a justly deserved tribute to you, Congressman. You have pioneered in this area and shown the way, and I believe those of us in Congress who have followed in your wake, so to speak, owe you a great debt of gratitude and appreciation.

There is only one other man that I can think of that has consistently joined in this same great effort and that is our own colleague here in the Senate, Senator MURRAY who, for years, has been advocating the extension and improvement of our social security system in the health field. Of course, the father of the Congressman from Michigan [Mr. DINGELL], whom I had the privilege of knowing when I first came to the Senate, was another one of those pioneers. Both he and Senator MURRAY took a great deal of abuse in earlier days for their efforts to improve medical care but I noticed it did not seem to affect them particularly. People still placed their faith and trust in them.

When I first came to the Senate I joined in Senator MURRAY's amendment to the Social Security Act which would have provided for hospitalization under social security for those who were to be the recipients of old age and survivors insurance.

Since that time social security has been greatly expanded in its coverage. I believe I am correct in saying that about 8 out of 10 wage earners are covered under social security and I think that in time it will be pretty much universal. It well ought to be.

We also now have arrangements for the self-employed to be covered as the Forand bill indicates.

Mr. Chairman, I have a statement that I have prepared and I am going to ask—with your permission and consent—to have that statement made part of the record as if I had delivered it in person.

Senator MCNAMARA. It will be made part of the record at this point without objection.

Senator HUMPHREY. Along with that, if the chairman will permit a statement of a 5-minute radiocast to my own constituents back in Minnesota, along with a brief analysis of provisions relating to the Social Security Act in which I have particular interest.

Senator MCNAMARA. That, too, will be made part of the record in the same manner at this point. If you will see that the reporter is supplied with a copy it will be placed into the record.

(The statements follow:)

Mr. Chairman, I appreciate this opportunity to testify in support of legislation to help in meeting the urgent health needs of our older citizens. This subcommittee is to be congratulated for directing attention to this crucial problem. Your hearings and reports make a wonderful contribution to public understanding of the needs of our older citizens.

We are now in the 25th anniversary year of social security, a program which has paid tremendous dividends in human welfare and human dignity for American citizens by making many welfare benefits a matter of earned rights rather than a matter of charity.

The conscience of our affluent society must now face up to the moral challenge presented by the health care needs of our senior citizens. This is a human problem. It involves our fathers and mothers, our grandparents and ultimately, of course, ourselves and our children. This is a human problem we cannot—and should not—sweep under the rug. We have the resources and the time-tested method of social insurance to meet this challange successfully.

Last year—as in the 85th Congress—I introduced legislation to help meet this problem. My bill, S. 1151, would provide insurance against the costs of hospital and nursing home care through the Social Security mechanism. Similar in intent and purpose to the legislation of Congressman FORAND—it would add these benefits to those already provided through old age and survivors insurance:

1. Up to 60 days of hospital care, with subsequent nursing home care, if necessary, up to a combined total of 120 days in any year.

2. All hospital services, drugs, appliances and other care ordinarily furnished to patients in semiprivate accommodations.

3. Upon certification by a physician, freedom to choose any hospital that can admit them, and which has previously contracted with the Secretary of Health, Education, and Welfare to furnish such services—except tuberculosis and mental hospitals.

4. Similar freedom to choose nursing home service, including skilled nursing care, related medical and personal services and accompanied bed and board provided by a licensed nursing home operated in connection with a hospital or in which a medical doctor directs the care.

This program of hospital and nursing home insurance can be fully financed by an increase in the present social security tax of one-fourth of 1 percent for employers and workers and by an increase of three-eighths of 1 percent for self-employed people.

In this way, with the wonderful tool of social insurance, we can spread the heavy health care costs of old age over an entire lifetime of earnings instead of demanding that our senior citizens use up their meager savings just at the time when their income is barely enough for the simple necessities like food and shelter.

Just think for a moment about the heartrending problems of the average retired couple trying to struggle along on $1,440 a year—and the Department of Health, Education, and Welfare tells us that it costs at least $2,300 a year for a couple to live by themselves in a modest fashion—without luxuries.

And the average individual with social security benefits receives only $72 a month. That is scarcely luxurious living. Let us consider the desperate situation facing 1,300,000 aging widows who must try to exist—I can hardly call it living—on average insurance benefits of $56 a month.

The budget-shattering impact of unexpected hospital costs creates terrible anxieties and hardships for these people. Three out of every five men and women past 65 have no protection against hospitalization costs. A survey published last year by the Health Information Foundation showed that half of the people over 65 without health insurance could not afford it or were denied coverage.

Insurance companies have taken steps to cover a larger proportion of our older citizens in their private health care plans. These efforts are indeed praiseworthy, but it is clear that the greater health care needs and the lower income of aged people do not make them good insurable risks for private carriers. Either the private insurance company must raise its premium to a prohibitive level for low-income pensioners, or the company must impose such restrictions on benefits that the value of the coverage and protection is too small in comparison to the need.

A working man in his earning years usually can take advantage of group hospitalization, but when he retires, his income goes down drastically, his right to group coverage in hospital insurance plans is often lost, and the cost of private health insurance is often completely out of reach.

Thus, our older people past 65, who use more than twice as much hospital care as the rest of our fellow Americans, find that increased health needs and lower income create terrible financial worries and anxieties when hospital or nursing home care is necessary.

As my friend, Prof. Wilbur Cohen, told this subcommittee last year:

"These are the people who, as they need hospital care, even though they are receiving social security, must ultimately apply for public assistance to supplement their social security to pay for this hospital care; or not receive hospital care; or borrow money; or receive it from relatives or friends; or get free care in some way from the communities."

There are many doctors who provide free services. There are many free clinics and free hospital rooms for indigent patients. Through public assistance programs we spend hundreds of millions of dollars for medical care through our city, county, State, and Federal governments. And, of course, children and grandchildren and other relatives bear many costs of medical and hospital bills during emergencies.

But who will ever know how many aged citizens have suffered, or even died, because

they were unwilling to ask for charity, because they waited too long before they asked for help?

And how can we measure the heartache that accompanies the reluctant decision to ask a son or a daughter to exhaust savings or go into debt to pay for the patient's hospitalization or nursing home care?

We cannot be heartless or insensitive to the health care needs of our 16 million fellow citizens who have passed their 65th birthday. I would like to point out that lengthening lifespans in the next few years will mean that many adult Americans will find they have parents and grandparents trying to exist on retirement pensions.

We must have a Government with a heart. A Government which will expand its humane, dignified system of social insurance where benefits are available as a matter of right—a right that results from a lifetime of work and a lifetime of contributions. And I further believe that we must make up for past neglect by blanketing in those Americans who have already qualified for social security benefits.

America's older people deserve protection against rising hospitalization costs this year. I hope this Congress will not allow White House opposition to block action on this urgently needed and thoroughly justified legislation. Certainly the Eisenhower administration has offered no reasonable or workable alternative.

For 8 years the President and Vice President and their experts at the Department of Health, Education, and Welfare have had plenty of opportunity to come up with some plan to help elderly Americans in time of serious illness.

But now this Republican administration is suggesting that action be postponed for another study—in spite of the backlog of urgent needs, in spite of overwhelming demand for action. We have had plenty of studies. We have files full of evidence on the need to protect our older people against unexpected health costs. Any Member of Congress who reads his mail knows just how concerned, how worried and anxious our older people are about the costs of serious illness.

I say Congress must act now, because, if we wait for the Republican go-slow, not-now, veto administration to take action on a program to help finance health care, we will wait forever.

I do not doubt that a voluntary program involving local government as well as State and Federal support can be invented for an election year. But I believe we should let commonsense and reason guide us—instead of creating an administrative monstrosity.

We already have a successfully operating national program of social insurance to help take care of Americans in their retirement years. Social security has helped to make our country great and strong. Social security has enhanced human dignity and welfare—and it has done so with an administrative cost of less than 2 percent. Let us improve and expand this wonderful program. Let us help protect the health of our senior citizens economically and effectively. Let us show them government with a heart.

Protection against hospital costs through social security has top priority but it is only one of the steps we must take to give security and dignity to our senior citizens in their retirement years. I have introduced other legislation to help older Americans, but I do know that you are chiefly concerned at this time only with the problem of health care for the aged.

Mr. Chairman, I ask that you include in your record of hearings the text of my radio speech of March 7 and my newsletter of March 11 about my 6-point program for senior citizens. I believe Congress should give most urgent attention to legislation carrying out this program.

I deeply appreciate this opportunity to discuss the health needs of our senior citizens with you. Thank you very much.

A PROGRAM FOR SENIOR CITIZENS

(Text of recording by Senator HUMPHREY—week beginning Mar. 7, 1960)

We often hear the word "crisis" thrown about these days. It is a word which is used all too often to describe problems of all types.

Today I want to talk with you about a problem which is truly critical. It is a problem which can not wait for more talk and more study. It is the crisis faced by our Nation's senior citizens.

Let me first give you an idea of the immensity and growth of this crisis. In the year 1900, there were only 3 million Americans over the age of 65. Today there are nearly 16 million. In 10 years there will be more than 20 million.

But these are just figures. They do not tell the pathetic story of the needs of our senior citizens in terms which all of us can understand.

They do not tell the story of the elderly widow whose income is so low her day begins and ends with a sense of hunger.

They do not tell the story of the elderly man who needs but can not afford hospital or nursing home care for illness or disease.

They do not tell the story of the elderly couple who live each day in fear of losing the roof over their heads.

We hear noble talk about "the golden years." But more and more people are finding that these are years of despair and anxiety. This is a disgrace for a nation with our wealth and luxury.

I am not just talking about a few isolated cases. Millions of Americans—through no fault of their own—are existing without adequate incomes, health care or housing, and without a recognized role in the community.

The Department of Health, Education, and Welfare tells us that it costs at least $2,300 a year for a couple to live by themselves in modest fashion.

But the average retired couple on social security receives only about $1,440 a year.

And 60 percent of the individuals retired on social security have less than $1,000 a year in money income.

Even more desperate is the crisis facing the 1,300,000 aging widows who now receive an annual social security benefit of $56 a month.

I ask you: Is this what our mothers and fathers deserve? Do these fine citizens deserve a shabby rented room and a diet of bread and soup in their final years?

There are selfish and narrow-thinking persons who say the problem is not theirs. They say "It's every individual for himself." They say every individual has total responsibility to plan for retirement.

I agree that we should all plan on an individual basis to provide for our future needs. But the best plans and preparations of all men can be crushed by forces beyond their control. Disease, economic fluctuations and just plain bad luck can make a mockery of even the wisest investments and preparations.

What we need is a new dedication to end the crisis facing our senior citizens. What we need is a government with a heart and understanding. And what we need right now is action on a program to allow our senior citizens to live with dignity, security and a sense of usefulness.

Let me specify six steps which are vital to such a program:

1. Increase social security benefits to keep pace with living costs.

2. Increase from $1,200 to $1,800 the amount which individuals may earn without losing social security benefits.

3. Extend the social security system to cover costs of hospital and nursing home care for senior citizens.

4. Establish minimum Federal standards which States must meet for old-age assistance programs.

5. Provide effective Federal assistance for specialized housing programs for the aged.

6. Allow a tax credit incentive to encourage hiring of older workers.

I have sponsored legislation for these purposes in the Senate and will continue to fight hard for favorable action. This is no sudden effort on my part. I have never forgotten—and I will never forget—the crisis facing our senior citizens. We must let them know they are not alone.

NEWSLETTER

(From the desk of Senator HUBERT H. HUMPHREY, special to editors—week ending March 11, 1960)

A program for senior citizens. We hear noble talk about the "golden years" for our older citizens settling down into retirement. But too often these years bring despair and anxiety.

Millions of Americans, through no fault of their own, are barely existing, without adequate incomes, without access to adequate health care, without decent housing, and without the dignity and respect to which they are entitled. An action program to help our 16 million senior citizens is needed now.

Desperate needs: A married couple living by themselves needs at least $2,300 a year for a modest, minimum standard of living—but the average couple retired on social security gets only $1,440 a year. And three out of five people on social security pensions get less than $1,000 a year in cash income. Do these citizens deserve a shabby rented room and a diet of bread and soup? Should they be forced into overcrowded charity wards in hospitals and nursing homes when the savings of a lifetime are wiped out by unexpected sickness or hospitalization? I say this is disgraceful and unjustified in our rich and productive country.

Dividends of medical research: Wonderful advances in medical science promise eventual conquest of crippling and killing diseases such as arthritis and heart ailments. A man of 65 today can expect to live another 13 years and a woman will probably live another 15½ years. If medical research continues successfully, we may have 30 million or 40 million people over 65 instead of the expected 20 million. My Senate Subcommittee on International Health is helping to advance research on the problems and the process of aging. But, in addition to lengthening life spans, we can put more "life" in the retirement years. We can give our older Americans the security and the dignity they need and deserve.

Action program for 1960: Since I first came to the Senate, I have worked for legislation to help America's older people. Here is my action program:

1. Health benefits. My health benefits proposal will give protection against the heavy costs of hospitalization and nursing home care through social security.

2. Increased social security benefits to keep pace with rising living costs. A 30 percent increase in the minimum payment is needed.

3. Raise earnings limits from $1,200 to $1,800 so benefits won't be lost by many older workers.

4. Minimum Federal standards for State old-age assistance programs. Protect the dignity and self-respect of relief recipients. Abolish public "shame" lists.

5. Effective Federal assistance for special housing for the elderly.

6. Tax credit to encourage hiring of older workers.

Government with a heart: This is the 25th anniversary of social security—the first

major attack on poverty, helplessness and shattered family life. In these 25 years, we have created "government with a heart"—a government properly concerned with the welfare of all citizens, not as an act of charity, but as a moral and social obligation—bringing new security, new dignity and new independence to millions of American families.

I am sure you know that a number of us have been meeting with rather substantial numbers of people in recent weeks and I have been asked many times by reporters, by interested citizens, by commentators—what are the American people concerned about? I think the chairman of this subcommittee, along with his associate here from the House of Representatives, Congressman FORAND, would be interested to know that in a series of television programs that I conducted—called "Ask Senator HUMPHREY," just a question and answer program with people just calling in with no advance preparation, just picking up the phone and calling the television station—that we had more questions on the problems of medical care and hospital care for the aged than all the other questions put together.

Now, these were just people calling in, not any organized group.

Also, I found out in analyses relating to those questions that a goodly number of them came from younger people, not the elderly who were already eligible for social security benefits, who were concerned, first of all, about their own parents and what would happen to them under prolonged sickness, and secondly, they were concerned about their own future, what kind of care would they get?

Mr. Chairman, the costs of local and county and State governments in the field of health care for our elderly has become one of the largest items of cost, next to education. The property tax burden upon citizens and localities is a very heavy one. In fact, I would say that many communities today have property taxes at such high rates that they act as a deterrent to further economic expansion in the community.

One of the reasons for the high property tax is medical and hospital care of the needy, the indigent and the elderly. In my own State of Minnesota, we give pretty good care to our elderly people. We feel, through our University of Minnesota Hospital, University Medical School, through our welfare departments, we have done a good job, but, Mr. Chairman, this has become a very, very heavy burden upon the property owner. That is the only way we have of raising taxes for them with the exception of an income tax which has its limitations and has its dedicated funds.

Through the wonders of medical science and technology, we have been able to extend the lifespan of our people, we have come to the point where we have a substantially larger group of people 65 and over to be cared for.

Now, their sickness increases with age and their capacity to pay decreases with age. The incidence of the need of hospitalization goes up with age and the ability to pay for it goes down.

One does not have to be a wizard to figure out what ought to be done. What needs to be done in a country such as ours is to provide some means of caring for these people. This is just elementary social justice.

Now, the argument apparently is not over whether or not they should be cared for at the moment even though I think that behind some of the pettifogging that goes on, there is a little argument about that. But, let us assume for a minute that everybody wants to provide hospitalization, nursing home and medical care for the elderly. Then the argument comes down to the means of doing it.

If we are going to spend the next year, 2 years, 3 years, arguing over means, we are doing it at a great expense because in the meantime a large number of people are being inadequately cared for.

We have a true, tried, and tested method for providing adequate care. That method is under the social security system.

The Forand bill provides freedom of choice for hospitalization, freedom of choice for the surgical service. I have introduced a bill, S. 1151, which does not include the surgical services but includes all hospital care, all nursing care, including the drugs and other items that are required under nursing home and hospital care.

I put that bill in because I thought it might be well to have a bill that provided only hospital and nursing home care as a way of possibly some compromise on the broader Forand bill. But I want the fact quite clear—I support the principles and the details of the Forand bill.

My proposal should relieve some of the attack from the American Medical Association, which is so concerned about the possibility of interference with the freedom of choice of doctors. But I think we ought to put our foot down on this strawman right now. There is no denial of freedom of choice under the Forand bill. The choice is there but it is a real choice. It is a choice you can make and know that it will be paid for. There is no use of having a choice of automobiles, you know, if you cannot buy one, no use of having a choice of homes if you cannot even afford to have a tent. To talk about freedom of choice for doctors and hospitals for the elderly when they have no way of paying for it except to swallow their pride and go on relief and the public welfare rolls, seems to me to be denying the real meaning of freedom of choice.

The administration says it is going to come up with some kind of alternative proposal. What we want is a program that will help the patient; that will help the needy.

I recognize that there is a variety of services in this country such as group health and group hospitalization, and various private insurance plans, but let the record be clear: If we could relieve the private medical care programs, the private and group hospitalization and medical care programs of the extra cost that comes with the care of the elderly, premium payments on other insurance policies for the rest of the American people could be substantially reduced.

The way to relieve those costs and to put them in proper relationship with the income is to take the group that are eligible for old age and survivors insurance benefits and include them under social security. Those who do not want to do that are really asking that others pick up a disproportionate share of the bill for a group of people that could have better medical care, better hospital care, better nursing home care, under some provisions under social security. And the cost under social security, according to the studies made in the House and according to private research foundations, can be financed with a quarter of 1 percent increase in the tax on both employer and employee and three-eighths of 1 percent on the self-employed.

This is a modest amount for the care that can be extended.

So, Mr. Chairman, I want to extend to you my thanks for doing a service for first of all, the elderly; secondly, those who will be under private health insurance plans; and thirdly for the insurance companies, themselves, which will be able to give better insurance coverage for the vast number of people under 65, if they can be relieved of the cost and the burden of those above 65.

I thank you very much.

Senator MCNAMARA. Thank you, Senator HUMPHREY. We appreciate very deeply your taking time to be here this morning and to speak so eloquently and well on behalf of the elderly citizens.

Senator HUMPHREY. Senator, for the record, we had a tremendous audience that gathered in Detroit recently on this very issue. All of us in public life know a good audience when we see one. I believe there were about 18,000.

Senator MCNAMARA. That is about what it was said to be.

Senator HUMPHREY. Approximately 18,000 people who gathered in the Coliseum in Detroit, elderly citizens, on a Sunday to urge upon the Members of Congress passage of the Forand bill. I think that every Member of Congress who would come in here and testify would have to admit that his mail on the so-called Forand bill is the biggest bulk of mail that he has today and the letters are not these "jimmied up" ones. These are letters that come in from people who write them in their own way, appealing to the Congress of the United States to do something in this crucial area.

We had better get busy and do something or some of these Members will not be back here. If some of my friends in Congress want a little political health insurance, may I suggest that they get busy and do something for the elderly people?

Senator MCNAMARA. Thank you, Senator. We appreciate your suggestions here this morning and intend to move forward this morning to accomplish the ends you have suggested.

Are there any questions?

Senator BRUNSDALE. I just want to ask the Senator if, under his plan, he wants to limit the contribution through the social security payment to one-fourth of 1 percent? If that is not enough, would he not agree that it should be raised so that these people can be adequately cared for?

Senator HUMPHREY. I surely would, Senator.

Senator BRUNSDALE. That is all. Thank you.

Senator MCNAMARA. All the records we have from them indicate this, and you do agree, I take it, Senator, that there is evidence that a quarter of 1 percent from the employer and employee, plus three-eighths of 1 percent for the self-employed, would do the job?

Senator HUMPHREY. I not only think it would do, I think it would more than do the job. This is particularly true if you get the 4 million unemployed in this country employed, Mr. Chairman.

Senator MCNAMARA. And we can look forward to some increase in our gross national product which we expect would take care of some of this unemployment and, therefore, the prospects would be very good.

Senator HUMPHREY. Absolutely. With this economy moving forward at any rate that is worthy of being called America, and with the picking-up of the unemployed and seeing they are reemployed, which is the least the country ought to do, there would be no problem with one-fourth of 1 percent according to the actuaries who have studied this.

I am not an expert, but I do know that studies have been made by private groups as well as Congress and that percentage of tax seems to be adequate. But I want to be very frank about it, if it requires, for example, one-eighth of 1 percent more or whatever the figure would be, the Senator from Minnesota does not hesitate to say he would vote for it. I happen to think the American people can afford to have education for their youngsters and they can have decent hospital and medical care for their oldsters. If we cannot, we ought to close up shop, because this country spends a good deal of time wallowing around in its commercial recreation which adds little or nothing to its character.

I think the richest country in the world ought to be able to protect the elderly.

I was over in Sweden, Norway, Finland, Denmark. They do not have nearly as high a standard of living as we do, but there is not an elderly person there that is not given the best medical care that modern science can provide.

If the Swedes, Norwegians, Finns and Danes can afford it, this cosmopolitan society of ours can afford it. I would like to think we could aspire to those heights.

Senator MCNAMARA. Many people oppose the social security approach to solving this problem and have recommended that the States participate in payments to the fund. What is your reaction to that?

Senator HUMPHREY. Well, I think it would be a good idea to go out and find out how the States are going to finance it. You know, Mr. Chairman, there are all kinds of ways to duck an issue, and they have been perfecting some new ones of late. One way that people try to duck the real responsibility for meeting head on an issue is to say "Well, we will let the localities do it," or "we will let the State do it."

And when you go to those same States, you discover that they are often times incapable of financing their education program, their highway program, their basic State services. To load onto them additional responsibilities with their tax base being sorely limited, is, I think, ducking or avoiding the issue. The real truth is the one area of government that has the capacity to raise the money to pay for this cost is the Federal Government and that is exactly why those who do not want to pay for it are saying, "Let the States and localities raise the money."

There are constitutional prohibitions in some States against this thing, and there surely are under city charters. I have been a mayor of a city. No one needs to tell me what a problem it is for a city to raise money. I know what has happened to the tax base. I say those persons trying to shift this burden back on local, county and State governments, are really trying to avoid the responsibility altogether.

There are differences. Some States can and are being helpful but in the main——

Senator MCNAMARA. Another suggestion made by the opponents of the social security approach is that it is not or does not take care of a certain number of people, 2 million, 3 million, 4 million. Actually, all of the shortages in our social security system or the failures to meet the total problem under the social security system would be reflected in this program and is it not a pretty good argument for extending the social security system to others when they are so much concerned with this area in connection with medical care?

Senator HUMPHREY. The Senator's insight into this matter is only excelled by his great compassion for the people. The Senator is absolutely right. Now we find people pointing out the shortcomings of social security—the very same people who made those shortcomings mandatory.

I am perfectly willing to have social security cover every person in the Nation. I think it ought to. And I want to say the gaps that are there can be filled as social security is expanded. This is a good argument for expanding social security. Also, I understand that this subcommittee is working on some proposals to cover those not currently covered under social security.

Senator MCNAMARA. That is correct.

Senator HUMPHREY. I might add that if the administration feels as deeply as it apparently claims of late about uncovered workers, it might want to try out its programs on those not covered. That is a possibility. We will see which plan works the best. It would be very interesting.

Senator MCNAMARA. Senator HUMPHREY, we know of your concern to get away. You do have important commitments, and again we appreciate your testimony.

Senator HUMPHREY. I am going over to the Committee on Foreign Relations to see to it that the public funds are protected. I came over here to see that the public interest was at least helped along. I did not need to do much with you as the chairman.

Senator MCNAMARA. I hope you do as well over there.

Senator HUMPHREY. Thank you.

Science Island, Casco Bay, Portland, Maine

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. OLIVER. Mr. Speaker, it is a matter of great personal satisfaction to those of us who have participated in its organization to be able to announce the start of a practical, imaginative, and urgently needed educational project, which will make a substantial contribution to America's efforts to produce more qualified scientists.

I am referring to the creation of the National Youth Science Center on Science Island, now known as Cushing's Island which is located in Casco Bay, near Portland, Maine. The stirring story of the National Youth Science Center may well be a classic example of how an American institution is rooted. In this true-to-life saga, one finds a large measure of ingenuity, a humble start, several years of hard work and the foresight and faith of a number of individuals in a bold pioneer program aimed to guide and inspire our future scientists to eventually undertake discovery as well as applied scientific efforts.

It all started prior to Sputnik I when an overzealous housekeeper complained to the SPCA and her boss, Mr. David L. Lukens, a South Orange, N.J., business executive, that Mr. Lukens' son, 14-year-old Jeff, had dissected a frog. The boy's father, seeking a method to channel the bright youngster's talents, hit on the idea of a youth science center where the boy could receive guidance under competent scientists and educators. Mr. Lukens then consulted with Dr. Vannevar Bush, board chairman, Massachusetts Institute of Technology, Dr. Mervin J. Kelly, then board chairman of Bell Telephone Laboratories, and Prof. George Sutton, president, American Rocket Society, as to the need and practicality of his idea.

The idea was enthusiastically received and then followed some 3 years of planning and legwork, during which time hundreds of educators, scientists, and business executives were personally interviewed by Mr. Lukens so that a practical and firm foundation would be built.

It was the unanimous opinion that the value of such a center would be in finding the gifted youngster and then giving him the opportunity and guidance and inspiration for development. This would be done with a minimum of formal education during the 2-month summer session at Science Island. The youngsters would engage in projects of their own choosing and carry them out under the supervision of capable teachers. An important part of the program would be visitation periods where renowned scientists who have already made their mark would meet the future scientists and discuss matters in an informal "shirt-sleeve" manner.

The permanent home of the center would be a major portion of the scenic island, some 125 acres, in which the Government had originally invested some $2 million for improvements and which housed about 1,200 Army and Navy personnel as a harbor defense during World Wars I and II.

Dr. Alan T. Waterman and Dr. Harry C. Kelly, respectively Director and Associate Director of the National Science Foundation, were others who in those early pre-Sputnik I days envisioned the need for more quality scientists and gave encouragement to the program.

Even though the program in its early days consisted of only a blueprint and words of encouragement, a small group of top business executives aided in providing funds for further development. This founding group consisted of Charles Shipman Payson, industrialist; Carl Gilbert, board chairman, Gillette Co.; George Pew, Sun Oil Co.; Dr. E. Gifford Upjohn, Upjohn Co., and William Jordon, Jr., banker.

However, the key to the entire program—its administration—was still lacking. Many colleges were interviewed, but in most cases, the college had numerous projects and problems of its own and could not give this new project the time and attention it needed. In other cases, the college administrator lacked vision and/or ability.

It was at this point that the project was brought to my attention. I suggested contact with Nasson College, in my congressional district at Springvale, Maine.

As a result, Mr. Lukens spent several days at Nasson and was greatly impressed with its spirit, its academic aims and capabilities of its administrators. He suggested an application for a grant be filed with the National Science Foundation that would enable a "trial run summer session" and the creation of the youth science center.

Nasson College has a regular 4-year liberal arts course. It is a progressive, coed, nondenominational, 48-year-old college located at Springvale, Maine. During the 10 years that Dr. Roger Crowell Gay has been president of Nasson, it has steadily grown academically and physically.

I then got together the principals, Nasson College, and Mr. Lukens, and National Science Foundation, and a plan of operation was approved.

As it is the intent of the National Youth Science Center to be self-supporting after the initial year, a nonprofit corporation, the National Youth Science

Foundation, was started to provide funds from private sources which it will give to the college administering the program.

Included on the board of directors of the National Youth Science Foundation are four Nobel prize winners, Dr. Edward Calvin Kendall, former Mayo Foundation biochemist; Prof. Percy William Bridgman, Harvard University physicist; Dr. Dickinson W. Richards, medical doctor, College of Physicians and Surgeons; and Prof. John H. Northrop, chemist, University of California. Other directors are Dr. Harold A. Edgerton, psychologist, head of the consultant firm, Richardson, Bellows, Henry & Co., Inc., and Dr. Mervin J. Kelly, former board chairman, Bell Telephone Laboratories and now special consultant to president, International Business Machines.

The initial phase of the project was announced in my office last Wednesday, April 13, when the National Science Foundation formally presented the grant to Nasson College for the purpose of administering the program. This grant covers 50 youths for a 6-week summer session. At the outset, the facilities of the college at Springvale, Maine, will be used and later the entire project is expected to be moved to nearby Science Island as facilities and additional funds are made available.

No youngster will be accepted for the National Youth Science Center unless he is qualified by ability. Once accepted, he will be given a "campship" to Science Island for 4 or 8 weeks during the summer. Any American industry, union, association or individual can sponsor a campship through the National Youth Science Foundation.

After the initial year of operation, the National Youth Science Center is expected to be self-supporting with the bulk of its income derived from the campships. The National Youth Science Foundation will provide funds for the operation of the center.

Another favorable aspect of this grant is that it recognizes the intent of Congress in having a Government agency aid in starting a project which can be taken over and supported by private sources, rather than perpetual Federal handouts.

The objective of the National Youth Science Center is to uncover America's most able youngsters in their most formative secondary school years and provide opportunity, guidance, and inspiration to become worthy and dedicated scientists.

In my opinion, this project is an outstanding example of democracy at work in its best and fullest sense.

Newsweek Calls Draft "Campus to Chaos"

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in the April 4 issue of Newsweek magazine there appeared a thoughtful article on the system of military personnel procurement we now use, the draft. This article highlights the deficiencies in that system, deficiences that affect not only the quality of our military manpower but also the operation of our civilian economy. The question is not whether to let young men "get out" of their obligations to the country, and the article points this out quite well; the question is how to get the best in terms of military organization and defense.

I would like to place this article in the RECORD:

[From Newsweek, Apr. 4, 1960]

THE DRAFT—CAMPUS TO CHAOS

Is there any sense trying to plan a career? Is it worthwhile to look for a permanent job? Should I get married? These are questions that tens of thousands of young men graduating from college must face up to now, as they bump squarely into four words "Uncle Sam needs you."

For most who graduate from high schools, there will be time to postpone the question of military service. But what about the young men of 21 and 22 who know the draft is coming soon. Will they be drafted? And how soon? How can they find out?

Or should they just enlist and get it over with? Or what about signing up for one of the Reserve programs? And if so, which one of a bewildering variety of alternatives should they choose?

At some time, almost every American family will be touched by the draft—now in a state of terrible uncertainty and confusion. For the first full appraisal of the draft, and its effect on the Nation's youth, a team of Newsweek correspondents headed by General Editor Jack Iams talked to students, parents, draft boards, and public officials across the Nation. Following is the summing up—and the answers to all-important questions:

The conscientious father in Arlington, Va., was both hurt and disturbed when his college sophomore son spoke up: "Dad, do you realize you've got me locked in with this darned draft thing until I'm 35? The other guys are just kissing it off until they're 26; and then they'll be exempt."

"I told you to do what the draft board requires," said the father. "To apply for a student's deferment while you're in college. Keep your grades up. It's true that makes you liable until you're 35. But that's the law."

"It may be the law," said the sophomore, "but the other guys aren't bothering. They say it's the only way you can beat the draft."

Father, sure he was right, reached for the phone. But the woman clerk at his son's draft board shook him to his conscientious core. "Your son's right," she said. "We just aren't bothering with college deferments any more. It's mostly redtape and the boys aren't filing requests for deferment. They hardly ever get called until they're 23 and they're out of college by then, so why bother? But, of course, since your son did apply, he's liable until he's 35. Otherwise, the liability ends at 26."

That is one example of draft-law confusion. Another, and a more common one, is provided by 23-year-old Robert Reed, who was graduated from Princeton in 1958 and is waiting patiently at his home in Chicago's suburban Lake Forest for his local draft board to tap him. "Ever since college, I thought it would be just a couple of months. Then as time went by I thought maybe they had forgotten all about me. Two months ago I had my physical. I guess I'll be called any time now. I've been waiting so long, it'll be a relief." But, relief or no, nearly 2 years of uncertainty will have gone out of young Reed's life, with 2 years of active duty and 4 years Reserve obligation still to come.

Or there is the Detroit officeboy, high school graduate James Gentner, now 21. "In June of 1957 I volunteered for induction. They deferred me for 3 months. They were supposed to call me in October that year, but they haven't done it yet. They may call today, tomorrow, a year from now. They've got me hanging." And while he's hanging, young Gentner marks time in a "just for now" job.

Another, and less resigned attitude, is that of 22-year-old Tom Taylor, a recent University of California graduate currently looking for a job in San Francisco. "I don't want to be drafted. It seems to be a waste of time in terms of career and the little good it does. I want to go into advertising but I can't get a good job because of the Army thing. I just hope there'll be a draft cut."

THE ODDS ARE 99 TO 1

These are typical cases, chosen at random. They can be multiplied thousands of times with individual variation in any part of the Nation today.

Few, if any, of these uncertain and badgered young men—and there are an eligible million and a half of them now in the draft age bracket of 18½ to 26—are unwilling to serve their country if they are really needed. But many wonder how great that need is, particularly when they know that the draft is currently taking fewer than 100,000 men a year (an estimated 93,000 in fiscal 1961). No wonder the temptation is to play "roulette," to lie low, say nothing, and hope to reach the magic age of 26 before one's number comes up.

But "draft roulette" is a game that plays havoc with nerves and with self-respect. Also, the chances of winning are slim. Right now, the Pentagon insists that "virtually no nonfather who is otherwise eligible is currently 'escaping' the draft." The word "virtually" is a slippery one, of course. But Pentagon officials say the odds are at least 99 to 1 against the "roulette" player.

But even those who gamble on waiting it out are weighted down by what many young men consider the heaviest burden imposed on them by the draft as it stands today: The near impossibility of going into a desirable job upon which a career can be built. Obviously, the great majority of employers are reluctant to hire young men for positions of any real responsibility when there is no telling just how soon they may be plucked for service. Conversely, many of the young men themselves would prefer to mark time in some run-of-the-mill job—working in a filling station or at a soda fountain—rather than embark on a serious working life that may be interrupted at any time.

A dean speaks. The way a majority of college students apparently feel is summed up by Amherst's Associate Dean John C. Estey, Jr., himself an Air Force veteran of Korea and student adviser on military obligations:

"In my experience in counseling some thousand students, I think I could characterize their reaction to the draft as one of uncertainty, inequity, and—I am extremely sorry to say—frustration and demoralization.

"They are uncertain when they will be called, if at all. They sense the inequity involved when they see friends with the money and inclination go on to graduate school, planning to stay deferred until age 26 when they will be free men. They sense the inequity in the indefinite deferment of their friends who precipitate marriage and have a family, often with the sole purpose of avoiding the draft.

"If it is true that raw manpower is still needed in great numbers by the Armed Forces, this message does not get through to the college student. He does not see why he is needed. He reads about the competition with Russia in research, technology, engineering, economics, culture, and he wonders why his brains and training are not as

valuable as his feet and back. Finally, he sees so many men being deferred for apparently flimsy rasons that he is bound to say, "How shall I get out of it?' rather than 'How shall I serve?' "

Ways out. For those who frankly want "to get out of it" there are a number of more hopeful prospects than "roulette." Some are matters of chance; some aren't. Briefly, these are the main avenues to "freedom":

Rejection for failure to meet physical or mental standards.

Fatherhood. Actually, fathers are not exempt or even automatically deferred; but they are far enough down on the order of preference to give them what is tantamount to indefinite deferment.

Continuance of graduate schooling until age 26—providing that a high average is maintained. The fact that this requires money has caused critics of the present draft setup to cry "one law for the rich, one for the poor." Representative WILLIAM H. MEYER, Vermont Democrat, has even compared the educational deferment to the Civil War practice of a draftee's hiring a substitute.

Pursuance of certain essential occupations, such as science, engineering, agriculture, and teaching. Decisions as to degree of essentiality are up to local draft boards.

The ministry, and study for the ministry. This is a flat exemption. It has raised problems, according to a California draft-board official, with such sects as Jehovah's Witnesses, some of whose members claim to be ministers though they hold full-time jobs.

Hardship cases—again determined by local boards. About a million and a half are currently listed in this category.

To what extent any or all of these categories are being exploited by the unscrupulous draft-dodger, nobody knows for sure. Draft-board officials are generally convinced that the successful faker is rare, indeed, though the tendency these days is toward leniency, and as one put it: "We stretch a point not to create hardship."

But where the question of fatherhood is concerned, there is simply no way of knowing when a young man has cynically and deliberately got himself married and started a family strictly for draft avoidance. There are now 400,000 fathers who are as good as exempt. A recent Labor Department study estimates that 35 to 40 percent of the men reaching the age of 22–23 will have become fathers. Certainly many a parent must wonder uneasily if his son has made a hasty and perhaps foolish marriage, saddling himself with a family that he may not be able to support. One New Jersey father put it like this: "My kid, who is 22, swears that he wouldn't think of getting married except for old-fashioned romantic reasons. But in the same breath he talks about friends of his who have started families just to get out of service." And it is a standard gag among deferred students at the University of Southern California: "If your grades fall you'd better have a fertile girl on tap."

The job problem: If the normal course of marriage is upset by the draft, the normal path of starting on a career is even more seriously affected. The college graduate who wants a job as a steppingstone to better things is just out of luck, in a great many cases, as long as the draft hangs over him. It's true that if he is drafted out of a job, his employer by law must rehire him when he is free. But the fact is that most employers don't want to hire a 1–A in the first place.

Large companies with elaborate personnel systems are inclined to insist that draft imminence is no factor in their hiring policies. But a far more widespread attitude was bluntly put by the San Francisco Bank of America's vice president, Frank E. Young: "We usually wait until a young man has completed his draft requirements. If you take a man and put him through training and then let him go off for 2 years in the Army, we have to start him again from scratch and this isn't worthwhile."

Employment agencies are still more outspoken. An official of Detroit's Action Center put it: "Many employers express the stipulation that employees be 4–F or have completed military training. It is rather prevalent as a stipulation."

The fresh college graduates themselves say flatly there is almost no chance of getting a decent job—one that will lead anywhere—during the months of limbo between the bright day of graduation and the dark one when Uncle Sam's greetings arrive. What burns up the eligibles is that during this same period their friends who are rejected as unfit or who have become fathers are walking into the jobs of their choice and getting a long head start.

How vital? This disruption over the draft during what is, nominally anyway, the peacetime American way of life, raises a basic national question: What justification is there for continuing a law passed in a time of stress, namely 1940?

The very history of that law provides a partial answer. It was dropped at the beginning of 1947. It was renewed 15 months later, in 1948, when the Soviet aggression threat appeared clear and present. Even then the law's teeth were not really felt until the summer of 1950 and the outbreak of the Korean war. In September of that year, 50,000 were called up (compared with the present monthly average of about 7,500).

The draft law has been renewed five times since then, most recently in February of last year for another 4-year stretch, until July 1, 1963. (It was no accident that Congress chose to set a nonelection year for the next bubbling up of the controversial issue.)

Baby crop: There was some opposition to renewal in Congress last time. There will almost certainly be more in 1963—barring some world upheaval—because that's when the postwar bumper baby crop will start crowding the registration lists. That means that the draft, purely in terms of providing the armed services with manpower, will be only a drop in the bucket. For that matter, it isn't much more than a drop in the bucket today, providing as it does less than 100,000 men annually to a total defense manpower of 2.5 million.

If that is so, why is the draft necessary even now?

Defense officials, led by Lt. Gen. Lewis B. Hershey, have plenty of answers, but they mostly boil down to this: If it weren't for the hot breath of the draft, volunteer enlistments would drop far below the point of sufficiency.

Assistant Secretary of Defense Charles C. Finucane, in charge of manpower and reserves, puts it simply: "Even if we don't take many people in the draft, we need it for a proper flow of enlistments. The Armed Forces would dwindle if you removed that impetus. We would never have time in an emergency to rebuild a Selective Service System if it were dissipated. Selective Service is the machinery in being, a pillar of our ability to mobilize manpower in an emergency." It is a hard argument to answer. One answer may come from England; there conscription has been abolished as of the end of this year, on the ground that sufficient volunteers are available to meet Britain's military commitments—and provide more efficient forces. But skeptical American officials reply that results of the British experiment won't be known for another 2 years.

It should also be stated, on the side of the draft, that the civilian officials who carry out most of the actual, backbreaking work of administering the law do a first-class, thoughtful, considerate job ("a beautiful job," says Georgia Tech's Dean Fred Ajax)—and furthermore, the bulk of them do it without pay.

Nevertheless, the great problems of disruption, delay, uncertainty, confusion, and general demoralization, where the flower of the Nation's young manhood is concerned, are undeniably present, casting their shadows across a nation opposed since its birth to the militaristic tradition. What can be done about it?

Two presidential aspirants have ideas on the subject:

Senator HUBERT H. HUMPHREY says: "I am not at all satisfied with the present law. One immediate step should be taken. Our whole program should be reviewed and revised by a special manpower commission of civilian members."

Senator STUART SYMINGTON, the candidate most deeply immersed in defense problems, says: "A force made up of volunteer professional military personnel is more effective and less costly than one dependent upon involuntary draftees. If the current atmosphere of complacency were dissolved, and a military career made more respected and attractive, the draft could be eliminated."

Keep it: Vice President RICHARD NIXON, on the other hand, has never changed from the position he voiced in 1956, when he said there was no "easy way" to maintain defense, and the draft, however hard a way, was indispensable to national security.

The average youngster, for all his grumbling, knows full well that behind all the confusion and uncertainty of the draft, behind the rosy promises of service recruiting officers, behind the inequities and the skulduggery and the smart-guy stuff, there lies the simple, basic need of his country's welfare. His complaint is not: "Why should I serve?" It is: "Tell me when and how I should serve, and to the best of my ability." He doesn't want his time wasted—and his time, in the long run, is the Nation's time.

At the time of the hearings and vote on the extension of the draft in the 1st session of this Congress, I presented testimony before the Senate Armed Forces Committee. In the light of this article, I think that this testimony bears repeating. I would like to enter this testimony in the RECORD:

STATEMENT OF HON. THOMAS B. CURTIS, OF MISSOURI, BEFORE SENATE ARMED SERVICES COMMITTEE, MARCH 3, 1959

Mr. Chairman, I appreciate the opportunity to testify before this committee on the very serious question of the extension of the induction provisions of the Universal Military Training and Service Act.

This act had a difficult birth and its life has been a strange one. If anyone doubts it let him ponder over its title. It is probably neither universal, military, nor training. It is theoretically a draft act, as it is popularly called.

I would like to review the legislative birth of this act from the time it received its undescriptive title if I had the time. Instead I will refer to the remarks I made on the floor of the House during various debates upon it. The first, April 3, 1951, CONGRESSIONAL RECORD, volume 97, part 3, pages 3220–3222; April 12, 1951, volume 97, part 3, pages 3786–3787; February 29, 1952, volume 98, part 2, pages 1674–1679; May 17, 1955, volume 101, part 5, pages 6497–6498; and stress the highlights.

Before doing this I would like to refer to the testimony I gave before the House Subcommittee on Education and Labor which reported out its version of the National Defense Education Act of the last Congress, an act which also does not live up to its title.

I quote: "Before Congress undertakes to extend the Federal Government's authority in the field of education it is essential that it thoroughly appraise the Federal Government's present role in this important area to determine whether its role is proper and

conducive to the growth and stability of the educational system. Regrettably, this appraisal has not been made to any great extent to date. I am convinced that the greatest damage that is occurring in our educational system today stems from the role of the Federal Government during the past 8 years.

"Under the guise of a peacetime draft law the Military Establishment has effectively disrupted for the past 8 years the education and training of every youth in America. Even those who have not been drafted have had their plans disrupted by uncertainty. Those who have been drafted include potential teachers, engineers, scientists, and indeed any potential professional man or technician who have had 2 to 3 years taken out of the most crucial periods of their education. Their time has been devoted to largely sitting on their hands in a military uniform. If the military utilizes the peacetime draft system for its intended purpose, i.e., acquiring the personnel needed to carry out its functions, it would be an entirely different matter. Unfortunately, the peacetime draft law is being used to carry out the specious, impractical, and rejected philosophy that 'every American boy should have military training.' I say rejected philosophy because the Congress rejected the Military Establishment's request for universal military training. It was rejected, in part, because the military could never define by curriculum or even in general terms what constituted military training. During the debates on the various bills, members of this Committee on Education and Labor raised the point that if the bill really was to be a training bill it should be referred to the Committee on Education rather than to the Committee on Armed Services. Members of your committee warned, and I joined in that warning, that UMT would badly damage our educational system. I charge that the peacetime draft has been perverted in its use to a quasi-universal training program and indeed it has badly damaged our educational system and is continuing to do so.

"The first step that should be taken by this committee is to examine into this charge to see if it is substantiated. If it is, then it should recommend to the Congress what steps must be taken to require the Military Establishment to carry out the intention of the peacetime draft law and not subvert it. Such positive action should bring positive results, to wit: (1) We would improve our educational system, particularly in the area of scientists and technicians; (2) we would improve our defense strength because we would be getting our men trained in military science back to the jobs they are trained for and away from education for which they are not trained; (3) we would save billions of dollars that are presently being wasted on inadequate training and usage of personnel.

"In the 1920's and 1930 the American Legion sponsored a universal military training bill that was based upon an extension of the high school ROTC program. It had proved quite effective in training men for wars like World War I and to some degree World War II. The basis of this plan was the proper utilization of the educational facilities already existing in the society, rather than an attempted duplication of these facilities in the military.

"The need in modern warfare for technical skills, as opposed to close-order military drill skills indicates that we should be utilizing the educational facilities that exist in the society in the field of vocational education, instead of having the Military Establishment duplicate them at the cost of billions of dollars.

"We achieve at least three things by following a program based upon utilization of the educational plant already in existence, to wit: (1) We get better trained technicians; (2) we get these technicians at one-tenth the cost; (3) we work with rather than foul up the civilian educational system.

"Fortunately, this is not a matter of theory. It is a matter that was proved conclusively in World War II by the Seabee personnel procurement system. To illustrate, the Seabees needed bulldozer operators. They did not take 18-year-old boys with a couple of weeks boot training camp experience and send them for a few months to a bulldozer operating school set up by the Navy. Instead they offered enlistment opportunity with a suitable rating to the experienced bulldozer operators in the civilian society and accepted them even though they were fat and 40—if they really knew how to operate a bulldozer. The accomplishment of the Seabees in World War II is fabulous and resulted essentially from this personnel system.

"The Seabee formula was abandoned when the war was over. The Navy now operates a bulldozer operators school and takes young men, whether they want to be bulldozer operator or not and sends them to this school for a few months. The results are obvious: (1) You don't have a very good bulldozer operator; (2) after the enlistment period is up the man involved may or may not take a civilian job operating a bulldozer * * * likely not * * * so the skill is lost * * * (the Reserve program has not been carried out successfully to retain these skills); (3) the cost to the Navy of running the school is considerable; (4) the talents of the naval personnel who run the school are taken away from the fields where they could be efficiently utilized."

Unfortunately the House Subcommittee on Education and Labor did not make the studies I recommended. No committee in the Congress or executive agency to my knowledge has made such studies. Yet the truth of my basic observations is borne out by our common experiences and requires some pretty strong evidence to rebut.

The reason I am before this committee in the Senate is because the House Armed Services Committee made no study into these important charges. In hearings covering a period of 4 days and lasting only 7 hours and 13 minutes according to the committee's own records the extension of this draft act was passed out unanimously by the committee. An examination of the hearings demonstrates that it received the most cursory type of study. Not one educator testified. Not one person in the field of technical training testified. The testimony was exclusively that of representatives of the armed services and various church and other groups who were concerned with the spiritual aspects of the draft law.

I am concerned with the efficacy of the draft law in providing the type of defense this country needs. Not so strangely the most efficacious measure to provide the strongest defense happen to be the least costly. A fat man never could fight with efficiency and a fat Military Establishment can't fight any better.

The speeches I referred to in my opening remarks give sufficient detail to follow up the points I shall now state. If this committee undertakes to make a real study of these points I should be happy to supply to your committee staff the many reference books and other materials I have accumulated on this subject, hoping that some day some committee or even executive commission would undertake this important study.

The points:

1. An enlistee is considerably more valuable than a draftee. Enlistees are obtained by making the military service as attractive as possible.

2. Draft laws are necessary if there are insufficient volunteers. Yet relying on the draft law to meet personnel needs tends to weaken the efforts to attract volunteers. It is like getting used to relying on a crutch.

Therefore, drafting as a basis for getting personnel should be abandoned just as soon as possible. Indeed, it should be abandoned on a trial basis—just as a crutch should be abandoned—to see if a system of attracting volunteers will not work. And to test different methods of attracting volunteers.

3. To defend our way of life without having the very defense we set up destroy our way of life we must rely on a small standing military force backed by Ready Reserves:

(a) To make a Reserve system work the regular Military Establishment must try to make it work. One good test of whether they have tried to make it work is whether they are in a position to testify in detail as to why it does not work. The testimony of the leaders of our Military Establishment over a period of years on the inadequacies of the Reserve and National Guard systems demonstrate beyond much doubt to one who looks a little beneath the surface that they have not tried to make either system work.

4. Modern warfare (even the World War II variety) requires 90 percent noncombatant skills and of these noncombatant skills an increasing proportion are technical skills:

(a) Most of these skills have their civilian counterparts and these civilian type skills are readily adaptable to their military counterparts.

(b) The civilian educational system, including the vocational, trade, industry, etc., schools, has the specialists in the field of education and training.

(c) The leaders of the Military Establishment are specialists in the field of military science. Military science is a different field from education and training.

Therefore, the 90-percent noncombatant skills needed by the Military Establishment should be taught through the civilian educational system. The 10-percent combatant skills should be taught by the Military Establishment.

Corollary: The 10 percent needed for combatant duties could undoubtedly be procured through volunteer enlistment, particularly if the bright uniforms, medals, honors and veterans' benefits were reserved for this group.

Corollary: The 90-percent noncombatant skills could be procured through voluntary enlistment inasmuch as the men would be moved by the greatest incentive there is to be employed in skills they know and like.

5. A–1 physical specimens are not needed for noncombatant skills. A one-legged man can be a stock clerk. A midget an airplane mechanic. Only one thing seems to serve as a check on utilization of personnel with physical limitations: The cost of veterans' benefits. But if veterans' benefits are reserved for combatants this problem is eliminated.

6. Military law and discipline is required for combat and those who might be in combat. It is not the best or most efficacious system for utilizing noncombatant skills.

The Code of Military Justice of World War II evolved from centuries of battle experience was found to be inadequate when applied to the 90-percent noncombatant personnel. Without appreciating the fact that the error lay in trying to apply a system of discipline and law in an area where it was inappropriate we junked this time-tested code for a watered-down code which is no longer effective for combatant activity and doesn't do very well in the noncombatant area.

We should take a new look at the Code for Military Justice. Set it up for combatant

activities and combatants and withdraw it from noncombatant activities.

In other words, there is no sense in putting a military uniform on a Pentagon clerk. In fact, we cut down on the ability to recruit good clerks by subjecting them to military law.

7. A thorough job analysis of the technical skills needed by the Military Establishment should be done. At the same time an inventory of the civilian counterpart skills should be taken. Match the two groups to determine what may be lacking and set up an incentive system to encourage the training and the enlistment for training through the civilian educational system in those areas where there are skill shortages. Have a reserve system set up geared to receive these skills to keep them from becoming rusty and to keep them up to date with the needs of the military. Have a stepped-up civilian-type law during war or emergency to deal with absenteeism and malingering and I believe we will have a strong defense system.

Gentlemen, these are the points that have not been studied. I am satisfied a study of them would give a sensible answer to what some have looked upon as insoluble problems of how we are to have defense in modern warfare and sustain its cost, how we are to preserve and strengthen the education system that will continue our advance in science and technology and yet have the manpower necessary to man the defenses, how to defend our way of life without destroying it, or setting it aside for the nonce saying we will reset it up after the emergency.

The committee has several months to study this serious matter. I pray that you take the time to make this study.

Our military manpower policies are of great and far-reaching importance. Their implications are, unfortunately, too often lost to those to whom they are the most important; those groups which should have the most interest in this situation, the educators of the country for example, have been strangely silent.

It would be a shame to perpetuate a harmful system simply because the system in being is in being and there is no earnest search for a suitable alternative.

Opening the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 20, 1960

Mr. WILEY. Mr. President, the opening of the St. Lawrence Seaway for its first year of deep-draft operation heralds a new economic era for the Great Lakes region.

We recall that—even though the Seaway was dedicated about midway in the navigation season in 1959—the trade and commerce expanded substantially.

We realize, of course, that attaining maximum traffic through the great waterway will not be clear sailing.

To the contrary, we can expect problems that will need to be resolved, not only for the Seaway itself, but also in terms of encouraging the expansion of the flow of traffic through the Seaway, resolving pilotage problems, encouraging good labor-management relations, and generally promoting a climate in which the nation can best benefit from its great—and well justified—investment in this significant waterway.

As the 1960 navigation season gets under way, the Nation, I believe, needs to take a realistic look not only at the promises, but also at the problems ahead.

Recently, the Milwaukee Journal published an informative article depicting the outlook for trade and commerce through the waterway in 1960.

I ask unanimous consent to have the article, together with a brief statement by myself, printed in the RECORD.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

SEAWAY YEAR MAY BE BIG—THERE IS AN "IF"

The deep draft St. Lawrence Seaway will start its second season Monday amid expectations of a gain in cargo volume * * * "if."

That was brought out Saturday in an Associated Press survey.

Some port spokesmen coupled their predictions of better business with the qualifying "if"—if no labor or other troubles develop.

Some officials speculated that more freight would be carried by fewer ships.

In its first season, the new seaway carried 20,103,767 tons, a big increase, but 5 million tons below advance estimates.

OUTLOOK TERMED BRIGHT

Martin Oettershagen, deputy administrator of the St. Lawrence Seaway Development Corp., described the 1960 outlook as bright. He forecast substantial movement of iron ore and grain and an increase in general cargo.

Oettershagen said the trend was toward larger, more efficient vessels. Many small canal boats will drop out of the traffic, he said.

Clusters of vessels at the Welland canal and some ports at times last year caused delays. The salt water ships also found inadequate loading and unloading equipment and shortages of skilled hands at some docks. New facilities and other improvements at some ports, plus a year of experience, should add up to smoother operations this year.

REPORTS FROM CITIES

Here are brief reports from port cities:

Chicago: Maxim Cohen, general manager of the Chicago port district, commented: "If we're not tied up in labor trouble, we should do as well as last year and have a reasonable increase." George Weiss, a steamship agent: "Without question, there will be a further expansion of cargo volume through the port of Chicago."

Detroit: Fewer ships but a larger gross tonnage are expected. Labor relations are stable. Several additional lines will serve the port.

Cleveland: William J. Rogers, port director, estimated volume would be 20 percent higher than last year, provided there were no strikes or other unforeseen developments. Rogers figured that, within the overall increase, there would be more oversea shipping and less domestic cargo.

Toledo, Ohio: Shippers said volume would be heavier. Their estimates of gains range from 15 to 50 percent. The Army Transportation Corps, which has Great Lakes headquarters in Toledo, said it would ship 20 percent more oversea cargo through lake ports. In 1959 it shipped 91,333 tons, mostly vehicles.

Erie, Pa.: Calvin Dingler, port director, predicted that tonnage would be doubled. State of Pennsylvania has appropriated $500,000 for improvements this year.

Duluth (Minn.)-Superior (Wis.): Exporters predicted grain shipments of 125 to 150 million bushels this year compared with 86 million in 1959. General cargo volume outlook is uncertain.

STATEMENT BY SENATOR WILEY

The 1960 navigation season promises to be the greatest shipping year in the history of the St. Lawrence Seaway and the Great Lakes Waterway system.

Dedicated in June 1959, the completed Seaway during its first year of operation experienced greatly increased traffic; oversea traffic stepped up; port incomes jumped; waterfront employment expanded; and, overall, the flow of trade and commerce increased promisingly.

In 1960, traffic is expected to be even greater.

As a sponsor of the Seaway law, I am naturally delighted with the brightened economic outlook created by the deepened, improved and modernized waterway.

In addition to economic benefits, however, we can expect to face serious, though not insurmountable, challenges. Among these may well be: Need for further modernization of port and harbor facilities, including better docks to accommodate ships, equipment for handling in cargo, warehouses for goods, and other facilities; hitting the target date of 1962 for deepening and improvement of the Great Lakes connecting channels—to bring Wisconsin—and other States west of Lake Erie, the full benefit of deep-sea shipping as early as possible; dovetailing water traffic with highway, rail and air transportation systems—to assure expeditious handling of traffic; searching for new markets for the products of our farms and factories to better utilize this less-expensive trade route to the world; encouraging cooperation between labor and shipping interests—so as to stimulate, not handicap—the expansion of trade. Why? To create more jobs, as well as economic health; and finally, we need to be alert to head off efforts to kill off the Seaway by its long-time enemies—who have special interests elsewhere in the country.

Overall, the challenge is great. However, the promise of reward is even greater.

If we vigorously, practically, and creatively carry forward constructive efforts to resolve the problems, the economic benefits—I am confident—will prove the Seaway a sound investment for the American people.

International Center in Hawaii for Cultural and Technical Interchange Between the East and the West

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. WIDNALL. Mr. Speaker, it is a great privilege for me to join my distinguished colleague, the Representative from Hawaii [Mr. INOUYE] in sponsoring a bill introduced April 19 to establish

an international center in Hawaii for cultural and technical interchange between the East and the West.

The bill is the answer to one of the great needs of our time, and I would like to commend the distinguished senior Senator from Hawaii [Mr. FONG] and his colleagues, the distinguished junior Senator from Hawaii [Mr. LONG]; the distinguished majority leader, the Senator from Texas [Mr. JOHNSON]; the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]; the distinguished senior Senator from Wisconsin [Mr. WILEY]; and the distinguished majority whip, the junior Senator from Montana [Mr. MANSFIELD] for their bipartisan efforts that have resulted in the emergence of this legislation.

Enactment of my bill H.R. 11823 or one of the companion bills will be the forging of a mighty link in the chain that binds East and West in a bond of friendship, mutual understanding, respect, and cooperation.

Mr. Speaker, President Eisenhower has at once, in this statement of his, interpreted the need and suggested the solution:

> I propose to you that while governments discuss the meeting of a few at the summit, universities consider the massive interchange of mutual understanding on the grand plateau of youth. More enduringly than from the deliberations of high councils, I believe mankind will profit when young men and women of all nations and in great numbers study and learn together.

The University of Hawaii, in a most favorable sociological climate of blended ethnic elements, and of which the East-West center is to be a part, already is geared to the role of international interchange and has long served in that capacity.

As the distinguished senior Senator from Hawaii [Mr. FONG] has pointed out, Hawaii's statehood has brought the United States 3,000 miles closer to the people of Asia. The 50th State thus is ideal—from geographical as well as sociological and other points of view—as a location for the East-West center.

Let us lose no time in forging one of the greatest links in the immensely important chain of good will and good deeds that holds together the East and the West in peace and progress.

Letter to the Editor of the New York Times Protesting Birmingham Stories

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. HUDDLESTON. Mr. Speaker, today I have addressed a letter to the editor of the New York Times, in which I point out certain glaring errors, distortions, and exaggerations which appeared in his newspaper in a series of two articles written by Mr. Harrison E. Salisbury last week. Mr. Salisbury's articles were entitled, "Fear and Hatred Grip Birmingham," and, "Alabama Shaken by Racial Issue." These articles were highly inflammatory and I can only come to the conclusion that they were written for the sole purpose of slandering a community of decent people.

No doubt, many Members of Congress read the Salisbury articles when they appeared in the New York Times and, naturally, came to the conclusion that they represented an accurate report of the race situation in Alabama. I urge that all Members of Congress read my letter to the editor of the New York Times, which I am inserting in the CONGRESSIONAL RECORD herewith, in order that they may see for themselves that the articles are not good reporting but, on the contrary, represent a very severe example of journalistic irresponsibility.

My letter to the editor of the New York Times is as follows:

APRIL 19, 1960.

EDITOR,
The New York Times,
New York, N.Y.

DEAR SIR: It is shockingly ironic that, only days after the New York Times was selected by certain editors and publishers of the American press as the newspaper which best lives up to the high journalistic standards set forth by Joseph Pulitzer, the Times should print the purported factual reports by Mr. Harrison E. Salisbury on Birmingham, which two articles constitute, in fact, gross falsehood.

Sadly, there will be those who, because of the generally excellent reputation the New York Times has always enjoyed, will accept the innuendos, half-truths, and totally unrealistic conclusions of Mr. Salisbury as pure truth.

Birmingham is my lifelong home and, with surrounding Jefferson County, comprises the Ninth Congressional District of Alabama which I have represented since 1955. I spend a considerable portion of each year in the city, have visited there quite recently, am in constant touch with friends and family (including the hundred or more constituents who write me daily), read every Birmingham and Jefferson County daily and weekly newspaper consistently, and can state unequivocally that the picture Mr. Salisbury has painted of the community and its racial problem bears no semblance to reality.

I protest most vigorously against such irresponsible reporting and against the practice of publishing such slander against a decent community which is, with sister cities throughout the South, now faced with and working toward the solution of a most serious problem. Surely, the result of Mr. Salisbury's inflaming words can but increase southern resentment against those who have never been sympathetic with the South and its efforts to solve its own problems, and can but harden our conviction that hypocrisy reigns over the minds of many members of the northern press when racial problems are considered. These two articles contain so many statements which are at variance with the facts that it would be impossible to refute each of them in such a communication as this. My pointing out several examples of Mr. Salisbury's fallacious reporting will perhaps serve the purpose.

Given great prominence as an indication of typical Alabama politicians and a typical southern attitude was the example of Adm. John G. Crommelin. Mr. Salisbury states that though the extreme viewpoint of Mr. Crommelin is deplored by many "violent segregationists," it seems to have wider acceptance than many Alabamians will admit in public. Admiral Crommelin ran for Governor in 1958 and in the secrecy of the voting booths only 2,245 persons cast their votes for this man whose views, according to Mr. Salisbury, are typical, out of a total vote of 618,000. Further, in Jefferson County, where Mr. Salisbury would have it believed that he enjoys wide popularity, he received only 218 votes.

Mr. Salisbury claims there are "schemes" in Alabama to undermine the electoral college system to enable electors on the Democratic ticket to vote against election of a Democratic presidential nominee. This is not a "scheme." It is a legal effort and will be put to a vote of the people next month. Eleven electors are running as loyalist Democrats. Eleven are running as States rights Democrats who, if elected, may or may not cast their electoral votes for the Democratic nominee. The people of Alabama, with all the facts available, will vote on these two slates in May. It is not by any means a "scheme." It is a wide open, hotly debated, completely legal issue to be decided at the ballot box and not, as intimated in the article, by politicians in a smoke-filled backroom.

The article mentions volunteer horse patrols and likens them, through implication, to self-appointed vigilantes. In two or three towns in the State, responsible citizens who own horses have been deputized for a special purpose or situation, but to imply that such a practice is voluntary in the sense of being unwanted, unnecessary, or unconnected with the established law enforcement machinery of the community is incorrect and to state that it is an extralegal device is patently untrue.

Another strange innuendo contained in Mr. Salisbury's article is that local newspapers attempted to whitewash the serious and exceedingly regrettable incident of a young 16-year-old Gadsden boy's attempting to bomb a synagogue and attack the congregation. Newspaper articles did describe the youth as a "clean-cut blond youngster devoted to his parents and his stamp collection," but this was by way of pointing out into which circles the poison of neonazism could reach. The entire Gadsden community has through various and public means made it quite clear that they do not in anyway condone such attitudes and actions and the Alabama press, in toto, has strongly condemned that particular incident and the ideology which inspired it, thus voicing the thoughts of the people of the State.

Mr. Salisbury asserts it is not inconceivable that the whole county structure of the State might be modified in a gigantic gerrymander, or redivision of boundaries, to create stable white majorities in each county unit. May I point out that in New York and other States, congressional districts have been so redistricted as to put incumbents outside the district which they represented. Reasons for gerrymandering an area are numerous and quite often honorable, and most assuredly they always seem so to the people who use this implement. Otherwise, it would not be done.

To imply that Birmingham law enforcement officers have not done everything within their power to apprehend those responsible for bombing of synagogues and

churches is slanderous. After the attempted bombing of a synagogue in Birmingham, which was charged to be a part of a pattern extending over a large area, city officials met with those of other southern municipalities and cooperated with Federal officials in an attempt to catch the criminals and to break up any ring which might be sponsoring such outrageous practices. There is absolutely no truth whatsoever in Mr. Salisbury's indication that telephones have been tapped by Birmingham officials, nor in his charge that mail has been intercepted and opened. Especially if the latter were true, as Mr. Salisbury well knows, postal authorities would be forced to investigate thoroughly and Federal authorities would promptly be called in. If Mr. Salisbury has facts to back up this charge, he should certainly feel compelled to make them known to officials of the Post Office Department.

Mr. Salisbury mentions that Alabama has not reapportioned its legislature since 1901. That is true. But this has nothing to do with the racial issue. Nor is Alabama alone in this failure. This is strictly a political issue in which the rural and now smaller counties refuse to surrender their legislative power to the cities. The problem is not peculiar to Alabama. This situation is acute in many States, including New York.

Many of the examples Mr. Salisbury cites in his arrogant attempt to justify the ridiculous thesis that Birmingham is a "community of fear" are completely erroneous. He mentions a "white pastor" being mistreated at a local bus depot while in the company of a Negro minister and his wife. The incident to which Mr. Salisbury alludes occurred in 1957 when a person who previously was sentenced to 18 months' imprisonment for the violation of Federal laws, and who certainly is not a minister of the gospel, continued his history of lawlessness in a professional and preannounced attempt to agitate racial violence by violating local statutes. Mr. Salisbury's references to tampering with the mails must have been confused with this man's conviction on such a charge.

In citing some of the errors of Mr. Salisbury's report, mention should be made of the most glaring error of omission of many to be noted. He failed for some peculiar reason to state clearly that of the major southern cities which have recently been troubled with "sitdown strikes," Birmingham is practically the only one where there has been no violence whatsoever. Is this not very much to be commended?

To repeat, it is impossible in a letter of this sort to refute all the inaccuracies and misstatements which have been proclaimed as fact to the people who read the Times. It can only be hoped that intelligent persons will not be utterly misled by the writings of a man who has obviously begun with the point he wanted to prove and grabbed up such stories, true or untrue, as he thought would apply to embellish on his preconceived and immediately recognizable intention.

It is also to be hoped that the city of Birmingham will continue, despite such inflammatory attacks, to maintain the peace and order and lack of violence which prevails now, in contrast to other cities, including some southern communities, and especially, including such cities as New York itself where violence and racial discord are commonplace.

Very truly yours,

GEORGE HUDDLESTON, Jr.,
Member of Congress.

Tabulation of Questionnaire

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. AVERY. Mr. Speaker, it is essential that a Congressman be properly informed on the views of the people he represents. In this connection, a public information questionnaire was sent to the constituents of the First Congressional District of Kansas. The following are the results. Approximately 90,000 questionnaires were distributed. They were mailed to every person with a telephone, to all post office boxes, and to all rural routes. In addition, questionnaires were sent to any individual who requested copies for distribution, all colleges and universities in the area, and all groups and clubs requesting copies for the membership.

A total of 7,976 questionnaires or about 9 percent were returned and over 50 percent included a special letter or additional comments.

Questionnaires originally mailed to district addresses were forwarded and returned from many areas outside of the State of Kansas, including such communities as Rochester, N.Y., Washington, D.C., and San Diego, Calif. Even servicemen serving overseas replied. The office is now receiving questionnaires at the rate of approximately one or two per day.

When analyzing the results, consideration was made for the fact that it is difficult to answer some of the questions with a simple "yes" or "no." The questionnaire method has limitations but generally speaking it does reflect the views of the persons in the First District.

If anyone desires extra copies of this tabulation, I will be happy to send such.

I am grateful for the fine response and I hope everyone will continue to write me on matters of interest.

With reference to question 4, asking if an increase of taxes is favored and if so, what taxes, the response by county was generally the same. The great majority suggested either excise taxes or postage rates on third- and fourth-class mail be increased if necessary to balance the budget. As a third alternative some suggested the income tax. In many cases it was suggested that instead of raising taxes a greater effort be made to cut down on needless Government spending in order to obtain additional revenue to balance the budget.

The tabulation follows:

Entire district tabulation

[Percent]

Question	Yes	No	No opinion
1. Do you favor a national fair trade law?	33	45	22
2. Do you favor extending the coverage of the minimum wage law of $1?	54	34	12
3. Under existing conditions at home and abroad, do you consider a balanced budget:			
Percent			
Unimportant 3			
Essential 45			
Desirable 39			
4. Would you favor increasing any taxes if necessary to balance the budget?	47	40	13
5. Do you favor curtailing our domestic programs, if necessary to balance the budget?	62	28	10
6. Do you favor cutting defense spending, if necessary, to balance the budget?	37	52	11
7. Do you favor Federal aid to education for:			
School construction?	41	53	6
Teachers' salaries?	27	59	14
Do you think such will result in Federal control of education?	49	38	13
8. Do you think the Agriculture Department should devote more effort in research for the development of industrial uses for farm commodities?	77	13	10
9. Do you favor medical care for social security beneficiaries—to be financed by increased social security taxes?	32	59	9
10. Should cooperatives be taxed the same as other businesses?	77	14	9
11. From the information available, are you satisfied with our missile and space efforts?	40	41	19
12. Do you favor:			
Elimination of all agriculture price supports?	44		
Sliding scale supports from 60 percent to 90 percent of parity?	20		13
Fixed supports at 90 percent of parity or above?	10		
Graduated parity based on production units from 95 percent down?	13		
13. Do you favor continuing our foreign aid program?	50	33	17
Do you think the program is helpful in our efforts to promote peace?	49	34	17
14. Do you favor GI educational benefits program for peacetime veterans?	35	58	7
15. Do you think the Federal Government should spend more on soil conservation work?	42	44	14
16. Do you favor increasing the interest rate on Government loans to REA co-ops from 2 percent to the average rate the Government pays on its own bonds?	75	13	12
17. From the information available, do you believe this country's defense program is adequate?	57	25	18
18. Number the following issues in the order of their importance to you:			
1. National defense	5. Labor problems	10. Civil defense	
2. Balanced budget	6. Farm problem	11. Federal aid to education	
3. Inflation	7. Juvenile delinquency	12. Veterans' benefits	
4. Reduction in Government spending	8. Foreign affairs		
	9. Social security

Medical and Hospital Care for the Aged

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I want to address myself to the matter of health care for our aged citizens. Frankly, there has been too much sound-and-fury on this subject, too little emphasis upon the basic facts. Too little discussion has been devoted to the fundamental, important question: What will help the elderly?

Let me set forth some questions and answers which people are entitled to know. I am convinced that too many aspects of this have been neglected.

Question. Is there presently a program designed to meet the health requirements of the aged?

Answer. Yes.

Question. Is this a local, State, or Federal program?

Answer. All three levels of government are active in this program. Also active in the program are the churches, health agencies, fraternal and benevolent organizations, and private groups.

Question. Is this program producing results?

Answer. Yes, very marked results.

Question. Is sufficient progress being made?

Answer. In my opinion, emphatically yes. Yet I recognize this is the issue for public debate, as it applies to the number of persons receiving health care, the adequacy of the health care received and the effect of the cost of health care on the financial position of the aged.

Question. Is the availability of health care for the indigent aged sufficiently broad?

Answer. The statement has been made publicly many times that today there are no indigent persons in the United States who do not receive health care or could not receive health care upon application. These statements remain unchallenged.

Question. Speaking broadly, who is presently financing the health care for the indigent aged?

Answer. Many groups in our society presently share in these efforts. These include the Federal Government, through old age assistance grants; the programs of the States and the counties; private charities and churches; private training hospitals, and persons in the medical profession who donate their services.

Question. Is financing health care of the indigent a problem?

Answer. Only to the extent that financing anything is often a problem. The money to pay for this health care must be raised by the public. That means it must come either from taxes or community giving. But this is the same sort of problem we have been solving since the 18th century—not only in the provision of health care for the indigent, but in such programs as aid for dependent children, assistance to the blind, and so on.

Question. Where else has great progress been made?

Answer. In the quality of health care facilities and skills. In fact, the very rapid improvement in drugs, hospitals, doctors' skills, and so forth, has helped to bring about the situation I am discussing today. Largely due to advances in the health care field, people are living 10 years longer. These 10 years of being alive represent a wonderful advancement.

Question. Are present medical costs justified?

Answer. Yes. Progress by its very nature costs money. However, technological advances and new skills in treatment have brought about a longer, healthier lifespan. We are paying for these advances through higher priced equipment and an improved salary level for the more intensely trained and skilled medical technician. But we should never forget that these advances have alleviated suffering and reduced the term and intensity of illnesses. These are values which must be measured in terms of human life. They cannot be reckoned on the basis of dollars and cents alone.

Question. Is there a doctor shortage in the United States?

Answer. Our doctor-patient ratio has remained nearly constant for the past 10 years. In 1950, there were 133 physicians for each 100,000 of our population. However, productivity has increased greatly through the wider use of telephones, improved transportation and better equipment and skills. But because our population is growing so rapidly and the continuing discoveries of modern medicine already take the physician into every area of life and environment, America in a few years will need many, many more young doctors to maintain and protect the health of the Nation's citizens. Doctors will be needed in family practice, specialization, research, teaching, public health, the Armed Forces, industrial health, administration, school health, and in government. The Nation's medical schools are now expanding at an unprecedented pace to provide additional facilities for their growing enrollments. Medical faculties and the medical profession are engaged in an aggressive, nationwide recruitment program in every community to assure a continuing and increasing supply of well-trained physicians for the future. All of this costs money. However, even more serious than costs would be legislative restrictions on their freedom to practice medicine under a private system. This would discourage young men and women from choosing medicine as a career.

Question. How about facilities?

Answer. There still is need in some areas for more hospital facilities. Considerable study also is being devoted to more efficient use of the hospital facilities we now have; for example, in the care of the chronically ill.

Question. How do private nursing homes fit into this picture?

Answer. Many older people and convalescents do not need full hospital care. If private nursing homes were available, these persons could be cared for in private nursing home facilities at about one-third the cost of hospitals. Crowding of our hospitals would also be relieved. There is need for more good nursing homes, the cost of buildings designed for private nursing homes is only approximately one-third that of hospitals. The daily charge to patients can be reduced accordingly—an important factor in long-term care. The

FHA guarantee to encourage construction of private nursing homes which meet high standards of health and safety is the most recent Federal program and one that will meet one of the greatest needs today. This law was passed just last August, and the regulations to handle applications were announced February 25. Already 1,500 applications or inquiries have been received.

Question. Are there other areas where skills and new facilities are being developed?

Answer. Yes, of course. One of the greatest needs today is to extend the organized home care plan. The hospital is needed for the most serious cases, the nursing home is the next step, but there is a third step, namely organized home care, which is less costly, than the nursing home. This third category permits the older person needing just a limited amount of health care to remain in his home. Organized home care is a team approach normally including at least a physician, a nurse, and a social worker. The visiting nurse in many cases teaches the family how to care for the older person, and the nurse comes periodically to the home when needed.

Question. How about health insurance coverage for those over 65?

Answer. Within the last 3 years tremendous progress also has been made in health insurance coverage for people over 65.

Question. Why do you say 3 years? Isn't this a fairly short period?

Answer. It points up the rapid progress. Just a few years ago, for example, Blue Shield and Blue Cross dropped from coverage in group plans persons reaching 65 and retirement status, and the plans had no health care coverage to offer persons over a certain age. Today, this is all changed. There are 39 Blue Shield plans in 36 States offering coverage for elderly persons, and there are 14 additional plans in 8 States which have proposed programs for this coverage underway. With rare exceptions, the Blue Cross plans have taken similar actions. Furthermore, private insurance companies have been moving into the field of health insurance for the aged. The figures are dramatic. According to a Social Security Administration report in 1952 some 26 percent of all persons over age 65 had health insurance coverage. That represented an estimated 34 percent of persons in that age group who needed and wanted such protection. The 1956 Social Security Administration report showed that the 1952 figure of 26 percent had increased to 37 percent of the total represented some 48 percent of those who needed and wanted the coverage. Some well-documented analyses (assuming a continuation of recent trends) predict that during 1960 some 65 percent of persons 65 and over who want and need insurance will have it and that the figure will increase to 80 percent by 1965.

Question. But are these policies adequate and are the premiums within the means of older persons?

Answer. My answer to both those questions would essentially be "Yes." Much is being accomplished, particularly in extending catastrophic-type insurance.

Question. What is catastrophic-type insurance?

Answer. It is insurance to protect against the catastrophe of a prolonged and costly illness. The premiums for this kind of insurance are relatively low, based upon the deductible amount assumed by the insured.

Question. What is the Forand bill supposed to do?

Answer. The Forand bill is supposed to set up a form of Federal compulsory health insurance which everyone will purchase by paying additional social security taxes. Under this scheme, only those eligible for social security would receive a limited amount of hospital, surgical and nursing home benefits.

Question. How many persons 65 and over would be omitted from coverage under the Forand bill?

Answer. There are about 4½ million older persons who would receive no consideration under the Forand bill.

Question. Will the Federal Government then go into the health insurance field?

Answer. Yes, but with a program just the reverse of the catastrophic-type policy most needed. In other words, the Federal insurance would take care of the first 60 days of hospital care—from then on the older person requiring hospital care is on his own or on relief. Catastrophic insurance has the patient assume the cost of the first few days, but then bears the cost burden throughout his illness.

Question. What could this mean to you as an individual?

Answer. As a patient, you would have to choose a hospital, nursing home or physician under contract with the Federal Government if you were eligible for treatment under the Forand bill. Of course, the Federal Government would have to regulate provisions for treatment and charges. Doctors would have to conform to regulations which hamper them from prescribing treatment that they, as professional men, believed patients needed. That's why doctors and others in the health field say such action is the beginning of socialized medicine.

Question. What is socialized medicine? Is that just a scare word, or does it mean something specific?

Answer. Yes, it means something specific. Socialized medicine is one form or another of compulsory national health insurance—medicine controlled and administered by the Federal Government, in other words the State rather than the patient selects the doctor and medical facility.

Question. But does not the Forand bill permit the choosing of one's own doctor?

Answer. On the surface, yes—but only on the surface. Suppose the doctor or hospital the patient wants does not reach an agreement with the Federal Government on fees and charges. Then the patient would have to go to a doctor and a hospital which has reached such an agreement. It takes little insight to see what power the Federal Government would have over doctors and hospitals, because the Federal Government would decide which doctors and which hospitals qualify or are disqualified according to the Federal regulations.

Question. Does the Forand bill apply to all old persons?

Answer. It does not. It applies only to those eligible for social security retirement and survivorship payments. The millions of persons over 65 who never were covered by OASI because of the program's limited coverage in its beginning will not receive benefits. These include, of course, such persons as retired police officers and firemen, retired railroad workers, teachers, self-employed professional people, and so forth.

Question. Does the Forand bill cover the indigent aged?

Answer. It does not.

Question. Are there other things in the social security program that could affect the aged in the matter of health costs with which the Forand bill provisions are not concerned?

Answer. Yes. I feel the most important area in which to help the older people in their financial problems is to liberalize the $1,200 work clause. Furthermore, liberalization of this clause conforms to the social policy that all of us should favor—namely, to utilize the talents of our older citizens who can work longer because of the advances in the field of health. There is also the great psychological factor of helping the older person to be actively useful, as well as helping his economic status.

Question. Why is not the work clause liberalized?

Answer. Primarily because of opposition of the leaders of the AFL–CIO.

Question. Why are they against it?

Answer. They say it will cost money.

Question. But would not the Forand bill cost money?

Answer. Certainly. I believe the fundamental reason for their opposition to liberalizing the work clause is that they want to keep older people out of the labor market. This, to me, is an antisocial policy. For reasons stated previously, it is in this area we can help our older citizens the most.

Question. How about the program which Senator JAVITS and some others have advanced to have the Federal Government finance a voluntary health insurance program along with the States?

Answer. I would have to be convinced that the present program is not showing the remarkable progress which is clearly evident before I would abandon it in favor of something that is untried. We know what progress we are making, and this has not required Federal Government intervention.

Question. Is it true that 60 percent of the people over 65 have a per capita income of $1,000 a year or less?

Answer. It is a juggled figure. It is a very misleading statistic taken out of the context of the entire picture. It would be just as accurate and just as misleading to state that in 1957—the most recent year to which the misleading figure applies—63.7 percent of all Americans

had incomes of $1,000 or less per year. In 1957 almost half of those persons over 14 years of age also had incomes of $1,000 or less per year. And 47 percent of those between the ages of 14 and 65 had incomes below $1,000 a year. Actually most people over 65 own their own homes and their own furniture. Except for medical costs every item in their budget is less than that of persons under 65.

Question. What about the future as far as health care for those over 65 is concerned?

Answer. I think the situation is good, and it is getting better. I suggest that we use the approaches we have on hand, if evidence indicates that action must be taken. We have the device of public assistance—locally administered and locally disbursed, on the basis of known need. We have already hard at work the voluntary efforts of civic, religious, and health leaders at the community level. We have operating effectively the machinery of health insurance. There is still evidence to be gathered, and President Eisenhower has called the White House Conference on Aging for January 1961, to get more complete facts to see where, if anywhere, we can help. Congress has appropriated $2 million for use in preparing for this conference. We in the United States have the healthiest nation in history. Our prospects for the future to better this record are excellent.

Just what are the motives of those who ignore the facts, falsify the records, and try to propagandize the people about this system of private medicine, which has brought this about? Should we tamper with this system because some demagogues think it will get votes in the 1960 election? I hardly think so, and when the people find out that that is what has been attempted, I have no doubt what their judgment will be.

Testimonial Banquet in Honor of National Junior Vice Commander of the Veterans of World War I of the U.S.A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include part of my remarks at the testimonial banquet in honor of National Junior Vice Commander George M. Leary by the Veterans of World War I of the U.S.A., held in the Hotel Bradford at Boston, Mass., on Monday evening, April 18, 1960. The program was as follows: Clifford H. Harris, chairman of the committee on arrangements, of Quincy, Mass., who acted in the capacity of toastmaster, and who introduced the following:

Rt. Rev. Msgr. William J. Callahan, who gave the invocation; Lt. Gov. Robert F. Murphy, of Malden; State Senator Charles W. Hedges, of Quincy, Mrs. Olive Morton, national president of the National Ladies' Auxiliary, Veterans of World War I of the U.S.A., Indianapolis, Ind.; Massachusetts Department President of the Ladies Auxiliary Mrs. Edith Healey, of Charlestown; Massachusetts Department Commander Frank Farnham, of Springfield; Mrs. Catherine B. Byron, of Lawrence, regional president; Mrs. George M. Leary, wife of the honored guest; and George M. Leary, national junior vice commander, of Quincy.

Presentations were made to Mr. Leary and National Commander Charles A. McCarthy and several others wired messages of congratulations.

The remarks follow:

Ours is the only veterans' organization that is suffering from those pleasant symptoms that are diagnosed as growing pains.

Since the Veterans of World War I of the U.S.A. was born, I have noticed a bright look in the eyes, and more bounce in the steps of my comrades.

At last we have an outfit of our own to belong to, with a special program that is not to be confused with others.

When the younger generation returned from World War II, and joined the existing veterans' organizations, we found that we had lost our identity. They outnumbered us. They had a different experience and perspective, and we became the forgotten veterans—but not for long.

It was clear that we needed an organization to distinguish the veterans who had served in World War I from those who had served in other conflicts. A place where we could meet with those who talked our language; work with them toward a mutual objective; and rediscover the pride of comradeship that was ours over 40 years ago.

We established and developed the Veterans of World War I for that purpose.

The response to the new organization's call for volunteers was prompt and enthusiastic.

As if tens of thousands had been waiting over the years for leadership that would have the skill and the energy to create an organization exclusively reserved for the veterans of World War I.

An organization that would not only provide a measure of fulfillment for us, but would ever remind the Nation of the meaning of World War I, and of the service given by 4 million men in defense of American ideals.

Tonight we have assembled from barracks all over the State, to honor one of the charter members in the establishment of our national organization.

Genial George Leary was born with the talent for bringing people together.

His capacity for making friends is limitless.

It took a lot of confidence and hard work and traveling on his own time and at his own expense to help organize barracks in the various cities and towns. But George was more than equal to the task, for he put his whole heart into the movement.

No part-time buddy was he.

He was the go-through guy for the Veterans of World War I of the U.S.A. from the very beginning.

Sooner or later in this world, ability and devotion must bring recognition even to those who do not seek it.

So it was with our good friend and guest who was promoted to the position of national prominence among the older veterans of our Nation.

We who have had firsthand experience with his tireless efforts in behalf of our group, know that the spreading knowledge of his merits will raise him eventually to the position of national commander.

On the eve of Patriot's Day, we express our appreciation to a Massachusetts man whose leadership is one of the reasons for the growth and prestige of the Veterans of World War I of the U.S.A.

To say that we are proud of him is not enough.

The fact is we are very happy that this well-earned honor has been conferred upon the man who never spares himself in building up the Veterans of World War I—our popular comrade—National Junior Vice Commander George M. Leary.

The Needs of the Nation for Special Education and Rehabilitation

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. GIAIMO. Mr. Speaker, pursuant to permission granted, I am pleased to insert in the RECORD the text of an address delivered by my friend, Hon. JOHN BRADEMAS, at the annual conference of the American Personnel and Guidance Association held in Philadelphia on April 13, 1960. In his address, the gentleman from Indiana comprehensively set forth needs of the Nation for special education and rehabilitation and the work which the Subcommittee on Special Education has been doing to meet these needs. For the past year and a half, I have had the pleasure of serving with the gentleman on this subcommittee, and I now deem it a privilege to draw the attention of this House to his fine address, which follows:

THE NEEDS OF THE NATION FOR SPECIAL EDUCATION AND REHABILITATION

"No man is an island, entire of itself," said John Donne. "Every man is a piece of the continent, a part of the main; any man's death diminishes me, because I am involved in mankind; and therefore never send to know for whom the bell tolls; it tolls for thee."

Those of you whose chief responsibility is the education and care of the handicapped will appreciate more than most persons the meaning of the phrase, "I am involved in mankind," for John Donne's lines nobly express the sense of responsibility which the members of a humane and civilized society ought to have toward those who are in some way handicapped or in need of special attention.

Because of my own concern about the general problem which is the subject of our discussion here today and because of my high regard for the man who asked me to be with you, my distinguished colleague of the House Education and Labor Committee, the chairman of the Special Education Subcommittee, CARL ELLIOTT, of Alabama—in my judgment, one of the finest public servants ever to sit in Congress—I am pleased to take part in this annual conference of the American Personnel and Guidance Association.

CONGRESS RESPONDS TO NEEDS OF HANDICAPPED

As the American people have come to understand that the handicapped have both special needs and special potentials, the Federal Government has responded with programs to meet these needs and potentials. The Vocational Rehabilitation Act was passed in 1920 to help the handicapped who

were employable to reenter the labor force. The Social Security Act contains various provisions for handicapped persons. More recently Congress has made possible supplies of materials for the blind through the Library of Congress and the American Printing House for the Blind. The 85th Congress enacted legislation to provide Federal funds for the training of the mentally retarded.

In the first session of this Congress over 100 different bills have been introduced to deal with the problems of one or more of the categories of the handicapped.

Those who deal with the difficulties of the various types of handicapped persons have come to see that many of these groups have similar needs. All of the groups apparently require more trained personnel, more clinical diagnosis and treatment, more educational materials and more research into the causes and effects of the handicapped.

Some of the bills introduced during the 86th Congress have reflected this perception of the similarity of needs and have attempted to fashion one piece of legislation which would meet the more critical requirements of the several groups. The basic philosophy underlying these proposals is that every handicapped person should receive the best possible special education and rehabilitation services in order to be able to achieve the maximum development of which he is capable.

SPECIAL EDUCATION AND REHABILITATION DEFINED

Let me pause for a moment to make clear what we mean by the phrase, "special education." To quote the recent inventory of services published by the House Special Education Subcommittee, we mean "education for those, who in order to reach full development, may be in need of special services, equipment, facilities, curriculum, and specially trained personnel. The field studied includes all physically and mentally handicapped, emotionally and socially disturbed, and the gifted."

In the same study Congressman ELLIOTT defines rehabilitation as "the restoration of disabled persons to the fullest physical, mental, personal, social, vocational, and economic usefulness of which they are capable."

Although the major emphasis of rehabilitation programs has been to assist the employable, a bill introduced last year by Congressman ELLIOTT and Congressman JOHN FOGARTY, of Rhode Island, would provide for independent living services to help those severely handicapped persons who may not be able to achieve vocational rehabilitation but who may, by means of the services afforded in the proposed program, achieve a significant degree of independence.

HOUSE SPECIAL EDUCATION SUBCOMMITTEE SETS STUDY ON NEEDS OF HANDICAPPED

In view of the many bills now before Congress and the question of whether a comprehensive approach or piecemeal legislation directed to each type of handicapped was preferable, the House Subcommittee on Special Education last year determined to carry out a special education and rehabilitation study. The objectives of the study were three: (1) To discover the unmet needs in these areas, (2) to review the adequacy of services now available, and (3) to recommend legislation to meet the needs.

Because the subcommittee felt that no individuals were better acquainted with the needs of the handicapped than the people who worked with them, it set up workshops to be held in each region prior to the scheduled subcommittee hearings. These workshops included representatives of public and private agencies, organizations, clinics, and schools from throughout the region who met to consider the various problems of handicapped individuals. The workshop groups then presented their reports on urgent needs and their proposals to the subcommittee at hearings.

WORKSHOPS HELD THROUGHOUT UNITED STATES

The first such workshops and hearings were held in New York City in mid-October 1959. Representatives from throughout New York State assembled for 2-day workshops on the blind, the emotionally disturbed, the gifted, the mentally retarded, people with hearing and speech impairments, the neuromuscular, orthopedic, and chronic handicapped, and those with limited vision. Each workshop group presented virtually unanimous reports to the subcommittee at hearings on the following day.

Since the first hearings in New York City, workshops and hearings for the New England area have been held in New Haven, Conn.; in Atlanta, Ga., for representatives from 14 Southern States; Philadelphia, Denver, San Francisco, and in Portland, Oreg., with a visit to Chicago scheduled for mid-May. I believe you can see that Congress will have the benefit of a nationwide survey.

I should like to devote the rest of my time today to discussing the reports of these various workshops on the Nation's needs for special education and rehabilitation services for our handicapped citizens.

Wherever they have met in the United States, the workshops have consistently found the same problems and the same shortages which are causing heartbreak and despair and the loss of human dignity and self-respect.

Because the workshops studied the needs in the three areas of personnel, services, and research, I shall organize my remarks along the same lines.

NO. 1 PROBLEM: SHORTAGE OF TRAINED PERSONNEL

Without any doubt, the most consistently cited problem during the workshops was the critical shortage of trained personnel. In virtually every geographic area, and in every handicapped category, there is a serious lack of trained teachers, social workers, psychologists, psychiatrists, nurses, doctors, and clinicians. For example, the New York workshop on speech and hearing impairments reported that there are currently at least 30,000 deaf children of school age in the United States. If the minimal educational needs of these children are to be met, said the workshop, we need approximately 500 specially trained teachers each year. Yet there are only 150 persons training in this field.

The New England workshop estimated a current need in New England for 1,027 additional teachers for those with speech and hearing impairment. The southern regional workshop reported that in 9 Southern States there were 350 actual vacancies for speech correctionists alone—positions where money and facilities were available but no personnel.

TRAINING FACILITIES LACKING TO PREPARE SPECIALISTS

There are several reasons for this shortage. One is the lack of training facilities to prepare specialists. Workshop after workshop cited the need for additional funds so that our colleges and universities can expand their programs of training to supply personnel.

But the problem is not that simple. In many areas there are facilities and teachers available for training such personnel, but no students apply. The workshops have reported an urgent need for scholarships and fellowships to enable the student to undertake the extra period of training necessary to become a qualified worker in the field.

Yet even scholarships would not be enough, according to the workshop reports. Part of the problem is that personnel available to work with the handicapped are generally untrained in and unaware of the special problems and techniques of each handicapped person. Group after group stated that the social worker or the clinical doctor or nurse or the persons responsible for aid to the disabled were not familiar with the special problems of the blind, the deaf, or the chronically ill, and therefore were unable to give them maximum assistance. The workshops therefore suggested programs of in-service training, short-term intensive workshops, and increased circulation of written material on the needs and problems of our various handicapped groups.

NO. 2 NEED: MORE SPECIAL EDUCATION AND REHABILITATION SERVICES

Perhaps most critically in need of such assistance are our regular classroom teachers who are increasingly faced with severely handicapped children in their schools, and the social case workers, who are often the only persons available for contact with the family of the handicapped person. It was apparent to virtually all participants in all of the workshops held so far that this lack of trained personnel was resulting in overhandicapping millions of our citizens. It seems clear that many persons can be cured completely, and many others enabled to lead more productive lives if only more trained personnel were available to work with them.

LACK OF TRAINED PERSONNEL OVERHANDICAPS MILLIONS

The second and perhaps most obvious general area of need indicated by the workshops was that of services to these individuals. The workshops stated, first of all, that there was a wide range of difference in both the number and the quality of the services available in the different areas of the country. Invariably the urban centers were more adequately served than the rural or semirural communities. In areas of more scattered population the incidence of any one type of handicap is frequently too small to make special facilities economically possible. But even in our urban centers the lack of services from infancy to the aged is critical. Almost every workshop group stated that we need more facilities for clinical diagnosis, treatment, counseling, and assistance to the preschool handcapped child and his family. The New York Workshop on Limited Vision, in describing its own requirements, spoke to the general need of all handicapped children with this statement:

"There is a great need for care finding of infants and preschool children with visual defects. Many ocular defects are easily remediable during early childhood; these same defects may be resistant to all forms of treatment during the rest of an individual's life."

EARLY DIAGNOSIS, TREATMENT, AND COUNSELING ESSENTIAL

The groups who work with the blind, the deaf, the emotionally disturbed, the mentally retarded, the gifted, and the orthopedically, neuromuscularly, and chronically handicapped—all the groups—regarded early diagnosis, treatment, and counseling as prerequisites to better education, treatment, and rehabilitation as well as to better mental and emotional adjustment by the child and the family.

The need for increased physical facilities for the handicapped student is equally crucial. Not only is there a lack of trained personnel at this level, but there is an even greater shortage of instructional materials and equipment, and even of information as to the best techniques and approaches to the education of these children.

A CLEAR-CUT NEED: COORDINATION OF VARIOUS TYPES OF AID TO HANDICAPPED

It is perhaps at this point in our discussion that we ought to focus on a need that is clearcut—coordination of all forms of assistance to all types of the handicapped.

In our specialized society there is no one group of workers who can even remotely attempt to fulfill all the needs of the handicapped. Handicapped persons require help from teachers, social workers, medical personnel, and clinical technicians. Unfortunately, in most areas the services of these various groups are in no way coordinated. The duplication of the services of public and private agencies, organizations, and schools means a waste of valuable resources and facilities.

I should also report that there is little coordination in the dissemination of information to these various groups concerning the best means of diagnosis, treatment, education, and rehabilitation of the handicapped. Virtually all of the workshops called for increased Federal, regional, State, and local efforts in improving coordination of existing programs.

Let me speak of another related problem to which the workshops gave considerable attention: The lack of facilities to assist in the difficult transition of the handicapped child from school to the outside world. It is obvious that we must have much closer cooperation in this respect between school counselor and rehabilitation workers. Many groups called for an expansion of sheltered workshops and halfway house facilities to assist in this transition. The pioneer work done with these two types of facilities has been most promising, but they are only a minute beginning.

FEDERAL LEGISLATION SHOULD INCLUDE MORE OF HANDICAPPED, GIVE GREATER ASSISTANCE

Finally, the workshops gave voice to the feeling that existing Federal legislation should be broadened to include more of the handicapped and to give them greater assistance. Groups already helped, such as the blind, felt that the restrictions placed on aid were too tight and pinned the recipient down to a bare subsistence level of existence. Other groups such as the emotionally disturbed and the visually impaired found that they were generally not included in Federal assistance programs at all.

We have been making considerable progress in rehabilitating those who can potentially be gainfully employed. We have however, woefully neglected the adolescent or the adult who is not capable of working but who can be trained to care for himself and to meet the general needs of living in society, so that institutional care or attendant care in the home is no longer necessary.

We need substantially to increase the services available to every type of handicapped person if we are to realize our hope of helping him to reach his maximum potential.

NO. 3 NEED: MORE RESEARCH INTO PROBLEMS OF HANDICAPPED

The final general area of need cited by the workshops is research. The sense of inadequate effort in this field is represented by this conclusion of the New York Workshop on the Blind:

"The pressure of meeting basic, rudimentary, educational needs has been so great that little study has been possible."

These research needs are many and varied. First is the need for investigation of better methods of prevention and of early diagnosis of these various handicaps, and publication of the results of such studies. Listen, for example, to this startling statement of the New England Workshop on the Mentally Retarded:

"We feel if the information we already have were disseminated, perhaps 25 to 40 percent of the defects that are occurring at birth could be eliminated."

We also need to study the best methods of treating the actual impairment or handicap itself so that its effects can be minimized. This effort would include the developing of new machinery, new materials, and new techniques, and then bringing these developments to the attention of the public.

We must learn about techniques, methods and philosophies for educating the handicapped child. We must develop and make available appropriate instructional materials.

Research is needed to determine the advantages and disadvantages of the various approaches and techniques used to rehabilitate the adolescent and the adult. Very few studies have been made and very little has been published on many of these methods.

And finally we must begin to gather accurate statistical data on the incidence of the various types of handicaps. At what age do handicaps occur? What types are most prevalent? In what geographical areas are the needs most pressing? There is no accurate statistical data at all with respect to many types of handicaps. In other fields, the relevant information is outdated or incomplete. We cannot adequately prepare to meet a problem when we do not know what the extent of the problem is.

WORKSHOPS HOLD FEDERAL FUNDS ESSENTIAL TO MEET CHIEF NEEDS

In recommending proposals to help meet these three areas of needs, the workshops generally felt that Federal funds were essential in nearly every area. Federal scholarships and fellowships would help more persons to receive training. Federal grants-in-aid are required to enable the schools to expand their existing programs or initiate new ones. Federal assistance would help make possible the in-service training and short-term workshops so urgently called for.

Federal funds are needed to increase the physical facilities of clinics, schools, and hospitals. Many groups suggested the expansion of such existing legislation as the Hill-Burton Act to include funds for such purposes. Federal assistance is needed to make educational and rehabilitational equipment and material readily available.

FEDERAL FUNDS NEEDED FOR RESEARCH

And finally Federal funds are necessary for research. Many workshops suggested that existing Federal research programs could be broadened to include these fields. They argued that Federal assistance was especially important in the area of research not only because State and local funds were most noticeably lacking here, but also because much of the essential research cuts across lines of specialization—that is, it touches on medicine and education and psychology and other related fields. The Federal Government, it was held, is far more able than any other agency to carry out such collaborative research.

In addition, the workshops proposed that considerable Federal leadership should be offered by the Children's Bureau, the Office of Education, the Office of Vocational Rehabilitation and the National Institutes of Health in investigation, coordination, and publication. Each group felt that either the Office of Education or the Office of Vocational Rehabilitation or both should have a full-time consultant on each of the categories of handicapped people, and should furnish field consultant services to the States and local areas.

Finally a great need was expressed for more State and regional workshops, and for more State and regional cooperation and sharing of scarce personnel and facilities.

SUMMARY OF MAJOR FINDINGS OF WORKSHOPS

In my time with you today I have attempted to provide you some general indication of the major findings of the workshops conducted across the United States during these last several months to determine what America needs in the fields of special education and rehabilitation.

I have tried to suggest to you what some of your colleagues whose chief concern is special education and rehabilitation believe ought to be done if we are effectively to meet our responsibilities as citizens and as human beings to our fellow-citizens who are in some way handicapped or exceptional.

I have pointed out that there are three areas in which the persons who took part in these workshops believe we stand in most need of serious effort: we need more trained personnel, we need more services, we need more research.

Finally, I have attempted to indicate the appropriate role of the Federal Government in responding to these needs.

AMERICANS MUST HELP HANDICAPPED FELLOW-CITIZENS LIVE IN DIGNITY AND SELF-RESPECT

Those of us who have not ourselves known the tragedy of handicap ought to feel a special sense of concern to help lift the level of life of our brothers in society who are in some way afflicted. If we set both our hearts and our minds to the task, we can, I am confident, use the vast resources of our great country to enable these citizens to live in dignity and with self-respect.

Those of you whose lives are dedicated to helping the handicapped achieve their maximum potential development have the admiration of your fellow-citizens. We must now offer you and the handicapped our fullest cooperation and support as well. For "no man is an island, entire of itself * * *."

Congressman Tom Steed Expresses His Views on Greater Opportunity in a Growing Country

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 20, 1960

Mr. ROOSEVELT. Mr. Speaker, perhaps the committee which has rendered the most direct service to our colleagues during this session of the Congress is the Special Subcommittee on Problems in the Dairy Industry, of the House Small Business Committee.

The chairman of that subcommittee is the distinguished, able, and friendly gentleman from Oklahoma, the Honorable TOM STEED.

The current issue of the trade magazine American Milk Review—April 1960—contains a most interesting exclusive interview with Congressman STEED by the American Milk Review's correspondent, Mr. Larston D. Farrar. This interview is so revealing that I am hopeful that my colleague will have time to read it; and it is, therefore, with great pleasure that I include it in the RECORD.

It would be difficult to find a clearer statement of the problem than that given by our distinguished chairman.

GREATER OPPORTUNITY IN A GROWING COUNTRY—NOT TO DESTROY BUT TO GIVE

(By Larston D. Farrar)

LARSTON D. FARRAR. Mr. STEED, in behalf of the readers of the American Milk Review I want to thank you in advance for agreeing to answer my many questions about your work in the dairy industry. We realize how busy you are in your legislative and committee work. We are grateful for this opportunity.

TOM STEED. I am delighted to do it, Larston. I feel keenly that the more all of us

know about our basic economic problems, the more apt we are to come to agreement on solutions that will be fair and equitable to business and to the consuming public. I am convinced that most of us—and that includes many, if not every one, of our very largest businessmen—want to develop a better America, in every good way, all the time. We want business to prosper and the public to be able to buy at fair prices all the produce of our farms and factories. The problem naturally is how to accomplish these goals. One thing is certain: Sound action comes from sound thinking, which must be based on adequate and reliable information. If we are to find solutions to our problems, we must have more knowledge about them. I congratulate you and the magazine you represent for probing deeply into these issues. I feel that you are fulfilling the function required of a magazine serving a tremendously important industry.

Mr. FARRAR. Speaking of the dairy industry, have you any general statement you would like to make about its problems, and the cooperation—or lack of it—which you have received from the various segments of the industry?

Mr. STEED. As we both know, every American is dependent upon the dairy industry, just as surely as we now are dependent on the automobile, the electricity which powers our homes, and the oil and gas we use in a multitude of ways each day. Milk is a life-giving food that is absolutely indispensable to our national good health. The people who raise the cows that give our milk, the companies which distribute it and many auxiliary products which come from milk deserve our encouragement and support. They deserve to make money and to prosper, just as our public utilities, our gas and oil companies, and other industries which serve us vitally deserve to prosper in our capitalistic economy. The charge sometimes is made that those of us in Congress who investigate a particular field have some design other than to strengthen our system. It is not necessary, I think, for me to deny such charges here. We must investigate, in order to build up a body of knowledge so that we can refine our laws in order to keep them in line with the economic realities. We want milk—of course. We want consumers to have milk as cheaply as they can be provided with it economically. But we also want a business community in which there is opportunity for new people to get into business.

More than 60 years ago, when a few companies in other fields unrelated to dairying were gobbling up everything in sight, Congress passed the first of several antitrust laws, designed not to destroy big business or any kind of business, but to give increased opportunities in a growing country to all segments of any business. Certain practices—in other fields—which led to the adoption of those original antitrust laws still are being undertaken, with variations, in distribution of milk and milk products, as well as other food products. If we find that such practices are working against our economic growth, against the development of a diffusion of power among businessmen, and against the long-range interests of the consumer, it is not only our desire as Congressmen to thwart these practices, which tend to promote monopoly, but it is our duty to do so.

The dairy industry today, in a sense, is a very sick industry. I think that I have never investigated one that in many ways, is sicker.

As to the cooperation I have had, it has been all that I, or any Congressman could expect. The gentlemen representing the various segments of the industry we have investigated all have been uniformly courteous and responsive to our desires for information.

Mr. FARRAR. Can you tell us something of the House Committee on Small Business and the makeup of your special subcommittee?

Mr. STEED. The House Committee on Small Business was first a special committee. Several years ago it was made a permanent committee of the House of Representatives. It is in existence because Congress recognizes the need of a continuing flow of information on the various and varied problems of small businessmen in all fields. The committee is not a legislative committee. It cannot report bills to the House for direct action. For that reason, legislation is not referred to it for study. Any legislation which members of the Small Business Committee want enacted must be introduced, referred to another of the standing legislative committees of the House, be considered by those other committees, and reported out by them.

The special subcommittee which I have headed, in investigating the dairy industry's problems, consists of myself as chairman; Representative JAMES C. ROOSEVELT, Democrat, of California, Representative CHARLES H. BROWN, Democrat, of Missouri, Representative HOWARD W. ROBISON, Republican, of New York, and Representative EDWARD J. DERWINSKI, Republican, of Illinois.

Mr. FARRAR. Just what stimulated your subcommittee's interest in the dairy industry?

Mr. STEED. My first contact with this subcommittee's work began in December 1958, when I interrupted my Christmas vacation at home to lend a hand to the chairman of the House Committee on Small Business, my friend, Representative WRIGHT PATMAN, Democrat, of Texas. Mr. PATMAN had scheduled an inquiry into a milk price war in Dallas, Tex., in response to complaints by independent businessmen in that area. Since the hearings were set for December 30–31, 1958, Mr. PATMAN had difficulty finding a committee member available. I attended the hearings as an accommodation to him. Mr. PATMAN was in Texas when the price war flared. He wanted to complete the inquiry on complaints from Dallas before the new session of Congress began in January. We thought at the time that this single hearing would constitute the fieldwork of the special subcommittee.

Mr. FARRAR. What were your original purposes or goals at the time you began your investigation?

Mr. STEED. The hearings had been called because of complaints from small businessmen. These complaints alleged that large distributors had attempted to eliminate small competing distributors through the use of price discriminations, rebates, special allowances, and other unfair trade practices. At the Dallas hearing, we sought to get the facts available about the milk price war as evidence of how abuses can exist, under laws already on the statute books, and how such price wars could prove detrimental to small business. At the time, none of us imagined the long workload ahead for the subcommittee.

Two months after the Dallas hearing, complaints came in from the Kansas City area, relating to a price war that had spread throughout Missouri and Kansas. Again, I agreed to participate in field hearings with Mr. PATMAN, solely because I had become familiar, to some extent, with the problems raised at the Dallas hearings. It was not until after the Kansas City hearings were set that Mr. PATMAN asked me to serve as subcommittee chairman. Pressure of other work prevented him from carrying on. Thus began the chain reaction that has kept me involved in milk price war complaints from Denver to Boston, and many other points in the Nation.

Mr. FARRAR. Have you been surprised at the facts you have uncovered through the 2 years you have headed this investigation?

Mr. STEED. To say that I have been surprised, as we have studied the many complaints reaching us, is putting it mildly. I have been very distressed and dismayed at the widespread evidences of ruthlessness in economic warfare that has swept this vital industry in recent years. Everyone who learns of it must deplore the vicious toll it has taken, especially among the smaller independents. I feel it is a conservative statement to say that the milk industry, in many areas of the Nation, is unstable, chaotic, and upset to a point of economic illness not being experienced by any other segment of our entire economy.

Mr. FARRAR. Just what ground rules did you lay down at the beginning? What or who determines the areas of what you will investigate, or have investigated?

Mr. STEED. We make our investigations only after complaints by local dairies have been submitted to us. These complaints may be made to us directly by mail or by personal visits, or they may be made through the Member of Congress from the district in which the dairy is located.

When we get a request for an investigation, our staff members make field investigations. These are followed by public hearings if members of the subcommittee feel that the situation is of sufficient interest to build up a public record on it for study by the full committee and other members of Congress. The subcommittee confines all its inquiries, during an investigation, to the factfinding level. Particular attention is given to facts that indicate a lack of adequate law, or facts that indicate existing laws may have been violated.

As subcommittee chairman, I have called the attention of the Attorney General to a number of instances in which, my subcommittee feels, the law is being violated.

Mr. FARRAR. What other techniques have you and members of the subcommittee staff used in probing into the economics of the dairy industry?

Mr. STEED. Besides public hearings, the subcommittee obtains a great deal of information by staff inquiries and through questionnaires which we send to companies in areas from which complaints originate. The pricing data studies are of particular interest and importance, I believe.

Mr. FARRAR. What factors determine just where you will conduct a public hearing?

Mr. STEED. Public hearings usually come about in areas in which a number of small businessmen are particularly disturbed, and where it is evident that a public airing of the controversy can be helpful. The public interest is paramount in places where conditions can lead to monopoly and to harmful trade practices, such as curtailment of quality, service and sufficient health safeguards. Price wars never serve to alleviate any of these ills, but rather in the long run, add to them.

Mr. FARRAR. When you do hold a public hearing, are witnesses subpenaed, or do they appear voluntarily, or both?

Mr. STEED. When public hearings are scheduled, witnesses are called both by subpena and by voluntary agreement. Some witnesses, while ready and willing to cooperate by appearing voluntarily, prefer to be subpenaed because of a fear of reprisal if they testify as volunteers. Subpenas also help in providing the subcommittee with company records we deem essential to the studies being made.

Mr. FARRAR. Out of the mass of testimony that your subcommittee has gathered so far, can you discern a general pattern, or patterns? This applies both to complaints and causes of complaints.

Mr. STEED. By and large, milk price wars follow a fairly similar pattern. In almost every instance into which the subcommittee has inquired, the claim always is made that the entry of the gallon glass jug into the market brought about the first evidence of price disturbance. Pressures created by a prolonged oversupply of milk, by the efforts of a new company to break into the market,

and by the constant efforts of the large chainstores to increase and expand their share of the market, also show up in almost every case investigated. Only in a few instances did the difficulties involve the distributors in a clash of interest with producers.

Mr. FARRAR. There is a tendency on the part of independent milk distributors to blame the large chain organizations for their troubles. Do you find this to be justified by the evidence you have compiled?

Mr. STEED. The charges by small companies as to the guilt of the large chains in fomenting price wars have never been admitted, of course, by those accused. However, there is an obvious advantage held by the larger companies when price wars break out. So far, we have not been able to find any evidence which would indicate that the larger companies sought to minimize the opportunities that such wars give them, to say the least. Some evidence has been gathered to indicate that the first disturbance arose in retail grocery outlets seeking to use milk as a "loss leader" item, or as a "tie-in bargain" item.

Mr. FARRAR. Just how great a problem—to the independent dairyman—is the private label, or private brand milk?

Mr. STEED The private brand labels used by many companies do not constitute a pressing problem to the smaller firms, according to what we have learned so far. Fluid milk is sold in many areas under brand names familiar to the local consumer. It is in the field of milk products other than fluid milk that the brand name is used more effectively as a competitive device. This is particularly true of ice cream, cottage cheese, and condensed milk.

The information we have indicates that private label or private brand milk sales for the most part are through the retail stores of some of the largest chain food retailers. For example, Safeway Stores has its private label or private brand milk—"Lucerne." First National Stores, which is a leading chain food retailer in New England, markets milk under its private label, "Brookside." It is obvious that the heavy volume of milk sold by these and other chain food retailers under their private labels reduces the marketing opportunities of individual processors and distributors of milk and other dairy products. However, the information we have also indicates that the total volume of private label milk handled by these few large chain food retailers amounts to only a small percentage of the total volume of milk marketed in this country. It is understood that Stop & Shop, Inc., the second largest chain food retailer in the Boston (Mass.) metropolitan area, is proceeding with plans to market milk under its private label. We do not know how many more are proceeding with similar plans. Obviously, if private label milk should be marketed by all the chain food retailers, independent processors and distributors of dairy products would be shut out of a substantial part of the total milk market in the Nation.

Mr. FARRAR. One of the chief economic and competitive problems in the milk business seems to be sales below cost. There is some difference of opinion as to what cost is, or, indeed, whether it is possible to determine cost for a specific market. Do you have any ideas on this phase of the problem?

Mr. STEED. We recognize that various people have differing opinions about how to determine cost of any particular item, such as milk, in a specific market. Some hold to the view that it is quite difficult, if not impossible, to determine cost. For that reason, laws designed to prevent sales below cost have been challenged as unconstitutional, as being too indefinite, and as making it impossible to express intelligently a lawful course of conduct. Fortunately, we recently have had decisions by the Supreme Court of the United States, and by the highest court in a number of the States, dealing with this problem. The Supreme Court of the United States, in the case of *Safeway Stores, Inc.* v. *Oklahoma Retail Grocers Association, Inc., et al* (360 U.S. 334), held that the Oklahoma law, designed to prohibit sales at prices below cost, was not too indefinite and was constitutional. Also, within recent weeks, the Colorado supreme court has upheld the law of that State, which prohibits sales below cost. In doing so, the court said that reasonableness must be taken as guide in determining the validity of the standard prescribed by the statute, that cost does not have to be established "with mathematical precision and exactness." The court rejected the contention that it is not possible to allocate costs accurately in industries where accounting is complex.

Mr. FARRAR. The Federal Trade Commission decision in the Ice Cream cases seemed to take the line that trade practices in the dairy industry were not as serious, or as bad, as the independents represent them to be. Does this coincide with the results of your investigation?

Mr. STEED. I'd like to be excused from discussing the findings and decisions involved in pending cases. Therefore, I am refraining from discussing at this time decisions which have been reached in the Federal Trade Commission's Ice Cream cases. I do not hesitate to say that small businessmen in the dairy industry, who have testified before our special subcommittee, have presented evidence about trade practices involving loans, gifts and the practice of providing rent-free cabinets and other equipment by large processors and distributors. It appears from the evidence presented to us that these practices present serious problems to small and independent business concerns in the dairy industry.

Mr. FARRAR. What remedies or corrective measures does your committee suggest?

Mr. STEED. Our special subcommittee has presented two reports to the House Committee on Small Business, both of which were adopted by the full committee without dissent, and submitted to the House of Representatives. Those reports are House Report No. 2713 (85th Cong.), submitted January 3, 1959, entitled, "Price Discrimination in the Distribution of Dairy Products," and House Report No. 714 (86th Cong.), submitted July 27, 1959, entitled, "Small Business Problems in the Dairy Industry." In those reports the remedies suggested were included in the recommendations made by the special subcommittee. The recommendations included in House Report No. 2713 (85th Cong.) were as follows:

1. The Department of Justice, the Federal Trade Commission, and the Department of Agriculture increase and expedite the use of provisions of existing law to bring to a halt the injurious and unfair competitive practices found by this committee to exist in the processing and distribution of dairy products.

2. Congress should enact new legislation to strengthen the antitrust laws and provide relief from the injurious and unfair competitive practices herein found to exist in the dairy industry.

3. Specifically, Congress should enact legislation which would (a) strengthen the antitrust laws by providing that the "good faith" defense of subsection (b) of section 2 of the Clayton Antitrust Act shall be a complete defense to a charge of unlawful price discrimination "unless the effect of the discrimination may be substantially to lessen competition or tend to create a monopoly;" (b) amend the Clayton Act so as to supplement existing laws against unlawful restraints and monopolies by providing that violations of section 3 of the Robinson-Patman Act shall constitute violations of the antitrust laws; and (c) amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease-and-desist orders issued thereunder, and for other purposes.

4. The Department of Agriculture should review the Federal milk marketing orders with a view to taking such action as would be appropriate to remove unjust discriminations in the prices paid by dealers for milk and cream.

The recommendations of the special subcommittee presented in House Report No. 714 (86th Cong.) were to the following effect:

The special subcommittee urges early consideration by the appropriate legislative committee of the Congress of the recommendations of the independent dairymen as contained in the record of hearings to date and the report (H. Rept. 2713, 85th Cong., 2d sess.) of the special subcommittee on small business problems in the dairy industry of the House Committee on Small Business.

These industry recommendations, in substance, are as follows:

1. Require publications of prices, discounts, rebates, allowances, commissions, loans, and gifts by all sellers;

2. Prohibit price discriminations which would have the effect of substantially lessening competition or tending to create a monopoly; and

3. Provide for process under the Federal Trade Commission Act for temporary injunctive relief pending issuance of final orders in litigated cases.

These conclusions and suggestions are tentative, but are made at this time in order to get them presented through this interim report for consideration.

Mr. FARRAR. Have these corrective measures been incorporated into proposed legislation?

Mr. STEED. A number of these suggestions and recommendations have been incorporated in proposed legislation. One of the recommendations has been enacted into law. I refer to the last part of the recommendation under No. 3 set forth in House Report No. 2713 (85th Cong.), January 3, 1959, for amendment to section 11 of the Clayton Act. This recommendation provides for the more expeditious enforcement of cease and desist orders instituted thereunder. The Congress on July 23, 1959, enacted Public Law 86–107 to do what was provided for in that recommendation. A number of additional legislative proposals have been made in keeping with the recommendations I have mentioned. Those additional proposals are pending at this time. They include the proposal to empower the Federal Trade Commission to issue temporary cease and desist orders, pending the completion of the litigation in those instances where litigation is prolonged. Bills for that purpose during the last session of this Congress (H.R. 8841, H.R. 8842, H.R. 8843, H.R. 8844, and others) were introduced by myself and other Members of Congress.

On February 8, 1960, Representative PATMAN, chairman of the House Committee on Small Business, introduced H.R. 10235, which provides for a strengthening of the antitrust laws by adding prohibitions against certain types of price discriminations which would have the effect of substantially lessening competition and tending to create a monopoly. Also, Chairman PATMAN introduced H.R. 2215, which would require publication of prices, terms, discounts, rebates, allowances, commissions, loans, and gifts by all sellers.

Mr. FARRAR. What chance do you see for early enactment of any of these bills?

Mr. STEED. I have made reference to the fact that Public Law 86–107 was enacted to amend section 11 of the Clayton Act. It is difficult to predict whether any of these other bills to which I have referred will be enacted before the end of this session of the Congress. I understand that the prospects are good for hearings on some of them.

Mr. FARRAR. TOM, it has been most kind of you to take this time to help our readers to understand these matters, and to be informed as to the situation. I want to thank you again in behalf of them.

Mr. STEED. It has been a pleasure, Larston. I hope that, by thinking on these problems, all branches of the dairy industry can formulate solutions in line with the public good, that will help to ease some of its most pressing problems. We must think of the small businessman, we must think of the consumer, and, above all, we must think of the future, for, as more than one philosopher has pointed out, we are all going to have to spend a lot of time there.

Inter-American Cooperation Moves Forward

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 20, 1960

Mr. FULTON. Mr. Speaker, as we take up the Mutual Security Act of 1960 I am including under leave to extend my remarks in the RECORD, an excellent expression of inter-American cooperation as outlined in a speech given this morning by the Honorable Christian A. Herter, Secretary of State in the Pan American Union:

INTER-AMERICAN COOPERATION MOVES FORWARD

(Address by the Honorable Christian A. Herter, Secretary of State, in observance of Pan American Day, before the Council of the Organization of American States, Pan American Union, Washington, D.C., April 20, 1960)

I am grateful for this opportunity to meet here with the Council of the Organization of American States today as it gathers in celebration of Pan American Day in the 70th year since the founding of the inter-American system. Not only is this my first appearance before a protocolary session of the council, but it happens by circumstance to be almost the first anniversary of my appointment as Secretary of State. The year has indeed been a momentous one in the history of the organization, full of events of tremendous significance to the continued growth and development in the unique cooperative relationship which this organization represents.

Speaking personally, I value highly the good fortune that has made it possible for me to journey twice to Latin America, once last August to attend the Meeting of Consultation of Ministers of Foreign Affairs in Santiago and again in February when I accompanied the President on his trip to Argentina, Brazil, Chile, and Uruguay. The pleasure and stimulation gained from this experience of travel could only have been increased had my good fortune been extended by visiting all 20 of your countries.

Two such trips only half a year apart bring me to the inescapable conclusion that Latin America, still emergent and even nascent in some aspects within its present high level of attainment, is an area of tremendous development potential. It has most of the natural resources and all of the human resources for a steady and predictable rise in prominence and importance among the world family of nations. The surge and pulse of this rise is a visible and tangible circumstance, to be seen and measured in the construction of new cities, the laying out of networks of roads, the building of schools, the spread of new industries. One can sense the trend of movement from rural areas and agriculture to urban living and industrial development, from limited suffrage to universal suffrage, from narrow exercise of authority to fully representative government. Here are many of the world's last great frontiers—the jungles of the Amazon Basin, the isolated mountain valleys of the Andes, the almost inaccessible mineral deposits, the extensive farmlands of high potential in almost every country—all awaiting the conquest of advancement through new methods of health and sanitation or the construction of new means of communication. Here, too, one can sense the race between a bursting population growth and the upsurge of economic development that must provide more and more products and develop more and more jobs for larger numbers of people.

It seems to me that such convictions as we in the United States had on this score were reinforced by the President's recent visit to Latin America and that a new sense of urgency was communicated to us with respect to such participation as the United States, within the framework of its worldwide commitments, can contribute.

Looking back across the intervening 70 years since the founding session of the "Commercial Bureau of the American Republics," conceived principally as a clearinghouse for the interchange of commercial information, who among our predecessors then in attendance could possibly have foreseen that the humble seed they planted was to grow into the all-encompassing structure that the Organization of American States is today? The soil that nurtures this rich growth is mutual cooperation.

Represented here today are 21 Republics; each sovereign and separate, each with its distinctive identity and national aspiration. For each the Charter of the OAS confirms sovereign equality regardless of size or power. Each uses its equal voice in determining issues by the exercise of its vote in the democratic process of decision by the majority. Yet with all the express individuality and distinct character of its respective members, with all the diverse interests and separate aims of the various countries, with all the divergencies between widely differing peoples, this international assembly works with remarkable harmony toward its objective—and that objective, simply stated, is to provide a steadily improving way of life for the 360 million people it represents.

These 360 million individual human beings, wherever they may be in whatever country, provide the measure by which their chosen representatives must guide their actions. The individual citizen is today the common denominator of all representative government and of all foreign policy wherever there is freedom of choice. The "common man" is the initial charge that sets in motion the dynamo of democracy that impels the forces of change toward a better way of life.

At the present stage in the evolution of international affairs within this hemisphere, attainment of the normal aspirations of the individual citizen may require drastic revisions in existing social, economic, and political institutions. These aspirations toward a general improvement in living conditions, toward the elimination as rapidly as possible of the consequences of poverty and ignorance, must be recognized by the OAS itself and by the individual countries that are represented here. They should be achieved in liberty, and with a dedication to international peace and harmonious cooperation as reflected in the guiding principles of the Organization of the American States, which are prime requisites to the accomplishment of its objectives.

Throughout the many years of its history, the genius of the inter-American system has been its capacity to reconcile principles and forces that have at times appeared to be in conflict. If sovereign states had refused to yield when purely national interests appeared to conflict with the general international interests of the whole assembly of nations, if each had chosen to adopt only principles that were in perfect accord with its individual goals, the Organization of American States could not have moved forward to the high level of attainment that it has reached today. Many of these conflicts have proven to be more apparent than real, especially in the light of shared benefits that have accrued to every nation through mutual international accord.

In similar respect, a partial success in improving the living standards of the individual citizen is not enough. The achievement of material progress, for example, falls short of the need unless it is accompanied by the equally important attainment of liberty based upon respect for human rights and representative democracy as described in the Declaration of Santiago agreed upon at the fifth meeting of Consultation of Ministers of Foreign Affairs last August. This statement declares that the "principles and attributes of the democratic system in this hemisphere" must include such essentials as the rule of law assured by separation of powers, free elections to choose governments, judicial procedures to protect individual freedom and human rights, freedom of information and expression, and effective control of the legality of governmental acts. It further points out that political proscription, perpetuation in power, and the exercise of power without a fixed term are manifestly contrary to democratic order in the Americas.

However lofty and hopeful might be the fundamental principles of an international organization, their application within the borders of the member nations is often not easy. All of us will do well to bear in mind that those who judge will also be judged. It seems to me that the organization as a whole must be willing to concede that each member may have its own special problems and its individual circumstances that may make progress appear very slow in the translation of broad principles into specific actions within each country. Yet it would be a matter of no small concern to the organization as a whole if its member nations agree to the broad principles but seek to travel only their separate paths in application. My view is that for member nations to maintain their own self-respect in the community of this hemisphere there needs to be a genuine endeavor to implement within their respective borders the fundamental principles to which their international representatives have signed agreement. We can all hope that recognition of this essential fact will bring with it the maturity and calm judgment required for the official conduct of governments in our present day relationships.

To reach the root of many problems facing our hemisphere requires a methodical study of the existing and potential resources to meet present and future needs. Many of these studies have been underway through the various entities of the Organization of the American States. The farsighted initiative of Operation Pan America, calling for detailed economic surveys of the countries of the Americas, is an important concept that will bear fruitful results within the near future in planning and organizing new projects on the basis of specific needs.

That the Organization of American States has been an instrument of accomplishment is manifest in many ways. Defense against aggression, from within or without the hemisphere, is now the concern of the whole American community rather than any single nation—and sums formerly spent for defense against neighbors can increasingly be safely devoted to economic development. The twin pillars of nonintervention

and collective action are now firmly cemented into the foundations of our tested and proved system of inter-American security. Astonishing progress has been achieved toward the goal of eradicating malaria and other diseases from our hemisphere. A regional development bank has become a reality. A major breakthrough has been registered in the discovery of a highly nutritious food, called Incaparina, to combat the high mortality of young children. Important groundwork has been laid in establishing a common market and a free trade association. The benefits of agricultural research already are evident in many ways, such as the development of new cattle breeds more adaptable to Latin American conditions. Even the launching of promising young artists on careers of world-wide acclaim, plus a long list of other achievements in the general field of culture and education, are commendable efforts that likely could not happen except for the existence of some form of international organization.

In my view, the achievements and the work actually underway in the areas of cooperation are often less noticed than they should be—given the apparently irresistible attraction of controversy and conflict. Steady, constructive, carefully planned progress in any of the many fields of human interest and endeavor in which we cooperate, both in the OAS and between ourselves, may not be as dramatic as if it were actively punctuated with sweeping slogans—but in the long run it may actually move further. For example, the OAS has long recognized the need for extensive efforts in the field of housing. The many activities of the Inter-American Housing and Planning Center in Bogotá, Colombia, are demonstrating results in the development of new building materials and inexpensive construction methods that will be of enormous importance in the solution of one of the most fundamental problems of our people. I am well aware of the close cooperation between the center and certain of the projects in this significant field that have been aided by my Government. Among others, these include the low-cost housing project in Chile which President Eisenhower visited recently, and which he and others of us who accompanied him found to be among the interesting points of the tour. These and similar endeavors are carried forward under the concept of self-help and mutual aid that might well be taken as key words in our international relationships.

If we support the premise that the dignity of the individual in a free society is strengthened when he acquires his own home, so must we also recognize the importance of land ownership to the man who works the land. While there is much arable land not in economic use—properties owned both publicly or privately that are difficult of access or not put to full use—small farmers by the hundreds of thousands must make their living from tiny plots that yearly become more depleted from too intensive development. Land distribution is a problem of the hemisphere, demanding the attention of all nations and the Organization of American States as a whole. The establishment of adequate credit facilities to assist small farmers in purchasing land, the establishment of adequate facilities to confer title to new owners, and the adoption of appropriate fiscal policies to promote more effective use and facilitate transfer of poorly utilized land are measures demanding urgent attention.

It will serve us well to remember that the mind of the individual citizen is the object of a great ideological conflict that divides our world. One side thrives on the ills of mankind—poverty, hunger, disease, ignorance, upheaval—while the other strives for man's natural desires, for individual freedom, human dignity, and personal well-being. Any international organization that hopes for and works for solid accomplishment will need to recognize that its framework must be solid and durable to withstand the constant probing of new and subtle forms of exploiting whatever forms of weakness may exist.

Under a system of free elections and representative government, the day will likely never dawn in this hemisphere when the majority voter of any country will freely choose his own complete subjugation to the state. It is contrary to all reasonable supposition to conceive that the voter of the Americas, in any considerable number, would ever willingly enslave himself to a monolithic economy, surrender his individual freedom, renounce whatever religion he may hold, or relegate himself to the status of landless servitor to a new class of bureaucratic aristocracy. Since the imposition of such a system through force, threat, or subversion would be a denial of basic principles for which the OAS stands and, therefore, could not be allowed to exist, and since its appeal to the voter is traditionally small in all areas of the world, the continued progress toward ever more valid democracy in each of our native lands is the real promise of life in our hemisphere.

If an ideology that is foreign to our hemisphere has little chance of taking root here, the state of harmony within the hemisphere will bear some attention. Each country should assume a certain responsibility toward the fundamental principles of the inter-American system. To quote from the Santiago declaration:

"Harmony among the American Republics can be effective only insofar as human rights and fundamental freedoms and the exercise of representative democracy are a reality within each of them, since experience has demonstrated that the lack of respect for such principles is a source of widespread disturbance and gives rise to emigrations that cause frequent and grave political tensions between the state that they leave and the states that receive them."

The truth in these statements is self-evident. After all most of the basic principles of the Organization of American States are as hallowed in time as that ancient day when separate civilizations first realized they had to try to exist in harmony together. In many ways the Declaration of Santiago is an echo of the words so wisely stated many years ago by that great freedom fighter, José Martí:

"America must encourage every means of bringing the American peoples closer to one another, and reject everything that keeps them apart. In this, as in all human problems, the future is of peace."

By the fact of the frozen wastelands that lie above and below and the great oceans that swirl on either side of our continents, we are all neighbors. Give us, each one of the 21 Republics, each independent and yet interdependent, the maturity and foresight and thoughtfulness to be good neighbors. There is not one among our countries that cannot help the others, there is not one that cannot receive help from the others, there is not one that will not profit through the mutual well-being of all.

SENATE

THURSDAY, APRIL 21, 1960

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father, who art in heaven, and in the earth, and in the hearts of men, hallowed be Thy name.

Without Thee, our striving would be losing. Without thine enabling might, our puny strength is unequal to our tasks, and the demands of the needy world overwhelm us.

To us in Thy providence has been given a place of awesome responsibility in this supreme test of the centuries. We would exercise with anxious care and deep humility our stewardship of power.

In these fateful days, lead those chosen to speak here and to act for the Republic to right decisions, as through fallible judgments there is given wisdom which is higher than our devising.

Deliver Thy servants in this historic Chamber from political policies which are symptoms of spiritual disease. Make us fit channels for the good and the glory Thou desirest to give, through us, to all the waste places of this stricken earth.

We ask this in the dear Redeemer's name. Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, April 20, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the following bill and joint resolution, in which it requested the concurrence of the Senate:

H.R. 11776. An act making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes; and

H.J. Res. 678. Joint resolution relating to the entry of certain aliens.

HOUSE BILL AND JOINT RESOLUTION REFERRED

The following bill and joint resolution were each read twice by their titles and referred as indicated:

H.R. 11776. An act making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes; to the Committee on Appropriations.

H.J. Res. 678. Joint resolution relating to the entry of certain aliens; to the Committee on the Judiciary.

NOTICE OF JOINT MEETINGS WITH HOUSE OF REPRESENTATIVES ON MONDAY, APRIL 25, AND THURSDAY, APRIL 28

Mr. MANSFIELD. Mr. President, for the information of the Senate, I an-

nounce that a joint meeting with the House of Representatives will be held next Monday, April 25, at 12:30 p.m., in the Hall of the House of Representatives, to hear the President of the Fifth French Republic, General de Gaulle.

On Thursday, at 12:30 p.m., there will also be a joint meeting with the House of Representatives, in the Hall of the other body, when the King of Nepal will address Congress.

To repeat, there will be a joint meeting of the two Houses on next Monday to hear President de Gaulle, and a joint meeting of the two Houses on Thursday of next week to hear the King of Nepal.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual morning hour. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

VISIT TO THE SENATE OF CANADIAN PARLIAMENT MEMBERS OF THE CANADA-UNITED STATES INTERPARLIAMENTARY GROUP

Mr. AIKEN. Mr. President, the presence today, in the Senate Chamber, of a considerable number of good-looking gentlemen does not mean that recently there have been special elections for the Senate in 24 States. Instead, it means that we are privileged, indeed, to welcome 24 members of the Canadian Parliament.

Mr. President, as chairman of the Senate delegation to the third meeting of the Canada-United States interparliamentary group, it gives me great pleasure to welcome to the Senate and to introduce to my colleagues here the members of the Senate and of the House of Commons of the Canadian Parliament who are delegates to this third meeting.

This is a great occasion. We have had smaller groups of members of the Canadian Parliament in Washington during the several planning meetings which have led to the formation of this interparliamentary group. But today we are happy to welcome the full 24 members of the Canadian delegation.

I would remind my colleagues that last June, in connection with the opening of the St. Lawrence Seaway, the Canadian Parliament welcomed 24 Members of the U.S. Congress to Montreal and to Ottawa, for a most successful meeting of the group. On that occasion, the Canadian Parliament not only welcomed the 24 Members of our Congress who officially attended the dedication of the Seaway and the meetings in Ottawa, but also welcomed and royally entertained about twice as many more Members of our Congress—I believe there were approximately 70 of us, in all—who at that time went to Canada.

Our meetings here, today and tomorrow, are concerned principally with three subjects:

First, defense cooperation and disarmament.

Second, boundary problems, such as the development of the Columbia River Basin, and other matters pertaining to the waters of the international boundary.

Third, economic problems which are common to both countries, such as our relations with the European Common Market.

On Saturday and Sunday, as many of the members of the group as possible will visit the Strategic Air Command base in Nebraska and the Joint Canada-United States Air Defense Command in Colorado. They will be accompanied by as many of our own legislative body as can find it possible to attend.

Mr. President, I have one concern: I worry a great deal that Members of our Senate and House of Representatives will not be able to match the splendid hospitality and the friendliness with which we were received last summer in Canada. I can only say that we shall do our best. We are doing very well so far, insofar as the weather is concerned; and we hope this beautiful weather will last while our visitors are with us.

Mr. President, at this time I shall introduce to the Senate the Members of the Canadian delegation:

First, the Honorable Mark R. Drouin, Speaker of the Canadian Senate. [Applause.]

The Honorable Roland Michener, Speaker of the Canadian House of Commons. [Applause.]

The other Members of the Canadian Senate who are with us are:

Senator A. M. Blois. [Applause.]

Senator T. Darcy Leonard. [Applause.]

Senator Sydney J. Smith. [Applause.]

Senator Arthur L. Beaubien. [Applause.]

Senator W. R. Brunt. [Applause.]

The Members of the Canadian House of Commons, besides Speaker Michener, are:

Mr. William Anderson. [Applause.]

Mr. Armand Dumas. [Applause.]

Mr. G. E. Halpenny. [Applause.]

Mr. Paul T. Hellyer. [Applause.]

Mr. M. W. Herridge. [Applause.]

Mr. H. M. Horner. [Applause.]

Mr. Alan Macnaughton. [Applause.]

Mr. J. A. McGrath. [Applause.]

Mr. McGrath is the first representative to visit us from Newfoundland.

Mr. H. J. Michaud. [Applause.]

Mr. J. L. Pigeon. [Applause.]

Mr. Gabriel Roberge. [Applause.]

Mr. R. D. C. Stewart. [Applause.]

Mr. Reynold Rapp. [Applause.]

Mr. M. Bourbonnais. [Applause.]

Mr. Neil Spencer. [Applause.]

Mr. Erik Neilsen. [Applause.]

Mr. Neilsen's best-known constituent, I think, is Dangerous Dan McGrew. Is not that correct; is he not from your district? Well, I believe he is almost from that district—from the Northwest.

And, finally, Mr. J. R. Keays. [Applause.]

Mr. President, I join all my colleagues in welcoming to the Senate these distinguished visitors.

[Prolonged applause, Senators rising.]

Mr. MANSFIELD. Mr. President, will the Senator from Vermont yield to me?

Mr. AIKEN. I yield.

Mr. MANSFIELD. I should like to join my distinguished colleague, the senior Senator from Vermont [Mr. AIKEN], the chairman of the U.S. Senate section of the Joint United States-Canadian group, in extending our warmest welcome to the distinguished Members of the Canadian Parliament who are honoring us today by their visit here.

Mr. President, this morning we were honored to have the Secretary of State extend greetings to the joint committee, at the opening of the first session.

I should like to join in extending greetings to the distinguished members of the Canadian parliamentary delegation who honor our Nation and the Senate by this visit. It is a great pleasure and a great privilege to have them call on us.

Let me say that for too many years we have had a paradox in the relations between the people of the United States and the people of Canada. Between us there has been no significant geographic or political barrier. Between us there has been no significant cultural or linguistic barrier. On the contrary, in all these basic matters, the two nations are in every sense neighbors and very close neighbors. In spite of this, our knowledge of each other as people, our awareness of each other's human hopes, human interests, and human problems, has been remarkably limited. In short, we have been close in the abstract, but rather distant in the specifics.

I do not think the people of the United States have wanted it that way. I do not think the people of Canada have wanted it that way. It has been one of those things which just happens without anyone knowing quite why it happens.

I believe that this paradox may now be drawing to an end. I believe that those of us who, as representatives, are closest to our respective peoples, can do much to bring it to an end. We can do so by not only reaffirming, in these binational meetings, our obvious but abstract closeness, but also by trying to bring about a similar closeness in the specifics.

Once again, I join in bidding you a warm welcome. I hope your stay among us will be pleasant, and that the deliberations of the interparliamentary group will be most fruitful.

Mr. DIRKSEN. Mr. President, will the distinguished Senator from Vermont indulge me for a moment?

Mr. AIKEN. I certainly am very happy to yield to the distinguished minority leader, inasmuch as I am occupying his seat at the present time.

Mr. DIRKSEN. I fully concur in and associate myself with the sentiments expressed by the acting majority leader [Mr. MANSFIELD]. I emphasize to our visitors that it is always a delight and always a pleasure to have you come. We have the identity of common traditions and common language which make it easy for us to understand each other.

I doubt whether there exists a paradox in what my distinguished friend from Montana has indicated, namely, that we have not come together more frequently. I think that fact comes about as a result of the deep trust and confidence that

we have in you and that you have in us, and out of it there comes a singular affection which requires no cementing in order to keep the felicity and the fire of friendship alive from year to year and from generation to generation.

What a happy thought it is, while the boundaries between countries in other sections of the world are mounted with patrols and there is consternation and anxiety, that no patrols, no impediments, no difficulties stand in the way of the boundaries that separate us, because those boundaries are fairly invisible.

I think it is a testimony to the understanding that we have mutually, you of us and we of you; and I am confident, on the basis of what the past has indicated, that it will always be that way.

So let me join with my distinguished colleague from Vermont in extending to you the hand of fellowship, and to utter the hope, in line with the sentiment expressed by the acting majority leader, that there will come about a greater interplay, a greater and more felicitous relationship, as time goes on; that more of our people will go across the boundary, and more of your people will come here, so that we can say in truth and in fact that there is indeed a durable and abiding and integrated friendship that shall last forever.

So, gentlemen, welcome to this parliamentary sanctum.

Mr. KEATING. Mr. President, will the distinguished Senator from Vermont yield?

Mr. AIKEN. I yield to the Senator from New York.

Mr. KEATING. As a very close neighbor of Canada, I wish to join in this tribute which has been paid, and the warm welcome which we are extending to our brethren from Canada.

My home is in Rochester, N.Y., and for many years it has been said that from the harbor in Rochester one cannot see Canada, but, for some reason, from the Canadian side, one can see Rochester. I do not know why it is, unless our brethren from Canada have greater perception. But, at least, that story is told.

In any case, we are neighbors, and visit frequently back and forth. We have fine rivalry in yachting, where sometimes we have gotten the short end of the stick.

The University of Rochester, of which I have the honor to be a graduate, has established a special program for Canadian studies, with which many of you may be familiar. I hope this pioneering venture will stimulate other institutions to establish courses and studies on Canada and on Canadian-American relations.

The institution of the Canada-United States Interparliamentary Group, linking legislators from the two countries, is certainly a fine step in the right direction in bringing our two countries closer together. We do have many problems, and this is a fine opportunity for an interchange of views on those problems, in which I am happy to be a participant.

Finally, I want to say to our friends from Canada that we who serve here, and many of us who served in the House of Representatives, are very proud of the representative of our country in your country, the Honorable Richard B. Wigglesworth, who served with great distinction in the Congress of the United States. I know, from talking to my Canadian friends, he has done a fine job there.

Ambassador Wigglesworth understands your problems and aspirations. He loves your people. He is fully cognizant of the interdependence of the two countries. I know he will continue to serve us in noble fashion in your country. I hope he will be as popular with you as he was with us.

It is wonderful to have you with us, and we hope you will soon be back again.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. AIKEN. I yield to the Senator from Oregon.

Mr. MORSE. As a member of the Foreign Relations Committee of the Senate and as a member of the Subcommittee of United States-Canadian Affairs, I wish to join in this Senate welcome to our Canadian colleagues. I say "colleagues," Mr. President, because we are engaged in a joint enterprise, it seems to me, at all times, connected with our common heritage.

I want to comment briefly upon that common heritage, because the Government of Canada and the Government of the United States inherited the same system for protecting individual rights, to which we are dedicated, namely, the Anglo-Saxon system of justice. That is the system of government by law I speak of when I refer to protecting the freedom of individuals, and the perpetuation of individual rights.

I know I do not need to say this to our Canadian friends, but I think it must be reiterated time and time again in our two countries that freedom for the individual, including civil liberties, would not be in existence in our countries had we not inherited the Anglo-Saxon system of justice. Our mutual system of jurisprudence is based upon fair procedures for settling disputes among litigants. It is based upon a legal truism that the substantive legal rights of the citizens of our two countries can never be any better than their procedural rights.

I would have you remember, as you participate with us as colleagues in these interparliamentary conferences, that we have a dedicated duty to carry that idea of justice to the rest of the world. After all, it is the British Commonwealth of Nations and the United States along with the other nations in the free segment of the world that have, in our time, a great moral duty to further the cause of winning the peace through a system of international justice by fair procedures of international law. I think our generation offers the only time mankind will ever have that opportunity, because, if we fail in our time, I think it is going to be the end of civilization as we know it in our countries. We have this dedicated duty to extend the basic principles of Anglo-Saxon justice to international justice.

We have a duty, as I see it, before it is too late, to join in trying to establish a system of international justice through law, enforced by procedures through such an organization as the United Nations, for the settlement of disputes which threaten the peace of the world. If our two parliaments, acting together, can advance in the slightest degree the cause of a needed system of international justice through law, then our meetings, in my judgment, will truly be historic and we shall make a great contribution to the peace of the world.

The VICE PRESIDENT. The Chair wishes to say it is the custom of the Senate that the Presiding Officer is allowed to speak only when he makes a ruling or breaks a tie vote. In the past 7 years there have been only seven occasions when I have been able to break a tie vote.

One exception to the rule regarding the Presiding Officer speaking is when there are distinguished visitors in the Senate Chamber, as there are today.

I know there is little which can be added to the eloquent statements made on both sides of the aisle, but I should like to say that as we consider the good fortune of our own country during the time of our existence, and as we consider our economic progress and our strength today, all Americans should be reminded from time to time, as your visit reminds us, that this has been to a great extent made possible because we have had throughout our history a friendly neighbor along 3,000 miles of our border. We have often thought what would have been the case had we not had a friendly neighbor. The United States would have had to maintain military forces along our northern border, as would have Canada, of course, with the result that neither country could have reached the economic position we both enjoy today.

This is for us a very historic occasion. It is a historic occasion for the Senate and for me personally to be allowed to speak on an occasion in the Senate. [Applause.]

RESOLUTIONS OF BROOKLYN, N.Y. BAR ASSOCIATION

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a series of resolutions adopted by the Brooklyn Bar Association, of Brooklyn, N.Y.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION I

Resolution on purchase of insurance by airlines for international passengers

Whereas most passengers in international flight are American passengers on American carriers, and most passengers believe that the same rules apply to international flight as to domestic flight. They are, unfortunately, unaware of the provisions of the Warsaw Convention limiting liability to $8,300; and

Whereas present insurance coverage for international flights is available to the insurance purchasing passenger in amounts up to $125,000 of life insurance for $5, but the cost to the airlines for securing the same insurance on a blanket proposal for all passengers would be materially below $5 per

passenger. This reduced cost could either be absorbed by the airlines in the price of the ticket or added to the price of the ticket with the cost borne by the passenger: Now, therefore, be it

Resolved, That the Brooklyn Bar Association recommend to the proper subdivision of the Civil Aeronautics Board dealing with tariffs and the economic regulation of air carriers, that each international air carrier applying for certification in the United States, be obliged to purchase insurance in an amount not less than $125,000 per passenger.

RESOLUTION II

Resolution on modification of Warsaw Convention

Whereas it is claimed that the Warsaw Convention unifies the system of law under which a passenger injured or killed institutes an action, to recover damages and thus simplifies the disposition of claims and makes said disposition more rapid; and

Whereas this simplification and/or codification of the basis of liability is the price which the passenger pays for assuring a recovery of $8,300 or in the Hague Protocol $16,600; and

Whereas proof of negligence in the early days of flying was difficult by reason of the limited knowledge of the public in flying; but there has been a growing body of knowledge and information available to the bar in general upon which to predicate and prove the negligence of the carrier and the base of proof required for the recovery by the passenger (the extension of res ipsa in conjunction with the proof of negligence) has been broadened; and

Whereas the convention establishes its own arbitrary standard of liability superseding all standards within the boundaries of various states and/or nations, but this standard is adopted in order to justify the low limit of liability. The American passenger, the largest revenue producer for the aviation industry is limited to the European dollar standard: Now, therefore, be it

Resolved, That a new legal standard be established which would provide that the tort liability of the carrier shall be determined by the law of the domicile of the passenger and not by the law where the tort occurred. In this way, American passengers, comprising the great bulk of the international flying public, will receive the benefit and/or hardship of his local law.

RESOLUTION III

Resolution on rejection of Warsaw Convention

Whereas the Warsaw Convention was enacted to protect an infant industry from the financial burden of air disasters; and

Whereas in 1929, the only substantial international air transportation was on the Continent of Europe; and

Whereas in 1959, most of the world's international passengers are Americans flying on American airlines; and

Whereas with the exception of the United States, all international airlines are government-owned; and

Whereas in the United States notwithstanding the fact that U.S. airlines are privately owned, domestic air transportation has never received protective legislation against air disasters; and

Whereas the American air passenger, ignorant of the terms of the Warsaw Convention, relies on the financial ability of the airline on which he flies and assumes that he is flying under the same rules as pertain to domestic flights; and

Whereas if protection against disaster has proven unnecessary in the case of domestic airlines, it is certainly unnecessary in the case of foreign air carriers which have behind them the financial resources of the nation whose flag they bear: Now, therefore, be it

Resolved, That the fundamental basis for the enactment of the Warsaw Convention, that is to shield an infant industry from prohibitive costs arising out of aviation disasters, no longer applies; and be it further

Resolved, That foreign air carriers are not entitled to more protection than privately owned domestic air carriers receive in the United States; and be it further

Resolved, That the Warsaw Convention should be abandoned.

RESOLUTIONS OF ORGANIZATIONS IN STATE OF NEW YORK

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD a series of resolutions adopted by organizations in the State of New York.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY THE LITHUANIAN COUNCIL OF GREATER NEW YORK

We, Lithuanian Americans of Greater New York, loyal citizens and residents of the United States, gathered on February 14 of this year of grace 1960 at Webster Hall in New York City to commemorate the 42d anniversary of the restoration of the independent Lithuanian State after a prolonged eclipse of its liberty;

Voicing once agian our indignation and our protest against the brutal suppression by the Government of the Soviet Union of Lithuania's independence and freedom and her subjugation to ruthless Soviet colonial exploitation, perpetrated at a time when Lithuania was living in peace with the U.S.S.R. and was bound to her by a peace treaty and a nonaggression pact;

Pointing out that this year, marking the 20th anniversary of the Soviet subjugation of Lithuania, poses a particular challenge to the West to press for application of the principle of self-determination in Lithuania and the entire captive part of Europe;

Stating that the present Soviet challenge to the West, with Berlin as its direct objective, is aimed at the settlement on Soviet terms of the political problems resulting from World War II; namely, at the legalization and consolidation of Soviet criminal conquests in Europe and at creating conditions for further Communist expansion in Europe and elsewhere;

Considering that the present abnormal and dangerous situation in Europe, characterized by the division of Germany, the subjugation of nine formerly sovereign states of Central and Eastern Europe, including Lithuania, and by the division of the Continent is the major cause of the present international tension and requires an urgent and global settlement in conformity with the wartime and postwar commitments and pledges of the great powers:

Resolve:

1. To appeal to the President, the Secretary of State, and the Congress of the United States firmly to pursue and vigorously to promote their repeatedly declared policy of the restoration of the independence and freedom of Lithuania and other captive countries of Central and Eastern Europe through free and unfettered elections after the withdrawal of Soviet Armed Forces and agents, and to reaffirm the determination of the Government of this great country not to be party to any agreement or treaty which would confirm or prolong the subjugation of Lithuania, now held in bondage by the U.S.S.R.;

2. To express gratitude to the President, the Secretary of State, and the Congress of the United States for the proclamation of the Captive Nations Week in July 1959, which importantly contributed to strengthening the determination of the Lithuanian people to achieve freedom, as well as to maintaining their faith in the West;

3. To request the President of the United States that, in line with the pledges and principles enumerated above, and to the advantage of both the United States and captive Lithuania, the issue of Lithuania's subjugation be raised at the forthcoming summit meeting;

4. To rededicate ourselves to the just cause of Lithuania's independence and freedom and to combat Communist aggression and Soviet-Russian imperialism;

5. To assure the Lithuanian people under Soviet occupation of the indissolubility of our ties and of our unswerving determination to spare no efforts and sacrifices for the attainment of the sacred goal of the Lithuanian nation—its independence and freedom;

6. Actively to support the policy of the United States Government aiming at the establishment in Europe and elsewhere of a just and durable peace based on the inalienable right of the respective peoples to governments of their own choosing.

RESOLUTION BY NEW YORK CHAPTER, KNIGHTS OF COLUMBUS

Whereas the imprisonment by the Communist Government of China of the Most Reverend James E. Walsh, M.M., former superior general of the Maryknoll Fathers, is a travesty of international justice and decency; and

Whereas the malicious, spurious, and specious charges of espionage against his excellency as the result of the efforts of the Communistic leaders to discredit the Catholic Church among the Chinese people and to deprive the faithful of this most important link with Christianity; and

Whereas this is a further evidence of the contemptible and brazen attitude of the leaders of the Communistic government of China in imprisoning American citizens without legal cause or merit; and

Whereas by their own actions the leaders of the Communist government of China can at best be termed barbaric and not in consonance with the moral philosophy of the free world: Now, therefore, be it

Resolved, That the New York chapter, Knights of Columbus, unanimously urge that the U.S. Government exert fully, every diplomatic and legal resource at its command to solicit freedom for Bishop Walsh; and be it further

Resolved, That the President of the United States and his Secretary of State continue to maintain an alert vigil to prevent the barbaric Communist government of China from gaining admission to the world society of the United Nations; and be it further

Resolved, That the President of the United States and his Secretary of State exert their powerful world positions to instill in other free nations of the world the necessity of denying diplomatic recognition to the Communist government of China; and be it further

Resolved, That this resolution be publicized with the widest of latitude to urge others to similar action and, in particular, that copies hereof be forwarded to Dwight D. Eisenhower, President; Christian Herter, Secretary of State; Luke E. Hart, supreme knight, Knights of Columbus; Emmett Burke, State deputy, New York State council, Knights of Columbus; Jacob K. Javits, U.S. Senator; Kenneth B. Keating, U.S. Senator; the Catholic News; the Tablet; and to various lay newspapers.

JAMES E. FOLEY,
Chairman, Catholic Interest Committee.

RESOLUTION OF THE BOARD OF SUPERVISORS OF SCHENECTADY COUNTY, N.Y.

Resolution on increased salaries for postal workers support urged

Whereas the Postal and Civil Service Committee of the U.S. House of Representatives is now studying proposed legislation to increase the salaries of postal workers; and

Whereas the present substandard salaries of postal employees, as measured by various economic indices have lagged behind the average rise in earnings during the past several years; and

Whereas the employees of the U.S. Post Office Department and their families are entitled to a fair and just compensation plan to enable them to adequately meet financial obligations and prevent unnecessary economic hardships: Now, therefore, be it

Resolved, That the Schenectady County Board of Supervisors memorialize and recommend to Congress, members of the Postal and Civil Service Committee, our district representative Congressman SAMUEL S. STRATTON and U.S. Senators KENNETH B. KEATING and JACOB K. JAVITS, that favorable action be taken on the above legislation to insure the maintenance of the high level of efficiency characterizing our postal service.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. SYMINGTON, from the Committee on Armed Services, without amendment:

H. Con. Res. 582. Concurrent resolution providing under section 3(e) of the Strategic and Critical Materials Stockpiling Act the express approval of the Congress for the disposal from the national stockpile of approximately 470,000 long tons of natural rubber (Rept. No. 1283).

By Mr. ROBERTSON, from the Committee on Appropriations, with amendments:

H.R. 10569. An act making appropriations for the Treasury and Post Office Departments and the Tax Court of the United States for the fiscal year ending June 30, 1961, and for other purposes (Rept. No. 1282).

By Mr. HARTKE, from the Committee on Interstate and Foreign Commerce, with amendments:

S. 3019. A bill to provide for certain pilotage requirements in the navigation of U.S. waters of the Great Lakes, and for other purposes (Rept. No. 1284).

By Mr. MAGNUSON, from the Committee on Interstate and Foreign Commerce, with amendments:

S. 1781. A bill to provide for cooperative unit programs of research, education, and demonstration between the Federal Government of the United States, colleges and universities, the several States and territories, and private organizations, and for other purposes (Rept. No. 1285).

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. JAVITS:

S. 3400. A bill for the relief of Helen Irma Imhoof; to the Committee on the Judiciary.

By Mr. McCARTHY:

S. 3401. A bill to amend the Internal Revenue Code of 1954 to exempt nonprofit hospitals from certain excise taxes; to the Committee on Finance.

S. 3402. A bill to authorize the partition or sale of inherited interests in trust and restricted allotted lands and restricted purchased allotted lands in the State of Minnesota, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HUMPHREY:

S. 3403. A bill to amend the Public Buildings Act of 1959 to provide a study as to the best location for a new building for certain courts of the United States, to preserve the Dolly Madison House and other historic buildings near the White House for cultural and educational purposes in keeping with the national policy enunciated in the Historic Sites, Buildings, and Antiquities Act, and for other purposes; to the Committee on Public Works.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. KENNEDY:

S. 3404. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act, so as to provide that an injured employee shall have the right to select his own physician, and for other purposes; and

S. 3405. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act, as amended, to provide increased benefits in case of disabling injuries and for other purposes; to the Committee on Labor and Public Welfare.

AMENDMENT OF PUBLIC BUILDINGS ACT OF 1959, RELATING TO LOCATION OF CERTAIN COURT BUILDINGS IN THE DISTRICT OF COLUMBIA

Mr. HUMPHREY. Mr. President, I introduce, for appropriate reference, a bill to provide for a study of the best location for certain Federal court buildings in order to preserve Lafayette Square for cultural and educational purposes.

The bill calls for a study by the Administrator of General Services, the National Capital Planning Commission, and the Commission of Fine Arts of the feasibility of constructing a building for the U.S. Claims and Customs Courts in the area bounded by Pennsylvania Avenue on the north, 17th Street on the east, New York Avenue on the south, and 18th Street on the west.

My bill would also provide for preservation and maintenance of the Dolly Madison House, the Benjamin Tayloe House, and the Belasco Theater.

A proposal now being considered for construction of the necessary court building on Madison Place on the east side of Lafayette Square would mean destruction of the gracious Dolly Madison and Benjamin Tayloe Houses as well as the theater. I believe that these cherished reminders of our history and the historic spirit of the entire square should be maintained.

As we plan for the future of our Nation's Capital, we must remember that our city is a living lesson in our Nation's history as well as the center of our Government operations.

In locating Federal buildings in the District of Columbia, we must think not only of Government services for our children, but of preserving for them the beauties of our American heritage.

We have not always guarded this heritage as we could and should. I hope that we shall not fail in this opportunity to maintain one corner of our past in the heart of the District.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 3403) to amend the Public Buildings Act of 1959 to provide a study as to the best location for a new building for certain courts of the United States, to preserve the Dolly Madison House, and other historic buildings near the White House for cultural and educational purposes in keeping with the national policy enunciated in the Historic Sites, Buildings, and Antiquities Act, and for other purposes, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Public Works.

AMENDMENT AND EXTENSION OF SUGAR ACT OF 1948—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of April 14, 1960, the names of Senators DWORSHAK, MCNAMARA, MOSS, ALLOTT, and MCGEE were added as additional cosponsors of the bill (S. 3361) to amend and extend the provisions of the Sugar Act of 1948, as amended, introduced by Mr. ELLENDER (for himself, Mr. HOLLAND, Mr. LONG of Hawaii, Mr. CHURCH, and Mr. YOUNG of North Dakota) on April 14, 1960.

NOTICE CONCERNING CERTAIN NOMINATIONS BEFORE COMMITTEE ON THE JUDICIARY

Mr. DIRKSEN. Mr. President, on behalf of the Senator from Mississippi [Mr. EASTLAND], chairman of the Committee on the Judiciary, I announce the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Lyle F. Milligan, of Wisconsin, to be U.S. marshal, eastern district of Wisconsin, for a term of 4 years;

Oliver H. Metcalf, of Pennsylvania, to be U.S. marshal, middle district of Pennsylvania, for a term of 4 years.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Thursday, April 28, 1960, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MANSFIELD:

Press release from office of Senator JACKSON relating to public hearings on "Creaks and Groans in the Machinery of National Security Planning," to begin on Monday, April 25, 1960.

By Mr. WILEY:

Editorial entitled "Confusion Compounded," dealing with State-Federal jurisdiction over wiretapping, published in the Washington Post of April 19, 1960.

By Mr. RANDOLPH:

Excerpts from 10th anniversary report of the Education Foundation, Inc., of West Virginia.

TRIBUTE TO SECRETARY OF STATE CHRISTIAN HERTER

Mr. MANSFIELD. Mr. President, I do not wish this day to pass without noting that it is the anniversary in office of Mr. Christian Herter. Mr. Herter was sworn in as Secretary of State 1 year ago.

He assumed this most difficult assignment at a most difficult time. He has acquitted himself admirably, amply confirming the confidence which the Senate demonstrated when his appointment was endorsed by this body by unanimous vote.

This comes as no surprise to those of us who have known Mr. Herter through the years. Mr. Herter and I both came to Congress in 1943, and it was my privilege to serve with him on the Committee on Foreign Affairs of the other House for many years. He brought to his work in that group, particularly in connection with the Marshall plan, the same exceptional and penetrating understanding of international problems which he has displayed in connection with his duties as Secretary of State. He had then, as he has now, a great sensitivity to the ever-changing needs of foreign policy and the courage to advocate and pursue new approaches.

I should like to congratulate the Secretary of State on this occasion and to express again my admiration and appreciation for his exceptional service to the Nation.

ADDRESS BY JOHN J. SAUNDERS, COMMANDER, DISTRICT OF COLUMBIA DEPARTMENT, CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA

Mr. MORSE. Mr. President, on February 5, 1960, it was my honor to be one of the speakers at a memorial service for those four heroic American chaplains who sacrificed their lives in World War II in going down with their ship so that others might live.

Mr. President, one of the speakers at that memorial service was John J. Saunders, commander, District of Columbia Department, Catholic War Veterans of the United States of America. The service was held at the B'nai Israel Synagogue, Washington, D.C. I ask unanimous consent that the address delivered on that occasion by Commander Saunders be printed in the RECORD at this point in my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY JOHN J. SAUNDERS, COMMANDER, DISTRICT OF COLUMBIA DEPARTMENT

Rabbi Segal, Senator WAYNE MORSE, other distinguished guests and friends, I bring cordial greetings and a message from the District of Columbia Department, Catholic War Veterans of the United States of America.

As you are already aware, we are here tonight to pay honor to the four military chaplains who, when the U.S.S. *Dorchester* was sunk, so heroically gave their lives in order that other men who may or may not have been of their faiths might live, and be inspired to bigger and better things for the honor and glory of God. Those deaths were the epitome of the real meaning of the brotherhood of man; and true patriotic nationalism.

"Brotherhood of man," what is its significance, what does it mean to you? Is it just a euphemism or a reality in your workaday world? Have you ever realized your reactions in the midst of its personal application? Some of us cringe a little, draw back as it were, yes even look furtively around when we hear the expression "brotherhood of man" for fear it might have been inappropriately used with respect to some of the people present in our gathering. This is done not because we do not believe the truth expressed by the person who has used the words, but because we may sometimes detect a note of insincerity when a speaker glibly uses such a comprehensive phrase.

True "brotherhood of man" is not the brotherhood displayed by a booming voiced, powerful back-thumping kind of individual, or a once-in-a-while pal of some fraternal order who regales us with some likely story. You may be surprised but in its true sense it means nothing less than a general family relationship which has God as its father. It means that, no matter how detestable a man or a nation appears, this man or that nation cannot be said to bear no relationship to us. Our people, yea even the people of the whole world today, would do well to make a meditation on that thought and its significance in the realm of peace and friendship for all mankind.

While we are bound to love all men, not excluding our enemies, in holy charity we are bound to love with special attachment those people with whom we share a common fatherland. One's nation then should be considered a sort of civil family of which he is a member, and to which he owes a particular loyalty by reason of which he might be required to do acts of heroism which are above and beyond the call of duty.

We in the United States of America should make loyalty to our Nation and its people an indivisible thing. We should not let various isms divide us. As for isms, let us try to achieve a greater and truer Americanism. When we are brought face to face with anti-Semitism, we are apt to speak of it as a Jewish problem rather than one that concerns all of us. Some of us view anti-Semitism in the light of its serious economic, political, and social effects, while the more conscientious among us see it for what it really is—a moral problem—a sin. Anti-Semitism, like anti-Catholicism, may be said to be a yardstick of our failure to practice sound Christian ethics in all of our serious public problems. If in the place of true brotherhood—true loyalty—true patriotism—there prevails and rages within a nation an egoistic and harsh nationalism instead of mutual understanding, peace cannot endure. The plans, the blue prints of unity and brotherhood were given to all of us at Mount Sinai. The Master of eternity, the common Architect, God—gave all of us the 10 commandments as the cornerstone of our morality. Let us take stock of ourselves in the light of those commands. Can you and I say individually, we have met any or all of their requirements? The patriotism of the chaplains whose memory we revere tonight was not a cynical flag-waving type of patriotism. Theirs was a God-inspired kind of patriotism which transcends all human understanding. Their example of love and devotion to our country and its people should be practised by all of us. We in the United States should be alert to the spellbinder who would try to stampede us into a national or international policy inimical to the human dignity which we know is ours by divine revelation.

In conclusion, I wish to state that the position of the District of Columbia Department Catholic War Veterans of the United States with respect to the aforementioned matters is in keeping with and follows the recent pronouncement of the Roman Catholic bishops of the United States wherein they again reiterated their oft-repeated statements deploring any revival of the anti-semitic prejudice which in earlier manifestations culminated in such terrible disaster; and wherein they further state that whatever may be the source of the evil or the sinister purpose to be served, the danger from the recent outbreak of religious and racial bigotry should be immediately recognized, and all citizens, whether Christians or Jews, and all who love truth and justice should strongly protest privately and publicly against any further such manifestations.

Thus, and only thus, will we all manifest the true brotherhood of man and the patriotic Americanism of which I speak.

ATTEMPTS TO INTIMIDATE JUDGE KAUFMAN UNDERSCORE HIS FINE JUDICIAL RECORD

Mr. KEATING. Mr. President, recent newspaper articles about attempts to intimidate District Judge Irving R. Kaufman should be cause for concern to every American who is interested in maintaining the independence of the Federal judiciary. The threats against this distinguished jurist only serve to emphasize the courageous record he has established on the bench.

According to news dispatches, four threatening notes have been directed in recent weeks to Judge Kaufman's 18-year-old son, who is a student at Syracuse University. Local police and the FBI are sufficiently concerned about these communications to step in and investigate the circumstances.

There are strong indications that these attempts to cow Judge Kaufman have stemmed from his decision last January sentencing the 20 hoodlum delegates to the now infamous gangland convention at Apalachin, N.Y. Some think that his conduct of the Rosenberg spy trial might also have contributed to these recent intimidation attempts.

Whatever may be the motivation behind these sinister threats, the fact remains that they represent blatant efforts to interfere with the independent judgment of one of our finest judges. While I am confident that our law-enforcement officials are equal to this challenge, the connotations it raises are nothing less than shocking.

I am certain that even these threats to his next of kin will do nothing to shake the judicial responsibility and soundness of judgment which Judge Kaufman exemplifies to the highest degree. It is a true measure of the quality of this outstanding jurist that he has not wavered in the face of these acts of vengeance. So long as our judiciary is manned by people of the knowledge, judgment, and caliber of Irving Kaufman, we need have no fear about the future of American justice.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an editorial on this subject from the New York Herald Tribune.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Is there objection to the request of the Senator from New York?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Apr. 20, 1960]

VENDETTA AGAINST JUDGE KAUFMAN

News that members of the family of Federal Judge Irving R. Kaufman have been threatened with violence is shocking in itself and disturbing in its connotations. Judge Kaufman is one of the most active and conscientious jurists in America. Fate has taken him into more than one man's share of important and taxing cases. One of these was the Rosenberg spy trial. Another was the matter of the Apalachin gangster convention. Whatever the stakes and the pressures, Judge Kaufman has never shirked his duty or sidestepped his responsibility.

Since last January, when he sentenced 20 delegates to the infamous Apalachin conclave of hoodlums, Judge Kaufman has seemingly been a man marked out for vengeance—with the attacks aimed less at himself personally than at those who are dear to him. Since April 5, four threatening notes have been sent to his 18-year-old son, Richard, a student at Syracuse University. They are deemed serious enough for the FBI to have joined local police in the investigation.

We are confident, as Judge Kaufman is, that the authorities are capable of dealing with this unpleasant situation. But that it should exist at all is distressing to all who are concerned with American justice and who know and respect one of the jurists who typify it at its best.

COURT ACTION EMPHASIZES NEED FOR WIRETAP ACTION

Mr. KEATING. Mr. President, a decision just handed down by the U.S. court of appeals in New York is a stark testimonial to the critical need for congressional action to deal with the wiretap muddle.

By a divided vote, a majority of the court refused to enjoin the introduction of wiretap evidence in two State court prosecutions. At the same time, every judge on the court agreed that Federal law makes it a criminal offense to present such evidence in a State court. One judge went so far as to invite the U.S. attorney to institute criminal proceedings against the New York district attorneys if they attempted to introduce any wiretap evidence.

This decision emphasizes the incredible legal situation which now prevails. New York has the most well-balanced, carefully safeguarded, up-to-date laws on the subject of wiretapping and other forms of eavesdropping, among all the States in the Nation. Nevertheless, a New York district attorney, who acts in full compliance with the requirements of the New York law, now must face the risk of Federal prosecution. I cannot conceive of anything more illogical and indefensible.

If crime were not such a serious problem, the present situation would be ludicrous. I cannot believe that anyone in Congress intended, when the Federal Communications Act was passed, to make criminals out of district attorneys who obtain State court orders permitting wiretapping. We must act promptly to restore some sense and sanity in our handling of this subject.

The need for action has never been more evident. This is a responsibility Congress must not shirk. I am hopeful that the matter will be given early attention and that a solution will be devised along the lines of a bill denominated as S. 3340, introduced by me in the Senate, and introduced in the other body by the distinguished chairman of the Committee on the Judiciary, Representative EMANUEL CELLER.

Mr. President, I ask unanimous consent that the opinion of the U.S. court of appeals on this matter be printed at this point in the RECORD.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

(U.S. Court of Appeals for the Second Circuit—Nos. 306–307, October term, 1959—(argued March 8, 1960; Decided April 14, 1960)—Docket Nos. 26116–26147: *Burton N. Pugach, Petitioner-Appellant* v. *Honorable Isidore Dollinger, District Attorney of Bronx County, and Honorable Stephen P. Kennedy, Police Commissioner of the City of New York, Respondent-Appellees; John O'Rourke, Joseph De Grandis, Frank De Forte, Ernest Zundel, Herbert Jacob, Eugene Jacob, Lawrence Gallo, Joseph Gallo, Norman J. Clark, Jr., Charles De Forte, Anthony Pafumi, also known as Angelo Pafumi, Kenneth Ciazza, Pasquale Catroppa, Phillip Losquadro and Vincent Losquadro, Plaintiffs-Appellants* v. *Manuel W. Levine, individually, and as District Attorney of Nassau County, State of New York, and John M. Beckmann, individually, and as Commissioner of Police of Nassau County, State of New York, Defendants-Appellees.*)

Before: Lumbard, chief judge, Clark, Waterman, Moore and Friendly, circuit judges.

Plaintiffs appeal from judgments rendered by the U.S. District Courts for the Southern and Eastern Districts of New York, Frederick vanPelt Bryan, J., and Leo F. Rayfiel, J., respectively, in two suits denying preliminary injunctions in actions seeking to prohibit State officers from divulging in State criminal trials evidence obtained by them through the tapping of plaintiffs' telephone wires on the ground that introduction of such evidence would constitute a violation of section 605 of the Communications Act of 1934, 47 U.S.C. section 605. Judgments affirmed.

Herbert S. Siegal, New York, N.Y., for appellant Burton N. Pugach.

Emanuel Redfield, New York, N.Y., for the New York Civil Liberties Union, amicus curiae.

Irving Anolik, assistant district attorney, Bronx County (Isidore Dollinger, district attorney and Walter E. Dilon, assistant district attorney, Bronx County, on the brief), for appellees Isidore Dollinger and Stephen P. Kennedy.

Louis J. Lefkowitz, attorney general, State of New York, Samuel A. Hirshowitz, first assistant attorney general, George K. Bernstein, assistant attorney general, and Vincent A. Marsicano, assistant attorney general, amicus curiae.

Arthur Karger, New York, N.Y. (Zoloto & Karger, Jacques M. Schiffer, Price & Iovine and Leo Healy on the brief) for appellants John O'Rourke, et al.

Henry P. DeVine, assistant district attorney, Nassau County (Manuel W. Levine, district attorney, on the brief), for appellees Manuel W. Levine and John M. Beckmann.

Lumbard, chief judge:

The question for decision is whether a Federal court should enjoin State officers from divulging wiretap evidence in a State criminal trial, when introduction of this evidence will constitute the violation of a Federal criminal statute. In the two cases before us Judges Bryan and Rayfiel both refused to grant injunctive relief, and we affirm their judgments.

In No. 306, *Pugach* v. *Dollinger*, appellant and several others were indicted in November 1959 by the State of New York for burglary in the second degree, maiming, assault in the second degree and conspiracy. Their case was set for trial on January 7, 1960. About 2 weeks before the trial was to begin appellant brought this suit in the southern district of New York to enjoin the Bronx County district attorney, the New York City Police commissioner and their agents from making use at the state trial of evidence obtained by tapping appellant's telephone wires in June 1959 and of evidence obtained by the use of information overheard in the course of the tapping. The complaint alleged that, although the wiretap was obtained pursuant to state court authorization and in accordance with a state statute, its divulgence would constitute a violation of section 605 of the Communications Act of 1934, 47 U.S.C. section 605. It further stated that wiretap evidence had been introduced before the grand jury in obtaining appellant's indictment and that the district attorney intended to make use of such evidence at trial. The district attorney has not denied that he expects to use wiretap evidence, nor does he contest appellant's allegations that appellant will be subject to irreparable injury if convicted by means of such evidence. Judge Bryan, relying primarily upon *Stefanelli* v. *Minard* (342 U.S. 117 (1951), declined to grant a preliminary injunction and dismissed the complaint. *Pugach* v. *Sullivan* (180 F. Supp. 66 (S.D.N.Y. 1960). Upon motion by appellant, this court stayed introduction of the wiretap evidence, pending determination of the appeal.[1]

In No. 37 *O'Rourke* v. *Levine*, appellants are presently on trial in the Nassau County Court on an indictment charging them with conspiracy, extortion, attempted extortion and coercion. The selection of jurors began on February 1, 1960 and the taking of testimony started a week later. Suit in the eastern district of New York to enjoin the introduction of wiretap evidence was commenced on February 16, 1960. The allegations of the appellants' bill are substantially the same as those in the Pugach case though in O'Rourke the district attorney has stated on the record in the State court trial his intention to make use of wiretap evidence. Judge Rayfiel denied a preliminary injunction, distinguishing the grant of the stay pending appeal in Pugach on the ground that much greater disruption of the State court proceeding would result were the introduction of evidence in a trial already in progress enjoined. Both this court and subsequently Mr. Justice Harlan of the Supreme Court declined to stay the introduction of the wiretap evidence pending appeal.

We convened an en banc session of the court to hear these appeals.

The jurisdiction of the district courts was properly founded upon section 1337 of the Judicial Code, which states that "the district courts shall have original jurisdiction of any civil action or proceeding arising under any act of Congress regulating commerce. * * *" The Communications Act of 1934 is an "act of Congress regulating commerce." (See *Benanti* v. *United States* (355

[1] 2 Cir., Feb. 11, 1960, slipsheet p. 731. There were three opinions. Judge Medina voted to grant the stay on grounds that would lead equally to the grant of an injunction. Judge Waterman concurred in the grant solely to preserve the status quo lest the case become moot before the appeal could be decided. Judge Madden of the Court of Claims, sitting with the court by designation, dissented.

U.S. 96, 104–105 (1957)); cf. *Mulford* v. *Smith* (307 U.S. 38, 46 (1939).) Since the asserted right to relief is based upon section 605 of the Communications Act, a suit to protect the Federal right against impairment by State officers is a suit "arising under" the Federal statute (*A. F. of L.* v. *Watson* (37 U.S. 582, 590–591 (1946)).[2]

Section 605 of the Communications Act states in pertinent part: "No person not being authorized by the sender shall intercept any communication and divulge the existence, contents, substance, purport, effect, or meaning of such intercepted communication to any person." In *Nardon* v. *United States* (302 U.S. 379 (1937) and 308 U.S. 338 (1939)), the Supreme Court held that under section 605 evidence obtained from wiretapping by Federal officers was inadmissible in a Federal court. In *Schwartz* v. *Texas* (344 U.S. 199 (1952)), upon direct review of a State criminal conviction it was held that the use of the same kind of evidence obtained by State officers was not prohibited by section 605. The Court stated that it would not presume, in the absence of any clear manifestation of intent, that Congress intended to supersede a State rule of evidence permitting the introduction of evidence obtained by State officers and divulged in violation of a Federal statute. Two years ago, in *Benanti* v. *United States, supra,* the Court held that wiretap evidence obtained by State officers was not admissible in a Federal court, although the evidence was procured in accordance with a New York State statute authorizing wiretapping pursuant to Court order.[3] The Court reasoned that under section 605 Congress intended to exclude from use in the Federal courts evidence the divulgence of which would be unlawful, regardless of its source. Though the Court made clear that tapping coupled with divulgence was a violation of section 605, even when done pursuant to State law, it carefully distinguished the decision in *Schwartz* v. *Texas, supra.*[4]

Appellants contend that we should enjoin the defendants from introducing wiretap evidence in the State court trials, since the divulgence of this evidence will violate section 605. They contend that if we do not intervene, they will be subject to irreparable injury, because, if the evidence is introduced and they are found guilty their convictions will not be subject to reversal on appeal either under New York law. See *People* v. *Variano* (5 N.Y. 2d 391, 185 N.Y.S. 2d 1 (1959)), or Federal law, *Schwartz* v. *Texas, supra.*

The exercise of the power of a Federal court to grant equitable relief is a matter of discretion. In each case the court must balance the factors for and against the use of its power. See *Douglas* v. *City of Jeanette* (319 U.S. 157 (1943)). Here we think that the district courts properly concluded that the balance weighs against the exercise of the power to grant injunctive relief. We agree that in the circumstances of these two cases a Federal court should not intervene in criminal prosecution by a State for violation of its criminal laws. See *Voci* v. *Storb* (235 F. 2d 48 (3 Cir. 1956)).

Both Congress and the Supreme Court have often indicated their concern for the preservation of the balance between the States' administration of their laws and the use of Federal equity power by restriction or withholding of the power of the Federal courts. See, e.g., 28 U.S.C., sections 1342, 2283; *Stefanelli* v. *Minard, supra; Watson* v. *Buck* (313 U.S. 387 (1941)); *Maryland* v. *Soper* (270 U.S. 9, 270 U.S. 36, and 270 U.S. 44 (1926)). Moreover, Congress, in section 501 of the Communications Act, has provided that violation of section 605 shall be a misdemeanor,[5] and we have held that section 605 creates a civil action for damages in favor of one whose line is tapped. *Reitmeister* v. *Reitmeister* (162 F. 2d 691 (2 Cir. (1947)). Finally, we cannot overlook the long recognized principle of equity, based upon the policy of preserving the right to jury trial, that a court should not enjoin the commission of a crime. With these factors in mind, we do not think that a Federal court should interfere with the prosecution of a State criminal proceeding in order to provide an additional means of vindicating any private rights created by section 605.

We are guided in our determination by the decision of the Supreme Court in *Stefanelli* v. *Minard, supra.* There the Court held that a Federal court should refuse to intervene in a State criminal proceeding to enjoin the use of evidence claimed to have been secured by an unlawful search and seizure contrary to the fourth amendment. The plaintiff's claim in Stefanelli was closely analogous to that made here—that since under *Wolf* v. *Colorado* (338 U.S. 25 (1949)), admission in a State court of evidence obtained by an unlawful search and seizure would not be ground for reversal of the conviction, a Federal court should enjoin the introduction of such evidence. Mr. Justice Frankfurter's statement of the reasons for refusing injunctive relief in Stefanelli are equally applicable here:

"The consequences of exercising the equitable power here invoked are not the concern of a merely doctrinaire alertness to protect the proper sphere of the States in enforcing their criminal law. If we were to sanction this intervention, we would expose every State criminal prosecution to insupportable disruption. Every question of procedural due process of law—with its far-flung and undefined range—would invite a flanking movement against the system of State courts by resort to the Federal forum, with review if need be to this Court, to determine the issue. Asserted unconstitutionality in the impaneling and selection of the grand and petit juries, in the failure to appoint counsel, in the admission of a confession, in the creation of an unfair trial atmosphere, in the misconduct of the trial court—all would provide ready opportunities, which conscientious counsel might be bound to employ, to subvert the orderly, effective prosecution of local crime in local courts. To suggest these difficulties is to recognize their solution"—(footnotes omitted) 342 U.S. at 123–124.

It is urged that Stefanelli differs from the cases before us in that there the violation of Federal law was the unlawful search itself, which had already taken place at the time of the suit for injunctive relief and which the Federal court could therefore not prevent, while here the very act of divulging the evidence will constitute the commission of a Federal crime. The distinction is not persuasive. The decision in Stefanelli was placed on no such narrow ground, but was the expression of a general policy against "piecemeal" intervention by the Federal courts in State proceedings for the purpose of litigating collateral issues. Moreover, the fact that the divulgence of the evidence sought to be enjoined will constitute the commission of a crime is not significant, since the plaintiffs must prevail, if at all, by vindication of their own rights under section 605, not by collateral enforcement of the rights of the United States to prosecute under section 501. As the Supreme Court said in *Schwartz* v. *Texas, supra,* at page 201, "the introduction of the intercepted communications would itself be a violation of the statute" is "simply an additional factor for the State to consider in formulating a rule of evidence for use in its own courts. Enforcement of the statutory prohibition in section 605 can be achieved under the penal provision of section 501."

Neither do we find it a persuasive ground of distinction that Stefanelli was an isolated case of Federal law violation in New Jersey rather than what is called a consistent pattern in New York. Indeed, it could be argued that the constant conflicts that would be engendered between Federal and State courts in an effort to deal with such a pattern would make this an a fortiori case for

---

[2] Whether jurisdiction may also lie under 28 U.S.C. sec. 1343(3) we do not decide.

Sec. 1343 provides in part:

"The district courts shall have original jurisdiction of any civil action authorized by law to be commenced by any person:

* * * * *

"3. To redress the deprivation, under color of any State law, statute, ordinance, regulation, custom or usage, of any right, privilege or immunity secured by the Constitution of the United States or by any act of Congress providing for equal rights of citizens or of all persons within the jurisdiction of the United States."

In *McGuire* v. *Amrein* (101 F. Supp. 414 (D. Md. 1951)), the court held that it did not have jurisdiction of a suit identical in nature to that here under sec. 1343(3), since sec. 605 is not an "act of Congress providing for equal rights of citizens" as that phrase is used in sec. 1343(3). In *Stefanelli* v. *Minard* (342 U.S. 117 (1951)), the Supreme Court reserved the question whether jurisdiction lay under sec. 1343(3) in a suit to enjoin the introduction of evidence in a State trial on the ground that the evidence was obtained by means of an unlawful search and seizure.

[3] Sec. 813a of the New York Code of Criminal Procedures, under which the wiretap orders were issued in Benanti and in the cases before us states in part:

"An ex parte order for the interception, overhearing or recording of telegraphic or telephonic communications may be issued by any justice of the supreme court or judge of a county court or of the court of general sessions of the county of New York upon oath or affirmation of a district attorney, or of the attorney general or of any officer above the rank of sergeant of any police department of the State or of any political subdivision thereof, that there is reasonable ground to believe that evidence of crime may be thus obtained and identifying the particular telephone number or telegraph line, and particularly describing the person or persons whose communications are to be intercepted, overheard, or recorded and the purpose thereof. * * * Any such order shall be effective for the time specified therein but not for a period of more than 2 months unless extended or renewed by the justice or judge who signed and issued the original order upon satisfying himself that such extension or renewal is in the public interest."

Sec. 813a was originally enacted in 1942 pursuant to art. 1, sec. 12, par. 2 of the New York constitution, adopted in 1938, which states:

"The right of the people to be secure against unreasonable interception of telephone and telegraph communications shall not be violated, and ex parte orders or warrants shall issue only upon oath or affirmation that there is reasonable ground to believe that evidence of crime may be thus obtained, and identifying the particular means of communication, and particularly describing the person or persons whose communications are to be intercepted and the purpose thereof."

[4] Whether both a tapping and a divulgence are necessary for a violation of sec. 605 was specifically reserved by the Supreme Court in Benanti. See 355 U.S. at 100 n. 5. Since both elements are involved here, we need not consider whether tapping alone is lawful.

[5] Convictions have been upheld under section 501 for violation of section 605. E.g., *United States* v. *Gris* (247 F. 2d 860 (2 Cir. 1957)).

refusal to interfere. We have no reason to think that issuance of injunctions in these two cases would lead New York prosecutors to desist from this time forward from offering wiretap evidence in New York courts as permitted by the law of that State. On the contrary, the district courts would be flooded with suits for injunctions against the use of wiretap evidence and its alleged fruits in the State courts, with the consequent necessity of determining just what evidence was proposed to be introduced and whether the trial had reached such a stage that vindication of the Federal right should be subordinated to practical considerations of state law enforcement; and all these determinations would be subject to appeal, with the prosecution obstructed in the meanwhile. Our respect for the supremacy clause is deep and abiding. But, as recognized in *Stefanelli* v. *Minard*, direct interference by Federal courts in State criminal trials is quite a different matter from the analogies suggested by our brother Clark.

The stay granted by this court in *Pugach* v. *Dollinger* is vacated. The judgments are affirmed.

Waterman, circuit judge, concurring:

I concur in the result reached in both cases by the majority of the court; but I believe I should separately state certain individual views.

The injunction sought by petitioners in *O'Rourke et al.* v. *Levine* must be denied. A jury had been impaneled, trial had already begun, and some testimony had already been adduced, when the district court was importuned to affect future trial developments by an injunction order which, if granted, might limit the people's further proof. The disruptive complications that ensue when Federal judicial power is exercised to interfere with a State court criminal trial after testimony has been received there clearly dictate that we affirm the action below. A proper respect for the relation of the United States to the States and the courts of the States under these circumstances permits, in my belief, no other result. If at trial it appears that section 605 of the Federal Communications Act is violated by an unauthorized divulgence by a witness under oath of an intercepted communication the United States can enforce that violation against the witness by prosecuting him under section 501 of that act. In fact, as I read the opinion of the Chief Justice speaking for a unanimous court in *Benanti* v. *United States* (355 U.S. 96, at 103–106), even though the interception was authorized by a New York State wiretap order, the divulgence would be such a clear violation of the Federal Communications Act that Federal prosecuting officers would be expected to so prosecute.

Though I also concur in the result the majority reaches in *Pugach* v. *Dollinger and Kennedy*, the problems presented to us in that situation are much more difficult to resolve. There trial is not underway, and an injunction issued by us in the exercise of our equity powers to preserve compliance with "the supreme law of the land; anything in the constitution or laws of any State to the contrary notwithstanding," will not disrupt a trial or create any confusion. Forbidding the introduction of wiretap testimony at a trial not yet begun would only serve to prevent counsel from introducing certain material; it would neither stay the criminal prosecution itself, nor embarrass the progress of a trial, nor require a mid-trial shift of strategy. And though New York, as well as the two other States in our circuit, does not inquire how offered evidence was obtained, the quashing of wiretap evidence in advance of trial would not appear to be an unwarranted intrusion by us into State affairs inasmuch as the Federal Government has a very special interest in this field, an interest set forth by Congress in the Federal Communications Act with such thoroughness as to preempt the States from regulation save for certain stated exceptions not here applicable (*Benanti* v. *United States*, 355 U.S. 96, 103–106 (1957)).

I receive the impression from reading the majority opinion that the majority, although having a deep and abiding respect for the supremacy clause, does not think that a Federal court should ever interfere with the prosecution of a State criminal proceeding.

To such doctrine I cannot subscribe.

In order to preserve as best can be the pluralism of our form of Government it is true that in the exercise of a proper judicial self-restraint we should ever hesitate to interfere with State criminal proceedings—even as here—where it is claimed that unless we do interfere there will be open and overt violations of an act of Congress.

But it is also true that though, as a general policy, we should refuse to act, there are "exceptional cases which call for the interposition of a court of equity to prevent irreparable injury which is clear and imminent"—Chief Justice Stone speaking for the Court in *Douglas* v. *City of Jeannette* (319 U.S. 157 at 163).

Pugach v. *Dollinger* is an exceptional case, and it may well be that Judge Clark and Judge Medina are soundest in their approach to the problems it poses. I have hesitated to agree with them only because I have faith that there is no clear irreparable injury to Pugach at this time. I assume, arguendo, that divulgence of information obtained by wiretap at his Bronx County trial will do Pugach irreparable injury; but I am not willing also to assume that a New York State trial judge will permit such evidence to be admitted over the objection of defense counsel. After all, New York State judges, as we, were bound when they took office, to support the Constitution of the United States; and they are fully cognizant of article VI, clause 2 thereof:

"2. This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

Schwartz v. *Texas* (344 U.S. 199 (1952)), and *Benanti* v. *United States*, *supra*, make clear, and all the opinions of the court in the present case recognize, that divulgence of the contents of a wiretap unless the divulgence is authorized by the sender will constitute a violation of sections 605 and 501. It is therefore presumptuous to assume that any New York State trial judge will acquiesce to the commission of a crime against the United States in his presence in his courtroom by a witness testifying under oath.

Though I hope I have made myself clear that I expect that no evidence of intercepted communications will be admitted at trial and that it is principally because of this belief that I concur in the result reached by the majority, nevertheless if I believed otherwise I might still refuse to issue an injunction under the doctrine of *Douglas* v. *City of Jeannette*, *supra*. If the offered evidence is admitted, despite Benanti, supra, and if Pugach is convicted and his conviction is affirmed by the New York Court of Appeals—see *People* v. *Dinan* (6 N.Y. 2d 715, 185 N.Y.S. 2d 806 (1959), cert. denied, 361 U.S. 839); *People* v. *Variano* (5 N.Y. 2d 391, 185 N.Y.S. 2d 1 (1959))—even then that conviction is subject to review by the Supreme Court. This possibility of a final Federal review of a Federal question is perhaps enough so that under *Douglas* v. *City of Jeannette*, *supra*, Pugach may have an adequate remedy at law; and an injunction ought not to issue.

Where a State persistently sanctions violation of Federal law, due process considerations may arise, see Judge Medina's concurring opinion in *United States ex rel. Graziano* v. *McMann* (2 Cir. Feb. 11, 1960). As I indicated in my majority opinion in Graziano, I am unpersuaded for I believe *Schwartz* v. *Texas* to be controlling. But my opinion in that case is hardly the final one, and since Judge Medina's position is well-reasoned, it affords plaintiffs something more than a faint prospect that his expected State conviction will be reviewable by the Supreme Court on certiorari. The precise question has never been decided, and in light of the dicta in *Salsburg* v. *Maryland* (346 U.S. 545 (1954)) and *Wolf* v. *Colorado* (338 U.S. 25 (1948)), the possibility of direct review is strong enough to justify my concurrence in the result reached by the majority. Nor should we overlook the possibility that the Supreme Court might grant certiorari to reconsider *Schwartz* v. *Texas*.

Furthermore, I should point out that I not only differ from the majority wherein they apparently suggest that a Federal court should never interfere with a State criminal prosecution, but I also differ from them wherein they rely for their result upon the doctrine expressed in *Stefanelli* v. *Minard* (342 U.S. 117 (1951)). Without in the least detracting from the force of that opinion it is my belief that that case and its doctrine are alike inapplicable here. In Stefanelli whatever Federal crime was present had been fully committed before the Federal court was importuned to interfere with the State court proceedings. Here the threatened commission of Federal crime is sought to be prevented by an application for relief to a Federal court in advance of the occurrence. In the unlikely event a person were officially advised that his home was to be illegally searched by State officers on a particular date, I would suppose he could readily obtain injunctive relief from a Federal court. It would be in this posture of affairs that the two situations would be similar.

One final point needs to be made. Normally it is not the province of a member of the Federal judiciary to suggest to a U.S. district attorney how he should perform his duties.

I point out that in oral argument before this court sitting in banc counsel for the Pugach respondent-appellees did not deny that it was planned to offer wiretap evidence at that trial, and thereby did not deny to five Federal judges in open court an intent to commit a Federal crime. If such a crime is committed and remains unprosecuted after it has been stated by the U.S. Supreme Court in *Schwartz* v. *Texas*, *supra*, at page 201, and by us here that the interests of the United States may be adequately protected through enforcement of the penal provisions of section 501, there will have been a most extraordinary affront to this court. Accordingly I ask that the U.S. district attorney for the southern district of New York follow the proceedings in *People* v. *Pugach* with the closest attention. Similarly, I invite the attention of the U.S. district attorney for the eastern district of New York to the proceedings in *People* v. *O'Rourke, etc.*

Clark, circuit judge (dissenting):

In its latest pronouncement upon the issue, the Supreme Court of the United States has refused to find exception for State officers from the sweeping Federal ban on unauthorized interception and divulgence of "any communications," contained in section 605 of the Federal Communications Act, 47 U.S.C. section 605. Speaking through the Chief Justice of the United States, a unanimous Court finds "that Congress, setting out a prohibition in plain terms, did not mean to allow State legislation which would contradict that section and that policy."

And it points out the failure of Congress to grant exceptions, though strongly importuned to do so (*Benanti* v. *United States*, 355 U.S. 96, 105, 106).

Notwithstanding its decisive character, there is nothing surprising in the Court's statement; indeed, it would have been surprising had the Court said less. For the absolute character of the prohibition has been steadily emphasized over the years and the attempt to make the statute say less than it does has been conspicuously unsuccessful. So we must accept the interpretation that wiretapping, whether by State officers or by anyone else, is simply and shortly forbidden by Federal law, subject to severe penalties of fine and imprisonment (47 U.S.C., sec. 501). Attack must therefore be limited to the need of new legislation because of its hampering effects on law enforcement if prosecuting officials cannot have the benefit of at least controlled wiretapping. Involved are surely weighty arguments of public policy which the legislative body should weigh.[1] But these arguments have not as yet prevailed with the only governmental agency having authority to act to modify the existing law, and I do not see how they can affect the responsibility of U.S. judges to enforce that law. Hence for us I see no escape but to start with the premise that we are faced with repeated open and acknowledged violations of Federal law which we are assured will be continued until and unless Federal authorities intervene.

Thus we have an absolute impasse going so far as to be almost ludicrous if the issue were not so fundamentally serious. It seems generally conceded that wire tapping is an evil thing, particularly when employed by criminal or underworld characters and their associates. Yet it has not been possible to enforce the law against such persons when at the same time it is not enforced against even more open violators, albeit with loftier motives.[2] Thus one restrained comment puts it mildly: "Weighing the individual's right to privacy against the need for effective detection of criminals, we are met with the kind of conflict of values which characterizes many areas of our law and our social organization. In the case of wiretapping, however, this competition of social interests has resulted in a dangerous stalemate—a failure to find a workable adjustment—which leaves Mr. Smith, the average citizen, at the mercy of the more ruthless in our population. For, despite the statutes and judicial decisions which purport to regulate wiretapping, today this practice flourishes as a wide-open operation at the Federal, State, municipal, and private levels." (Westin, "The Wire-Tapping Problem: An Analysis and a Legislative Proposal," 52 Col. L. Rev. 165, 167 (1952).)

Professor Westin goes on to point out (from a careful analysis of congressional hearings and other cited material) how this stalemate affects the lives and fortunes of ordinary citizens, as well as others, and how the criticized practice taps the conversation of public officials in every sort of Government agency, of businessmen in business organizations, of private persons for purposes as diverse as labor espionage or securing evidence of a wife's infidelity, and with schools or training centers for instructing telephone tappers.[3] More recently a detailed study sponsored by the Pennsylvania Bar Association endowment shows much of wiretapping in action, with a description of "The Tools" and with detailed investigation particularly of police activities in several important metropolitan areas, including New York. See Dash, Schwartz and Knowlton, "The Eavesdroppers," 35 et seq. (1959). This suggests a much more prevalent practice than many officials have been willing to admit, although even the conceded number of ex parte court orders issued under the New York statutes appears quite adequate to show the pattern.[4] And other material of like effect is extensively available.[5]

In sum it is beyond dispute that there is a general, indeed universal, custom of Federal law violation. Now this is a distressing situation, made not less so that in the eyes of many worthy citizens it is required by the asserted exigencies of successful law administration. But it is not an unusual situation. For actually it is a clash between Federal and State governmental policies. As such it is a recurring struggle in our history and quite possibly a necessary one to a Federal form of government.[6] In the past we have found ways of meeting and solving the problem. Of course there are several forms of remedy; but the one to which there seems continual return when other remedies fail is the resort to the equity powers of the Federal courts to enjoin repeated violations of the criminal law. This is an old and well-established ground of equity jurisdiction, naturally to be resorted to only reluctantly as against State officials, but nevertheless thoroughly recognized. Thus the authority of U.S. courts to enjoin State officials, including prosecutors and others, from repeated violations of overriding Federal law has long been upheld in a variety of circumstances such as alien land ownership, rate regulation, closed shop and railroad tariff laws, and the like. Thus, for example, see *American Federation of Labor* v. *Watson* (327 U.S. 582); *West Virginia State Board of Education* v. *Barnette* (319 U.S. 624, 147 A.L.R. 674); *Watson* v. *Buck* (313 U.S. 387); *Hague* v. *C.I.O.* (307 U.S. 496); *Sterling* v. *Constantin* (287 U.S. 378); *Terrace* v. *Thompson* (263 U.S. 197); *Ex parte Young* (209 U.S. 123); *Smyth* v. *Ames* (169 U.S. 466, modified 171 U.S. 361). And see also *Rea* v. *United States* (350 U.S. 214), upholding an injunction preventing a Federal agent from transferring federally suppressed evidence to a State court or there testifying.

Directly in point also and perhaps most persuasive of all in view of the close analogy are the modern segregation cases. Thus see *Brown* v. *Board of Education of Topeka* (347 U.S. 483, 38 A.L.R. 2d 1180, 349 U.S. 294); *Cooper* v. *Aaron* (358 U.S. 1); *Harrison* v. *National Ass'n for the Advancement of Colored People* (360 U.S. 167, 179); *Faubus* v. *United States* (8 Cir., 254 F. 2d 797, certiorari denied 358 U.S. 829); *Clemons* v. *Board of Ed. of Hillsboro, Ohio* (6 Cir., 228 F. 2d 853), certiorari denied *Board of Ed. of Hillsboro, Ohio* v. *Clemons* (350 U.S. 1006). As these cases all demonstrate, a suit against a State officer violating Federal law is not within the prohibition of actions against a State. See also Judge Parker's complete statement in *School Bd. of City of Charlottesville, Va.* v. *Allen* (4 Cir., 240 F. 2d 59, certiorari denied 353 U.S. 910).

All these questions of jurisdiction the majority opinion herewith concedes, including the irreparable injury sustained. I agree thoroughly with the principles here stated; but that leaves only *Stefanelli* v. *Minard* (342 U.S. 117), and the question of the niceties of the exercise of Federal equity jurisdiction left to give us pause. For Stefanelli recognizes the jurisdiction of equity and emphasizes only the restraint which the Federal court should show against interfering with State criminal processes. I agree wholeheartedly, but ask (as was asked with respect to Little Rock schools, martial law in the Texas oil fields, and other historic Federal-State clashes), When does enough of Federal law violation become too much? The facts rehearsed above demonstrate in my opinion that only by the course of Federal injunction will the present impasse be resolved. *Schwartz* v. *Texas* (344 U.S. 199), shows that the way is not by appeal from a conviction already had; indeed it confirms the view that this is the one healthy and direct and complete solution. A clean excision is better than continuous mangling. Involved in Stefanelli was an isolated case of Federal law violation, not a consistent pattern as here. Also to be noted is the less direct compulsion of the Federal law there, since the fourth amendment does not touch the problem of communication and evidence directly; no Federal crime was there involved; and the damage had already been

[1] That the legislative is the correct and indeed the only approach to a solution is the tenor of a discriminating article by the chairman of the New York joint legislative committee to study illegal interception of communications. Savarese, "Eavesdropping and the Law," 46 A.B.A.J. 263 (1960). See also Gerhart, "Let's Take the Hypocrisy Out of Wiretapping," 30 N.Y. St. B. Bull. 268 (1958); Williams, "Wiretapping Should Be Liberalized," 30 N.Y. St. B. Bull. 261 (1958).

[2] There appears to have been only one successful prosecution under the statute (*United States* v. *Gris* (2 Cir., 247 F. 2d 860)). James R. Hoffa was prosecuted and acquitted. See Savarese, supra note 1, at 266.

[3] 52 Col. L. Rev. 165, 167, 168 (1952), quoted by Professor Donnelly of Yale in his careful article, "Comments and Caveats on the Wire Tapping Controversy," 63 Yale L.J. 799 (1954).

[4] In "Wiretapping in New York," 31 N.Y.U.L. Rev. 197 (1956), the figures for the orders received by the telephone company in New York City are given, viz, 1135 orders (good for 90 days) affecting 1954 wires for the year 1954 and 1,013 orders affecting 1,662 wires for the year 1953. The defendants take exception to the figures given by Mr. Justice Douglas, An Almanac of Liberty 355 (1954), but quote approvingly those given by Brown and Peer, "The Wiretapping Entanglement; How to Strengthen Law Enforcement and Preserve Privacy," 44 Cornell L.Q. 175, 183 (1959), as being a total of 480 orders in New York City in 1952. In Dash, Schwartz and Knowlton, The Eavesdroppers, 39 et seq., 68, 69 (1959), the authors suggest that Mr. Justice Douglas' estimate properly refers to wiretaps, not orders, and then making their own estimate of from 16,000 to 29,000 wiretaps a year, also suggest that the Justice's estimate is thus "closer to the truth than the figures submitted by the police to the Kings County prosecutor." More lately Mr. Dash has given an estimate of from 13,000 to 20,000 wiretaps per year. Hearing before the Subcommittee on Constitutional Rights of the Committee on the Judiciary, U.S. Senate, 86th Cong., 1st sess., pursuant to S. Res. 62, pt. 3, "Wiretapping, Eavesdropping, and the Bill of Rights," 520–521 (1960).

[5] Earlier citations are given by Professor Donnelly, in the article cited in note 3 supra. Later references appear in 57 Col. L. Rev. 1159 (1957); 26 Ford. L. Rev. 540 (1957); 31 N.Y.U.L. Rev. 197 (1956); 67 Yale L.J. 932 (1958); and Dash, Schwartz and Knowlton, The Eavesdroppers, 443, 458 et seq. (1959), including also references to congressional and New York State legislative hearings. See also the statements and articles by law professors and others in the hearing cited supra note 4, at 566–714.

[6] See Demet, "A Trilogy of Massive Resistance," 46 A.B.A.J. 294, 296 (1960):

"As demonstrated, disobedience, disrespect, and massive resistance to the mandates of the U.S. Supreme Court are relatively old historical concepts practiced by various of the sovereign States of the Union when it was felt the Court trespassed into spheres in which the various States had ideological and sociological views contrary to the edicts and mandates of the Court.

"It is interesting to speculate what the State courts would have done if the segregation cases had reached the Supreme Court by way of State courts, and not the Federal courts."

done.[7] Carefully considered I regard Stefanelli as authority showing the need and the utility of the action I urge, rather than to the contrary.

Consequently I am persuaded by and would follow the good opinion of Judge Medina upon the grant of a stay in this case (*Pugach v. Dollinger* (2 Cir., Feb. 11, 1960)). I also note that two State justices have reached a like conclusion and decline to proceed further in wiretapping. (Matter of Interception of Telephone Communications (9 Misc. 2d 121, 170 N.Y.S. 2d 84, Hofstadter, J.); Application for an Order Permitting the Interception of Telephone Communications of Anonymous (207 Misc. 69, 136 N.Y.S. 2d 612, Hofstadter, J.); Application for Order Permitting Interception of Telephone Communications (28 U.S.L. Week 2446 (N.Y. ct. gen. sess., N.Y.C., Mar. 7, 1960), Davidson, J.)).[8] These cases not only illustrate the uncertain and anomalous position into which State judges are now thrust, but also are good examples to U.S. judges. In the first case cited here, Mr. Justice Hofstadter makes a very pointed allusion to the mandate of the United States Constitution that laws made pursuant to it are "the supreme law of the land," binding upon us all, "anything in the constitution or laws of any State to the contrary notwithstanding" (United States Constitution, art. VI, cl. 2). This reminder from a distinguished State brother of the necessity for obedience to the "supreme law" ought to go far to allay the fear expressed that the State officials will defy this law, even after it has been authoritatively defined in the course of this litigation, and that the Federal courts will be flooded with actions to curb this defiance. For my part I entertain no such fear of either the defiance or the flood of cases; and hence I forego comment on the implication that mere number of applications may bar the right to equity relief. On the contrary I venture to believe that our State brothers and colleagues in law enforcement, both on the bench and in the prosecuting offices, will welcome definitive resolution of the present hopeless stalemate and will hasten to comply with the requirements of law as soon as they are made clear.

I would reverse the judgments below for the issuance of the injunctions sought.

INSURANCE CORPORATION ARGUES THAT IF STATUS QUO PREVAILS AMERICA WILL NOT

Mr. PROXMIRE. Mr. President, it is of course rare that a business corporation will pay thousands of dollars in advertising to propose that what this country needs are new ideas in government—a willingness to change and move ahead—to overcome the classroom shortage, understaffed hospitals, slums, and inadequate defense. It is unusual for a business organization to urge more Government action rather than less—particularly in an advertisement.

It is also unusual when a Senator inserts into the CONGRESSIONAL RECORD an advertisement; but because the ad of the Nationwide Insurance Co., a concern of which I had never heard until I read this week's Time magazine, does all these things, I ask unanimous consent that pertinent portions of it be printed in the RECORD at this point.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

STATUS QUO SEEKER

Do you recognize him? Maybe he's a family friend or business associate. Maybe he holds public office up at city hall—or down in Washington. He meets practically all problems with: "Let well enough alone." Overcrowded classrooms? Understaffed hospitals? Big city slums? Threats of nuclear war? You'll never get a suggestion for solving these problems from him. You'll hardly get a sympathetic ear. Wedded to the present, indifferent to the future, he abhors experimentation and resists any new idea. Yet new ideas, it seems to us, are precisely what America now needs—really new ideas—plus the willingness of each of us to welcome them with open minds and to speak up for all those ideas that are worthy. Otherwise, the "status quo seeker" will prevail, and America will not.

CREDIT ABUSES

Mr. PROXMIRE. Mr. President, the need for the passage of the Douglas truth-in-credit bill has been demonstrated by many witnesses before the Banking and Currency Committee in recent weeks. This morning's Wall Street Journal suggests an argument in support of the Douglas bill that has been given little or no previous attention. It provides solid evidence from the Nation's leading financial daily paper of the tragic consequence of the fantastic boom in installment credit to many American families.

I ask unanimous consent that this article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

[From the Wall Street Journal, Apr. 21, 1960]

BUSINESS BULLETIN—A SPECIAL BACKGROUND REPORT ON TRENDS IN INDUSTRY AND FINANCE

Credit abuses are blamed for the mounting number of bankruptcies.

"There's been a tremendous increase in installment selling, which induces unthinking persons to go into debt beyond their ability to pay," says a Los Angeles bankruptcy referee. Business bankruptcies, as well as individual bankruptcies, are caused basically by overextension of credit, claims a referee of the U.S. District Court of Northern Illinois. He predicts a 20- to 30-percent increase in bankruptcy proceedings this year in that court; individual voluntary bankruptcies are expected to account for 90 percent of the total.

The Bankruptcy Division of the U.S. Courts seeks additional funds to handle an expected record of 110,000 bankruptcies in the year beginning July 1, up from 105,000 in the current fiscal year. "It's hard to keep up," even though "we're using a lot of IBM equipment," says an official. A review of recent filings in Denver shows the typical bankrupt is age 32, has three children under 15, makes $350 monthly and has monthly payments of $200.

Dun & Bradstreet says business failures in March were the highest since May 1958.

AWARD TO HON. OREN HARRIS AS LEGISLATIVE MAN OF THE YEAR

Mr. FULBRIGHT. Mr. President, on April 8, 1960, there was bestowed upon my distinguished colleague, Representative OREN HARRIS, of Arkansas, the Air Freight Forwarders Association Public Service Award as "Legislative Man of the Year," at the third annual dinner of the association held in the Waldorf-Astoria Hotel, New York. This emblem of reward reflects the esteem in which the air freight forwarding industry regards our colleague's contribution to the transportation field and the public interest. I ask unanimous consent that the citation which appears on the bronze plaque presented Representative HARRIS be printed at this point in the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION ON PLAQUE FOR AIR FREIGHT FORWARDERS ASSOCIATION PUBLIC SERVICE AWARD TO CONGRESSMAN OREN HARRIS

To OREN HARRIS, a legislator whose courage and wisdom have made his voice known and respected where this country's laws are made, who has championed the public interest without impairing private rights, who has displayed the rare capacity for distinguishing between special pleading and legitimate advocacy, who has manifested the democratic talent for separating irresponsible abuse of power from penetrating inquiry. His work in the Congress has brought a new dimension to legislative examination.

As technological revolutions have bred new and pressing problems, each age has always called upon its leaders to help meet the crisis. The air age, now upon us, with its infinite widening of horizons is one of history's great challenges. OREN HARRIS has evidenced that singular combination of resoluteness and flexibility needed to point the way for the American people to meet this new challenge.

The future will profit much from his perceptive leadership.

WINTER OLYMPIC GAMES, 1960

Mr. ENGLE. Mr. President, a few weeks ago the United States was the official host to the VIII international winter Olympic games. These games brought together more than 1,000 of the world's most outstanding winter sport athletes.

Another 1,500 persons—coaches, press representatives, and officials from three dozen nations—made up the official delegation. Nations from both sides of the Iron Curtain intermingled and competed in a true sportsmanlike manner. Fine sportsmanship was shown by the Russian hockey team captain when he gave the Americans the advice which helped them win the championship they so justly deserved. I feel that the games contributed greatly toward improving world understanding and bettering the chances of world peace.

I should like to call attention to the very significant part that a close friend of mine played in bringing this great international project to the United States. He is Representative HAROLD T. "BIZZ" JOHNSON, who now represents the Second

[7] Hence for the exercise of a court's discretion there is a real difference between a completed case and one which is still pending, as we have held in *United States ex rel. Graziano v. McMann* (2 Cir., Feb. 11, 1960). This difference might serve to distinguish the *O'Rourke* case here from that of Pugach. Thus, there is much more reason to refuse an injunction in O'Rourke. On the whole, however—except and unless the trial has proceeded further than was evident at our hearing—I do not believe the *O'Rourke* case has gone so far but that justice will be better served by the issuance of an injunction there also.

[8] So held also by Judge Rayfiel in *Burack v. State Liquor Authority of State of N.Y.* (D.C.E.D.N.Y., 160 F. Supp. 161).

District of California—the district I had the privilege of representing for 15 years before coming to the Senate.

Representative JOHNSON first became interested in obtaining the 1960 winter Olympic games for California in 1954, when he was a member of the California State Senate, representing Placer, Sierra, and Nevada Counties. In 1954 the Placer County Chamber of Commerce and Mr. Alex Cushing, a Squaw Valley resort owner, approached BIZZ JOHNSON with the ambitious suggestion that the games be staged at Squaw Valley, Calif. On the opening day of the 1955 State legislature, Senator JOHNSON introduced California Senate bill 1—the enabling legislation which created the California Olympic Commission and gave that agency the responsibility of providing all facilities for the Olympic games. The bill, carrying with it an appropriation of $1 million was signed into law by Gov. Goodwin J. Knight.

In 1955 the State of California asked the Congress of the United States to pass a joint resolution giving official sanction to the invitation of the U.S. Olympic Association to hold the 1960 Olympic games at Squaw Valley. The resolution was approved by Congress and signed by the President—and this document was presented to the International Olympic Committee at its Paris meeting in 1955.

BIZZ JOHNSON'S activities did not stop after he got the ball rolling.

In 1956 he went to Italy to represent the Placer County Chamber of Commerce at the 1956 winter Olympics at Cortina D'Ampezzo. There—in conferences with the International Olympic Games Committee—the stage was set for the 1960 games and the preliminary plans and specifications approved by the committee. On his return to California, Senator JOHNSON succeeded in his efforts to get the Governor and the legislature to approve the authorization of an additional $4 million needed to set up the games. After that, with the unanimous approval of the international committee which encourages the development of permanent winter sport areas, the decision was made to make the 1960 Olympic facilities into a permanent unit of the California State park system. In 1957, Senator JOHNSON introduced legislation to appropriate an additional $2,990,000 required to make the installation permanent. Another $1 million was later authorized to guarantee performance against adverse weather conditions. This brought the State's contribution toward the 1960 winter Olympics to a total of $7,990,000.

Final architect and engineering plans indicated that additional funds would be required to build the permanent facility. The U.S. Congress cooperated by acting favorably on a bill authorizing $3½ million for construction of the main arena on Federal land to be leased to the State of California. In addition, Congress made funds available for participation of military personnel and equipment. Without such congressional action, the games could not have been staged.

The total cost of the highly successful 1960 Olympic games was about $20 million, including some $5 million in private capital.

Representative HAROLD T. JOHNSON is the public official most directly responsible for getting the 1960 winter Olympics held in California. We were therefore very pleased to see that he received official recognition for his outstanding contribution when the mayor of Cortina at the Squaw Valley opening ceremonies presented BIZZ with the international Olympic games flag.

The impact of the 1960 Olympic games has and will be felt by California in several ways—in our State's added prestige around the world; in the stimulated business activity not only in the Second District but in the entire State; and in the heightened interest in developing and utilizing the State's great recreational resources and facilities.

In January 1959, BIZZ JOHNSON brought to Washington a fine record as an effective legislator. He is demonstrating that same effectiveness as California's Congressman from the Second District. In the brief period that he has been here he has more than justified the confidence of the people of the Second District—and won the affection, admiration, and respect of his colleagues in the House of Representatives.

JUVENILE COURT JUDGESHIP BILL DELAY CAUSES HARDSHIPS

Mr. MORSE. Mr. President, the conscience of the Washington community is shocked, as indeed should be the collective conscience of the Congress, by the effects upon youngsters under the jurisdiction of the juvenile court of the District of Columbia of the delay in approving legislation to provide the two additional judges for the juvenile court found to be necessary by hearings held on February 4 and February 11, 1959, before the Judiciary Subcommittee of the Senate Committee on the District of Columbia under the able leadership of its chairman, the distinguished Senator from Indiana [Mr. HARTKE].

The Senate will recall that S. 1456 was reported by the Senate Committee on the District of Columbia on March 18, 1959, and that it passed the Senate on April 10, 1959.

It is now over a year since Senate action upon the bill and it languishes still on the other side of Capitol Hill. It is true hearings have been held—on July 23, December 10, and December 11, 1959—but as yet this badly needed remedial legislation, long overdue, has yet to receive the sanction of the House committee or floor action.

Mr. President, I have been informed that as of March 31, 1960, the court had a backlog of cases amounting to 1,569. These unheard cases involved 555 juvenile actions, 582 paternity cases, 403 nonsupport cases, and 29 cases involving such adult charges as those encompassed under the headings of contributing to the delinquency of a minor, violation of the compulsory education statutes, and violations of the child labor laws.

Currently, 100 cases a week are scheduled for hearing before the single judge who occupies the bench. In addition, each week there are an average of about 25 unscheduled appearances involving bench warrants, detainers, and other actions which necessarily take time to be considered. I am advised, for example, to cite but one situation of many that are faced by the court, that on April 18, 1960—just last Monday—seven cases were scheduled to be heard but the first case, one involving an adult and a jury trial, occupied the full day, forcing the remaining six over to another time.

Mr. President, the backlog of cases before the court is shocking enough, when viewed in terms of the cold published statistics. A simple comparison of tables 9A and 9B of the quarterly statistical report of the court for the periods July through September 1959, and October through December 1959, shows that the total backlog grew from 948 at the end of September to 1,309 at the end of December. As I indicated earlier, March 31 figures show that the backlog has increased to 1,569. Most evidently we are faced with an increasingly serious handicap to orderly judicial process.

I have said that the statistics are shocking enough in themselves, but when the figures are reduced to the cases involving erring parents and boys and girls considered as individuals, a new dimension is revealed which should spur action. Miss Eve Edstrom, a reporter employed by the Washington Post, and a very able one, in the first and second of three or more articles on the situation to be published, has pierced through the statistics to the people involved. I commend these articles most strongly to my senatorial and House colleagues. I suggest to them that they employ their persuasive talents and good offices with Members of the other body in order that prompt relief of an increasingly intolerable situation can be obtained.

The District authorities, the citizens of the Capital, and above all, the children under the jurisdiction and protection of the juvenile court, are entitled to congressional action upon this legislation as soon as possible.

Mr. President, I ask unanimous consent that the Washington Post articles, and the statistical tables to which I have alluded, be printed in the RECORD at this point in my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 20, 1960]

WHERE JUSTICE TAKES A BEATING—CROWDED JUVENILE COURT CALENDAR GROWS DENSER UNDER LONE JURIST

(By Eve Edstrom)

On October 9, 1959—6 months ago—in the 500 block of Second Street NE., a juvenile assaulted a 32-year-old man by striking him in the face and attempting to take his billfold.

On September 24, 1959—7 months ago—at Fourth and Adams Streets NE., a juvenile assaulted a 49-year-old man by striking him in the back, knocking him to the ground and causing him to suffer a broken wrist.

On August 4, 1959—8 months ago—at First and Rhode Island Avenue NE., a juvenile assaulted a woman, cutting her right hand with a knife.

On July 3, 1959—9 months ago—in the 800 block of Fourth Street NW., a juvenile yoked a 14-year-old boy and took $2.75 from him.

On March 5, 1959—more than a year ago—in the 800 block of North Capitol Street, a juvenile broke into a grocery.

All of the above cases were scheduled to come before Juvenile Court Judge Orman W. Ketcham for adjudication yesterday—some 6 months to 1 year after the offenses were committed. Not a single case on yesterday's calendar involved an offense committed more recently than 6 months ago.

Furthermore, the fact that these cases were scheduled does not mean they were heard by the judge. Of the seven youths facing trial by the judge prior to the court's adjournment for a Juvenile Court Advisory Committee meeting yesterday, four had their cases continued because their attorneys either withdrew, were unable to appear or demanded a trial by jury.

This is a common occurrence in juvenile court. In addition, scheduled cases frequently are continued with the following notation:

"Ready, couldn't be reached, continued subject to call of the assignment officer."

This means the case was ready to go to trial, all the witnesses were present but time ran out before Washington's sole juvenile court judge was able to hear it.

Because the Nation's Capital has only one juvenile jurist, the court's backlog is ever growing and now includes 1,569 cases—555 juvenile and 1,014 adult nonsupport and paternity actions—awaiting hearings.

The Senate recognized that the District's juvenile court lacked the judicial manpower to do its job properly when it passed a bill to provide the court with two more judges.

But one man—Representative JAMES C. DAVIS, Democrat, of Georgia—has kept that bill bottled up in his subcommittee to prevent it from coming before the House for a vote. DAVIS reportedly fears the bill might result in the appointment of a Negro or a woman to the juvenile bench.

DAVIS, therefore, throttled a bill to relieve the juvenile court judicial shortage in the 85th Congress, prevented a new measure from being enacted during the 1st session of the 86th Congress and is still sitting on the bill this year.

The failure to provide the court with additional judges has meant that justice is taking a beating in juvenile court because the time-lag works in behalf of the offender and not the victim.

Serious charges are dropped because witnesses have disappeared. Back in September, for example, a juvenile was arrested for asault with a deadly weapon. His victim had been slashed. But the case was nolle prossed last month when the complaining witness could not be found.

Even when witnesses are available, their memories are so hazy that charges are not sustained in many instances and the cases must be dismissed. In a recent case, a policeman could not identify two boys he had arrested during a melee several months ago.

"I've arrested scores of boys since then," he said. "I simply can't remember these two."

Most importantly, juveniles are not realizing the connection between their offenses and the subsequent court hearings or they are setting out deliberately to evade responsibility for their offenses.

One welfare ward, who was arrested for a theft and returned to children's center at Laurel, Md., was flabbergasted when told he had to appear in juvenile court some 7 months later.

"Why I thought that charge was all settled and that was why I have been at the center," he said.

Another boy freely admitted a robbery when first seen by juvenile court officials several months ago. But when he finally was arraigned, he denied the offense and the case still is awaiting trial.

"Don't think word doesn't get around," said a court official. "The boys know that if they deny crimes there will be delays in getting their cases heard and consequently they have a good chance to escape responsibility for their offenses. If cases could be brought before the court more speedily, juveniles would face up to their wrongdoings more realistically."

More than anyone else, Judge Ketcham recognizes the shortcomings of his court. Lack of judges, he has said, means that:

"The juvenile court does not afford the type of swift, sure, equal, and positive justice which sets a good example to the youth of this city.

"This seriously handicaps the administration of justice, hinders the court in its efforts to inculcate in children and their parents a proper respect for the law, and often denies the citizens of the community the protection to which they are entitled."

[From the Washington Post, Apr. 21, 1960]

TAXPAYERS FOOT THE BILLS—NE'ER-DO-WELL FATHERS CASHING IN ON JUVENILE COURT'S DELAYS

(By Eve Edstrom)

Juvenile courts runaway caseload now permits Washington's ne'er-do-well fathers to forget the children they beget.

With mounting frequency these irresponsible fathers are demanding jury trials in paternity matters because they know it could take 2, 3, or 4 years before their cases go to trial.

During that time the fathers evade all financial responsibility for their offspring.

But taxpayers—probably even the Congressman who has blocked all efforts to provide juvenile court with the necessary manpower for its job—do not.

They pay in District and Federal tax moneys for public relief grants to the families of these men.

Small wonder then that an alleged father broke into a broad grin Monday morning when informed there would be no time that day for a jury trial of the case against him.

That morning seven paternity trials were listed on the calendar.

But a jury and Judge Orman W. Ketcham, the District's sole juvenile court jurist, had time to hear only one of them. That case dragged on until after 4 p.m., making it impossible to begin another one.

Therefore, with the exception of a dismissal because the complaining witness did not show up, the cases against the other fathers were continued.

And all the continued cases had been continued previously.

In three of them, all parties were present and the cases were ready for presentation to a jury. But the words "couldn't be reached" meaning the court had no time for them—were written across their trial jackets.

When the continued cases finally will be brought to trial is anybody's guess.

Because the overburdened court attempts to give more attention to juveniles than adults, only three adult jury trials are scheduled every 2 months.

Currently more than 80 of these paternity and support matters are awaiting trial. If the court's current snail-like pace continues, it could take more than 4 years to hear these cases—provided no new ones were filed.

Such a backlog could be eliminated if juvenile court had two additional judges as is provided in a bill which passed the Senate last year.

But Representative JAMES C. DAVIS, Democrat, of Georgia, single-handedly has throttled the measure. He reportedly wants assurances that no Negroes or women will be appointed to the new positions.

Ironically, in the 85th Congress, he authored a measure to give the court additional manpower, then prevented it from being brought before the House for a vote. In the 86th Congress, both last year and this year, he has pigeon-holed a new measure in his subcommittee.

Lack of additional juvenile-court judges has resulted in an alarming increase in the court's backlog of cases.

In addition to those awaiting jury trials, juvenile court has more than 900 other adult nonsupport and paternity matters awaiting action by the court.

The delay in getting these matters before the judge has caused a sizable drop in court support collections. Only a few years ago the court was collecting almost $1 million in behalf of the city's destitute children and mothers. Now it is collecting about one-half that amount.

More and more the assistant corporation counsel's office at the court is becoming an adjunct of the city's public welfare offices.

Take the mother and three children who showed up last week. They had just been evicted. Their meager belongings were on the street. The mother said she could not get an appointment with relief officials for 12 days and the preliminary hearing on her case was not scheduled for months.

The assistant corporation counsel's office obtained an appointment with welfare officials for her that afternoon. She was granted emergency assistance until her relief claim could be processed.

"I just wish some of the Congressmen could see these women and children stream in here," said a court aide. "If they saw how the delays in these cases are affecting people, I am sure they would provide us with the necessary judges."

Until they do, District fathers who wish to flout their filial responsibilities can do so with impunity.

Mr. MORSE. Mr. President, I wish to make brief comment on the latter of the two articles I have inserted in the RECORD. It is entitled "Ne'er-Do-Well Fathers Cashing in on Juvenile Court's Trial Delays."

First I wish to comment on it from the standpoint of the human values involved; second, from the standpoint of the dollar waste involved.

What is happening, in view of this case logjam in the juvenile court is that father after father who is brought before the court for nonsupport, knowing that it will take, at the rate at which the present docket can be handled, some 2 to 3 years to get his case before the court if he demands a jury trial, is demanding jury trial. This is what the erring fathers are doing.

If there were two additional judges on the juvenile court bench, it could be possible to clean up the docket, and the court could get back to the procedure, which obtains in most nonsupport cases; namely, that the cases would be settled on the basis of an arrangement entered into between the court and the father, with the assistance of the social worker involved. The father would enter into what amounts to, in effect, a consent decree arrangement, under which he would start producing the money necessary to support the children involved in the case.

However, this dilatory tactic on the part of these misbehaving fathers—and that is what they are when they refuse to give support to their children—is resulting in these fathers taking advantage of the crowded docket of the court.

It is not fair, it is not right on any premise from which one cares to argue the matter, and it cannot be justified. I wish to stress this point especially from the standpoint of moral and human factors.

These children are entitled to the money, if the fathers involved are actually in a position to pay for their support. The mothers of these children are entitled to better treatment than they are getting.

It may be said, "Oh, but, Mr. Senator, there are the welfare funds which can take care of these children." This view brings out just the point I wish to make in respect to the dollar factor that is involved.

Miss Edstrom does a remarkable job in her article today in pointing out: "The delay in getting these matters before the judge has caused a sizable drop in court support collections. Only a few years ago the court was collecting almost $1 million in behalf of the city's destitute children and mothers. Now it is collecting about one-half that amount.

CROWDED DOCKET COSTS MORE IN WELFARE PAYMENTS

I wish to emphasize that point. The failure to put two more judges on the juvenile court bench is apparently costing us $500,000 a year, because of the failure to provide the judicial procedure which would permit the collection of this money from fathers who have walked out on their moral and economic responsibilities to their families, and who thereby are guilty of nonsupport.

What is happening? This situation is putting an additional drain on our welfare funds which ought to be used for other social welfare services, not for the support of children who have fathers who ought to be required to support them by way of court action.

These support funds in many cases could be speedily obtained from the fathers if enough judges were on the bench to hand down decisions involving them. The logjam in the court is denying the money which is needed for other social welfare services and is also, in effect, aiding and abetting a great many good-for-nothing fathers in the District who are evading their responsibilities of fatherhood.

This situation cannot be justified on an arithmetic basis. The failure to put two additional juvenile judges on the bench results in the wasting of thousands of dollars in the District of Columbia because it permits nonsupport fathers to get by with their nonsupport.

It may be said, "Oh, eventually you will get to them." I know something about what happens when dilatory tactics are permitted to continue. I say, "You will never collect a dollar from many of these fathers if you permit them to go along for 2 or 3 years because of a crowded court docket and not collect anything from them now."

I close, Mr. President, by saying that Congress owes it to the District of Columbia to take speedy action on this matter.

I am not at all interested in any behind-the-scenes controversy over who might be appointed to the bench. I am not at all interested in any spirit of racial prejudice that may be involved in this matter. I do not know what the facts are, but I do know what the rumors are, and what is being said in the cloakrooms and elsewhere.

We cannot justify this great legal sore to continue to fester in the District of Columbia. There are some who think that if a bill providing for two additional juvenile court judges were to be passed, a colored judge might be put on the juvenile court bench in the District of Columbia.

A few days ago on the floor of the Senate I spoke concerning what I think about ever raising a question as to the qualifications of a person to sit in any public office because of his race, or the color of his skin, or his creed. If a juvenile judge bill is finally passed and signed by the President of the United States, the question of the color of the skin of any qualified person to be appointed to that judgeship never should be raised by anyone in connection with that appointment.

It is pretty well known that I believe that people should be appointed to judicial office and elected to political office without any reference whatever to their color.

Frankly, I do not deny that more than likely the best-qualified persons for the job might well be Negroes. Washington, D.C., does have a large Negro population; it has many able lawyers trained in juvenile work who are also colored.

But so what? It is time to stop paying for someone else's racial prejudice, and that is what Congress is doing by refusing to increase the number of juvenile court judges.

SCHOOL INTEGRATION IN WASHINGTON, D.C.

In the matter of school population—because I think it is more directly related to this problem than one might at first think—I believe Washington, D.C., offers a dramatic proof and answer to those who take the position that school integration must move slowly; that it is possible to integrate only a few children in a school district at a time.

I am the chairman of the subcommittee of the Committee on the District of Columbia which has jurisdiction over educational problems in the District of Columbia. I am proud of the fact that in the District of Columbia, in a very short period of time, the school system has been thoroughly integrated, and that all the charges which have been made concerning what would happen if a large number of colored children were integrated in the schools of the District of Columbia have proved to be false.

If that can be done in the District of Columbia where about 75 percent of the school age population is colored it can be done in any other school district in the country, if the people have the willingness to abide by the supreme law of the land.

The school population problem being what it is, it is very important that we take the protective steps necessary to provide the families of the District of Columbia with the judicial services they need in order to enable the quick handling of any juvenile case which arises, of any parental case which arises, or of any of the other types of cases which fall within the jurisdiction of the juvenile court.

I close with the plea, again, that we get speedy action on a bill to provide for the appointment of two additional judges to the juvenile court. I commend Miss Edstrom for calling this very serious problem to the attention of the people of the District, and also to the people of the United States.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a series of excerpts from a speech made by Juvenile Court Judge Ketcham at the 50th anniversary banquet of the Federation of Citizens Associations, held on March 5, 1960, which

state concisely the nature of the problem.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY JUDGE KETCHAM

But one feature of the juvenile court remains the same as when it was first organized. The juvenile court was created in 1906, with one judge. It was revamped and reorganized in 1938, with one judge. And in 1960, there is still only one judge. During the same period of time, the judicial manpower of the municipal court has gone from 7 to 16 judges, plus the additional of a 3-judge municipal court of appeals. The District Court of the United States has increased from 5 to 15 judges, and the U.S. Court of Appeals has tripled in size, from three to nine judges. As a final measure of comparison, the strength of the Metropolitan Police Department of the District has risen from 731 men in 1910 to 2,508 in 1958.

Therefore, it is with regret, but candor, that I must report to you tonight that the juvenile court of the District of Columbia is not doing all that it should or could do to assist this community in its fight against delinquency, dependency and neglect. In the last few years we have resorted to a variety of devices in an effort to reduce the number of court hearings before the judge. But there is an absolute limit to what one judge can do to stem this tide; and that limit was reached long ago. The sad fact is that the absence of additional judges has created a bottleneck which seriously hinders the progress of the juvenile court as well as the many other agencies and organizations which are trying to make our city a safe and wholesome place for adults and children alike.

What has this bottleneck meant? It has meant a substantial failure of justice and law enforcement where it is most needed—in training the youth of the community to be the law abiding citizens of the future. In at least five ways is this evident.

First, juvenile court justice, under present circumstances, is not swift. The court has a large and growing backlog of cases awaiting adjudication. On January 1, 1960, there were 1,390 cases (401 juvenile cases and 989 adult cases) awaiting hearing. In juvenile cases this means a delay of 2 to 3 months before their cases are heard; and with adult cases, the delay is in the neighborhood of 7 to 9 months.

Second, because of the backlog and its accompanying delay, the court's justice is sometimes uncertain. The recollection of witnesses grows dim as the months pass and in many instances complainants cannot be located by the time of the trial.

The third point is that the court's justice is often unequal as between different juveniles who are awaiting a court hearing. Since the trial will be months away, the court must choose between detaining the child in the receiving home for a long period (at substantial public expense) even before it is determined whether he is delinquent or not—or releasing the child to the custody of his parents while waiting for the hearing. If the first course is taken, there is always the possibility of unjust confinement. If the latter course is taken I am always aware that the juvenile may again violate the law before his trial can be reached.

Fourth, a single judge cannot give enough time to each court hearing to allow for normal judicial reflection or analysis. When you must adjudicate and dispose of over 100 cases a week the process is similar to that of an assembly line in proceedings which, more than in any other court, warrant individual treatment and compassionate understanding. With such hasty determinations there is always the possibility of ill-considered justice.

And finally, the present situation means costly justice for you as citizens and taxpayers. If, on the one hand, the court commits to a public institution a youth who might have been corrected while still at home, you citizens foot the bill of $2,700 per year for his care while at the institution. While I fervently hope that none of them is unjustly committed, the fact that there are now over 1,400 children in our public juvenile institutions bears tribute to the fact that the court is not unmindful of its responsibility for protecting the law-abiding citizens of Washington. I estimate that the maintenance of these 1,400 children is costing the District of Columbia over $3¾ million each year. On the other hand, if the court mistakenly permits a child to remain in the community who should be in an institution, one or another of you may be yoked on a dark street or have your car stolen and wrecked. I sincerely believe that there will be a great saving for all if such decisions are made with greater deliberation and more certainty than is now possible.

Thus, it can be said that, as a result of the present judicial bottleneck, the juvenile court does not afford the type of swift, sure, equal and positive justice which sets a good example to the youth of this city. This seriously handicaps the administration of justice, hinders the court in its efforts to inculcate in children and their parents a proper respect for the law, and often denies the citizens of the community the protection to which they are entitled.

Turning then to the future, we find that the basic tools are at hand. But their cutting edge awaits the honing of an enlightened Congress. A noble and vastly promising concept has been embodied in the law. Community agencies, both public and private, designed to rehabilitate and wisely correct children have been created. Among these much credit goes to the youth aid division of the Metropolitan Police Department which was established in 1954 and to the child welfare division of the Department of Public Welfare which provides for most of the children committed by the court. But, to a large degree, the juvenile court is—and of necessity must be—at the hub of this wheel. I have the highest praise for the wise and devoted work which is being performed daily by the dedicated staff of my court. However, a judicial bottleneck exists and until the juvenile court is, by legislation, made adequate to the task assigned to it the community will never fully reap the benefits of this concept.

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD at this point a portion of the Senate committee report prepared by the Senator from Indiana [Mr. HARTKE] on the juvenile court judge bill. It is the material on pages 1, 2, 3, 4, and to the end of the first paragraph on the top of page 5, just before the printing of the changes in existing law.

There being no objection, the excerpt from the report (No. 116, 86th Cong., 1st sess.) was ordered to be printed in the RECORD, as follows:

The Committee on the District of Columbia report favorably S. 1456, to provide for the appointment of two additional judges for the juvenile court of the District of Columbia, a clean bill introduced and reported by direction of the Committee on the District of Columbia following unanimous approval thereof.

HISTORY OF LEGISLATION

There was referred to the committee two bills, S. 465, introduced by Senator CLARK and cosponsored by Senators BIBLE, MORSE, BEALL, and JAVITS; and S. 522, introduced by Senator FREAR, both bills amending the Juvenile Court Act of the District of Columbia, approved June 1, 1938, as amended (sec. 11–920, District of Columbia Code, 1951 ed.), so as to provide for the appointment of an additional judge for the juvenile court of the District of Columbia.

Hearings were held on the two bills on February 4 and 11, 1959, by the Subcommittee on the Judiciary, consisting of Senator VANCE HARTKE, of Indiana, chairman; Senator J. ALLEN FREAR, JR., of Delaware, and Senator FRANCIS CASE, of South Dakota. Detailed testimony was taken as to the differences in S. 465 and S. 522, and after due consideration by the subcommittee it was decided to recommend that a clean bill be reported to the full committee for its consideration.

The following witnesses testified in favor of providing for the appointment of two judges:

Hon. JOSEPH S. CLARK, U.S. Senator.

Hon. Leo A. Rover, chief judge, municipal court of appeals for the District of Columbia.

Hon. Orman W. Ketcham, judge, juvenile court of the District of Columbia.

Hon. E. Barrett Prettyman, chief judge, District of Columbia circuit.

Hon. Robert E. McLaughlin, president, Board of Commissioners of the District of Columbia.

Mr. A. Murray Preston, chairman, committee to study the needs of the juvenile court, Committee of the Judicial Conference, District of Columbia circuit.

Mr. Chester Gray, Corporation Counsel, District of Columbia government.

Inspector John E. Winters, commanding officer, Youth Aid Division, Metropolitan Police Department.

Rabbi Balfour Brickner, chairman, advisory committee to the juvenile court of the District of Columbia.

Mr. Oliver Gasch, chairman, Law Enforcement Council of the District of Columbia.

Mr. Richard K. Lyon, chairman, Commissioners Youth Council.

Mr. G. Howland Shaw, member, Commissioners Youth Council.

Mrs. Henry Gratton Doyle, past chairman, Advisory Committee on the Juvenile Court; member, Committee of the Judicial Conference.

Mr. Curtis Shears, chairman, committee on juvenile court and juvenile problems, District of Columbia Bar Association.

Mr. Clark Schilder, executive director, Washington Criminal Justice Association.

Mrs. Lyle Belsley, second vice president, District of Columbia League of Women Voters.

Mr. Frank D. Reeves, member, committee on legislation, Washington Bar Association.

Mr. William Stempil, attorney at law.

Mr. Nicholas J. Chase, first vice president, District of Columbia Bar Association; chairman, Subcommittee of the Juvenile Court Law Enforcement Council.

In addition, the chief judge of the U.S. Court of Appeals for the District of Columbia Circuit for the Judicial Conference of the District of Columbia Circuit appointed a committee to study the needs of the juvenile court of the District of Columbia. Speaking in behalf of the committee, the chairman testified that it was their unanimous opinion that two additional judges should be provided by the Congress for the juvenile court of the District of Columbia.

In an attempt to reconcile the differences between S. 465 and S. 522, the full committee deliberated at length as to the period of time that the appointee be a member of the Bar Association of the District of Columbia; the personal qualifications; the residence requirements; and the question of designation of a substitute judge. The ultimate result was the reporting of a clean bill containing provisions agreed upon by the full committee.

PURPOSE OF LEGISLATION

The purpose of this bill is to amend the Juvenile Court Act of the District of Columbia, approved June 1, 1938, as amended (D.C. Code, sec. 11-920), so as to provide for the appointment of two additional judges for the juvenile court of the District of Columbia.

At the present time, the juvenile court has one judge. This bill provides that the court shall consist of three judges, appointed by the President by and with the advice and consent of the Senate. Each judge appointed after the date of the enactment of the proposal shall serve for a term of 10 years, or until his successor is appointed and qualified. The qualifications for appointment, as set forth in the bill, are as follows:

1. A member of the bar of the District of Columbia for a period of 5 years preceding his appointment.

2. During a period of 10 years immediately preceding appointment have been a resident of the District of Columbia or of the metropolitan area of the District for at least 5 years of which not less than 3 years shall immediately precede appointment. Metropolitan area as defined in the bill means Montgomery and Prince Georges Counties in Maryland, and Arlington and Fairfax Counties and the cities of Alexandria and Falls Church in Virginia.

3. Have a broad knowledge of social problems and procedures and an understanding of child psychology.

The bill provides that the present judge of the court shall continue in office and shall be deemed to be occupying one of the three positions of judge provided by this legislation. Further provision is made that the President shall designate one of the judges to be the chief judge of the juvenile court whose salary shall be equal to the salary of the chief judge of the municipal court, which is $18,000 per annum, and the salary of the associate judges of the juvenile court shall be equal to the salary of an associate judge of the municipal court, which is $17,500 per annum.

The bill provides that in cases of sickness, absence, disability, or death of any judge of the juvenile court, the chief judge, or acting chief judge of the U.S. district court for the District of Columbia, shall designate one of the judges of the municipal court of said District to discharge the duties of said judge of the juvenile court until such disability be removed or vacancy filled. Likewise, during the temporary absence or disability of the chief judge of the juvenile court, an associate judge of such court shall be designated to serve as chief judge of the juvenile court by the chief judge or acting chief judge of the U.S. district court for the District of Columbia.

The juvenile court jurisdiction includes all children under the age of 18 years who are charged with violations of law, who are beyond parental control, who are truant from home or school, who are engaged in conduct endangering their own health, morals or safety, or the health, morals or safety of others, or who are without adequate parental care. The court also has original and exclusive jurisdiction in cases involving the paternity of children born out of wedlock, adults charged with violation of the child labor and compulsory education laws, and with contributing to the delinquency of minors. The court also has concurrent jurisdiction with the U.S. district court for the District of Columbia in criminal cases involving nonsupport of wife or children.

Further, it should be noted that a great many of the cases are of the felony type; i.e., cases involving offenses which, if committed by an adult, would be within the exclusive jurisdiction of the U.S. district court for the District of Columbia. Cases of this kind before the juvenile court are now running about 2,000 a year.

The workload of the juvenile court is shown on the table below:

CASELOAD

Complaints received

Fiscal year	1. Juvenile			2. Adults				Total complaints (all types)
	Delinquency	Dependency	Subtotal	Nonsupport	Children born out of wedlock	Miscellaneous	Subtotal	
1953	5,032	319	5,351	2,495	755	38	3,288	8,639
1954	5,211	303	5,514	2,439	769	39	3,247	8,761
1955	4,121	291	4,412	3,212	731	8	3,951	8,363
1956	4,327	224	4,551	3,495	869	32	4,396	8,947
1957	3,418	374	3,792	3,486	824	35	4,345	8,137
1958	3,454	329	3,783	3,350	800	38	4,188	7,971
1959 (July–January inclusive)	2,300	285	2,585	[1] 1,188	355	2	[1] 1,545	[1] 4,130

[1] Includes only July 1, 1958, through Nov. 10, 1958, for nonsupport. On that date nonsupport cases were no longer accepted by this court's intake staff. Subsequent nonsupport actions have been received by the Assistant Corporation Counsel.

Court hearings

Fiscal year	1. Juvenile court hearings	2. Adult court hearings	Total court hearings
1953	6,818	5,337	12,155
1954	7,969	6,876	14,845
1955	6,530	7,365	13,895
1956	7,453	8,690	16,143
1957	8,173	9,743	17,916
1958	7,317	5,879	13,196
1959 (July–January inclusive)	3,653	2,056	5,709

Official cases filed

Fiscal year	Juvenile cases, subtotal	Adult cases				Total (all cases)
		Nonsupport	Children born out of wedlock	Miscellaneous	Subtotal	
1953	1,967	399	755	21	1,175	3,142
1954	2,058	599	769	39	1,407	3,465
1955	1,758	782	731	2	1,515	3,274
1956	1,881	895	869	29	1,793	3,674
1957	1,846	754	824		1,578	3,424
1958	1,870	223	792	12	1,027	2,897
1959 (July 1958–January 1959 inclusive)	968	171	456	2	629	1,597

The estimated annual cost of this legislation would be approximately $91,367, made up as follows:

Recurring expenses	2d judge	3d judge
Personal services:		
1 Judge	$18,000	(1) $17,500
1 GS-7 courtroom clerk	4,980	(1) 4,980
1 GS-7 secretary to judge	4,980	(1) 4,980
1 GS-6 administrative aid (secretary)	4,490	(0) 0
1 GS-5 summons clerk	4,040	(1) 4,040
2 GS-4 bailiffs, at $3,755	7,510	(1) 3,755
1 GS-4 docket clerk	3,755	(1) 3,755
Total, personal services	47,755	39,010
Other contractual services	173	103
Grants, subsidies, and contributions	2,928	1,398
Total, recurring expenses	50,856	40,511

The committee has been assured by the court that the present court building contains sufficient space to accommodate two additional judges.

Mr. MORSE. Mr. President, earlier in my remarks I said, and I now wish to emphasize, that all of us are indebted to the Senator from Indiana [Mr. HARTKE] for the fine work he did for the Senate Committee on the District of Columbia on this juvenile court judge bill. I think he is deserving of being backed up by congressional action on the bill, because the arguments he sets forth in the report on this problem are unanswerable. So I hope the bill will be finally passed at an early date.

THE FLIGHT OF GOLD

Mr. MURRAY. Mr. President, the movement of gold away from our shores is one of the more important international events of the last decade. Its consequences and ramifications are so great that they touch not only upon the value of our currency, but also upon such matters as the size of our foreign aid program, the maintenance of our military installations overseas, and the extent of our investments abroad.

For some time the flight of gold from this country has been attracting the attention of the financial community. It has been the subject of more and more speeches and research papers, and of mounting comment in the financial press. And no wonder. During 1958 and 1959, more than $3 billion of gold left this country for points abroad, as the result of a payments imbalance. And the deficit continues in 1960.

Despite the obvious importance of this problem, I have been dismayed—though not surprised—at the utter failure of the administration to seek a basic solution or, indeed, even to make any real effort to cope with it.

The fact that this continuing drain on our gold reserves is serious and its solution is complicated is no reason why we should refuse to face up to it. It will not go away if we simply let it alone. This country cannot afford to play the role of the proverbial ostrich and put its head in the sand while our domestic economy and our foreign and military programs become increasingly endangered.

Not a day goes by when some important alarm is not sounded over our weakening position in the cold war. Speeches are made daily about the missile gap; there is constant debate about our military readiness; expressions of concern over the size of our military forces continue unceasingly. But is not our economic strength as important to our fight against communism as any of these?

Gold continues—as it has for centuries—to be the basic commodity in international finance and the ultimate means for settling accounts between nations. The International Monetary Fund expresses exchange parities in gold. The member countries of the European Payments Union must settle a substantial portion of their deficits in gold. And the International Bank for Reconstruction and Development and the International Monetary Fund frequently require the use of gold. There is no reason to believe that gold will be any less important in these affairs in the years to come.

It is perfectly obvious to all who have considered the matter that our balance of payments deficit and the consequential drain on our gold reserves cannot continue at levels similar to those we have experienced in the last 2 years. And it is also perfectly obvious that vigorous action must be taken: First, to formulate a basic policy; and second, to implement it on a variety of fronts.

What is significant about the flight of gold is its relationship to the adequacy of our gold reserves. For, as our reserves decline, we find ourselves at a disadvantage in the world market, which in turn can compel us to resort to controls over imports or force us to adopt multiple exchange rates. Or we can find ourselves pressed into reducing our economic and military aid programs or the size of our military establishments overseas. In short, inadequate gold reserves not only can impede free international trade, but also can adversely affect our foreign and military programs.

Numerous bills have been introduced during this session which seek in one way or another to deal with the problem of our gold deficiency. I myself have introduced legislation on this subject. I do not wish to take the time now to debate the different approaches which these various measures manifest. I do want to take the time to ask whether these bills will be permitted to languish and die as have their predecessors in previous Congresses.

I, for one, subscribe to the view that an increase in the price of gold is good technique for solving this problem. A higher gold price would, in my opinion, lead to larger gold production, which in turn would augment our diminishing reserves.

It is no secret, I am sure, that our domestic gold mining industry is in dire straits. Unlike other countries, we have not granted subsidies to our gold miners, and the consequence has been that the rising costs of labor and supplies and the fixed price of $35 per fine troy ounce has imposed a squeeze which makes it plainly uneconomical to produce gold today. By way of illustration, the production of gold from U.S. mines in 1957 reached the lowest peacetime level in more than 60 years.

By increasing the price of gold, this depressed industry would once again have an incentive to resume the mining of gold in the United States. Increased production will naturally make available additional gold stocks to be added to our reserves. We will thus have taken a long stride forward in forestalling the growing diminution of our gold reserves.

I am particularly interested in this solution because for many years I have been concerned with the plight of the gold mining industry in this country. The possibility that increasing the price of gold can at one and the same time aid this distressed segment of our economy and aid in solving the larger problem deriving from the payments imbalance has its obvious attractions.

The great prestige of our country has suffered immeasurably in the last few years. We cannot permit our position on the world scene to be further weakened. One quick and effective method for bolstering our wavering position in world affairs is to slow down, indeed, stop, the diminution in our reserves of gold.

The administration has failed to exert leadership on this important matter just as it has failed in many other important areas. But we cannot permit the continuing erosion of our gold reserves too much longer if we hope to retain our great status at the table of nations.

An increase in the price of gold will have an immediate effect on our international balance of payments deficit and, simultaneously, will reactivate and strengthen a distressed segment of our economy which has been too long forgotten. I urge strenuously, and with all the power at my command, that serious-minded men everywhere in our Government give immediate consideration to this grave problem and the sound and relatively simple solution which I have recommended.

TRIBUTE TO SENATOR ROBERTSON UPON HIS RENOMINATION

Mr. MANSFIELD. Mr. President, it is my understanding that the distinguished junior Senator from Virginia [Mr. ROBERTSON] has, in effect, been renominated to his present position. I understand that last week, when the date for filing for office in Virginia passed, no one filed against the distinguished Senator.

I wish to offer him my commendation for being so lucky. I wish more of us were so fortunate. If my memory serves me correctly, this is the second successive time that the junior Senator from Virginia has been renominated without any opposition whatsoever.

SALUTE TO DE GAULLE

Mr. GRUENING. Mr. President, tomorrow one of the greatest men of our time will arrive in the National Capital as the guest of our Nation. He is Gen. Charles de Gaulle, President of France. Of the many friends of freedom, leaders of the forces of civilization, who have visited our shores, none deserves a warmer welcome than this great Frenchman.

Charles de Gaulle merits such an acclaim both for himself and for the country he represents, the Fifth French Republic. His visit here should reemphasize this historic friendship between our two nations and tighten the close bonds that have united us.

It should recall the great debt we owe to France for her invaluable support to our Thirteen Colonies in their struggle for independence. It should renew our grateful memories of Lafayette, of Rochambeau, of D'Estaing, of De Grasse, of La Pérouse, and of many other sons of France who fought and bled in the American Revolution. Without her great help, our Nation might not then have been born.

President de Gaulle's visit should revive the stirring memories of how Frenchmen and Americans fought side by side for their common faith in the First and Second World Wars. The blood of both was shed on the battlefields of France. Our American dead and their French dead sleep in the soil of France. Let us recall that France held the fort in both world wars and was bled white while the United States was given time to prepare to enter the crucial struggle for the basic freedoms in which the peoples of both our countries deeply believe.

We salute General de Gaulle for the vision and courage which never faltered in France's darkest hour. We salute him for his immortal rallying cry when France was occupied by Hitler's hordes, uttered from exile in Britain, that "France has lost a battle, but France has not lost the war."

We salute General de Gaulle as the great leader whose vision for his country is restoring that country to greatness—a greatness that is one of the great triumphs of humankind. Of this restoration not merely France, but the whole free world, is the beneficiary. The United States is not the least of those nations whose hopes and aspirations for a world at peace with justice are thereby strengthened.

We salute General de Gaulle for his enlightened Algerian policy—the one bright spot, the one hopeful light in what has long been called the Dark Continent. It will become darker unless some part of it is saved for civilization, for justice, for self-determination, for law and order, and for peaceful coexistence of peoples of differing religious

and differing racial origins. That is what General de Gaulle's enlightened Algerian policy portends.

Mr. President, some chroniclers believe that history is shaped by vast, impersonal forces, by mighty currents which, for better or worse, sweep peoples and nations to an inevitable destiny. They assert that the individual no longer counts, and that the figures who briefly emerge on the world stage are mere flotsam in irresistible tides. I do not believe it. Leadership can still shape the destinies of mankind. We know it was so of old. In our own history, Washington, Jefferson, and Lincoln are shining examples of men who created conditions, preserved eternal values, and shaped events.

In our time, who shall deny that the world would be a vastly different one without Winston Churchill and Franklin Delano Roosevelt? And no one more conspicuously illustrates the impact of a personality on history than does Charles de Gaulle. If he succeeds, he will become—indeed, he already is—one of history's alltime great men.

May General de Gaulle's visit to our shores spell the renewal of a new era of firm friendship and accord with the people of France—France, the one major nation of continental Europe which, through devastating wars, and unprecedented upheavals has remained true to its great legacy of civilization and freedom.

To General de Gaulle let us wish the greatest success of his mission here and abroad. His success will be a victory for all mankind.

Mr. President, I ask unanimous consent that an excellent article on this subject, from the pen of the distinguished columnist, Walter Lippmann, published in this morning's Washington Post and Times Herald, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 21, 1960]

SALUTE TO DE GAULLE

(By Walter Lippmann)

Having been one of his American admirers since June of 1940, when he raised his flag in Britain and summoned the French to go on with the war, I cannot pretend to write dispassionately about General de Gaulle. But now that he is coming back to Washington in triumph, I have been asking myself what is the secret of this famous man?

The secret is that he is more than a great man. He is a great man in the sense that he has taken a great part in historic events. But there were other great men in the war days. In addition to being an historic man, he is also, which is rarer than greatness, a genius. This is the special quality which he, and I think only he, shares with Churchill.

His genius consists in the capacity to see beneath the surface of events, to see through the obvious and conventional and stereotyped appearance of events to the significant realities, to the obscured facts and forces which will prevail. This gift, which is more than leadership as such, is second sight into the nature of history. It brings with it the gift of prophesying what is going to happen because to the seeing eye it is already there.

The ability to see truly the significant reality carries with it the ability to convey what his vision brings him. Men like Churchill and De Gaulle do not sign ghost-written books and they do not read ghost-written speeches. For the vision is their own and they alone can communicate it.

Thus, in the bitter days of 1940 when France had fallen and Britain stood alone, it called for a great man, for a brave man, for a resolute and faithful man, to go into exile and from there to organize the French resistance. But it took genius to see how this noble but desperate venture would end, and to see that France, defeated, demoralized, and prostrate, remained one of the great powers, to see that in the end she would be—as is now the fact—among the principal shapers of the settlement with Germany.

Thinking of all that has happened in these 20 years, it occurred to me to see whether or not my memory was deceiving me. Was it true, as ever since I have believed, that in the darkest days of the most desperate of modern wars, General de Gaulle had communicated his vision of an enduring and an undefeated France?

I find that about 3 weeks after the fall of France, I had learned enough to be able to write that "in the misfortune of France it should be our fierce pride to be the last to forget the greatness of France. We must wish to be the first to remember * * * that France is indispensable, as indispensable to the maturity of Western civilization as Hellas was to its birth—and as imperishable."

I learned to say that only from General de Gaulle.

CUBAN ECONOMY

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an excellent article on the Cuban economy. The article was published this morning in the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUTHFUL GOVERNMENT'S INEFFICIENCY LEADS TO A TANGLED ECONOMY—IMPORT CURBS SHRINK POULTRY FLOCKS, PERIL POWER FIRM; SHOPPER FRETS ABOUT FISH—TWO-WAY TRIP FOR TOMATOES

(By Ed Cony)

SANTIAGO, CUBA.—High on a bluff overlooking this port city, the Castro government is building an elegant motel. Construction is lagging several months behind schedule, partly because a young government architect designed only a family-sized kitchen for the motel's spacious restaurant.

The error was discovered by a government technical adviser only after construction was well under way. Work was delayed while the kitchen was ripped out and new plans were drawn.

This is only a mild example of the workings of the Castro government's young and not too efficient bureaucracy. The island's revolutionary leaders freely admit to their inexperience but refuse to let it slow them down. Cheerfully confident of their abilities, they're rushing through a program that would give pause to far more seasoned statesmen: Converting Cuba, almost overnight from capitalism to a form of socialism.

AIDS THEY CAN TRUST

If inexperience were the government's only problem, it would disappear in time. But Cuba's leaders, like all revolutionaries, are fearful they themselves will be overthrown. This fear leads government officials to surround themselves with aids they can trust—no matter how incompetent they may be. Until recently, one government post just below the cabinet level was held by a man who could neither read nor write.

Cuba's bureaucratic blundering often is amusing. But it's frequently costly to the nation's economy. And, in the treacherous field of international relations, there's always the possibility Cuba's leaders may stumble into troubles they don't anticipate.

It is hard to exaggerate the youth of the Castro regime. It is filled with youngsters in their late teens and young men in their early 20's. Many of them hold important jobs, example: A 23-year-old Guatemalan now runs Otis Elevator's Cuban operations for the greater good of the revolution. The government has "intervened" Otis Elevator; the company retains ownership of its properties but government representatives manage them.

Of the 18 top posts in the government, only 6 are occupied by graybeards of over 35. Among the 35-and-younger set are such key figures as: the brothers Castro, Fidel and Raul, Prime Minister and army chief, respectively; Ernesto Guevara, head of the National Bank; Antonio Nunez Jimenez, head of the I.N.R.A., the government agency which directs agrarian reform and a number of business enterprises; and Augusto Martinez Sanchez, Labor Minister. Still in their tender 20's are four: Raul Castro, Education Minister Hart, Communications Minister Oltuski, and Interior Minister Naranjo Morales.

With seasoning, Castro administrators may grow in proficiency. In the meantime, mistakes multiply. For instance, the government is enthusiastically extracting manganese ore from a mine formerly owned by a Batista crony who plucked the best ore from the mine before he fled, along with his presidential patron. Because of the poor quality of the remaining ore and the depressed world market for manganese, the ore now gets no further than the port of Santiago, where it piles up awaiting a buyer. Scoffs one mining man: "They'll just never sell that stuff."

PERUVIAN ENGINEER QUITS

Another mining man tells the story of a Peruvian engineer who was advising the Castro government concerning iron ore deposits in a remote part of the island. One day he was enthused over the prospects for developing the site. The next day he quit.

He explained why to his friend: "These nincompoops want to rush into production immediately. What you should do first is to make a careful survey of the ore body, which would take months. After that, you'd have to build roads into the area. Only then should you begin to produce."

An American engineer in Cuba believes this impatience with "surveys" is typical of the mental outlook of those who overthrew the hated Batista. "They think they can do anything, now," he says.

This attitude of the revolutionary regime caused the U.S. Department of Agriculture to withdraw its inspectors from Havana, where for several years they had been inspecting Cuban vegetables bound for the United States. The Castro government indicated it didn't like the idea of Americans on Havana docks telling Cubans what they could and couldn't ship.

The only problem: Cuban vegetables, chiefly tomatoes, now must be shipped all the way to the United States before they can be inspected. A rejection there is much more costly than one in Havana.

THE BUREAUCRATIC MILLS

The withdrawal of U.S. inspectors also illustrates the slow and uncertain grinding of the bureaucratic mills in Mr. Castro's new Cuba. After the Cubans indicated their unhappiness over the presence of the inspectors, the United States notified Cuba it would call its men home unless the Cubans formally requested that they stay. Sixty-eight days later, the Cubans got around to allowing that they would like the inspectors to stay. Unfortunately they had

left for home the day before, and the United States has not seen fit to return them.

Castro planners can't resist the grandiose. They're aiming, for instance, to drain the huge Zapata swamp which extends over about 600 square miles of Las Villas Province. Their idea is to convert it into ricefields. American engineers believe the project is highly impractical.

One adviser to the government reports he continually has to squelch projects the government dreams up "because they're too big to be feasible." He adds: "They always want to build a plant bigger than any in the United States."

DISAPPEARING FORMS

Havana businessmen complain about the vagaries of the new bureaucracy. An executive at one American firm excuses himself while he signs a batch of government forms. "About all I do these days is sign these requests for import licenses," he grumbles. "We send them off to the National Bank and that's the last we hear of them."

A private school official traces another bureaucratic bungle: "Last October the government completely reorganized the educational system. We were told to send a list of all our students to municipal education boards. We did. Then the officials changed their minds and wanted all secondary students registered at provincial boards. Somehow, in the process, they managed to lose all the lists from our school."

If part of the problem lies in too many forms and too much redtape, the other side of the coin reveals too little attention to "normal channels" by the freewheeling Mr. Castro. The energetic Premier travels around the country armed with a checkbook. When he alights from a helicopter at what he considers a good spot for a school, a hospital, or some other public works project, out comes the checkbook. People who have watched Mr. Castro on spending sprees say he habitually fails to enter any record of his spending on his check stubs.

Communication between the government in Havana and its agents in the interior appears to be faulty. A local INRA man in a remote area of Oriente Province one day last month took it upon himself to step in and "temporarily intervene" the big, $75 million mining complex of Moa Bay Mining Co., a Freeport Sulphur Co. subsidiary developing nickel and cobalt deposits on the site.

The local INRA agent, a young man in his midtwenties, was inspired to act when he saw the company burning rubbish one day; he concluded the firm was burning its records.

WORD TRICKLES DOWN

A couple of days later, however, the Minister of Agriculture in a televised speech explained there really had been no intervention—the whole affair had been a mixup. But it was several days later, apparently, before word trickled down to the local INRA man. When he finally did get his orders from Havana, he quietly withdrew, turning complete control back to the company.

The Cubans are stumbling over many unexpected obstacles as they strive to control the island's economy from Government office buildings in Havana.

The Government has been trying to reduce Cuba's dependence on imported food by increasing domestic agricultural production. It has also sharply curbed imports of all kinds, in order to conserve its skimpy supply of dollars. But the Government has found these two programs often aren't compatible.

The tight rein on imports brought on, some time back, a shortage of feed for poultry. As a result, poultrymen reduced their flocks. In turn this has brought about such a shortage of poultry that the Government, trying to curb demand, has banned the sale of chicken on Wednesdays.

The curb on imports threatens more than chickenless Wednesdays. Cuban Electric Co., a subsidiary of American & Foreign Power Co., is running short of lines, transformers, and other maintenance equipment because of the import restrictions. It is known that the company's shortage of replacement parts threatens a prolonged power failure should any major trouble develop in the system. Inasmuch as Cuban Electric supplies power to Havana and 294 other Cuban communities, any such disruption would be costly to the island's economy.

A POWER MAN'S ANALYSIS

The company itself is understandably reluctant to comment on this danger. But one power authority in Havana, a man in a position to judge accurately, gives this analysis:

"Cuban Electric has been able to buy only the bare minimum of maintenance material. If the company is lucky, it will be able to get by in the immediate future without serious trouble." He pauses and adds with a shrug of his shoulders: "If it's unlucky."

Many Cubans tell how actions of I.N.R.A. have disrupted the once smooth workings of the Cuban economy.

Item: A housewife complains that her favorite fish market no longer has a wide variety of crab, shrimp, and other seafoods. "The man tells me he has to take whatever I.N.R.A. allots him. He has no choice any more in what variety of fish to buy."

Item: Farmers now must sell all their corn to I.N.R.A. at $3 for 101 pounds. In turn, I.N.R.A. sells corn to feed mills at $4.10. Feed mills that grow some of their own corn find themselves forced to sell it to I.N.R.A. at $3 and buy it back at $4.10.

Item: A grocer complains that egg marketing has been thrown into confusion since I.N.R.A. took over egg distribution from private suppliers.

It has now become illegal, with stiff fines for offenders, to sell an egg in Cuba which doesn't carry the I.N.R.A. stamp. "We used to get our eggs graded just like you do in the States," says this grocer. "They were segregated by size—large, medium, and small—and by color, white and brown. Now they come all mixed up in size and color."

Getting more and more excited as he discusses the egg situation, the grocer begins to pace back and forth and his voice takes on a more bitter tone:

"Besides not being graded properly, the eggs aren't even fresh any more. I.N.R.A. allows us only a 20-percent markup, and customers are returning so many bad eggs to us that we're losing money on them."

He unloads a final complaint: "You go down to I.N.R.A. and complain about the eggs. And you know what they say? 'You have a counterrevolutionary attitude. Don't bother us with such details.'"

ADVERTISEMENT ANNOUNCING ORGANIZATION OF A FAIR PLAY FOR CUBA COMMITTEE

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article in regard to an advertisement with respect to the Cuban Government. The article was written by George Sokolsky, and was published some time last week in the New York Times. I highly recommend a reading of the article by all the Members of Congress, because I believe the questions Mr. Sokolsky has raised are ones which the Members of Congress themselves would raise with respect to the advertisement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THAT CUBAN AD

(By George E. Sokolsky)

On April 6, an advertisement appeared in the New York Times announcing the organization of a Fair Play for Cuba Committee. This was to have been expected because there are always committees about everything and there are always America "lasters." It was also not surprising that this committee could immediately afford to spend $5,000 for an advertisement in the New York Times. I suggested that if the money came from the Cuban Government, those who signed it were unregistered foreign agents which is an offense; if the signers paid for it themselves out of their own pockets, then it is a just expression of opinion to which everyone is entitled.

The cochairmen of this committee were announced to be Waldo Frank and Carleton Beals and one was entitled to believe that these writers organized it and were responsible for it. However, into my hands came a letter from Carleton Beals to Robert B. Taber of the Columbia Broadcasting System, who was apparently organizing the Fair Play for Cuba Committee. It was Taber who invited Beals to become a cochairman of this committee. Beals' letter is dated April 5 and, the Post Office being what it is, may not have reached Taber in time. Also in a postscript, Beals asks Taber to show him the proposed advertisement as it is to be run. From this, it is to be inferred that Taber was the mechanic of this Fair Play for Cuba Committee. Beals did not see the advertisement until it appeared in print.

Beals' letter to Taber is most interesting, particularly a paragraph which I have his permission to reproduce herewith:

"Two things I would have to be assured about: (1) That no Communist is part of the committee or is asked to become a sponsor. This would blow the whole thing out of the water; (2) that funds are from voluntary contributions and that no money is derived from the Cuban Government or their representatives, either directly or indirectly."

Of course, as the advertisement was published 1 day after Beals addressed his letter to Taber, the former could not have received a reply from the latter. However, I telephoned to Carleton Beals on April 13 and he had not by that date received such an assurance as he requested. In fact, such an assurance could not have been given unless certain persons took steps to erase their life history from the record.

As for the funds coming from Cuba, the precise data on that subject cannot be found except under oath by some authority possessing the power of subpena. My belief is that those who signed this advertisement would prefer to list the contributors to its payment in order to vitiate the suspicion that it came from Castro. Men have a right to be suspicious, and wise men, if they have nothing to hide, make full disclosure of the facts. Certainly those public offices which deal with such matters know who paid for the advertisement and where the cash came from.

I must confess that I do not know who Robert B. Taber is, but the Beals' letter to him shows that there was an organizing committee, that Beals did not attend any of its sessions and that Beals wanted to know what was being done and that therefore he wrote to Taber as the man who could tell him.

What is the importance of all this? Well, there is much anti-Castro agitation in this country; there is a pro-Castro propaganda. Those opposed to Castro do not represent a foreign power; they represent an American

reaction to a revolutionary government which imperils the United States.

Those who favor Castro may be honest men and women who conscientiously believe that it is to the best interest of the United States that a government antagonistic to the United States should have come into existence 90 miles from Miami; that it is satisfactory that that government has made a deal with Soviet Russia; that it is satisfactory that American property in Cuba be seized and sequestered by the Castro government and that out of Cuba revolutionary forces develop disorder throughout the Caribbean and imperil the Panama Canal.

On the other hand some of those who so hold may be employed by Castro; they may have let themselves out for hire. We should know the facts.

RED BASES NEAR CUBA

Mr. SMATHERS. Mr. President, this morning there was published in the Washington Post an article which tells how Red bases are being built near Cuba. The article was written by Drew Pearson, and it reads in part as follows:

U.S. authorities aren't saying anything about it and won't, but what has all the earmarks of a submarine base in the making has just been discovered off the Cuban coast.

In the article Mr. Pearson describes what is happening, and where it is; and he writes:

This is the type of submarine installation the Russians have built in Albanian and Syrian waters, which have helped to give them submarine superiority in the Mediterranean.

Now, thanks to Fidel Castro, a potential enemy will have a submarine base within 90 miles of the American coast for the first time in history.

Mr. President, I ask unanimous consent that the entire article be printed at this point in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED BASES NEAR CUBA

U.S. authorities aren't saying anything about it and won't, but what has all the earmarks of a submarine base in the making has just been discovered off the Cuban coast.

It is at Cayo Largo, 65 miles south of Cuba, where Fidel Castro is building huge tanks obviously meant for diesel oil. Officially the Cuban Government says they are to store fresh water and that Castro intends to turn Cayo Largo into a tourist resort. However, the island is mosquito infested and would be the last place tourists would want to visit.

Finally, the huge tanks, each holding 100,000 gallons, are lined with coating used when tanks hold diesel oil, not water. Furthermore, the valves are located on the water side and the tanks themselves are buried in the sand near the shore so that submarines could easily come alongside and fuel.

This is the type of submarine installation the Russians have built in Albanian and Syrian waters, which have helped to give them submarine superiority in the Mediterranean.

Now, thanks to Fidel Castro, a potential enemy will have a submarine base within 90 miles of the American coast for the first time in history.

Mr. SMATHERS. Mr. President, in that connection, I should like to say that I trust that those who still take the position that the United States should not change its sugar quota, this year, with respect to the preferential treatment which Cuba receives—whereby Cuba gets $397 million, each year, from the United States, by virtue of the large and preferential sugar quota which Cuba receives from us—will realize that this large sum of money is being used by Cuba for the purpose of the building of bases of these types, which could be used to destroy the United States of America.

With this large sum of money Castro not only is building such submarine bases—and I have information which leads me to believe that the article written by Drew Pearson is eminently correct—but, in addition, Castro is purchasing the latest types of weapons which are manufactured in Europe, particularly in Czechoslovakia and Poland. He will use those weapons to maintain himself in power; and they will be used primarily against the Cuban people.

He is also using this money to publish school textbooks which have been rewritten since he came into power. Those books contain, throughout, glorification of one man, Fidel Castro; and not only do they teach that Castro should be glorified, but they also teach that the United States is an economic imperialist. They also teach the reverse of history when they state that the United States of America did not help Cuba gain its independence, but, instead, allege that our country subjugated Cuba. The books are calculated to teach the young people of Cuba to hate the United States of America.

It seems to me that those who say we must continue the Cuban sugar quota which results in giving Castro that large amount of money, with which he can do such things, should reevaluate their judgment that we should continue the Cuban sugar quota, which enables Castro to obtain such a large amount of money, which he uses for such purposes.

The PRESIDING OFFICER (Mr. Moss in the chair). Is there further morning business? If not, morning business is concluded.

AMENDMENT OF MOTOR VEHICLE SAFETY RESPONSIBILITY ACT OF THE DISTRICT OF COLUMBIA

Mr. HARTKE. Mr. President, I ask unanimous consent that the Senate resume the consideration of Senate bill 2131.

There being no objection, the Senate resumed the consideration of the bill (S. 2131) to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia, approved May 25, 1954, as amended.

THE FARM ISSUE

Mr. HRUSKA. Mr. President, the legislative leadership in Congress has been in the Democratic Party for the past 6 years, including 1960.

Their preponderance in the House is currently 279 Democrats to 151 Republicans; and in the Senate there are 65 Democrats and 35 Republicans.

President Eisenhower has expressed a willingness to approve any farm bill which meets certain broad standards which he set out. These standards are not unreasonable. Against this background, the editor of the Lincoln, Nebr., Journal recently wrote an editorial entitled "Fish or Cut Bait on Farm Issue." I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FISH OR CUT BAIT ON FARM ISSUE

Vice President RICHARD NIXON'S founders' day pronouncements in Lincoln apparently have been accepted in Washington as the outline for his approach to the farm issue. fer a farm issue to a farm solution," he declared.

The Vice President took the position that it is time for the Democratic-controlled Congress "to fish or cut bait" on the farm problem. "If they fail to act or act irresponsibly during this session of Congress, they will have made it clear that they prefer a farm issue to a farm solution," he declared.

A year ago, this statement from a high administration official would have had a hollow ring. Prodded by Agriculture Secretary Ezra Benson, President Eisenhower had made it plain that he would veto any farm legislation not moving toward the Benson promised land of lower prices and greater production.

This year it is different. The President has informed Congress that he will approve any farm bill which meets certain broad standards. The standards he laid down are not unreasonable.

If Congress fails to act this session, NIXON said, it will be the responsibility of candidates of both parties after the conventions this summer to present new programs to deal with the farm problem. NIXON and his advisers already are seeking counsel from throughout the Farm Belt to draw up such a program.

This, then, is not a typical phony Republican response, as it was labeled by Democratic Representative DONALD MCGINLEY, of Nebraska's Fourth District. It is first a challenge by NIXON to the Democrats in Congress. It is next a promise by NIXON to come up with a program if the Democratic Congress is unable or unwilling to do so.

At this point, the Democratic leadership seems not to realize the soundness of NIXON'S position.

They are preoccupied with the all-encompassing Poage family farm bill, which covers such a wide range that little chance is seen for its passage. They also appear intent on wrapping into the Poage bill, and thus probably scuttling it, one of the most promising farm measures yet proposed—a wheat bill endorsed by most of the major farm groups and apparently fitting the guidelines laid down by President Eisenhower.

NIXON obviously is in the boat and has a sharp hook on his line. If the Democrats are content to cut bait, they'll have some explaining to do when they come home to the voters empty-handed.

NATIONAL FUELS POLICY

Mr. HARTKE. Mr. President, there is pending in the Committee on Rules and Administration a concurrent resolution of great importance. I refer to Senate Concurrent Resolution 73, which would establish a joint congressional committee to study the overall fuels situation of this Nation and make recommendations for a single, integrated national fuels policy coordinating our energy-resource industries.

Many reasons dictate the undertaking of such a study. Fuel for energy is basic to the growth of our economy and to maintaining national security. It is obvious, therefore, that our continued well-being as a Nation depends on an assured supply of low-cost, high-yield fuels.

Conservative projections of America's growth set our 1980 population at roughly 250 million persons. If the standard of living enjoyed by this Nation is to keep pace with this skyrocketing growth, our industrial capacity must be expanded tremendously. An expanding industrial capacity means, in turn, that our consumption of energy fuels will grow, not only correspondingly, but at an even greater rate.

Resources for The Future, Inc., a nonprofit research group concerned with the development, conservation, and use of our natural wealth, has estimated that in the 20 years from 1955 to 1975 our power needs will grow by 120 percent in the use of hydroelectric power, 107 percent in the use of natural gas, 95 percent in the use of oil, and 75 percent in the use of bituminous coal. This seems fantastic for a scant 20 years, but I am assured it is realistic.

Where is this vast power to come from? We are today rich in power. I am not one to subscribe to the scare statistics that purport to show that we shall, in a few short years, waste away our inheritance of natural wealth. Yet our natural resources are not unlimited. Only a certain amount of oil, coal, gas, uranium, or any other source of energy is available anywhere.

It is possible to talk to 10 energy economists and come up with 10 different predictions of exactly when all of the fuel in the United States will be exhausted. Naturally, these predictions are always hedged with various qualifying phrases, such as "at current levels of consumption." But we are not interested in current levels of consumption. We hope we are facing a growth rate unprecedented in history—a demanding growth rate; and we must have the raw materials with which to meet this challenge successfully.

Meeting this challenge requires planning. It is essential that we know what we have, how it is being used, and what we can expect to have in the future. We cannot proceed blithely down the path of carefree extravagance, allow our vital industrial machinery to grind to a rusty halt, and then wonder what we should have done to avoid our plight. And I may point out here that the wheels of industry will halt long before our fuel supplies are exhausted. All that is required to suspend or cripple industrial activity, thus causing nationwide unemployment, is for fuels to become so expensive, because of short supply or high cost of production, that their use becomes prohibitive.

Consequently, we must plan for the future. That is the basic purpose of Senate Concurrent Resolution 73. It is a purpose which I endorse wholeheartedly.

I know that some Senators object to the word "plan." Many persons feel that we in the United States should enjoy a free, unplanned society. They believe that planning is the method of the Soviet Union—a method which is not free and with which our ideology conflicts.

But, merely because the Soviet Union states that it plans its affairs to insure the best use of its economic strength, it does not mean that we should be aimless, mindless, and wandering. Past administrations have brilliantly shown that planning our Nation's future need not necessarily lead to a regulated and regimented society. I am convinced that, if we drift, our destiny will be upon us much more rapidly than we think—and it will not be a happy arrival.

We are not concerned here with stringent Government regulation of the various energy industries. I do not think the Government should set up additional bureaucratic machinery to say "Thou shall," and "Thou shall not," to these important segments of our economy. What I am urging is the speedy approval of Senate Concurrent Resolution 73, a document that says nothing of Federal regulation or end-use control. The congressional committee envisioned under this resolution would be dedicated solely to determining exactly where the public interest lies in this vital matter of energy supplies. This, I think is a far different matter than establishing absolute Federal regulation, as some of the critics of this proposal have claimed it would do.

This entire subject of the public interest is one that concerns me greatly and which, I am sure, is of great concern to all my colleagues, as well. Ignorance of the public interest is one of the few certain ways in which a nation, if history is a reliable guide, can bring catastrophe upon itself. And on a smaller scale, we have many precedents in our own experience to indicate why concern for the public interest must be of overriding importance in the legislative activities of this body. As the late Henry L. Stinson stated, government is not "a mere organized police force, a sort of necessary evil, but rather an affirmative agency of national progress and social betterment."

Consider the simple matter of conservation. When the first westwardbound pioneers reached the summit of the Appalachians, they saw virgin forests stretched before them, with abounding game, swift streams, with easily harnessed power. They had found a land of infinite promise.

We all know what happened. As the pioneers moved west, the exploiters followed, filling the vacuum. Vast stands of timber that had taken hundreds of years to grow were mowed down in months. The herds of the Great Plains were slaughtered without reason. Streams were diverted for frivolous purposes and their power diminished.

Finally, of course, the public was aroused and the public interest was considered. A simple determination was made—that conservation of our natural resources was to be encouraged. This straightforward declaration of policy has had, as I am sure all Senators are aware, a profound effect. Take timber, for example. Where once logging companies stripped timberland and moved on without a backward glance, now grow tree farms dedicated to an assured supply of wood for future generations. This is the sort of policy declaration that must be made concerning our energy fuels.

Indeed, the situation in our energy industries is quite similar to the situation that gave rise to the earlier policy decision on the conservation of woodlands. At first discovery, our fuels resources—coal, oil, and natural gas—seemed inexhaustible. They were consequently used without question. There was always "plenty more where that came from." And there still is plenty more. But all three sources of energy are, at the present time, to varying extents, depleted. It has become obvious that these vital ingredients of national growth are, in fact, limited, although in many cases those limits are still a long while away. It has become just as obvious that it is time for a thorough, unbiased reappraisal of America's energy situation and its relation to the national interest—not only of today, but of the future.

This reappraisal is even more urgently indicated by the unhealthy economic conditions prevailing in our energy industries. The petroleum industry is facing a mammoth glut of oil, not only in this country, but on a worldwide scale. This oversupply naturally leads to depressed prices and basically uneconomic marketing practices. The gas industry, controlled as it is by Federal regulation, has been unable to make the proper adjustments to its role in the economy. Wellhead prices for this product have continued to be so low that sufficient incentive for exploration is lacking. The result is that the life index of natural gas has steadily decreased. And the coal industry is in the economic doldrums, causing widespread economic disaster to vast areas of this country.

Other countries of the world are not so naive as we. Many of them have already realized the importance of energy supplies to their economic progress and have consequently formulated fuels policies to guide them. Perhaps foremost in this movement is the European Coal and Steel Community—the group of six continental countries banded together for mutual economic growth. I have personally visited with their representatives in France, Luxembourg, and Western Germany. Our good neighbor to the north, the Dominion of Canada, was also quick to realize the necessity of an energy policy. They have established a National Energy Board designated to "study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada, and shall recommend to the Minister of Trade and Commerce such measures as it considers necessary or advisable in the public interest." We cannot afford to lag behind the rest of the world in this field.

Because the economic ramifications of our fuels industries are so widespread in American life, the fuels study proposed here must be conducted on a very broad scale. It must delve into all aspects of energy supplies, energy needs, and the great mass of data that pertains to the

economic future of the United States. As one leading fuels economist has pointed out:

> The development of an integrated national fuels policy calls for a consideration of all factors affecting the national supply of and requirements for all fuels and energy sources. The purpose of such a study is to determine what course of action is necessary to achieve the lowest overall cost of fuel and energy consistent with security of supply.

I, of course, cannot describe in detail what would be considered by the study group in their investigation. I cannot even tell Senators how long an effective study of this vital matter might take. But I can, in all conscience, assure Senators that such a study is an absolute necessity to the United States at this time.

Mr. BARTLETT. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. Moss in the chair). Does the Senator from Indiana yield to the Senator from Alaska?

Mr. HARTKE. I am delighted to yield to the Senator from Alaska.

Mr. BARTLETT. The Senator from Indiana speaks on a subject which is, or ought to be, of concern to every citizen. We need to know more about our resources in every field, and particularly, as the Senator informs us today, about energy fuels. We need to know the particulars of our resources, and we need to know the whole of our resources. In order to acquire that knowledge, we must, as the Senator so graphically tells us, make appropriate studies. Such studies are essential in this industrial Nation of ours, where changes are coming about so rapidly. We have consumed great amounts of our natural resources, sometimes not looking forward to the early tomorrow, when some of these resources may be depleted.

I congratulate the Senator for now urging an inquiry in this particular field which will comprehensively cover the whole subject.

Mr. HARTKE. I wish to thank the distinguished Senator from Alaska. I know of his deep and abiding interest in the future of the United States, and his particular interest in utilizing the resources of the new State of Alaska, where there are untouched natural resources. Unless we know exactly where they are and how to use them, they may never be used properly.

I congratulate the Senator for bringing to the attention of the Senate the requirement not only to recognize the fact that Alaska has been accepted as a new State of the Union, but the requirement of the recognition that the natural resources of Alaska should be utilized to the fullest extent, cognizant of the needs of our Nation.

Mr. BARTLETT. When the Senator said Alaska's resources were almost untouched, I was about to add they were also unlimited, but that would not be a proper statement, because I fear that is what was said too often about the resources of other States. The resources appear to be unlimited now—water power, coal, natural gas—but this may not be the case in 100 years. Even in Alaska, where everything is so new, and so vast, the time is appropriate for studies of the very nature which the Senator from Indiana urges on a broad scale.

Mr. HARTKE. I thank my distinguished friend from Alaska again.

Mr. President, I, of course, cannot describe in detail all of these things, but this is not simply a personal opinion. Over the years, many authoritative panels and commissions have had occasion to examine our energy situation. It has been a consistent recommendation of these groups that a study aimed at providing a national fuels policy was necessary. Let me cite just a few of these authorities.

A subgroup of the National Resources Committee recommended in 1939:

> The energy resource—coal, petroleum, natural gas, and waterpower—lie at the foundation of our industrial civilization. * * * From the evidence reviewed in this study, it appears beyond argument that the Nation's patrimony should be safeguarded, that a sound national policy must be concerned with the conservation and prudent utilization of these basic resources.

In 1951, an important committee of this body recommended in the words of its chairman, the senior Senator from Wyoming:

> We must still give consideration to the formulation of a broad "national fuels policy to meet the needs of the United States in times of peace and war."

The President's Materials Policy Commission, commonly called the Paley Commission, reported in 1952:

> But on one point the Commission is very clear—the hydra heads of energy policy must be reined together. This can be accomplished only if all parties concerned—the President and Congress, the State and Federal agencies, and the energy industries—work from a common base of understanding of the total energy outlook, the interrelations within the energy field, and of the relations between energy and the rest of the economy.

And just a few short months ago Vice Chairman William R. Connole, of the Federal Power Commission, asserted:

> The need for a national energy policy seems so patently obvious that I am simply unable to understand how thoughtful people concerned with this business can overlook it.
>
> When we think that our energy resources are consumed at such an incredible rate that, for an example, all the fossil fuel consumed in the history of the world up to the year 1900 would last only 5 years at today's rate of consumption, we know how important this whole subject is to all the peoples of the world.

While these authorities are all concerned primarily with the needs of a peacetime economy, the realities of national security present a further demand for a national fuels policy. Our experiences in two world conflicts have shown us that the extravagances of war require a tremendous increase in our energy output. We have no source of energy which can be greatly developed or expanded overnight. It is estimated by spokesmen for the domestic oil industry that it takes from 3 to 5 years to establish a new producing oil well. The gas industry, with its pipeline capacity already committed, would, of course, face delays because of the time necessary for additional construction. And the bituminous-coal industry reports that it takes up to 4 years to develop a modern coal mine and almost as long to train a miner in the use of the modern machinery of present-day mining.

With our retaliatory power strongly oriented to industrial capacity, our expanding need for energy fuels in the case of a national emergency is well documented. Overseas supply lines will be in jeopardy, domestic petroleum production will be consigned almost entirely to military uses, and our vital production might must be fueled by the remainder of our energy industries—primarily coal. Consequently, the maintenance of a strong, stable energy base becomes essential if this country is to be able to meet the exigencies of a future emergency. This resolution will insure that this is done.

Nor can we ignore the economic challenge which has been thrown down by the Soviet Union. The cold war, as we all know, is now being fought in economic terms as well as diplomatic ones; and, of the two, the economic competition is the more crucial area. The Communists are well aware of the importance of fuels to this strife. An Izvestia article more than a year ago emphasized this. It said:

> In the 7-year plan for the development of our national economy, it is extremely important to find a practical solution to the problems connected with the integrated use of natural fuels resources.

And a second article asserted:

> Therefore, in our long-range plan for development of our natural fuel resources we are planning for the extensive but intelligent use of oil, natural gas, and coal for powerplants, for our industry and the everyday needs of community living.

Recent reports of economic planning in the Soviet Union indicate that these assertions may be rapidly realized. The most recent figures available reveal that the Soviets expect to increase their consumption of energy by approximately 70 percent by the year 1965 as compared with 1958. In this country, on the other hand, the best estimates of our energy use show an increase of only 25 percent from 1958 to 1965.

It is also worth noting that the Soviet Union, for the first time in history, surpassed the United States in coal production in 1958, producing 560 million tons to our 430 million tons. Soviet propagandists also claimed that the production of oil in their country in 1959 ousted Venezuela from its historical spot as the second largest petroleum producer in the world. These signs of growth, and their economic implications, cannot be ignored by the United States.

Since the introduction of Senate Concurrent Resolution 73 late in the last session of this Congress, a certain amount of controversy has arisen among the various fuels industries concerning it. From the start the resolution has had the enthusiastic support of the coal industry. Some segments of the petroleum industry and the producers of natural gas, however, were more reluctant

to urge approval of this measure. Yet domestic oilmen have swung around to approving this important idea. For example, the president of the Texas Independent Producers and Royalty Owners, Harry C. Jones, recently stated that his organization had little to gain by opposing a fuels policy study, and added, "Our most realistic and productive course might well be to participate in such studies and discussions."

The controversy has now boiled down to a simple one. The bulk of the opposition now comes from four or five international oil companies. These are the principal importers of the foreign residual oil which has flooded the eastern seaboard of the United States, tending to render us dependent on oversea sources of supply for such a vital domestic need.

There was at one time an objection raised that this resolution would lead to so-called end-use controls on America's energy fuels. The sponsors of the resolution never intended this, and they have eliminated the language that led to this interpretation. End-use controls are no longer an issue in this discussion.

Still, Standard Oil of New Jersey has published a lengthy treatise discussing this proposal in terms of a regulated economy versus the free choice of consumers. As might be expected when the issue is presented in these terms, the company stands firmly on the side of freedom. But this means little, since the issue is considered in basically unrealistic terms. The distinction between opponents and proponents of a national fuels policy study cannot be drawn along the line of Government controls as opposed to a free economy.

The distinction at issue is whether or not this country is to maintain the security of its fuel supplies. Those few great oil corporations who stand opposed to the resolution decry the security of energy supply as a tenet of national policy. Senators may wonder, as I do, if it is because Jersey Standard and other opponents use foreign oil for higher profits.

I cannot understand continuing objections after objectionable provisions have been deleted from the resolution. I cannot understand the insisting on a policy of ignorance rather than enlightenment.

I suspect some oppose this important forward step in order to try to remain relatively unhindered in importing. Some apparently wish to be free to increase the flood of imported oil, particularly residual oil, which has been so detrimental to our domestic fuels industries and which can cause nothing but harm in the future.

Despite these objections, we must go forward with this fuels study. It is a vast problem that we are discussing. This area of energy supplies and needs is so broad and so crucial to our Nation that we must put our best brains to work assembling facts and extrapolating opinions to assure the country that its progress will not be impeded by a lack of energy.

Mr. President, we cannot long exist as a strong Nation without a fuels policy. We cannot afford to allow shortsighted or selfish individuals to stand in the way of our national growth. We cannot willingly permit a few companies to seek profits at the expense of America's national security. We must pursue our national destiny with all the logic and intelligence at our command, and this pursuit necessarily means the formulation and adoption of a national fuels policy without delay. The speedy approval of Senate Concurrent Resolution 73 is of the utmost importance. The Senate should not postpone adoption of it any longer.

Mr. MOSS. Mr. President, will the Senator yield?

Mr. HARTKE. I yield.

Mr. MOSS. I wish to commend the junior Senator from Indiana for his very excellent speech on a national fuels policy.

We have been considering this subject in the Senate for some time. I agree heartily with the Senator that it is high time that we moved on to the determination of a national fuels policy, under which information will be available to the people of America and to our Government, so that we may know where we shall be in the future, and what we can do to develop our fuel supply. I congratulate the Senator on his statement.

Mr. HARTKE. I thank my distinguished colleague for those very fine remarks. I thoroughly appreciate them.

NATIONAL GUARD SEMINAR

Mr. MOSS. Mr. President, it was my great good fortune this past weekend to attend some of the sessions of the first Americanism Up Front seminar sponsored by the Utah National Guard. I came away so deeply impressed by what I saw and heard that I hope that this magnificent course in informed citizenship is to be duplicated in every State in the Nation.

The seminar is the brain child of the able commander of the Utah National Guard, Maj. Gen. Maxwell E. Rich, and grew out of a seminar General Rich attended at the War College in Washington, D.C. Its purpose is to assemble leaders from all parts of the State, give them intensive training in Communist aims, accomplishments, and philosophy, bestow upon them certificates making them "minutemen for a day," and motivate them to return to their own communities with a program of action to "revitalize Americanism in the hearts and minds of the people."

The site of the seminar, which now will be repeated twice a month for a new group of 25 to 30 educational, industrial, civic and governmental leaders is Camp W. G. Williams, located approximately 20 miles south of Salt Lake City on what has been called the longest absolutely straight stretch of highway in the world.

The setting itself is inspiring—a cluster of buildings on the sagebrush-covered bed of prehistoric Lake Bonneville at the foot of the rugged Wasatch Mountains. The air is crisp and clear, and as invigorating as the ideas pounded out in the classrooms and mulled over thoughtfully in the guest barracks at night.

General Rich, speaking for the guard, opens the seminar by pointing to an enemy on the homefront which is as deadly as any weapon known to man—"the paralytic, cancerous ailment known as 'complacency'."

He continues:

> By definition, complacency is a state of contentment and self-satisfaction. In this age, national complacency is the first symptom of national rigor mortis.

He contrasts America's complacency with the "hard, cold facts of the Soviet military threat" in this way:

> As Russian diplomats engage us in conversation on peace and disarmament, Russian scientists, engineers, technicians, and laborers continue to conceive, design, develop, and produce modern weapons of war at an ever-quickening pace.

And then continues:

> As never before, the free world stands under the Soviet gun. Evidence of this fact is found in the recent long-range test shots conducted by the Soviets into the central Pacific which speak of a military warning of supremacy.
>
> The United States has officially conceded numerical superiority to the Soviet Union in intercontinental ballistic missiles—although it is now fashionable in official circles to describe the Russian margin as moderate.
>
> We do not have a weapon system capable of stopping ballistic missiles once they are launched, and there is no assurance we will ever have one.
>
> Any margin of deterrence possessed by the United States is steadily shrinking. And, as the margin disappears, balance of power automatically shifts to the Soviet Union.
>
> A safe margin of deterrence and resultant balance of power can be achieved and maintained only through a total unified and accelerated national effort that is not without some sacrifice.
>
> In the face of these openly paraded facts, how can we explain our Nation's headlong flight toward complacency—the careless disregard for the basic investment needed to insure our way of life?
>
> How can we explain the tendency to abandon the proven concept of deterrence through strength in favor of the philosophy of deterrence through hope?
>
> A few of the answers, I believe, have best been expressed by the great journalist, Walter Lippmann:
>
> "The critical weakness of our society," he writes, "is that for the time being our people do not have great purposes which they are united in wanting to achieve. The public mood of the country is defensive, to hold on and conserve, not to push forward and to create. We talk about ourselves these days as if we were a completed society, one which has achieved its purpose, and has no further great business to transact.
>
> "Thus, in our encounter with the Soviet rulers, in the confrontation of the two social orders, the question is whether this country can recover what, for the time being, it does not have—a sense of great purpose and of a high destiny."
>
> Lacking the sense of great purpose, our people have settled into a mood of wishfulness; a state of medicated somnolence.
>
> All-out modern war threatens us with inconceivable destruction. Too horrible to contemplate, we wish it away.
>
> Our desire for peace is fervent. Because this is true, we cling with desperation to the anesthesia of outright deceit published by uncertain Government leadership.

We are tranquilized by diversionary tactics. Attention drawn to avowed Soviet intentions hinders our study of demonstrated Soviet capabilities.

For this medication, the Khrushchev tour was just what the doctor ordered.

And now, quite unbelievably, the United States no longer is basing intelligence estimates of Russian military power against the long-accepted yardstick of Russian capabilities—but rather, on official estimates of Russian intentions. We now say that the Soviet threat "is an intelligence estimate of what we believe the Soviets will probably do, not what they are capable of doing."

The conclusions to be reached from these facts are expressed by General Rich in this dramatic way:

To regain national security—and world balance of power—calls for nothing short of a revival, nay, a crusade, embracing our diplomatic, educational, spiritual and scientific posture, as well as our military effort. This effort must strike deep into our community structure.

Somewhere along the line there has developed—among our leaders—the belief that American people can't take it.

This is possibly one key to our failure in this country to mobilize public opinion for adequate preparedness in military and mental readiness.

The Utah National Guard knows well that the American people can take it at any time—as long as there is public enlightment.

That, we feel, is the key—enlightened leadership. That's the key to solving the vexing problem of complacency.

It is with this hope that the Utah National Guard proposes this program of community action for a revitalization of Americanism in the hearts and minds of the people.

They must have an understanding of military power as a means to prevent war, they must realize that in preventing war our military power is only as good as the enemy thinks it is, and military power—as a preventative—depends upon our willingness to use power or force, if necessary. Otherwise, it becomes a fraud, and will be recognized as such by the enemy.

It means full understanding of the sacrifice it may take to remain free.

And it means full understanding of the philosophical struggle between democracy and communism—freedom and slavery—a God-fearing and a Godless society.

Our people must be convinced that supremacy of the individual is supremacy of the state (so convinced that they are willing to make a supreme sacrifice for it).

They must demonstrate that a government based on the will of independent individuals is the only kind yet devised with man as agent which will never prepare for large-scale, international aggressive war, but which will prepare and maintain a strong defense to assure uninterrupted perpetuation.

In class after class, from early morning to late at night, the leaders who attend the seminars will have driven home to them facts on the extent of the Russian military and psychological challenge, and what they mean in terms of world conflict. The curriculum is a most ambitious one, with seven areas of study as follows: First, "The Union of Soviet Socialist Republics in 1917"; second, "The Communist Philosophy and Russian History"; third, "European Satellite Nations of the U.S.S.R."; fourth "Historical Development Since World War II"; fifth, "Basic Themes"; sixth, "Political, Economic, and Social Vulnerabilities of Communism"; and seventh, "The Ideological-Philosophical Vulnerabilities of Communism."

Ten copies of the "Democracy Versus Communism" series serve as the seminar's textbooks, along with official service journals, and are given to the seminar personnel to take back to their communities.

The seminar ends with a panel discussion, and a summation of the course. It was my pleasure to make a summation at the close of the first seminar, April 16, 1960.

On April 15, the Deseret News, Salt Lake City daily newspaper, in editorial commendation of the group which attended the first seminar, stated:

To be invited, to accept, to participate, and to carry the message to others is a mark of dedicated and effective patriotism.

I ask unanimous consent to have the complete editorial printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UTAH'S "MINUTEMEN FOR A DAY"

Every conscientious citizen is fully aware that the Nation is expending approximately $40 billion annually to keep America strong militarily.

Aside from the Nation's higher military personnel, however, only a small civilian minority has very much knowledge or idea what the real defense problems are. An excellent nationwide program is now underway to bring important military and defense information to many responsible civilians.

At 7:30 Friday morning, 25 "Minutemen for a Day" civic leaders began a 2-day seminar, "Americanism Up Front" at Camp Williams. In class after class, for the 2 days, and from early in the morning until late at night, these civic leaders will have presented to them an amazing amount of pertinent facts about the defense problems facing the Nation.

These citizens are learning in detail, as undoubtedly they never knew before, the size of the problem. It is far more complex than just knowing what kinds of weapons rockets, and missiles are being and should be developed. These men are learning that the problem involves determining what the world wide objectives of communism are. It involves language barriers, the we-will-bury-you economic war, infiltration of Communist agents into non-Communist countries, defending the shores, harbors, and factories of the United States, military training, civil defense programs, mobilization, and even taxation.

The Pentagon wisely saw fit to conduct such an information seminar in Washington recently for the commanding officers and others of the various State National Guards. When these men returned home, they were advised to give similar seminars to the civic and business leaders of their own States so that these leaders would have a far better understanding of the serious problems facing the Nation.

Maj. Gen. Maxwell Rich and his officers of the Utah State National Guard have prepared a worthwhile and significant seminar. They merit commendation for the thoroughness of their preparation—and for the time and effort that they are giving to this week's seminar, the first of a series to be given at Camp Williams and then throughout the leading communities of the State for other leaders.

A word of commendation is also due the 25 men attending the first seminar these 2 days, and the many other men in the days to come, for giving time and effort to become better informed citizens, and for the efforts they will expend in the days ahead instructing others. To be invited, to accept, to participate, and to carry the message to others is a mark of dedicated and effective patriotism.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the joint resolution (S.J. Res. 150) permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton Federal reclamation project, Wyoming.

The message also announced that the House had agreed to the amendments of the Senate to the bill (H.R. 8601) to enforce constitutional rights, and for other purposes.

SERMONS WE SEE

Mr. BYRD of West Virginia. Mr. President, recently I had the good fortune to meet Mr. L. L. Winship, editor of the Boston Globe. Mr. Winship told me a story which I think is worth repeating. I shall repeat it in his own words:

The late James Morgan, distinguished writer for the Boston Globe and author of many books, including "Our Presidents" published by Macmillan Co., took a walking trip in Springfield, Vt., when he was a young bachelor.

His pipe got stopped up, and without his pipe, his vacation was ruined. He could find no tobacco store in town and finally ended up at a hardware store and told his problem to the Vermonter behind the counter.

The storeman looked around and finally found a long, thin nail and unblocked the pipe.

Morgan said, "I don't know how to pay you. It means more to me than you know." The storekeeper replied, "It's all paid for."

Morgan was puzzled He had never been in Springfield, Vt., before and did not know anybody there.

The storeman explained: "Thirty years ago a young man came down from the hills and worked here in the machine tool shop. After he had been here a couple of years, he got the flu and died. Two or three of us who had known him undertook to take the body back up into the hills and we put the box in the back of an old pickup truck.

"About 3 o'clock in the morning, just as we started up a hill toward his home, we got mired and couldn't get out and didn't know what we were going to do with that body.

"Somebody threw up a window in a house beside the road and the farmer in his nightshirt stuck out his head and said, 'I'll be right down.'

"He went to the barn with a lantern and came out with a yoke of oxen and a chain and whipped us out in no time.

"I had a $2 bill in one pocket and a $10 bill in the other pocket and I said, 'I wonder how much I've got to give this guy. It must be a racket. He's waiting there for people to get stuck, then pulls them out.' So I said to the farmer, 'How much do I owe you?'

"He replied, 'Nothing—you do something for somebody else someday.'

"'I've been paying for that for 30 years,' said the storeman as he sent me on my way with my pipe."

Mr. President, there is much in this story that typifies the ideal set forth in

the poem, "Sermons We See," by Edgar A. Guest. May that ideal guide each of us along his pathway from day to day.

SERMONS WE SEE

I'd rather see a sermon than hear one any day;
I'd rather one should walk with me than merely tell the way.
The eye's a better pupil and more willing than the ear,
Fine counsel is confusing, but example's always clear;
And the best of all the preachers are the men who live their creeds,
For to see good put in action is what everybody needs.

I soon can learn to do it if you'll let me see it done;
I can watch your hands in action, but your tongue too fast may run.
And the lecture you deliver may be very wise and true,
But I'd rather get my lessons by observing what you do;
For I might misunderstand you and the high advice you give,
But there's no misunderstanding how you act and how you live.

When I see a deed of kindness, I am eager to be kind.
When a weaker brother stumbles and a strong man stays behind
Just to see if he can help him, then the wish grows strong in me
To become as big and thoughtful as I know that friend to be.
And all travelers can witness that the best of guides today
Is not the one who tells them, but the one who shows the way.

One good man teaches many, men believe what they behold;
One deed of kindness noticed is worth forty that are told.
Who stands with men of honor learns to hold his honor dear,
For right living speaks a language which to everyone is clear.
Though an able speaker charms me with his eloquence, I say,
I'd rather see a sermon than to hear one, any day.

DEFENSE LAND WITHDRAWALS AND PUBLIC LAW 85–337

Mr. BARTLETT. Mr. President, on February 28, 1958, a bill introduced by the junior Senator from California, then chairman of the House Interior and Insular Affairs Committee, became Public Law 85–337.

It was the purpose of this act to reserve to the Congress the exclusive right to establish for defense purposes withdrawals of public land exceeding 5,000 acres. The language of the pertinent section clearly was intended to control all forms of land appropriation. In part, Public Law 85–337 provided that:

> No public land, water, or land and water area shall, except by an act of Congress, on and after February 28, 1958, be (1) withdrawn from settlement, location, sale, or entry for the use of the Department of Defense for defense purposes; (2) reserved for such use; or (3) restricted from the operation of the mineral leasing provisions of the Outer Continental Shelf Lands Act, if such withdrawal, reservation, or restriction of more than 5,000 acres in the aggregate for any one defense project or facility of the Department of Defense * * *.

Mr. President, those words are plain. They are incapable of being misunderstood. The Congress did not advise the executive branch of Government that the law would apply except when administrative agencies might decide otherwise. No exceptions were made. If the Department of Defense desires any tract in excess of 5,000 acres for a given purpose, existing law—Public Law 85–337—requires affirmative congressional action. When the sponsors of this legislation, the junior Senator from California [Mr. ENGLE], and those who joined with him, introduced and worked successfully for passage of the bill which became the law cited, they did not contemplate that there would be a unilateral determination on the part of the executive agency as to whether the law would be followed.

But the unhappy fact is that 4 areas, exceeding in the aggregate 1,400,000 acres, have been set aside for the use of the Defense Department in Alaska and no proposed legislation has been offered. There has been an obvious, deliberate, and thus far successful, attempt to evade the provisions of what I shall here term the Engle law.

For the sake of brevity, I shall cite but one example of the circuitous reasoning through which this situation has been created. It involves an area of some 607,800 acres located near Fairbanks, Alaska's second largest city.

On September 9, 1950, the Department of the Interior issued to the Department of the Army license to control this area of 900 square miles in Alaska. For purposes of comparison, I observe that this surface area represents approximately three-quarters of the total acreage in the State of Rhode Island. The tract is well over 100 times the area allowed to be administratively reserved or appropriated under the provisions of the Engle Act, Public Law 85–337.

The use for which the Department of the Army applied for this tract was perhaps one of validity. It was intended for use as a testing range for nearby Nike guided-missile installations.

At the time this license, or more appropriately, permit, was issued to the Army by the Interior Department, there was pending a request for the withdrawal of the same area through the process provided by law. Indeed, the application for withdrawal was a matter of public record as early as March 25, 1959, the date of its publication in the Federal Register.

Both Departments of Government recognized from the very beginning of negotiations for reservation that actual withdrawal would depend upon legislative action. The notice of application qualified the request with the stipulation that, "congressional approval is required under the provisions of Public Law 85–337."

This statutory requirement having been recognized by both Departments, it is fair to ask why use, exclusive of all other entry, was allowed in absolute conflict with the provisions of law.

I am informed that the Army was allowed to enter upon and exclusively control this tract by administrative authority because the provisions of the Engle law did not contemplate the administrative allowance of a special land-use permit. I am further informed that the Department of the Interior considered the action justified by the urgent need of the Department of the Army for an area to conduct test firing of missiles during the winter months of January, February, and March.

I have no complaint whatsoever with the allowance of use to the Military Establishment of land necessary to maintain adequate defense capabilities. In fact, prior to the issuance of the permit by which firing was conducted during 3 months of the past winter, I attended a briefing at the invitation of the Department of the Army, during which the necessity of withdrawing this particular tract was persuasively presented to me. My sole complaint is with the policy determination which allowed an obvious violation of the intent of the Engle Act, in order to meet an emergency created solely by the failure of either Department to draft and present to the Congress legislation allowing the withdrawal.

I feel confident that the Congress would have speedily considered legislation labeled urgent by the Department of the Army. I would go a step further to express my personal view that the proposed withdrawal might have been approved on its own merits.

As to the argument that the special land-use permit was not within the contemplation of the Engle Act, I observe that it does not seem a proper function of an administrative agency to devise special procedures to defeat congressional policy. I have searched diligently the regulations of the Department of the Interior for justification of a permit of this sort and find none compatible with the present situation. Special use permits appear in the Code of Federal Regulations, title 43, only to give a permittee the barest license to enter upon public lands. The regulations specifically prohibit the segregation of public land through this devise. I quote section 258.10 of title 43 which provides that: "The mineral contents on the lands shall at all times be subject to prospecting, location, developing, mining, entering, leasing, or patenting under the provisions of the applicable general mining laws or mineral leasing laws."

I ask, therefore, is it proper to allow a special use permit for the purpose of showering an area with guided missiles? Is it possible that mineral development could continue under such conditions?

It is true that the land was already segregated by reason of the prior application for its withdrawal, but there remained within the area valid mining claims upon which persons other than the personnel of the Army had every legal right to enter.

The point is that the special land-use permit, assuming that the Department is bound by its own regulations, and assuming further that a special variety was not created for this particular action, could not be issued for the purpose for which it was requested by the Department of the Army.

Were the record not so clear in this case and the three others to which I referred in the beginning of my remarks, my criticism might not be so great. It is apparent to me, however, that there was ample time for one of these Departments to have approached the Congress

with authorizing legislation. The fact is that even now no legislation has been proposed for the continued use of any of the four Alaska areas. I am led to believe that there would be no end to this invasion of legislative authority were these permits to stand unnoticed. Although, to the best of my knowledge, no similar violation has occurred in any other State, there is no guarantee that the practice will continue to be discriminatory in its application in Alaska.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. BARTLETT. I yield.

Mr. GRUENING. First, I want to commend the distinguished senior Senator from Alaska very highly for calling attention to what seems to be an amazing abuse and misfeasance of executive authority. Here we have an act of Congress which is clear and explicit. Yet the Department of the Interior, which supposedly has been the guardian of the public domain and the executor of the laws relating to it enacted by Congress, to the extent that the laws fall within the jurisdiction of that Department, has participated in or connived at four flagrant violations of this act.

On the day before yesterday, my colleague, Senator BARTLETT, made a most comprehensive analysis of a similar action taken by the Department of the Interior in an entirely different field, in which the Secretary, through a press release, announced his intention of establishing certain alleged Indian fishing rights, contrary to the legislation passed by Congress in the Statehood Act, contrary to the provisions of the Alaska constitution, and contrary to the law of the State of Alaska.

I wonder whether, in view of my colleague's statement that this action in regard to violation of the 5,000-acre limitation has happened only in Alaska, it may not be considered a kind of cultural lag, whereby the Secretary of the Interior, who for many years was almost the absolute czar of Alaska's destiny, has not noticed the fact that Alaska has become a State, and that it is entitled and its people are entitled to the same treatment as is accorded other States. I wonder whether this is not something which needs to be rectified by calling this inadvertence to his attention, and if disregarded, by action on the part of the appropriate congressional committees and by Congress itself.

I fear that unless some corrective action is taken, what is now sought to be done will be only the beginning of a long train of usurpations and abuses, of which the people of Alaska will be the victims.

Mr. ENGLE. Mr. President, will the Senator from Alaska yield?

Mr. BARTLETT. Before I yield to the Senator from California, who is the author of the law under discussion, I should like to reply to my colleague from Alaska. It seems to me that he has expressed a degree of the bewilderment and puzzlement which all of us are sharing increasingly. We cannot understand, for example, in this specific instance, why it is that the provisions of the carefully considered Engle bill, which became law, prohibiting the Department of Defense from acquiring public domain in excess of 5,000 acres, without authority from Congress, should be evaded. As I was saying, this situation has not occurred elsewhere yet; but if the effort is successful in Alaska—if it is not called to public attention—my prediction is that it will be extended elsewhere.

I am now happy to yield to the distinguished junior Senator from California.

Mr. ENGLE. Mr. President, I join in complimenting the able, diligent, and distinguished senior Senator from Alaska on his clear and comprehensive statement regarding what appears to be a plain violation of the law passed by Congress with respect to military withdrawals of public lands. The Senator from Alaska will recall that the reason for the passage of the law was that the military departments were stepping into the public lands areas of the United States, which abound in the western part of the country, including the new State of Alaska, and setting aside for themselves, and prohibiting all other use, large areas of the public domain.

It was customary for the military simply to draw on a map those portions of the public lands which they thought they needed or ought to have, and without any surveillance at all by any other department, because the Department of the Interior said it did not have the facilities with which to judge the military necessity for the withdrawals, proceed to take those areas. When the military departments took those areas, they excluded miners, stockmen, lumbermen, conservationists, sportsmen, hiking groups, and all others who like to get into the great out-of-doors. They would exclude every type of activity in the area, whatever it might be, including, perhaps, in some instances, vital water conservation programs.

So we from the West decided we had had enough of that, and that we would put some control on the military, so far as the withdrawal of huge areas of land was concerned. We passed a law which provided that whenever the military sought to withdraw an area in excess of 5,000 acres of public domain, it would be necessary for the military to come to Congress and get the consent of the congressional committees. We know that the committees would not prevent the military from taking such lands as are needed for the national defense. We simply did not want the Navy to have one area, the Army to have an area, the Air Force to have an area, and the Marine Corps to have an area, and all of them use the areas which they had selected only a tenth of the time, and exclude every other use—and sometimes exclude high-priority uses.

In addition, we did not want to require them to come to Congress with a very small application to withdraw 20 or 30 acres which might be needed, for instance, for a Nike site. So we placed a limit of 5,000 acres.

Now, to my astonishment, I learn from what the distinguished Senator from Alaska has said that apparently, through some connivance between the military departments and the Department of the Interior, a new gimmick has been created, called a permit, which seeks to go outside the boundaries of the law and to evade, as I understand, the plain intention and purpose of Congress.

I should like to ask my friend if this withdrawal is not meant for the purpose of some type of missile training. Do I correctly understand that the area is proposed for use as an impact area for the testing of missiles?

Mr. BARTLETT. It is. I recall that when I first heard about the proposal of the Department of the Army to withdraw this enormous area of more than 600,000 acres of land—more than 900 square miles—I was appalled.

Mr. ENGLE. I understand the Senator to say that it is two-thirds or three-fourths as large as the State of Rhode Island.

Mr. BARTLETT. Yes.

As I said, when I first heard of the contemplated withdrawal, I was instinctively against it, despite the fact that many of the organizations in Fairbanks, Alaska—the city nearest the withdrawal area—endorse it.

I will say that when representatives of the Department of the Army called on me and explained the need for this plan, what they had to say made very, very good sense, and I was converted; I was willing to become an advocate of this proposal, instead of an opponent.

Mr. ENGLE. Provided, however, the processes of the law are followed.

Mr. BARTLETT. Yes; provided they follow the processes of the law which was so wisely and so well guided through Congress by the junior Senator from California [Mr. ENGLE], who, to the best of my knowledge, initiated the whole concept, and led the effort which resulted in enactment of the bill.

I cannot remember at this time whether the junior Senator from California was one of the sponsors of the bill. But the junior Senator from Alaska [Mr. GRUENING] and I have, earlier in the year, introduced a bill to require every department of the Federal Government to make a request of Congress, when it wishes to acquire a tract of land, for use for most purposes, in excess of 5,000 acres. But such a law might be useless and without merit if it were evaded as this one is now being evaded. In such case, what would be the use of enacting such a measure?

Mr. ENGLE. If the area is to be used as a missile impact area, it certainly will be necessary to exclude all other uses, including mining, inasmuch as it will be dangerous for persons to be in the area, if missiles are to be tested there.

Mr. BARTLETT. There is no question of that.

Last fall, when I was in Alaska, I had reason to know that the Department of the Army had called upon people who had patented mining claims in the area, and had lived there ever so long, to leave during the winter months, while the testing was going on. Of course, that is not the whole story, because it might be that after the firing was completed during the 3-month period each

winter, there would be danger to uninformed human beings who might travel through the area. Some of the missiles might be lying on the ground, and might be alive.

Mr. ENGLE. In other words, duds might be lying there, and might be very dangerous.

Mr. BARTLETT. Yes. We know that under such circumstances there are areas from which people have been excluded for 15 or 20 years.

Mr. ENGLE. In these circumstances it seems to me the public law we passed clearly covers this situation, because we precluded the withdrawal of more than 5,000 acres, when the withdrawal was for entry, for use by the Department of Defense, for defense purposes, or reserved for such use. In other words, this area is unquestionably for use by the Department of Defense, for defense purposes, and has been reserved for such use—regardless of whether the arrangement is called a permit or a license or a lease or a fee title or a grant deed. Regardless of what it may be called, nevertheless it is for that purpose, because of the exclusive use needed by the military department. It is not a permit in the accepted sense of the word, as used in any of the legislation passed by Congress, because a permit has always presupposed some type of limited use which did not preclude other use. But since this use does preclude any other use, it does fall clearly, in my opinion, within the four corners of Public Law 85-337.

I should like to suggest to my colleagues from Alaska—and I know the junior Senator from Alaska [Mr. GRUENING] is a member of the Senate Committee on Interior and Insular Affairs—that we ask the distinguished chairman of that committee, the senior Senator from Montana [Mr. MURRAY], to hold hearings with respect to this instance, in order that we may get the procedure straight. If some amendment of the law is necessary, such an amendment certainly can be made. But in any case we can make sure that the military do not go into these public-land areas and select huge blocks of our western country, to be set aside for military use, and to exclude all other use, in violation of the law, without the consent of Congress, as required by the congressional act.

While the committee is doing that, I suggest that it very seriously consider applying the same formula which we provided in the previous act with respect to military withdrawals, so that formula would be applied to all withdrawals of any kind or character, when made by any department of the Government, because the logic which impelled us to pass that law applies with equal force to all other departments of the Federal Government, although in the past other departments have not so consistently and flagrantly violated the existing law in regard to such withdrawals as has the Department of Defense.

Again I compliment the Senator from Alaska for calling this matter to the attention of the Senate.

Personally, I propose to take up the matter with the chairman of the Senate Committee on Interior and Insular Affairs and with the chairman of the House Committee on Interior and Insular Affairs, and to call their attention to this debate today on the floor of the Senate, and to ask them, in carrying out the provisions of the Reorganization Act of 1946—which authorizes the Congress to keep under constant surveillance the laws which Congress passes—to see whether in this instance the law has in fact been violated, and whether some amendment of the law is necessary in order to prevent further abuse of this character and, if so, to see to it that such an amendment is proposed.

Again I thank the distinguished Senator from Alaska for his kindness in yielding to me and again I thank him for his comprehensive and clear statement on this subject today.

Mr. BARTLETT. Mr. President, I am grateful to the Senator from California for his support. I welcome his suggestion that an inquiry be made by the appropriate committee. I think that will be all to the good. I also welcome his advocacy and help in extending this authority to include every department of the Federal Government. I am sure that will contribute to the favorable consideration of such legislation and I hope that when and if such a measure becomes law, there will be no further attempt at evasion such as we have discovered in this instance.

As a matter of fact, discussion has been centered upon one area—of 600,000 acres—in Alaska. However, that is far from the only one. There is also an area of 249,000 acres; there is also an area of 572,000 acres; there is also an area of 51,000 acres. All those areas are being used under the permit system, without having the Department ever come to the Congress and request legislative authority to set aside that land for use for defense purposes.

I inform my colleagues that only one bill in implementation of the Engle Act has been sent to the Congress. It pertains to the proposed withdrawal of a tract of 81,480 acres adjoining Nellis Air Force Base, in Nevada. That bill is now before the House Committee on Interior and Insular Affairs. Included within the proposed Nevada withdrawal are portions of the Desert Game Range. The pending legislation would not revoke the Game Range withdrawal, but would qualify it, so as to allow joint use of the area by the Air Force.

Mr. President, it is my sincere hope that a policy so close to the borderline dividing administrative discretion from circumvention will immediately be abandoned.

The law should be construed by the administrative branch of Government to mean what, in plain language, it says it means. The law was enacted for a good reason. It should guide and direct. It should not be shoved to one side simply because a technical method has been discovered to defeat it.

Mr. President, I ask unanimous consent that immediately following my remarks a list I have prepared identifying the tracts I have discussed be inserted in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

BLM number: F-020174. Total acres, 249,552.
Application for withdrawal: Federal Register, July 31, 1958, page 5804.
Permit issued (most recent): June 26, 1959.
Length of use: until canceled or no longer needed.
Purpose: Yukon training area.
BLM number: F-019269. Total acres, 572,000.
Application for withdrawal: Federal Register, May 8, 1958, page 3071.
Permit issued (most recent): May 7, 1959.
Length of use: expired November 7, 1959, or when compliance with Engle law is complete, whichever first occurred.
Purpose: Fort Greeley maneuver area.
BLM number: F-012203. Total acres, 51,750.
Application for withdrawal: Federal Register, December 13, 1955, page 9313.
Permit issued (most recent): June 26, 1959.
Length of use: until canceled or no longer needed.
Purpose: Arctic test branch.
BLM number: F-022929. Total acres, 607,800.
Application for withdrawal: Federal Register, March 25, 1959, page 2312.
Permit issued: September 9, 1959.
Length of use: January 15 through March 15, 1960.
Purpose: Nike missile testing range.

Mr. GRUENING. Mr. President, will my colleague yield to me again?

Mr. BARTLETT. I am glad to yield.

Mr. GRUENING. I wish to repeat my warm commendation of my colleague from Alaska for bringing the subject to the attention of Congress, and to point out, in connection with the remarks of the junior Senator from California [Mr. ENGLE], who obviously favors legislation which has been introduced by the two Senators from Alaska, with many cosponsors, to apply the 5,000-acre limitation to all forms of withdrawals, that such legislation seems—in view of the Department's performance—increasingly desirable. Certainly 5,000 acres is a very considerable area, and if areas of such dimensions are to be withdrawn, they should not be withdrawn casually and arbitrarily by some executive official or two, without consultation with or approval of those in authority in the States from which those withdrawals are contemplated.

I wish to point out also that Alaska has been particularly the victim, through the years, of these vast withdrawals, often made without adequate knowledge of the conditions and consequences, and which, once made, long remain.

I recall that some 10 years ago, as we were faced recurrently with this problem which resulted in much valuable terrain being held out of use, or for limited use, the then Secretary of the Interior, Mr. Oscar Chapman, had a survey made of the number of acres that had been withdrawn, for various purposes, in Alaska. The total amounted to the astonishing figure of over 100 million acres, an area approximately the size of Montana. Upon further investigation, it was found that the reasons for some of these

withdrawals were lost in the obscurity of a distant past and had been made at the behest of officials who had long since passed from the scene.

It has been the desire and purpose of the people of Alaska, very naturally, to request the return of some of these acres for their best possible use, especially when no demonstration could be made of the continued usefulness of the withdrawal. It has often been difficult to achieve this result.

A shocking revelation in the facts which my colleague has exposed is that the Department of the Interior, which is supposedly the guardian of the public domain, has gone along with a flagrant violation of the law by another executive department, and one which was totally unnecessary, because, as the senior Senator from Alaska has pointed out, it is probable that the desirability of these particular military withdrawals could have been demonstrated, and the law could have been followed in due course. We would then have had a legal procedure—in other words, an example of government of laws, and not of men.

That is why the Senator from California proposes to call this matter to the attention of the Committees on Interior and Insular Affairs of both Houses of Congress, to see whether further legislation is necessary to stop these abuses, and if not, to see that the law passed by the last Congress is henceforth enforced.

Mr. BARTLETT. I thank my colleague from Alaska for his further contribution to this vexing and important subject.

I yield the floor.

UNIVERSITY OF TEXAS OPPOSES DISCLAIMER AFFIDAVIT IN NATIONAL DEFENSE EDUCATION ACT

Mr. YARBOROUGH. Mr. President, throughout history Texans have been dedicated to the ideal of human liberty—freedom of thought, freedom of expression, freedom of religion. Today is the anniversary of the Battle of San Jacinto, fought April 21, 1836, at which Texans won their independence and freedom.

Acting in this tradition and spirit, five outstanding professors at the University of Texas, comprising the committee of counsel on academic freedom and responsibility, recently adopted a resolution urging the Congress to remove the disclaimer affidavit from the National Defense Education Act.

In so doing, this dedicated committee voted the University of Texas in position to join with other great American educational institutions such as Harvard, Yale, Columbia, and others, on this issue.

All Texans should be proud that the University of Texas has a committee which steps forward and takes a stand opposed to this discrimination against students, though such a stand may result in criticism against them.

I believe it pertinent to note that the University of Texas, with an enrollment of over 18,000, and over 75 years old, has a Texas constitutional mandate to be a university of the first class.

With professors such as Millard H. Ruud, professor of law, and chairman of this committee, and other committee members who have such understanding and regard for the dignity of the individual, Texans can confidently expect that the day is not far off when their principal university will be counted among the leaders in the Nation, if, indeed, it has not already attained that stature.

It seems to me that the first point of the committee's resolution should be of particular interest to the Congress in consideration of this matter:

Resolved, That the disclaimer affidavit required by the National Defense Education Act of 1958 runs counter to strong American traditions of long standing that the state should not intrude itself in matters of belief and conscience. * * * History amply demonstrates the dire consequences to liberty which may ensue when government goes beyond the regulation of overt conduct and regulates belief also.

As pointed out in this resolution, what the college students and professors resent is the insult implied, and the slur on their character and patriotism implicit, in a system which requires disclaimer affidavits from students and teachers who seek to borrow money from the Government, and requires no such affidavit from farmers, businessmen, or others who seek loans from the Federal Government.

Are our students suspect because they attend college and seek an education? Are all who seek learning to be distrusted, while all who seek dollars are trusted? Is it more patriotic to accumulate money than it is to seek learning?

A disclaimer affidavit requirement for scholars, but not for the promoter or the businessman, is a revelation of a subconscious fear of knowledge that bodes America no good.

Knowledge can save us when material goods could fail.

Surely our society is advanced enough to learn true values in this world. We should value learning, and nurture it, and should not treat those who seek to advance their learning as suspect persons, unworthy of the trust of their fellow citizens.

This issue should have been laid to rest with the repeal of the alien and sedition laws of more than a century and a half ago. But it seems that each generation must relearn the lesson of liberty.

The faculty of the University of Texas is to be commended for its leadership in teaching this generation the value of liberty and of learning as its chief safeguard.

Mr. President, in order that the Congress may have the benefit of the thought of this learned committee in considering this question, I ask unanimous consent to have printed in the body of the RECORD the text of the resolution of April 4, 1960, by the committee of counsel on academic freedom and responsibility of the general faculty of the University of Texas, concerning the disclaimer affidavit required by the National Defense Education Act.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the National Defense Education Act of 1958 requires every person to whom a payment or loan is made under the act to execute a disclaimer affidavit swearing or affirming that he "does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods" (sec. 1001(e), Public Law 85-864, 75 Stat. L. 1580); and

Whereas this provision has been called in question by the publicly expressed dissatisfaction with it by many persons and organizations, including such educational associations as the Association of American Universities, the Association of American Colleges and the American Association of Land Grant Colleges and State Universities, and including officials of a number of the Nation's leading educational institutions, such universities as Harvard, Yale, Columbia, Indiana, and Washington; and

Whereas Congress has been giving serious consideration to a bill designed to remove the disclaimer affidavit and President Eisenhower and Secretary Arthur Flemming have urged its removal; and

Whereas the committee of counsel on academic freedom and responsibility of the general faculty, the University of Texas, is an elected, representative standing committee of the general faculty charged with the responsibility to be concerned with matters affecting academic freedom: Now therefore, be it

Resolved by the committee of counsel on academic freedom and responsibility of the University of Texas:

(1) That the disclaimer affidavit required by the National Defense Education Act of 1958 runs counter to strong American traditions of long standing that the state should not intrude itself into matters of belief and conscience. This the disclaimer affidavit does by requiring the student or faculty member to swear, among other things, that he does not believe in any organization that believes in the overthrow of the U.S. Government. History amply demonstrates the dire consequences to liberty which may ensue when government goes beyond the regulation of overt conduct and regulates belief also.

(2) That while the National Defense Education Act is based upon the apparent assumption that the welfare, if not the survival, of the Nation is dependent upon the well-being of education and the quality of the graduates and programs of institutions of higher education, the disclaimer affidavit, along with that in the National Science Foundation Act, singles out the college student and professor as the only recipients of governmental aid, loans and subsidy whose devotion to this Nation is so doubtful that such an additional assurance is required. It is understandable that the college student and professor should feel some offense over this probably unconscious insult.

(3) That a careful reading of the disclaimer affidavit discloses that it is vague and ambiguous. While this vagueness and ambiguity poses no deterrent to its execution by the disloyal, at whom it is apparently aimed, it does cause the scrupulous and conscientious to pause. Being vague and ambiguous it may operate as a deterrent to free inquiry and thought upon those who have executed the affidavit.

Therefore, we urge the Congress of the United States to remove the disclaimer affidavit from the National Defense Education Act and urge like-minded persons to give appropriate support to this step.

ANNIVERSARY OF BATTLE OF SAN JACINTO, NOW COMMEMORATED BY THE BATTLE OF FLOWERS

Mr. YARBOROUGH. Mr. President, today marks the 124th anniversary of the Battle of San Jacinto, which was fought on the gulf coastal plains near present Houston, Tex., by the Texan forces under San Houston, against the Mexican Army under Santa Anna, the Mexican Army being not only well led by Santa Anna, but also including a number of well-trained "soldier of fortune" officers from the Italian, and Spanish Armies.

Mr. President, that battle resulted in the complete victory of the Texan forces, who there avenged the Alamo, made Santa Anna a prisoner, and assured the independence of Texas as a nation.

Mr. President, April 21 of each year is a State holiday in Texas, and Texans commemorate this day with various observances, the most colorful of which is the 5-day-long Battle of Flowers, held at San Antonio, Tex., from April 17 through April 21 each year.

Mr. President, Texans each year on this day are prone, whether they be in their home State or in the National Congress, to commemorate this great victory, which is regarded by competent historians as being 1 of the 16 decisive military victories of all history, of all nations, of all time.

Mr. President, Texans commemorate this day with some words of appreciation for the valor of Sam Houston and of his forces. With a modesty which Senators might be surprised to find in a Texan today, instead of talking about the valor, the heroism and the achievements of our troops, I am going to pass that honor on to the people from other portions of the Nation, particularly to those north of the Ohio River. In lieu of my own remarks, I shall ask unanimous consent to have printed in the RECORD, an article written by Mr. Walter Trohan, of the Chicago Tribune Service, about that period during which the independence of Texas was won, including a narration of the achievements at San Jacinto, where 743 raw Texas troops defeated the regular forces of 1,600 under Santa Anna in 20 minutes, with a loss to themselves of only 6 dead and 24 wounded, while Santa Anna lost some 600 dead with the rest either wounded or taken prisoner.

This article, Mr. President, written by Walter Trohan of the Chicago Tribune Service, is entitled "'Honor' Was His Creed—Sam Houston Was Texas' Preserver and Conscience." The article goes beyond the Battle of San Jacinto, and points out that when Sam Houston left home as a youth he was given a gold ring by his mother, as a talisman with a motto inside. Sam Houston wore that ring and showed it to no one else. When Sam Houston died his mother took the ring off, so that the children might see what word Sam Houston's mother had given to him to wear throughout his life. The word was "honor."

Mr. President, this article from the Chicago Tribune Service points out many things about Sam Houston, but it does not point out that Sam Houston stood on the floor of this Senate all night long, a lone figure in the Senate of the United States, trying to prevent the passage of the Kansas-Nebraska Act, because, he said, "If it is passed it will lead to disunion and civil war."

His lone voice filibustered through a day and a night, in an attempt to save the Union from disaster, as he saw it.

Among other things, when Sam Houston went back to Texas he ran for Governor. He was defeated in 1857, but was elected in 1859. He made an effort to prevent disunion and to prevent secession. When Texas seceded from the Union, Sam Houston refused to take the oath of allegiance to the Confederacy, so he was thrown out of the Governor's office of Texas. He refused to take the oath, since he had worked for so many years of his life to bring Texas into the Union.

When Texas was a republic, opinion was divided. Many people wanted to maintain the republic. It was through the great influence of Sam Houston and his great friend, Andrew Jackson, that Texas as a republic voluntarily gave up the separate nationhood and came into the Union as a State.

Mr. President, I ask unanimous consent that the article from the Corpus Christi Times of March 1, 1960, reprinting the Chicago Tribune Service article, be printed in the RECORD; and I also ask unanimous consent to have printed in the RECORD at this point an article from the New York Times of April 3, 1960, entitled "Texas Doesn't Forget To Remember the Alamo," which gives the story of the Alamo and the resulting victory in the Battle of San Jacinto which followed.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Corpus Christi Times, Mar. 1, 1960]

HONOR WAS HIS CREED—SAM HOUSTON WAS TEXAS' PRESERVER AND CONSCIENCE

(By Walter Trohan)

WASHINGTON.—Today is the birthday of the noblest of Texans, one whose heart was great enough to make a State larger than Alaska. Not only was he the John Hancock and the George Washington of Texas, but he was its preserver and conscience. Every American anywhere in the Union should be proud of spiritual kinship to this hero, Sam Houston.

Houston was born near Lexington, Va., in 1793. At 14 his father's will headed him toward Tennessee, where he joined a Cherokee Indian tribe, becoming the chief's son under the name of Colonneh, "the Raven." At 20 he was fighting in the War of 1812, armed with his father's musket and a gold ring his mother had slipped on his finger as a talisman. He distinguished himself at the Battle of Horseshoe Bend, under the eyes of Andrew Jackson, who became an idol and friend.

Back from the wars a general, Houston became attorney general of his State, a Congressman and finally Governor of Tennessee. He married a beauty of a distinguished frontier family. Three months later during a reelection campaign she left him, for reasons never explained. When the incident was seized upon by his political enemies, mobs howled for his blood.

"Remember," Houston told his supporters, "that whatever may be said by the lady or her friends, it is no part of the conduct of a gallant or generous man to take arms against a woman. If my character cannot stand the shock let me lose it."

He resigned and fled the State, going back to his Cherokee friends, in Indian territory, where he married an Indian after his first wife secured a divorce, becoming the Cherokees' advocate in Washington. In 1832 he went to Texas, then part of Mexico, and on his 43d birthday after the heroism of the Alamo, he joined in signing the Texas Declaration of Independence. The next year he was elected commander in chief of the Texas army and leading 743 raw troops with the battle cry, "Remember the Alamo," defeated 1,600 Mexicans under Santa Anna at San Jacinto in 20 minutes.

Only 6 Texans were killed and 24 wounded, but the greatest of them all was nearest to death. After fighting blood poisoning for many weeks, he survived to become the first President of the Republic of Texas. After his term, he married a daughter of Alabama, his Indian wife having died. Under lesser hands the very existence of the Republic was threatened by war with the Cherokees, Mexican invasion and wildcat financial policies. Houston was recalled, saved his country and brought it into the Union in 1845.

"Texas could exist without the United States, but the United States cannot, except with very great hazard, exist without Texas," he argued.

He represented the new State in the Senate, serving 14 years. The great debate over the Union found him fighting for principle and the Union, almost alone. While still in the Senate, he ran for governor of Texas in 1857 and was defeated. Two years later, after leaving the Senate, he tried again and won, stumping the State against disunion.

But despite his heroic efforts, Texans, who were largely from the South, voted to join the Confederacy. They called upon Houston to take the oath of allegiance to the new nation, but this he refused to do because he loved Texas "too much to bring strife and bloodshed on her." When he refused to yield principles, the office of governor was declared vacant and he was retired, but he gave his son to the South and sent Texans to battle urging them to fight bravely even for a cause he knew was lost.

Houston died a few days after the surrender at Vicksburg and the defeat at Gettysburg spelled the doom he had predicted for the South. After his death, his wife removed the gold ring his mother had put on his finger so that his children might see the short word engraved on its inner surface, which had long been his creed. The letters spelled "Honor."

[From the New York Times, Apr. 3, 1960]

TEXAS DOESN'T FORGET TO REMEMBER THE ALAMO

(By Don Seiwell)

SAN ANTONIO.—Texans, ever ready to talk at the drop of a 10-gallon hat about their exploits in war and peace, will pay tribute during the week of April 17 to a band of 187 men whose claim to immortality is that they perished in what history records as a total defeat.

But from the ashes of their funeral pyre in the courtyard of the Mission de San Antonio de Valero—better known as the Alamo—came the spark that, only 2 months after the massacre, stimulated their horrified countrymen to drive the Mexican Army back beyond the Rio Grande and so insure independence for Texas.

This year, during the week-long celebration, a half-million visitors are expected in San Antonio to observe and participate in the Fiesta San Jacinto, the Southwest's annual tribute to the tragic heroes of the Alamo.

Every schoolchild knows the climactic story of this ancient mission, first built by the Spanish in 1716. Early in 1836, after an epic 10-day defense against more than a

thousand well-armed troops led by the Mexican dictator-president, Santa Anna, the gallant company of Davy Crockett, Jim Bowie, Colonel Travis, Jim Bonham and their companions died to the last man. Each fought until he fell, surrounded by the bodies of the enemy.

"REMEMBER THE ALAMO"

When news of the massacre and the final atrocity of burning the dead in two huge piles reached other Texas communities, the cry of "Remember the Alamo" rose in fury. Thereat, on April 21 of that year at San Jacinto (near the modern city of Houston), the Mexican Army was defeated and its leader captured.

The fiesta, called San Jacinto Day, is always held during the week of April 21. It was first observed in 1891, when President Benjamin Harrison visited this historic city. Its program has grown in size and national attention since that year, and in 1959 attracted more than 400,000 visitors.

The 1960 fete will open with a pilgrimage to the Alamo, in downtown San Antonio, on Sunday evening, April 17, in which representatives of historic societies, schoolchildren and units of the Armed Forces participate. It will be brought to a brilliant close on Saturday night, April 23, with the Fiesta Flambeaux parade, called "America's greatest illuminated night pageant."

The mood of the first night's march to the Alamo is a solemn one, silence is maintained, and there are massive banks of flowers lining the entrance to the mission in tribute to the Texas heroes. But the other events are gay in spirit, blending the colorful traditions of Mexico and the old Southwest in their pageantry.

The San Antonio River, which winds through the business area of the city, is the setting for Monday night's river pageant. Normally a quiet place, much liked by tourists and lovers who stroll along its secluded walks, on this night it becomes a scene of splendor. Floats of intricate design, loaded with flowers, make their way up the placid stream to greet King Antonio XXXVIII and his court of Texas Cavaliers who sit in state in the beautiful Arneson Waterside Theatre.

MEXICAN FLAVOR ADDED

Tuesday night, under the sponsorship of the Mexican Chamber of Commerce, another colorful festival begins. It is held in the reconstructed Spanish village of La Villita, overlooking the river, and is known as "A Night in Old San Antonio." Here may be found costumes, artistic productions, the food and fun of more than a century and a half ago, and on the fringes of the village, street dancing goes on well into the night. The celebration continues nightly, through Friday.

The coronation of the queen of the Order of the Alamo in San Antonio's municipal auditorium is the major Wednesday night attraction. This is a formal dance with admission by invitation only. Thursday's twin features are the children's dance fete in the auditorium and the band festival in Alamo Stadium. At the festival, high school and college bands from south Texas compete in a setting full of light and color.

The first San Jacinto fiesta, in 1891, had as its main attraction a parade of decorated carriages and a celebration "after the manner of the flower festivals of Nice and Cannes." As the ladies entered Alamo Plaza in their carriages, historians report, they threw natural flowers at each other and a literal battle of flowers took place. The event and its accompanying parade have continued through the years and the spectacle will be held this year on Friday afternoon.

Other events in this year's fiesta program include a guard mount ceremony in the Fort Sam Houston Quadrangle, a patriotic grand ball and reception, a flower and garden show, reviews of troops at various military bases and schools in the area, a dress parade honoring the king and queen of the fiesta, the annual Texas fast-draw contest, water ski shows, art exhibits and other special attractions.

For sightseers visiting San Antonio for the first time, there are many places of historic and artistic importance. The Alamo Museum has a wealth of remembrances of early Texas and its heroes. It is a shrine much visited by American and foreign travelers alike.

So are four early Spanish missions that ring the city. These are Mission Conception, massive and imposing in its architecture, built in 1741; Mission San Juan Capistrano, 1730; Mission Espada, once used as a fort by the early Texas colonists, and, most striking of all Spanish missions in the Southwest, the Mission San Jose. It contains living quarters for priests, soldiers, and converted Indians, a granary and grist mill. Its striking church has three vaulted naves and a beautiful rose window, considered to be the finest example of Spanish-colonial ornamentation in America.

INN BUILT IN 1859

An unusual tourist attraction in San Antonio is the first large inn built south and west of the Colorado River, dating from 1859. There Col. Teddy Roosevelt recruited his Rough Riders for the Spanish-American War, and O. Henry wrote many notable short stories. Other places of interest to tourists are the Witte Museum, which has a collection of fiesta coronation robes and jewels, and the McNay Art Institute, one of America's outstanding art galleries.

Early spring vacationists seeking the different and unusual in celebrations and historic shrines will enjoy San Antonio at fiesta time.

THE DEMOCRATIC PRIMARY IN WEST VIRGINIA

Mr. BYRD of West Virginia. Mr. President, I should like to take this opportunity to denounce the conclusions advanced in yesterday's column, authored by Joseph Alsop, published in the Washington Post and Times Herald.

As I stated on Monday in a news release, "I deplore the effort being made upon the part of some persons to make it appear that a victory for Senator HUMPHREY in my State of West Virginia would be a victory for religious prejudice."

Anyone reading Joseph Alsop's column yesterday would be treated to a precise example of that about which I spoke. After feebly attempting to show a vast amount of religious prejudice evident in West Virginia, he wrote as follows:

> It is unarguable that if Senator HUMPHREY wins the West Virginia primary, as he well may do, he will owe his victory to Ku Klux Klan-minded voters.

Mr. President, this is an insult to the people of West Virginia, and it is an insult to the people, wherever they may live in the United States, who may choose to vote for the Senator from Minnesota [Mr. HUMPHREY] in any campaign in which he might be pitted against the Senator from Massachusetts [Mr. KENNEDY].

Mr. Alsop must be of that "camp" which would have the United States believe that only the slack-jawed idiots, the buffoons, the ill-educated unfortunates would support the Senator from Minnesota [Mr. HUMPHREY]; while the pure in heart, the intelligentsia, dressed as the impeccable "Continental," with the traditional horn-rimmed glasses, support the Senator from Massachusetts [Mr. KENNEDY]. This is a bizarre, deliberate, and calculated distortion, and Mr. Alsop knows it. If he is to be a self-appointed political expert in my home State overnight, I feel that he should be aware that this subject of my past affiliation with the Ku Klux Klan has been chewed, swallowed, digested, and curded. It is "an old bag of bones" to the people of the State of West Virginia, and I am confident that it was brought to light and discussed thoroughly in the campaign 2 years ago, in which I ran for the U.S. Senate. The Nation's newspapers and the Nation's periodicals wrote about it at that time. It was washed out, it was rinsed, and it was hung upon the line.

I take personal offense at Mr. Alsop's ridiculous insinuations and his stupid analysis of things which motivate my people. I quote again from his column:

> On the stump in West Virginia, Senator HUMPHREY has of course deplored religiously prejudiced voting. One can be sure he is sincere, for he is the very opposite of his new ally, Senator BYRD.

I suppose that is meant to convey the impression that "his new ally, Senator BYRD" is not sincere. We will let the people of West Virginia judge that fact for themselves. I have served the people of West Virginia in public office for the last 14 years. I have run in West Virginia in 14 campaigns, if we are to consider both the primaries and the general elections. My name has been on the ballot in 14 elections. I have not yet been defeated. I have served the State of West Virginia in more legislative offices than has any other person in the history of the State of West Virginia. Evidently my constituents—for the most part, at least—are willing to believe in my sincerity.

The American publisher Frederick Saunders once said, "Nonsense is to sense as shade is to light. It heightens the effect."

Mr. President, I feel that Mr. Alsop has allowed a bit of shade to obscure the light; and though it may heighten the effect of his writing, it most assuredly does not heighten his position as a journalist.

Mr. MANSFIELD. Mr. President, the Senator from West Virginia needs no defense from me. He is able to take care of any allegations true or otherwise, which are made against him or about him.

But I point out to the Senate that under the Constitution there are two Senators elected from each State, regardless of its size. The responsibility for electing those Senators rests with the people of the sovereign State in question.

I am quite certain that, as he has said, the Senator from West Virginia has had his whole life and all his affiliations laid bare before the people of his State. He has been a good Representative in Congress. He is a good Senator.

I am somewhat disturbed at the course the present campaign is following, be-

cause I do not like some of the factors which are cropping up. Frankly, I do not believe that a man's religious faith is anyone's business but his own. Frankly, I do not believe that the question of what part of the country a man comes from should be an inhibiting factor. If we read the Constitution we find that there is no reference in that grand document which prohibits a man or woman from becoming President of the United States because he or she happens to adhere to a particular faith, or comes from a certain section of the country.

I believe it is about time that the Democratic Party woke up. I would suggest that our potential candidates, instead of fighting one another, train their guns on the record of the present administration. All the Democratic candidates—Senator KENNEDY, Senator HUMPHREY, Senator SYMINGTON, Senator JOHNSON, and other possibilities—are men of outstanding integrity, ability, and character. They should not be forced, as they are in these primaries, which I think are unwise, to fight one another.

I recall, for example, the debate on TV between Mr. Stevenson and Mr. KEFAUVER 4 years ago. It was a sorry spectacle. It helped neither candidate; nor did it help the Democratic Party.

I hope, and I am sure that the people of West Virginia and of the other States in the Union where primaries are being held do also, that the voters will judge the candidates on the basis of their ability, on the basis of their integrity, on the basis of what they advocate, not on the basis of their religion or on the basis of what part of the country they come from.

I know that the American people will show the degree of maturity expected of them, rather than be swayed by these issues, which really ought to have no credence in a campaign of this kind.

These candidates are going through enough as it is. Personally, I feel sorry for every one of them on both tickets. I feel very sorry for the two who will be nominated. I feel very, very sorry for the man who will be elected next November, because he will have a tremendous task to undertake in the assumption of office, and he will have great questions and difficulties to overcome. It will be up to all of us, the Congress and the people, to give him every bit of help and support that we can because he will most certainly need it.

I wish again to express the devout wish that the people of this country will look at this matter calmly, and will not be swayed by emotionalism, religion, or sectionalism, but will judge each candidate only on his ability, his integrity, his record, and what he stands for.

Mr. BYRD of West Virginia. Mr. President, I thank the distinguished Senator from Montana for his statement. I appreciate very much his kind words in my behalf.

I believe the record is clear, so that all may hear and see. I have stated my reasons for not supporting Senator KENNEDY. These reasons need not be stated again here. I have never impugned his character. I have never criticized his religion. I have only the highest regard for him as a U.S. Senator and as an American. I have not endeavored to participate in the making of an issue on the basis of religion. Senator KENNEDY has done that himself. Whether it will be good for him or bad for him remains to be seen. Very definitely, it will not be good for the country or for the Democratic Party.

I was in West Virginia last week. I traveled in 27 counties. I am a candidate for delegate at large to the national convention. I have stated my position, and what it will be if I am selected to be a delegate, and the people of West Virginia will, at the forthcoming primary, have the opportunity to state their position as to whether they want me to serve as a delegate to the convention.

During that week of travel in 27 counties I told the people of my candidacy, and I expressed to them my views on the importance of the forthcoming primary.

I did not visit a single minister; neither did I call a single minister, nor did I talk with one. In 1958, the year of my election to the U.S. Senate, I spoke in 55 churches in West Virginia—55 Protestant churches. I also spoke before Catholic audiences. Too seldom is a candidate for high political office invited to speak before a church gathering, particularly in an election year. In that year I averaged better than one church per Sunday. Evidently the church people of West Virginia had confidence that I would not inject politics into the church addresses I was called upon to make. I say this to point out that there are many ministers in West Virginia whom I could have contacted last week had I desired to stir the religious waters in the political pot.

I am sorry that some of the forces supporting Senator KENNEDY have chosen to characterize any individual who happens to support someone else as being anti-Catholic. For the reasons I have already stated, I would not support Senator KENNEDY in this primary if he were a missionary Baptist and a member of my own church in Raleigh County. I hope that that will make the record eminently clear, to the effect that I do not support his opponent because I am anti-Catholic. I am not anti-Catholic. I have Catholics on my staff. I appoint Catholics to the Military Academy. I serve Catholics in my State, just as I serve Protestants. I have many Catholic friends. I do not criticize those who wish to support Senator KENNEDY. Many good West Virginia citizens, Protestant and Catholic, will vote for him. They are sincere in their support of him. I am just as sincere in my support of Senatory HUMPHREY in the presidential primary.

I am sorry that certain segments of the press are intent upon stirring the religious issue. Religion is a factor in the West Virginia election, just as it was a factor in the Wisconsin election. But it need not have become an issue. Senator KENNEDY has boldly but carelessly and unwisely made it an issue. We can only wait to see what the results will be.

I yield the floor.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to consider executive business.

EXECUTIVE REPORTS OF A COMMITTEE

Mr. SALTONSTALL. Mr. President, from the Committee on Armed Services. I report favorably the nomination of Maj. Gen. William A. Carter to be Governor of the Canal Zone.

I also report favorably the nominations of 115 flag and general officers in the Army, Navy, Marine Corps, and Air Force.

In addition, I also report favorably a total of 24,324 nominations in the Army, Navy, Marine Corps, and Air Force, in the grade of captain and colonel and below.

I ask unanimous consent that the nominations be confirmed, in order to save the expense of printing the names on the Executive Calendar.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Massachusetts? The Chair hears none, and it is so ordered.

By Mr. CANNON, from the Committee on Armed Services:

Courtland D. Perkins, of New Jersey, to be Assistant Secretary of the Air Force, vice Joseph V. Charyk.

The PRESIDING OFFICER. If there be no further reports of committees, the Clerk will state the nominations reported today.

GOVERNOR OF THE CANAL ZONE

The Chief Clerk read the nomination of Maj. Gen. William A. Carter to be Governor of the Canal Zone, under the provisions of title II, section 6, Canal Zone Code, to succeed Maj. Gen. William E. Potter, whose term of office will terminate June 30, 1960.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

ASSISTANT SECRETARY OF THE AIR FORCE

The Chief Clerk read the nomination of Courtland D. Perkins, of New Jersey, to be Assistant Secretary of the Air Force, vice Joseph V. Charyk.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

NOMINATIONS IN THE NAVY, ARMY, MARINE CORPS, AND AIR FORCE

The Chief Clerk proceeded to read sundry nominations in the Navy, Army, Marine Corps, and Air Force.

Mr. MANSFIELD. Mr. President, I ask that the nominations in the Army, Navy, Marine Corps, and Air Force be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations in the Army,

Navy, Marine Corps, and Air Force are confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be notified of all nominations confirmed today.

The PRESIDING OFFICER. Without objection, the President will be notified.

(For nominations confirmed this day, see end of Senate proceedings.)

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Is there objection? Without objection, it is so ordered.

COAL MINE SAFETY

Mr. HUMPHREY. Mr. President, I wish to refer for a few minutes to a measure now on the calendar; Senate bill 743, which will soon be considered by the Senate. This is a bill to extend the protections of the Federal Coal Mine Safety Act to all coal miners, regardless of the size of the mine where they work, and regardless of the number of workers employed in the mine. I know that the distinguished Presiding Officer the Senator from West Virginia [Mr. BYRD] is very much aware of this proposed legislation, and is keenly interested in it.

The bill was introduced by the Senator from Pennsylvania [Mr. CLARK], on behalf of himself and other Members of the Senate; and was reported from the Committee on Labor and Public Welfare at the conclusion of the first session of the 86th Congress. On September 10, 1959, it was placed on the calendar.

As the law stands now, coal miners working in title I mines—the mines employing less than 15 men—are denied basic Federal mine inspection and safety protections. There is no possible justification for this deadly exemption.

Mr. President, I should add that when I was a member of the Committee on Labor and Public Welfare in the 82d Congress we held hearings on the whole subject of mine safety, and we explored the responsibilities of the Federal Government in this area of mine safety.

At that time the late and beloved Senator Matthew Neely, of West Virginia, was a member of the committee. The chairman of the committee was our friend and distinguished colleague, the senior Senator from Montana [Mr. MURRAY]. I served with these two great Senators, and I learned a great deal from their long experience in the field of industrial safety and, in particular, mine safety.

In that Congress we were successful in reporting and enacting into law the Federal Coal Mine Safety Act of 1952.

I suggest that when the debate on this bill is under way, we bring those hearings to the attention of all our colleagues, because those hearings contain some of the best testimony on mine safety and the problems which confront the coal miners in many areas of the United States, in addition to West Virginia, the State so ably represented by the present Presiding Officer.

I hope to be able to participate in the debate on this subject and to do my part in seeing to it that this particular measure is enacted.

Every year since the mine safety law to which I have just referred was passed in 1952, the U.S. Bureau of Mines has urged Congress to repeal this deadly exemption of the so-called small mines. The Director of the Bureau of Mines, Marling Ankeny, says that men working in mines employing less than 15 men are entitled to the same protection as are men working in mines with 15 or more men.

In fact, the Director of the U.S. Bureau of Mines, Mr. Ankeny, says that many mine owners deliberately keep their working force below the 15-man protection point to avoid the safety requirements of the Federal Coal Mine Safety Act. This is shocking—that a few dollars of profits should be put ahead of the lives of coal miners.

I submit that the safety of coal miners must take priority over profits of mine owners, no matter what the size of the coal mine, and no matter how many men it has working underground.

Let me add that I do not believe there is any conflict between economic solvency and profit for a coal mine and safety for those who work in the mine. As a matter of fact, I am of the opinion—and I believe the technological facts will bear me out—that when a mine is adequately protected for safety purposes, namely, the safety of the miners, it is a more efficient mine and, therefore, lends itself to even better economic opportunities and profits for the mineowners.

Human life in these mines is at stake. Last year 290 coal miners died on the job, many of them crushed to death, drowned, or gassed in deathtraps never properly checked for safety. West Virginia suffered more than any other State in this deadly toll; there were 86 deaths in West Virginia coal mines, or 30 percent of the total. But Pennsylvania had 82 mine deaths, and Kentucky had 44 mine deaths. Three-fourths of all the coal-mine deaths occurred in three States. This fact in itself should be enough to dramatize the importance of this proposed legislation and to secure its enactment.

Think of the grieving widows and children of those miners. Think of their sorrowing mothers and fathers, brothers and sisters. Surely this consideration in itself should demand the prompt passage of the bill. I do not see how we can continue to deny to all coal miners and their families the basic protection of the existing Federal safety law.

I believe that the man who goes into a mine employing only 14 workers deserves the same protection as the man who works in a mine with 15, 50, or 150 other men, and therefore, I am supporting this legislation.

If this bill is passed, the provisions of title II of the Federal Coal Mine Safety Act of 1952—this is the act to which I referred earlier—will apply to all underground coal mines, regardless of the number of men working underground. Title II is designed to prevent mine disasters from explosions, fires, floods, or accidents from any other cause.

Federal mine inspectors can shut down a title II coal mine until a dangerous situation is corrected, or Federal inspectors, under this bill, can order a title II coal mine operator to correct dangerous conditions within a reasonable length of time. Unfortunately, the title I coal mines with less than 15 workers underground have a higher death rate than title II coal mines with 15 or more miners. With only 12 percent of America's coal production last year, the small title I mines were involved in 31 percent of all underground coal-mine deaths in the United States.

I call this figure to the attention of the Senate again. Here were a number of mines, smaller in size, in terms of their mining operations, employing fewer than 15 workers. Those smaller mines produced only 12 percent of the American coal production, and yet they were involved in 31 percent of all underground coal-mine deaths in the United States.

This is conclusive evidence within itself as to the imperative need of the legislation presently pending on the calendar of the Senate.

I see no difference between a title I coal mine employing 13 men and a title II mine employing 16 men. They are both small mines. They are both equally capable of protecting the lives of the hard-working men who labor underground.

There is no unfair hardship on the mineowners in this proposed legislation. There is no license to arbitrary action by Federal inspectors. The proposed legislation involved in this particular bill, S. 743, is safety legislation which warrants the wholehearted support of the entire Congress.

I urge the Senate to give S. 743 prompt approval, in order to repeal the deadly exemption of title I mines from the safety protections of the Federal Coal Mine Safety Act.

Mr. President, I did want today to cite the importance of this bill. I have looked over the calendar, and this is surely one of the bills which ought to be promptly acted upon.

FOOD FOR PEACE

Mr. HUMPHREY. Mr. President, while I have the floor, and before I move to adjourn the Senate, I wish to call to the attention of the Senate a bill that is pending on the calendar, S. 1711,

to promote the foreign policy of the United States by the more effective use of U.S. agricultural commodities for the relief of human beings and for promoting economic and social development in less-developed countries.

This bill was reported out of the Committee on Foreign Relations on August 10, 1959. I was privileged to report it. I was the author of the bill, along with a number of cosponsors. Extensive hearings were held in the Senate Committee on Foreign Relations, and the bill was reported by an overwhelming majority vote of the committee.

I call to the attention of the Senate and the Senate leadership this particular bill because this is the International Food for Peace Act. This is the bill that has provisions within it for long-term use and planning of our agricultural commodities. This is the bill that would establish, by act of Congress, a Food for Peace Administrator. This particular bill would have the Food for Peace Administrator appointed by the President and confirmed by the Senate.

The food for peace bill, S. 1711, would provide also for a number of uses, very important and valuable uses, of the foreign currency that has accumulated and been generated as a result of sales of surplus American agricultural commodities to foreign countries. We would be able, as I have indicated so many times, to turn food into health, economic development, public works, education, hospitals, roads, ports, harbors, homes, and jobs.

Last year the Senate, after a long debate and after this bill had rereferred to the Committee on Agriculture and Forestry, adopted many of the features of the so-called food for peace bill, but it did not establish what I think is the basic organizational structure for the proper administration of the so-called food for peace program.

The other day the White House announced that the President was appointing Mr. Don Paarlberg, special assistant to the President, as the Food for Peace Administrator. I was pleased with that particular announcement, and I said at the time that I was pleased, but I want this RECORD to note that the administration bitterly opposed that provision in the International Food for Peace Act, S. 1711, which would have provided for the Presidential appointment for a Food for Peace Administrator.

The administration's witnesses appeared before two committees, the Committee on Foreign Relations and the Committee on Agriculture and Forestry, and strongly opposed any change whatsoever in the administrative management of our so-called surplus food program.

The Senator from Minnesota had volumes of evidence to point out—and I offered that evidence in our discussion—that the administrative management of our surplus food program was wasteful, time consuming, ineffective, and fraught with all kinds of duplication and costly delays.

Everybody who studies the record knows that to be a fact. Now I find that even the administration, after about 8 or 9 months, discovers that is a fact, because if in July and August of last year the food for peace program was properly managed, as the representatives of the administration said again and again, why do they need to change its management now?

The answer is quite obvious. It was improperly managed, and has been for over 5 years. We have had costly delays. We have had wasteful administration. We have failed to take advantage in our forign policy of this great blessing of an abundance of food and fiber.

After continual probing by some of us on this side of the aisle, the administration finally wakes up, with one eye—not both eyes, but with one eye—because the appointment of Mr. Paarlberg is still without legislative sanction. There are no duties prescribed in the law for the administrator or director. There is no advisory board which was provided in S. 1711, the International Food for Peace Act. The advisory board that the Senator from Minnesota asked for would have included not only representatives of the agencies of the Federal Government involved in our foreign aid and foreign economic programs, but also would have included representatives from agricultural, labor, business, and consumer groups, so that the Government of the United States would have received the benefit of the advice and counsel of mature, informed minds and persons from the great private sectors of the American economy.

I ask the Senate of the United States, and particularly the leadership of the Senate, through this means of discussion on the Senate floor, to take a good look at S. 1711 again, and to look at the administrative features of the bill. The portions of the International Food for Peace Act which relate to administration are needed. We cannot rely on this halfway measure which has been presented by the President in the person of a special assistant as a director for the food for peace program.

Mr. President, I should have the Senate remember that when I tried to name this program "food for peace" I also ran into resistance. The administration was perfectly willing to call it a food for peace program in the President's message. But when we wanted to call the bill, which is an agricultural surplus disposal act at the present time, what it should have been properly called—namely, a food for peace program—we ran into the same stubborn resistance by the administration.

Mr. President, I have some pleasures in life. One of them is that when we make suggestions in the Senate which, at the moment, bring on a stern rebuke and strong resistance from the administration, ultimately the administration at least takes a halfway step toward acceptance. The administration accepts the letter of the program, if not its spirit.

I noticed the other day, in the field of disarmament, that the administration has now decided it ought to have some kind of a peace agency to coordinate disarmament activities. The Senate should know that the Senator from Minnesota offered on February 4 of this year the National Peace Agency bill. The administration has shown little or no interest in updating and upgrading the disarmament administrative structure. Again, as is true in the instance of the Food for Peace Administrator, the administration has offered a kind of token expression of acceptance of a disarmament agency, an arms control agency, without spelling out at all its powers, its duties, its responsibilities, its functions, its staff, its appropriations, its budget, and all of that which makes any agency a meaningful instrument for public good and public policy.

GOVERNMENT WITH A HEART

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an address I delivered recently entitled "Government With a Heart."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT WITH A HEART

It is 25 years since the United States began the realistic, compassionate social security program to help conquer the old enemies of freedom—poverty, helplessness, and shattered family life. These 25 years have brought new security, new dignity, and new independence to millions of American families through new and improved social welfare programs.

We have made retirement and survivors benefits an earned right and we have expanded this protection program to 9 out of 10 working people. We have established unemployment compensation insurance for those who lose their jobs through no fault of their own. We have helped to feed the hungry with our farm abundance. We have brought comfort to widows, orphans, and needy aged Americans through our public assistance program. We have set wage and hour standards to raise the living standards of wage earners.

The wonderful success of our welfare programs shows we can promote the general welfare—as our Founding Fathers promised in the preamble to the U.S. Constitution—without losing the initiative, the inventiveness, and the imagination which spark the progress of our free society.

We have created a government with a heart, a government which is properly concerned about the welfare of all citizens, a government which offers a helping hand to Americans not as an act of charity but in the fraternal spirit of mutual responsibility between free citizens and their democratic government.

Our Social Security System is good, but it can be better and it must be better. There is no reason to think we can sit back and ignore the crying needs of the present just because we have accomplished so much in the past. In this 25th anniversary year, let us raise our sights to existing needs. Let us demonstrate that we still have government with a heart.

There is no need to be fearful of change. We have brought over 100 million Americans into our social security program and our freedom is still intact. We have provided for those permanently and totally disabled and the program still works. We have paid people when they could not find work and our economy has prospered.

HEALTH INSURANCE

Top priority on our 1960 action list must be a health insurance program for our older citizens.

Medical costs are high and rising but only two out of five of people over 65 have any kind of health insurance, and even those who do carry health insurance usually find that it is limited in scope and likely to be cancelled at any time.

Too many elderly citizens find that even brief sickness or hospitalization can wipe but overnight the painfully accumulated savings of years. Our senior citizens need more health care at that stage in life when they can least afford it. Two-thirds of those over 65 who are living alone get less than $1,000 a year in cash income. And one-half of all families whose head was over 65 had cash incomes of less than $2,000 a year.

This is real hardship. These elderly people can barely afford the simple necessities—food, shelter, clothing. Health expenses cut into these basic necessities.

A worker in his earning years can usually get group hospitalization protection, but when he retires this protection is often lost or becomes much smaller. The retired worker and his wife then face tremendous problems in case of sickness or hospitalization. Their income drops sharply from the earning years and they have lost their right to adequate group coverage in hospital insurance plans. Too often the cost of private health insurance is beyond their limited income.

I believe that America's older citizens are entitled to a dignified system of health insurance where benefits are received as a matter of right—a right earned over a lifetime of work and a lifetime of contributions. We have a moral and a social obligation to free our elderly citizens from the constant anxiety over what will happen in time of serious illness.

Therefore, I call for action on my proposal, S. 1151, to give protection against the costs of hospital and nursing home care to America's senior citizens through the social security mechanism.

A brief summary of my proposal, is as follows:

HOSPITAL AND NURSING HOME AMENDMENTS

1. Up to 60 days of hospital care, with subsequent nursing home care if necessary up to a combined total of 120 days in any year.

2. All hospital services, drugs, appliances, and other care ordinarily furnished to patients in semiprivate accommodations.

3. Upon certification by a physician, freedom to choose any hospital that can admit them, and which has previously contracted with the Secretary of Health, Education, and Welfare to furnish such services—except tuberculosis and mental hospitals.

4. Similar freedom to choose nursing home service, including skilled nursing care, related medical and personal services, and accompanied bed and board provided by a licensed nursing home operated in connection with a hospital or in which a medical doctor directs the care.

5. This program would be financed by an increase in the present social security tax of one-quarter of 1 percent for employees and employers, and by three-eighths of 1 percent for the self-employed.

My bill is similar to the Forand bill, H.R. 4700, in seeking to use the wonderful tool of social insurance to provide basic health benefits which cannot be given to our older citizens in any other way. Welfare experts have endorsed this kind of legislation. And organized labor has called for health benefits to be included in social security.

Addition of health benefits to the social security system would save millions of families from anxiety, financial bankruptcy, and needles suffering. It would also relieve the financial crisis now threatening many hospitals and welfare agencies, both private and public. Many local and State governments are finding hospitalization for the aged is a tremendous financial burden. My proposal would end much of the cost-consciousness of hospitals which cannot afford to take charity patients.

I believe social insurance for health care for the aged through the social security system is morally right and socially desirable. We must—and we can—provide a dignified, efficient system of health insurance for our older citizens.

RAISE BENEFITS

We must also give high priority to raising social security retirement benefits. Ten million Americans 65 and over are now receiving social security benefits; but these benefits average only $72 a month for individuals and $110 a month for couples. About 2½ million Americans are receiving old-age assistance and the average payment is about $65 a month.

In a wealthy country like ours, these benefit figures are disgraceful. I believe Congress should increase social security benefits substantially—and I believe we should raise the minimum monthly payments of $33 by at least 30 percent. I do not think anybody will try to argue that it is possible to keep body and soul together in 1960 on $33 a month.

We must stop the grossly unfair disability restrictions and the age limit for disability benefits. A disabled worker should get disability benefits at any age. He should not have to wait until he is 50 years old. And wives and widows who are permanently and totally disabled should be entitled to social security benefits also.

To those who claim we cannot afford to raise benefits, I say "look at the report of the board of trustees of the social security trust fund." They report that the fund is in "approximate actuarial balance" and that it will run a surplus in the foreseeable future.

If necessary, we should widen the maximum earnings base up from $4,800 a year to finance better benefits. It is only reasonable that those who benefit the most should pay their fair share.

OLD-AGE RIGHTS

The public assistance provisions of the Social Security Act contain certain inequities and unfair restrictions which should be corrected. In too many States, our public assistance programs are administered in such a way as to strip away from recipients their basic right as American citizens to be treated with dignity and respect.

I have sponsored the Humanitarian and Old-Age Rights Act, S. 937, to fulfill our moral obligation to provide simple justice, equality, and dignity in our treatment of the needy aged, the blind, the physically handicapped, and dependent children.

Here is a brief summary of the provisions of this bill:

HUMANITARIAN AND OLD-AGE RIGHTS ACT

1. Lower the age requirement for women old-age beneficiaries to the same age requirement of 62 for benefits paid under the OASI program.

2. Raise the permissible monthly additional income as follows:

Aged and handicapped could earn up to $50 per month.

Parents of needy children could earn up to $30 per month.

Needy children could earn up to $30 per month.

3. Allow ownership of a home up to a value of $5,000 free from lien.

4. Exemption of household furnishings and other personal effects in determining need.

5. Permit retention of an insurance policy or burial arrangement up to $500.

6. Prohibit practice in some States of refusing old-age assistance to pensioners with living relatives.

7. Exemption of nonhousehold, nonclothing personal property up to $1,200 in determining need.

8. Provides uniform treatment of old-age beneficiaries in various States, including:

Elimination of the "shame list" by requiring names of recipients to be held confidential.

Reduction of all State-imposed residence requirements to 1 year.

Elimination of designation of beneficiaries as "paupers" or "indigent."

9. Permit distribution of any surplus food by Federal Government without deducting from recipient's aid.

OLDER WORKERS

More and more of our older workers—especially those between the ages of 40 and 65—are finding job opportunities closed to them. It is a terrible tragedy for the head of a family who loses his job after he passes 40. Many business firms are reluctant to hire these people, one reason being the additional costs incurred in pension and welfare plans for older workers.

I have proposed legislation to give a tax credit to employers who hire older workers. My proposal, S. 2707, would allow an employer to compute the additional costs of fringe benefits for older workers, as compared to the youngest age group doing similar work. Then the employer could treat these costs as a tax credit against his income tax. I believe passage of this bill will mean that many more of our middle aged and older workers can find jobs open to them.

UNEMPLOYMENT BENEFITS

We must also make sure that we provide adequate benefits to workers who are thrown out of work and cannot find jobs. I believe we have a very serious responsibility to improve our system of unemployment compensation. Many State programs are simply not meeting the needs of the people who are out of work or the needs of their families. Too often, unemployment benefits are not sufficient to keep a family going. And too often, unemployment benefits run out before the family breadwinner can find a job in hard-hit depressed areas like the Iron Range in my own State of Minnesota, and in many similar regions in West Virginia and other States.

I am proud to be a sponsor of S. 791, a bill to set minimum standards for unemployment compensation—with 39 weeks of benefits—and to extend unemployment benefits to many working people who still do not have this basic protection. I believe that a government with a heart has a responsibility to give effective help to our fellow Americans who are out of work, to tide them over until they can find a job.

To those who say we cannot afford aid for depressed areas or adequate unemployment benefits, I say we cannot afford the terrible human and economic waste of people out of work. The President's shocking veto of the Area Redevelopment Act in the 85th Congress and his continued opposition must not block quick action on this vital program to help bring new industry, new life, and new hope to depressed communities. I am proud to be a sponsor of the area redevelopment bill and I will continue to give this legislation my full support.

We cannot afford to deny any good American the right to make his contribution to society, the right to earn a decent living, the right to provide his family with food, clothing, and shelter. We have a moral obligation to provide these opportunities to every American. This is what I mean by government with a heart.

MINIMUM WAGE

And we must give a helping hand to the millions of American workers whose earnings are insufficient to provide a decent standard of living. There is no justifiable excuse for a nation as wealthy as ours not providing for

an adequate minimum wage and hour law. Unfortunately, many of the workers and families with the lowest incomes in this wealthy country are those in the weakest bargaining position. Few of them have a trade union to bargain with employers for better pay.

These low-income workers—and their families—are entitled to a decent standard of living. As a matter of social justice workers deserve a decent wage. And, I might add, one reason for continuing unemployment is the inability of low-income families to buy the goods put out by our amazingly productive economy. We need less "trickle down" and more "percolate up" if we are to have a healthy economy and a healthy society.

Gradual increases in the minimum wage to $1.25 an hour will help boost purchasing power among those who desperately need decent living standards. I will continue to support the policy set by Congress in the Fair Labor Standards Act of 1938. I support and shall work for greater wage and hour protection for millions of American workers.

FOOD FOR THE NEEDY

And, finally, we must make sure that America's food abundance does not stand rotting in warehouses when there are hungry children or starving families anywhere in this country. We must get this food to the elderly, the disabled, the unemployed, the orphans—and particularly to those depressed areas where hunger walks the streets with unemployment.

Ever since I came to the Senate, I have worked for a food stamp program to get surplus foods to needy families. Last year we were successful in adopting a pilot food stamp plan, to get highly nutritious surplus foods to schoolchildren and to needy families throughout the country. The Secretary of Agriculture has, unfortunately, refused to put this plan into operation. I, therefore, shall press for enactment of my bill, S. 3166, which I introduced in March, to establish a mandatory program to compel the Secretary of Agriculture to get our food abundance to those needy families who are really on the edge of starvation. It is terrible, it is shocking that any man, woman, or child should go to bed hungry when our granaries are bulging at the seams with food surpluses.

I have pointed out some of the urgent legislative problems before this Congress. I believe they deserve our most serious attention for they involve the welfare of our people and the conscience of our Nation. There is nothing visionary or impractical about the measures I have proposed. These are realistic goals for government with a heart in 1960.

ADJOURNMENT TO MONDAY

Mr. HUMPHREY. Mr. President, if there is no further business, I move that the Senate, in accordance with the order entered yesterday, stand in adjournment until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 3 o'clock and 23 minutes p.m.) the Senate, pursuant to the order entered yesterday, adjourned until Monday, April 25, 1960, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 21, 1960:

GOVERNOR OF THE CANAL ZONE

Maj. Gen. William A. Carter, O18023, for appointment as Governor of the Canal Zone, under the provisions of title 2, section 6, Canal Zone Code, to succeed Maj. Gen. William E. Potter, whose term will terminate June 30, 1960.

DEPARTMENT OF THE AIR FORCE

Courtland D. Perkins, of New Jersey, to be Assistant Secretary of the Air Force, vice Joseph V. Charyk.

IN THE ARMY

APPOINTMENTS IN THE REGULAR ARMY

The following-named officers for appointment in the Regular Army of the United States to the grades indicated, under the provisions of title 10, United States Code, sections 3284, 3306, and 3307:

To be major generals

Maj. Gen. John Southworth Upham, Jr., O17178.
Maj. Gen. Verdi Beethoven Barnes, O17198.

To be brigadier generals

Brig. Gen. Richard Collins, O29375.
Maj. Gen. Francis Frederick Uhrhane, O18071.
Brig. Gen. Albert Watson 2d, O18105.
Maj. Gen. William Henry Sterling Wright, O18129.
Brig. Gen. William Henry Harris, O18155.
Col. Fred Joseph Delmore, O29440.
Maj. Gen. John Phillips Daley, O18358.
Brig. Gen. Robert Hackett, O18380.
Brig. Gen. William Charles Hall, O18391.
Brig. Gen. Mervyn MacKay Magee, O18478.
Brig. Gen. Gunnar Carl Carlson, O18515.
Maj. Gen. Ernest Fred Easterbrook, O18537.
Brig. Gen. Curtis James Herrick, O18538.
Brig. Gen. Andrew Joseph Adams, O18579.
Maj. Gen. John Frank Ruggles, O18596.
Brig. Gen. Chester William Clark, O41908.
Brig. Gen. Ellsworth Ingalls Davis, O18658.
Maj. Gen. Sam Carroll Russell, O18678.
Brig. Gen. George Robinson Mather, O18696.
Brig. Gen. Frank Hamilton Britton, O18703.
Maj. Gen. James Karrick Woolnough, O18709.
Brig. Gen. Robert Augur Hewitt, O18713.
Maj. Gen. Earle Gilmore Wheeler, O18715.
Brig. Gen. Dwight Benjamin Johnson, O18722.
Maj. Gen. Dwight Edward Beach, O18747.
Maj. Gen. Louis Watson Truman, O18755.
Maj. Gen. Harvey Herman Fischer, O18832.
Brig. Gen. George Thigpen Duncan, O18878.
Maj. Gen. John William Bowen, O18904.
Brig. Gen. Ray Joseph Laux, O42102.
Maj. Gen. Teddy Hollis Sanford, O29893.
Brig. Gen. Alfred Dodd Starbird, O18961.
Maj. Gen. Richard Davis Meyer, O18963.
Brig. Gen. William Jonas Ely, O18974.

To be brigadier general, Medical Corps

Brig. Gen. Clinton Stone Lyter, O18291.

The officers named herein for promotion as Reserve commissioned officers of the Army under the provisions of title 10, United States Code, section 3384:

To be major generals

Brig. Gen. Robert Daniel Charlton, O235009.
Brig. Gen. Alfred Edward Hintz, O364120.
Brig. Gen. Cecil Joseph Kennedy, O243189.
Brig. Gen. Henry Cabot Lodge, O188725.
Brig. Gen. Charles Coudert Nast, O298840.
Brig. Gen. Dilman Atkinson Rash, O274004.
Brig. Gen. James Strom Thurmond, O191221.
Brig. Gen. Morgan Montrose Wallace, O275387.

To be brigadier generals

Col. John Caswell Baker, O368365.
Col. John Clinton Brogan, O343058.
Col. William Reuther Douglas, O373402.
Col. Edmund Jeffords McMullen, O277456.
Col. William Russell Porter, O399388.
Col. Herman Frederick Schuster, O366569.
Col. John Hootsell Stowers, O176135.
Col. Robert Harrie Travis, O406588.

The officers named herein for appointment as Reserve commissioned officers of the Army under the provisions of title 10, United States Code, section 593(a):

To be major generals

Col. Ronald Dana McDonald, O322470.
Col. Lyle Andy Welch, O416234.
Maj. John Pershing Jolly, O431736.

TEMPORARY APPOINTMENTS IN THE REGULAR ARMY

The following-named officers for temporary appointment in the Army of the United States to the grades indicated under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major generals

Brig Gen. John Charles Hayden, O18174.
Brig. Gen. Stephen Read Hanmer, O18348.
Brig. Gen. Tom Robert Stoughton, O18156.
Brig. Gen. John Archibald Barclay, O18420.
Brig. Gen. Creighton Williams Abrams, Jr., O20296.
Brig. Gen. Jean Evans Engler, O19198.
Brig. Gen. Daniel Aloysius O'Connor, O29454.
Brig. Gen. Hiram Dudley Ives, O29509.
Brig. Gen. Richard Collins, O239375.

To be brigadier generals

Col. Vernon Price Mock, O19906.
Col. Walter Brown Richardson, O30597.
Col. Merrill LeRoy Tribe, O42374.
Col. John DuVal Stevens, O19414.
Col. Harry Jacob Lemley, Jr., O19756.
Col. Charles Frederick Leonard, Jr., O19829.
Col. William Carl Garrison, O30144.
Col. Claire Elwood Hutchin, Jr., O21092.
Col. Duncan Hallock, O18960.
Col. Joseph Rieber Russ, O19860.
Col. Harry Herndon Critz, O19786.
Col. Lester Lewes Wheeler, O19951.
Col. Durward Ellsworth Breakefield, O19781.
Col. Robert Benton Neely, O19114.
Col. Melvin Delos Losey, O42235.
Col. Julian Alexander Wilson, O30359.
Col. Richard Martin Hurst, O30191.
Col. Hamilton Austin Twitchell, O19843.
Col. George Stafford Eckhardt, O19766.
Col. Hugh McClellan Exton, O19780.
Col. Ralph Edward Haines, Jr., O19849.
Col. Francis Mark McGoldrick, O19857.
Col. George Ruhlen, O19733.
Col. Frank Thomas Mildren, O21992.
Col. Frederick Carlton Weyand, O33736.
Col. James Bowdoin Stapleton, O19656.

The following-named officers under the provisions of title 10, United States Code, section 3066, to be assigned to positions of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Lt. Gen. James Edward Moore, O15650, Army of the United States (major general, U.S. Army), in the rank of general.

Maj. Gen. Earle Gilmore Wheeler, O18715, Army of the United States (colonel, U.S. Army), in the rank of lieutenant general.

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Maj. Gen. John Albert Dabney, O16602, U.S. Army, in the rank of lieutenant general.

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

Maj. Gen. Paul Lamar Freeman, Jr., O17704, Army of the United States (brigadier general, U.S. Army), in the rank of lieutenant general.

Mr. SALTONSTALL reported favorably three groups of nominations for appointment in the Army, and

On request of Mr. MANSFIELD, and by unanimous consent, said nominations were considered and confirmed, as follows:

David P. Anderson et al., which were received by the Senate on February 2, 1960, and appear in the executive proceedings of the CONGRESSIONAL RECORD for that date;

The nominations of James Y. Adams et al., which were received by the Senate on March 3, 1960, and which appear in the executive proceedings of the CONGRESSIONAL RECORD of that date; and

The nominations of Jack E. Adams et al., which were received by the Senate March 31, 1960, and appear in the executive proceedings of the CONGRESSIONAL RECORD for that date.

IN THE AIR FORCE

JUDGE ADVOCATE GENERAL, U.S. AIR FORCE

Maj. Gen. Albert Meldrum Kuhfeld, 884A (brigadier general, Regular Air Force), U.S. Air Force, for appointment as the Judge Advocate General, U.S. Air Force, for a period of 4 years beginning April 1, 1960, in the permanent grade of major general in the Regular Air Force. (This nomination is made under the provisions of section 8072, title 10, United States Code.)

RETIRED LIST

The following officers to be placed on the retired list in the grade of lieutenant general, under the provisions of section 8962, title 10, of the United States Code:

Lt. Gen. Glenn O. Barcus, 87A.
Lt. Gen. Richard C. Lindsay, 476A.
Lt. Gen. Oliver S. Picher, 540A.

The following groups of nominations for appointment in the Air Force were favorably reported by Mr. SALTONSTALL, and

On request of Mr. MANSFIELD, and by unanimous consent, were considered and confirmed:

The nominations of William H. Abbott et al., for promotion in the Regular Air Force which were received by the Senate on January 14, 1960, and appear in the Senate proceedings of that date in the CONGRESSIONAL RECORD.

The nomination of Wesley W. Posvar et al., for appointment in the Regular Air Force, which were received on February 18, 1960, and which appear in the Senate proceedings of the CONGRESSIONAL RECORD for that date;

The nominations of Arthur H. Ahrens, Junior, et al., for promotion in the Regular Air Force, which were received on March 16, 1960, and which appear in the Senate proceedings of the CONGRESSIONAL RECORD for that date;

The nominations of Philip W. Andrews, et al., for promotion in Regular Air Force, which were received on April 11, 1960, which appear in the Senate proceedings of the CONGRESSIONAL RECORD for that date.

IN THE NAVY AND MARINE CORPS

Vice Adm. Charles Wellborn, Jr., U.S. Navy, for appointment as U.S. naval representative, Military Staff Committee, United Nations, as senior Navy member pursuant to title 10, United States Code, section 711.

Vice Adm. Maurice E. Curts, U.S. Navy, for appointment to the grade of admiral on the retired list in accordance with title 10, United States Code, section 5233.

Vice Adm. Thomas S. Combs, U.S. Navy, for appointment to the grade of vice admiral on the retired list in accordance with title 10, United States Code, section 5233.

Having designated, in accordance with the provisions of title 10, United States Code, section 5232, the following-named officers for commands and other duties determined by the President to be within the contemplation of such section, I nominate them for appointment, to the grade of lieutenant general while so serving:

*Joseph C. Burger, USMC.
*Edward W. Snedekar, USMC.
*Thomas A. Wornham, USMC.
*John C. Munn, USMC.
*Wallace M. Greene, Jr., USMC.

The following-named officers of the Navy for appointment to the grade of vice admiral on the retired list in accordance with title 10, United States Code, section 5233:

Vice Adm. Stuart H. Ingersoll, U.S. Navy.
Vice Adm. Ruthven E. Libby, U.S. Navy.
Vice Adm. Edward W. Clexton, U.S. Navy.
Rear Adm. Frank T. Watkins, U.S. Navy.

Having designated, under the provisions of title 10, United States Code, section 5231, the following officers for commands and other duties determined by the President to be within the contemplation of said section, I nominate them for appointment to the grade of vice admiral while so serving.

Rear Adm. Ulysses S. G. Sharp, Jr., U.S. Navy.
Rear Adm. Charles L. Melson, U.S. Navy.
Rear Adm. George F. Beardsley, U.S. Navy.

(NOTE.—Asterisk (*) indicates ad interim appointment issued.)

The following nominations for appointment in the Navy and in the Marine Corps:

Mr. SALTONSTALL reported favorably three groups of nominations in the Navy and in the Marine Corps, and

On request of Mr. MANSFIELD, and by unanimous consent, the Senate considered and confirmed the said nominations en bloc, as follows:

The nominations of James B. Glennon et al., for appointment or promotion in the Navy, which were received on January 18, 1960, and appear in full in the Senate proceeding of the Senate in the CONGRESSIONAL RECORD for that date;

The nominations of Andrew C. J. Harnett et al., for appointment in the Navy and the Marine Corps, which were received on March 8, 1960, and which appear in the Senate executive proceedings of the CONGRESSIONAL RECORD for that date; and

The nominations of Dean A. Ablowich et al., which were received on April 6, 1960, and which appear in full in the Senate proceedings of the CONGRESSIONAL RECORD for that date.

HOUSE OF REPRESENTATIVES

THURSDAY, APRIL 21, 1960

The House met at 12 o'clock noon.

Rev. Carl Erland Ericson, Knox United Presbyterian Church, Falls Church, Va., offered the following prayer:

Almighty and Eternal God, as we convene with Thee, we give thanks for this day of splendor and opportunity, and for all who labor here in responsible freedom. Grant them courage to resist tyranny, and the wisdom to know where its seeds are sown.

In this place, where liberty is made into history, may the powerful find that democracy is not to be perverted, the rich that stewardship is national virtue, the poor that Thy love can transform charity, and may all the people come to take refuge here against injustice and discrimination.

As righteousness exalts a nation, grant us the strength to turn away from sin, the humility to see error in ourselves, and the grace to forgive it in others—that we may be Thy children.

Help us to see that the less we give ourselves to Thee, the more we contribute to our own despair. Teach us that uneasiness tomorrow is born of failing to seek Thy will today.

May these who are public servants have confidence without arrogance, that all the people of the world see Thy will in our national purpose.

May Thy love and peace come to the sick and the lonely; Thy leading hand to the uncertain and distraught.

And no matter what our condition or state, we thank Thee for tomorrow as for today, certain that both can be spent with Thee. In the name of Him in whom we are reconciled, even Jesus. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

KING OF NEPAL VISIT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that it may be in order at any time on Thursday, April 28, 1960, for the Speaker to declare a recess for the purpose of receiving in joint meeting His Majesty the King of Nepal.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATION BILL, 1961

Mr. PRESTON. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 10234) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

CIVIL RIGHTS

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules I call up House Resolution 503 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That immediately upon the adoption of this resolution, the bill H.R. 8601, with the Senate amendments thereto, be, and the same hereby is, taken from the Speaker's table, to the end that the Senate amendments be, and the same are hereby agreed to.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN], and pending that myself such time as I may consume.

Mr. Speaker, this resolution requires no explanation. When it is passed, the civil rights bill, with Senate amendments, will be cleared for the President. The Senate amendments, however, do require some

explanation, and consequently I yield to the gentleman from New York [Mr. CELLER] 15 minutes.

Mr. CELLER. Mr. Speaker, I arise in support of House Resolution 503.

I am mindful of the fact that there are Members here today who, for opposite reasons, are far from satisfied with the legislation we are about to vote upon. I, too, am not entirely satisfied with this legislation. However, under the circumstances, I believe it would be a futile gesture to send this legislation to a conference. To the opponents of the legislation I say that this bill is a moderate one. To the supporters of strong civil rights legislation I say that this bill is meaningful and can be effective.

The Celler Civil Rights Act of 1957 was a historic advance because it breached the barrier to civil rights legislation as it stood for 82 years. This was a first step and experience has shown that it was a halting one. The opposition which has arisen since 1957 to my bill demands the enactment into law of the legislation before us now.

We must understand that it is no light matter to undo a century or more of unequal treatment. The task of changing deeply entrenched patterns of racial segregation demands the full resources of our Government and our Nation. The task, moreover, has been complicated and aggravated by the instances and incidents of disorder and violence in the field of desegregation, by the enactment of States' statutes designed to impede and obstruct the carrying out of Federal court orders in the field of desegregation, and particularly in the field of elective franchise.

From the experience of the Attorney General in enforcing the Civil Rights Act of 1957 and the activities of the Civil Rights Commission, it is clear that means of more effective enforcement of our constitutionally guaranteed rights, and in particular the right to vote, is necessary. I am firmly convinced that the legislation before us will provide such a means and an effective means, too, provided that those who will be responsible for the administration and enforcement of this legislation carry out that responsibility. Some may say this is small relief, but remember a small key can sometimes open a big door. Assuring the ballot to the Negro gives him a shield and a sword, a shield to forfend wicked officials and a sword to fight for his unalienable rights—life, liberty, and the pursuit of happiness.

The enactment of this legislation will be a challenge to the Attorney General of the United States to proceed forcefully and effectively to provide and guarantee to qualified citizens the right to cast a ballot in any and all elections.

In casting my vote in favor of this legislation—the Celler-McCulloch bill—I do so with a firm conviction and an unalterable promise that should for any reason, be it the statute itself or the administration or enforcement of the statute that fails to achieve the objective of the legislation, I would once again introduce, as I have done in the past and as I did during the course of debate on this bill, legislation—strong, effective legislation—to achieve the goal of equal opportunity for all of our citizens.

I wish to point out briefly the substantial differences between the Celler-McCulloch bill as it passed in this body and as it was amended in the other body.

In title I, obstruction of court orders, the House version was limited to the obstruction of court orders dealing with school desegregation. The other body broadened the scope of this title to include all Federal court orders and increased from 6 months to 1 year the penalty of imprisonment. It also deleted from the title the word "corruptly" and eliminated the section requiring that the criminal penalty imposed be concurrent with any other penalty imposed under the same section. In addition the language which would have made it a crime to interfere with or obstruct the court order of "a threatening letter or communication" was deleted.

In title II, the other body eliminated from the House version the proposal which would have made it a crime to travel in interstate or foreign commerce to avoid prosecution for having given a false tip regarding a bombing. However, the version before us includes a provision making the conveying of a false tip itself a crime. In addition, the Senate version makes it a Federal crime to transport in interstate commerce any explosive for bombing purposes.

In title III, Federal election records, the provision requiring the preservation of voting records for 2 years from the date of election has been reduced to 22 months and the requirement that such records were to be made available at either the principal office of the Custodian or the office of the local U.S. attorney was limited to require production of such records only in the office of the Custodian.

In title IV, dealing with the Civil Rights Commission, the Senate eliminated the House proposal which would have authorized the Commission to hire personnel without regard to the civil service classification laws.

In title V, education of children of members of the Armed Forces, the Senate eliminated the House provision whereby the Commissioner of Education could negotiate for the leasing of school buildings which had been constructed with Federal aid when the local educational agencies are unable to provide facilities for the children of the members of the Armed Forces.

In title VI, voting referees, the Senate added a provision requiring that voting referees take the same oath of office as is now required for other responsible Federal officials. Secondly, the Senate added a provision requiring that the proceeding before the referee shall be held at such times and places as the court shall direct. Finally, the Senate added a proviso to that portion of this title relating to provisional voting for an applicant who has filed his application twenty or more days prior to an election. The Senate added the proviso that such applicant be allowed to vote provisionally when he is qualified to vote under the State law.

The other changes made by the Senate in the House version are merely technical and in no way affect the substance of the House version.

In conclusion, I shall maintain ceaseless vigilance and unmistakable zeal in this onward march for full civil rights for all. Complete civil rights may not come tomorrow. They may not be achieved the day after. But come they must. Patience and courage are essential—above all patience. Remember with patience mulberry leaves finally become satin.

CALL OF THE HOUSE

Mr. COLMER. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll and the following Members failed to answer to their names:

[Roll No. 52]

Alexander	Forand	Meader
Alger	Gavin	Mitchell
Andersen, Minn.	Giaimo	Montoya
Anderson, Mont.	Grant	Morris, N. Mex.
Auchincloss	Hays	Moulder
Barden	Holifield	Norblad
Brock	Holland	Oliver
Burleson	Horan	Powell
Cooley	Jackson	Rogers, Tex.
Davis, Tenn.	Kearns	Rooney
Dent	Keogh	St. George
Derounian	King, Utah	Sheppard
Diggs	Lafore	Sisk
Durham	Lipscomb	Taylor
Fenton	McGinley	Teague, Tex.
Fisher	McGovern	Tuck
	McIntire	Withrow
	Mack	Young

The SPEAKER. On this rollcall 378 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CIVIL RIGHTS

Mr. BROWN of Ohio. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, there seems to be some misunderstanding as to the situation under which we find ourselves at the present time. House Resolution 503 is a very short one, and I believe I should read it in its entirety. The resolution reads as follows:

Resolved, That immediately upon the adoption of this resolution, the bill H.R. 8601, with the Senate amendments thereto, be, and the same hereby is, taken from the Speaker's table, to the end that the Senate amendments be, and the same are hereby agreed to.

Now, in simple language, that means that when we adopt this resolution, we will be agreeing to the Senate amendments to the House bill, H.R. 8601, which was the original House measure on civil rights. In other words if we will agree to those amendments, when that vote is taken, or if the resolution is approved, the bill H.R. 8601 as amended in the Senate will then be on its way to the White House for the President's consideration.

Mr. Speaker, when I opened the debate in the House on March 10 on this measure, I believe I predicted then that the final result would be such that perhaps neither the opponents or proponents of the measure would be entirely satisfied with its contents. Yet, this bill, containing, as it does, the features of the original McCulloch bill, which was made in order as an amendment by the Committee on Rules, which sets up the voting rights protection as the main feature of the bill, I believe that which I said in March is still true; that if you give to all qualified citizens the right to vote, they, in turn, can and will cure many of the practices to which they now object.

This measure, of course, carries other important provisions, but above all else it does protect the right of all qualified citizens to vote, regardless of race, color, or creed. It is, therefore, in my opinion, as good a compromise bill as could be put through the Congress of the United States, and, on the whole, it is a good measure. I hope this resolution will be adopted.

Mr. Speaker, I now yield 5 minutes to the gentleman from Indiana [Mr. HALLECK], the minority leader.

Mr. HALLECK. Mr. Speaker, this is a memorable day in the Congress of the United States.

We have taken a decisive step toward protecting and furthering the civil rights of all our citizens.

I congratulate the Members of the House on their expeditious and intelligent handling of the bill, first as reported by our own Judiciary Committee and again as returned to this body by the Senate.

I congratulate the distinguished Members of the other body for their success in securing reasonably prompt action on the bill.

Naturally, the bill does not satisfy everyone. For some it goes too far. For others it does not go far enough.

But I believe that this bill basically represents the wishes of the American people in this year 1960. Every fair-minded person will have to recognize, I think, that we have achieved real progress toward the great goal of insuring full civil rights for all of our people.

Having this in mind, I want to summarize briefly what it seems to me we are accomplishing with enactment of H.R. 8601.

First of all, it affords meaningful protection of the right to vote.

Title VI—the Federal voting referee provision—may well be called the heart of the Civil Rights Act of 1960.

Certainly the right to vote is a basic civil right. By providing Federal machinery to affirmatively assist persons who have been denied the franchise by racially discriminatory State action, we are really reaching the grass roots of civil rights.

A second indispensable shield for the protection of voting rights is provided by title III.

That title requires the retention of State voting records for 22 months after a Federal election and the handing over of such records upon the demand of the Attorney General.

This provision realistically recognizes that voting records are important evidence in most voting rights cases and that only Federal law can overcome the reluctance of some State officials to make such records available.

But H.R. 8601 is not merely a voting bill. Let me review briefly the other aspects of this constructive piece of legislation.

In title I, the bill provides criminal sanctions against persons who obstruct or attempt to obstruct rights or duties under Federal court orders.

The significant contribution of this title is that it will be available to punish those who take the law into their hands either to prevent a school board from opening its school to Negroes or to interfere directly with Negroes ordered admitted to a public school pursuant to a court decree.

The other body has seen fit to broaden the scope of this title beyond the specific category of school desegregation orders so that it applies to obstruction of any type of Federal court decree.

Title II penalizes interstate flight to avoid prosecution for damaging or attempting to damage any building by fire or explosive, as well as interstate transportation of explosives for illegal use and the use of threats or false information concerning bombings.

Although broadened by the other body to include damage to all types of structures, this title retains a specific reference to religious and educational institutions.

Obviously, a major aim of this legislation is to eradicate the hate bombings which have centered largely on schools, churches, and synagogues.

I am confident that the title will be successful in that aim.

Title IV amplifies the powers of the Civil Rights Commission by permitting each member to administer oaths or take statements of witnesses under affirmation.

Title V implements the obligation of the Federal Government to the members of the Armed Forces. It allows the Commissioner of Education to provide educational facilities for children of military personnel living off base as well as on.

As we know, it is a real possibility that schools in some areas will close to avoid compliance with desegregation orders.

Our off-base military children, white and Negro, would suffer irreparably unless the Federal Government could provide for their education.

This, in substance, is the Civil Rights Act of 1960.

In conjunction with the Civil Rights Act of 1957, it provides the tools for combating many existing evils.

Let us have faith that these tools will be used effectively, with fairness to all concerned.

Mr. BOLLING. Mr. Speaker, I yield 5 minutes to the gentleman from Mississippi [Mr. COLMER].

Mr. COLMER. Mr. Speaker, I dislike again to strike a note of discord here when so many, having made their record on this bill, seem to be so happy about it. I happen to be one of those old-fashioned constitutional Democrats who is very unhappy about it.

A lot of effort has been made on this side to call it a Democratic bill, on that side a Republican bill. I foresee that in the future there may be those of you who live long enough to regret that you had anything to do with it at all.

It is said that this is a moderate bill. Many of my Southern colleagues take comfort in that thought. I see nothing moderate about it. To me it is a very vicious bill. I am not talking about race. I am not talking about black people or white people; I am talking about the institutions of America, its history, its electoral system. This strikes at the very foundation of our system of government.

Someone wants to call it the Celler-McCulloch bill. Somebody else wants to call it the McCulloch-Celler bill; the Democratic bill, the Republican bill.

Why not call it just what it is? The 1960 election bill, a bid for the minority bloc vote. And that is what it is.

We all recognize it. The press recognizes it. The NAACP, the politicians, everybody recognizes it. It is a vicious attack, I repeat, upon the fundamental structure of our country. It is going to result in more and more legislation, more and more discord. You are setting back the good progressive relations that have been going forward under an evolutionary system between the races.

Yes, it may be aimed at my section of the country but, I repeat, you will live to rue the day that you had any part to play in this infamous thing. Frankly, I do not think either party is going to get any credit out of it. As individual Members you can go back home and tell this minority group how hard you fought for it. But mark you again, this is not the end. This is taking another step in the attack upon the American system and its institutions, putting the Federal Government in purely local matters.

Maybe not this year but year after next, in another election year, my friend from New York [Mr. CELLER] or others will be in here asking for more and more discriminatory—and I mean just exactly what I say—discriminatory legislation in favor of a minority group. This group will not be satisfied with what you have done here today. They will demand further discriminatory legislation in their behalf. I wonder how many of your constituents realize that this bill actually discriminates against white people in favor of Negroes?

Mr. Speaker, time will not permit to go into detail but I should like to sum up some of the most obvious and serious objections to this bill which we are going to pass in the next hour and send on to the President. I seriously doubt that it would have a ghost of a show if the people from the other sections than the South had realized its full effect and

implications upon them, the country as a whole, and its cherished institutions.

In brief, these are some of the evil effects of the bill:

First. It removes one of the basic foundation stones of States sovereignty, local control of election machinery.

Second. It is another significant step in the continuing drive for centralization of authority in an all-powerful Federal Government with the resultant loss of individual liberties.

Third. The bill admittedly gives Negro voters discriminatory privileges over white citizens. This definitely illustrates the evil of attempting to enact legislation for the benefit of a minority group.

Fourth. For obvious political reasons, the proponents wrote into the bill on the floor of the House the so-called referee plan which goes further into the field of Negro voting rights than anything passed by the Congress in the dark days of the Reconstruction Period. The Federal supervision of Negro voting rights in that period only applied to elections of Federal officers. This would apply to all elections from constable to Governor.

Fifth. It unquestionably violates article I of the Constitution providing for freedom of speech, and so forth, as well as other provisions of that immortal document. It particularly violates the 10th amendment which reserves all powers of government not specifically delegated to the Federal Government to the States, or the people.

Sixth. It, most unfortunately, destroys the good brotherly relations existing between the races, particularly in the South where so much orderly and evolutionary progress was being made by the Negro race under the guiding hand of his white brother.

Seventh. Of less importance, but of significance, the final passage of the bill will widen the breach between the so-called Northern and Southern divisions of the Democratic Party. Thus, the so-called liberal Democratic bloc may win the preliminary skirmish, but lose the 1960 political battle.

Finally, those of us who believe in conservative government here in the House have given our dedicated best efforts to prevent this deadly assault upon the priceless heritage bequeathed us by the Founding Fathers. We can now only hope that the day will be hastened when its evils will become so manifest in its operation that a wiser and less politically minded Congress will repeal it—even as a similar bill—the old Davenport Act—enacted in the unfortunate Reconstruction Era was repealed at the turn of the century.

Mr. BROWN of Ohio. Mr. Speaker, I yield 20 minutes to the gentleman from Ohio [Mr. McCULLOCH], the ranking member of the Committee on the Judiciary.

Mr. McCULLOCH. Mr. Speaker, I arise to support House Resolution 503, to make in order the House agreement to the Senate amendments to the civil rights bill.

I am pleased, indeed, to have introduced both the original administration bill on civil rights and the bill which, in substance, became the Federal voting referee section of the final legislation which we are considering today.

This is a happy occasion for me, and, I am sure, for most of my colleagues on the Judiciary Committee, particularly the distinguished chairman, therein, all of whom have worked diligently and so effectively in finally bringing to the House this significant legislation.

Of course, the Members of this body are familiar with the contents of the civil rights bill as it left the House. Therefore, I will not elaborate upon the bill except, later, to remark on the extent to which the amendments of the other body have altered or changed the bill.

The Rules Committee has reported for our consideration a House resolution which will be productive of the results desired by the great majority of this House, namely, the speedy passage of a good civil rights bill.

At this point, let me emphasize that I would not support the resolution if I thought the amendments had a crippling effect on any of the provisions of the civil rights bill passed by the House. I must in fairness add that the amendments are not all to my liking. But they have not altered the fundamental structure of the bill or its effectiveness as a workable civil rights measure. In particular, the voting rights sections, the heart of the bill, have not been altered beyond a minor degree.

Title III, Federal election records, has been amended so as to require State officials to preserve election records for a period of 22 months instead of 2 years and to permit the inspection and copying of the records only at the principal office of the Custodian of the election records, instead of also at the office of the U.S. attorney. This very essential provision makes possible the discovery and use in court of evidence of voting violations.

Title VI, the voting referee provision, has been altered only in three respects. None of these alter the effectiveness of the title as a judicial measure to enforce the voting rights of citizens who have not been permitted to vote because of their race or color.

The first amendment in this title merely requires the voting referee to subscribe to the oath of office required by 5 United States Code, section 16. The second amendment, which I think is an improvement, requires the court to fix the times and places for the ex parte proceedings before the voting referee.

The third amendment adds a provision to the provisional voting clause to require that the applicant "shall be qualified to vote under State law." The primary reason for this change was to clarify that applicants who had not attempted to register within the time prescribed by State law are not to be entitled to a provisional voting order. Thus, the amendment merely accords to the interpretation of the House at the time it adopted the O'Hara amendment.

For all practical purposes, I believe that the voting provisions of the bill have not been changed and that they reflect the will of the great majority of this House.

All other titles to the bill, titles I, II, IV, and V, have been substantially amended, but none of these amendments have weakened the House version of the bill.

Title I was amended to apply to all Federal court orders. Title I, as it left the House, was principally limited to school desegregation court orders.

Title II also has been broadened with the amendments, which now provide penalties for interstate flight to avoid prosecution for damaging or attempting to damage by fire or explosion any structure or building, as well as penalties for the illegal use or possession, in interstate commerce, of explosives, and the communication of threats or false information concerning attempts to damage or destroy any building or other property.

Title IV and title V have also been amended. Title IV gives the members of the Civil Rights Commission the authority to administer oaths or take statements of witnesses under affirmation. The original version of this title, it is to be remembered, largely became moot with the amendment to the Mutual Security Act during the 1st session of the 86th Congress, which extended the life of the Civil Rights Commission to 2 years.

Title V, education of children of members of the Armed Forces, was first amended in the House so as to deprive the Federal Government of the right to take possession of local schools closed because of a desegregation dispute. Therefore, the amendment of the other body deleting the right to negotiate for the use of such schools takes away little, if any, Federal authority. As amended, it retains the important provision which permits the Commissioner of Education to make arrangements for the education of children of members of the Armed Forces who live off the base, as well as those who live on the base.

Title VI, the Federal voting referee provision, as I explained, provides a truly effective judicial tool, which will enable the Attorney General to secure the right to register and vote for all those qualified citizens who, because of their race or color, have been deprived of their elective franchise, the very cornerstone of representative government.

The bill, as amended, I am happy to say, is in every respect a moderate, yet effective measure in the field of civil rights. The Congress has searched for and found the golden mean.

If this legislation be properly used and not abused, it may well be the beginning of a new era. This can be one of our finest hours.

Mr. BROWN of Ohio. Mr. Speaker, I yield such time as he may desire to the gentleman from Virginia [Mr. POFF].

Mr. POFF. Mr. Speaker, weighed in the balance, the civil rights bill passed in the other body, while still materially defective, represents a substantial technical improvement in the version which passed

the House. This evaluation is based on a purely legal analysis. That analysis, section by section, is as follows:

TITLE I

Title I, the so-called obstruction of court orders section, was extended to include all orders, judgments, and decrees of a Federal court. The House version restricted title I school desegregation decrees only.

In the motion to recommit which I was privileged to offer, I incorporated an instruction to amend title I by deleting the words "or by any threatening letter or communication." In my judgment, those words, if left in the bill, would have raised a serious question of infringement of freedom of speech and freedom of the press as guaranteed by the first amendment to the Constitution. Apparently, a majority of the members of the other body concurred in that opinion; the words are no longer in the bill.

During the course of the House debate, I criticized the use of the word "endeavors" as an unsatisfactory substitute for the word "attempts." The word "attempts," which is a word of art refined in the case law of our American jurisprudence since its inception, was employed in title I of the bill as approved by the other body.

The other body increased the title I prison penalty from 60 days to 1 year. Inasmuch as coverage was broadened and since the degree of the penalty imposed is discretionary rather than mandatory, I find no serious objection to this change.

However, I do strongly disapprove another change in title I made in the other body. As the bill passed the House, any penalty imposed under title I would run concurrently with any penalty imposed for contempt of court growing out of the same violent act. Under the bill as passed by the other body, such penalties may run consecutively.

TITLE II

Under title II, the other body added a new section which makes it a crime to transport explosives in interstate commerce with the purpose or knowledge that such explosives will be used to damage real or personal property. This new section also makes it a crime to use the mail, telephone, telegraph or other instrument of commerce to convey a threat concerning an attempt to damage such property.

As the bill passed the House, the criminal threat was a part of the unlawful flight section of title II. Since essentially the same provision was incorporated in the new section added by the other body, the threat provision in the unlawful flight section was deleted. Of this change I have no criticism.

In connection with the language in the new section by the other body, it is significant to note how the question of legal presumptions was treated. In that language, the possession of an explosive creates a rebuttable presumption that the explosive was transported in interstate commerce. In order that there could be no doubt about the meaning of that phrase, the other body was careful to add the proviso "that no person may be convicted under this section unless there is evidence independent of the presumptions that this section has been violated." Parenthetically, I must add that it is regrettable that similar language was not incorporated in title VI, the so-called voting referee plan.

TITLE III

The other body made a salutary amendment of title III. As the bill passed the House, the custodian of voting records could be compelled to produce the same in the office of the U.S. attorney. Under the amendment, these records are subject to examination only at the office of the Custodian. The period of preservation was reduced from 24 months to 22 months.

TITLE IV

The only change made in title IV was the deletion of the clause which permitted the Civil Rights Commission to hire employees without regard to the provisions of the civil service laws.

TITLE V

During the House debate, title V was amended to authorize the U.S. Commissioner of Education to consult and negotiate with State educational agencies when the operation of school buildings had been discontinued by State acts. The purpose of that amendment was to withhold the Commissioner's right to seize a specific school building if other nearby school buildings were operational and available for use by children of members of the Armed Forces. In the other body, this amendment was deleted. In my judgment, this was a mistake. By every yardstick of orderly procedure and economic practice, the House version was preferable.

TITLE VI

The other body made several amendments to title VI, the voting referee plan.

First. Voting referees are required to subscribe to an oath of office. No one can legitimately consider this amendment objectionable. Indeed, it is commendable.

Second. The U.S. district court is required to fix a time and place certain for the conduct of referee proceedings. So far as it went, this amendment represented an improvement.

Third. An amendment was added which provides that an applicant for registration will not be allowed to vote provisionally unless found "to be qualified under State law." This language, considered vague by many, has the practical effect of eliminating provisional voting as authorized in the House version. In other words, if the court is required to make a decision about the applicant's qualifications, there will no longer be any reason why he should be permitted to vote provisionally. If the judge finds that he is qualified, his right to vote will be absolute and not provisional.

It should be noted that the other body made no change whatever with respect to the ex parte proceeding before the referee or with respect to the irrebuttable presumption. As currently written, the bill makes available to a citizen who was never a party to the original suit an arbitrary presumption which, so far as his individual case is concerned, is based on no evidence and which is subject to no rebuttal by the defendant registrar. Accordingly, the constitutional question of due process is still unresolved and can now apparently be resolved only by the courts. Undoubtedly, this constitutional question will be tested in the courts as soon as the plan is invoked.

In summary, while the bill has been improved by the other body, it is still legally defective in several material aspects. Even if it were wholly without legal defects, and even if we are to assume that the Federal Government has the naked power to so legislate, whether, as a matter of policy, the Federal Government ought to exercise its power is distinctly another question. It cannot be gainsaid that this legislation represents another invasion and usurpation of the sovereignty of the several States. In this regard, it must be remembered that the States of the South, while obviously the intended victims, are not the only States to which this usurpation extends. The Enforcement Acts of 1870 and 1871 were aimed at the Southern States. Yet, it was a Northern State, that is, New York, which 24 years later, and motivated by the sorry experience which her people had endured under the operation of the act, initiated the movement to repeal what proved to be unwise and unworkable laws. History may repeat itself.

Mr. BROWN of Ohio. Mr. Speaker, I have no further requests for time.

May I ask the gentleman from Missouri if he will request permission for all Members to extend their remarks before we finish.

Mr. BOLLING. I will do that later on.

Mr. Speaker, I yield 2 minutes to the gentleman from Minnesota [Mr. WIER].

Mr. WIER. Mr. Speaker, now that the civil rights resolution is finally before us here in the House for a vote, I find myself confronted with a reluctant vote. This comes as a result of my best evaluation upon this resolution. But at least I am very, very much dismayed as to how so many Members of the Congress could spend so many, many days on behalf of so many, many citizens of this Nation and then come up with so little. Possibly this bill might serve as lipservice device in a campaign, but in reality this bill does not serve the intended purpose. I am very keenly disappointed that the bill comes here in what I term a rather watered-down condition. At least I would hate to be a candidate for President of the United States and have to campaign on this legislation as one of my accomplishments. It is not just going to be explained away as easily as that.

I yield back the balance of my time, because I know the committee is short on time, but I wanted to express my disappointment with this bill.

Mr. BOLLING. Mr. Speaker, I yield the balance of the time on this side to the gentleman from Michigan [Mr. O'HARA].

The SPEAKER pro tempore. The gentleman from Michigan is recognized for 13 minutes.

Mr. O'HARA of Michigan. Mr. Speaker, I rise for the purpose of clarifying the effect of the Senate amendment to the provisional voting portion of H.R. 8601.

When title VI of H.R. 8601 was under consideration by this House, I offered an amendment which in part provided:

> In the case of any application filed 20 or more days prior to an election which is undetermined by the time of such election, the court shall issue an order authorizing the applicant to vote provisionally.

The amendment was thoroughly discussed and explained by the distinguished chairman of the committee, the gentleman from New York [Mr. CELLER], the able gentleman from Colorado [Mr. ROGERS], a member of the committee, and myself prior to its adoption by the House.

Nevertheless, when H.R. 8601 was before the Senate, a majority of the Members of that body felt that it was desirable to insert into this paragraph language to reinforce the legislative history in the House.

Both the minority leader, the Senator from Illinois, Mr. DIRKSEN, who offered the successful Senate amendment to the provisional voting paragraph, and the majority leader, the Senator from Texas, Mr. JOHNSON, stated during the debate that it was their intention to make the bill conform to the legislative history made in the House of Representatives.

The majority leader said that:

> The Senate, if it adopts this amendment, is doing no more today than what those Members of the House—

Referring to the chairman of the committee, the gentleman from New York [Mr. CELLER], the gentleman from Colorado [Mr. ROGERS], and myself—

> said the O'Hara amendment provided at the time.

However, two questions have arisen concerning the meaning of the provisional voting paragraph, as amended by the Senate.

The first has to do with the time within which a person seeking an order permitting him to vote provisionally must have attempted to register with the local officials and the time within which he must have applied to the Federal court.

The fear had been expressed that the provisional voting section, as it passed the House, might require the courts to permit provisional voting by applicants who had not even attempted to register with the local officials within the time permitted by State law. To clarify this point, I should like to briefly restate the intention of the membership of this House with regard thereto.

Before an order providing for provisional voting may be entered, it must appear that the applicant has attempted to register with the local election officials within the time prescribed by State law. If he has, and then presents himself to the Federal court 20 or more days prior to the election to which the provisional voting order will apply, and appears otherwise qualified, the court shall issue such order. If he has, and then presents himself to the Federal court less than 20 days prior to the election in which he seeks to vote provisionally, the court, in its discretion, may issue an order entitling him to vote provisionally. In short, the 20-day period referred to in the provisional voting paragraph of title VI applies to the time of application to the court. The time of application to local officials is still determined by State law.

The second major question arising from the Senate amendment to the provisional voting feature of title VI has to do with the method by which the qualifications of the applicant for an order entitling him to vote provisionally shall be determined.

Provisional voting is provided in cases in which a final determination of the applicant's qualifications has not yet been made. If a final determination of his qualifications has been made, he is entitled to an order authorizing him to vote unconditionally, and there is no need for an order permitting him to vote provisionally. It is, therefore, clear that the Senate did not intend by its amendment to provide that applicants could vote provisionally only if their qualifications had already been finally determined. Such an interpretation leads to a patently ridiculous result and is totally unsupported by the record made in the Senate.

The purpose of the Senate amendment was to assure that the court is not required to issue orders permitting provisional voting whether or not the applicant appears to possess the necessary qualifications for voting under State law.

The proviso makes it clear that the court is expected to examine any application it receives before it issues an order permitting the applicant to vote provisionally. Lines 4 through 7 on page 18 provide that an applicant's statement under oath "shall be prima facie evidence as to his age, residence, and prior efforts to register or otherwise qualify to vote."

From the applicant's sworn statement as to these matters and the referee's report, if available, the court can readily determine whether or not the applicant appears to possess the necessary qualifications under State law. The court then should issue an order entitling an applicant to vote provisionally, unless it appears from an examination of these documents that, under State law, he is not qualified to vote.

The foregoing interpretation of the provisional voting portions of title VI is in accord both with the intention of those who offered and supported the provisional voting amendment in the House and with the expressed intent of those who offered and supported the proviso inserted therein by the Senate.

Mr. MCCULLOCH. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Michigan. I yield to the gentleman from Ohio.

Mr. MCCULLOCH. I would like to state for the RECORD that the remarks made by the gentleman from Michigan are in accord with my understanding of the intention of the provisional voting portion of H.R. 8601, and it is in accordance with my understanding of the effect of the language added thereto by the Dirksen amendment in the other body.

Mr. LINDSAY. Mr. Speaker, will the gentleman yield?

I should like to direct a question to the gentleman from Michigan [Mr. O'HARA]. The gentleman from Michigan stated that under the provisional voting paragraph of title VI, as amended by the Senate, an applicant for an order authorizing him to vote provisionally must have attempted to register with the local officials within the time permitted by State law. Did the gentleman from Michigan, when he said this, assume that a Federal court finding of a pattern or practice of discrimination in voting had been made a reasonable time prior to the closing of registration under State law?

Mr. O'HARA of Michigan. That is correct. I assumed that the finding of a pattern or practice had preceded the closing of registration under State law.

Mr. LINDSAY. If the gentleman will yield further. Does the gentleman from Michigan contemplate that an applicant before the Federal court must have attempted to register within the time permitted by State law even when registration has been closed before the court finds the pattern or practice of discrimination?

Mr. O'HARA of Michigan. When a court finds a pattern or practice of discrimination it has also, in effect, found that it would have been futile for the applicant to have attempted to register at any time prior thereto, and, if registration has already closed, the applicant has had no opportunity to meet any such requirement after the finding of a pattern or practice of discrimination.

Since this is a suit in equity, equitable doctrines should apply, including the rule that persons asking relief need not have attempted a clearly futile act as a condition precedent to receiving relief. This principle was recognized during the Senate debate. I believe that the court could and should examine the circumstances in each case and not exact a requirement of prior application to the local officials within the time permitted by State law under the fact situation described by the gentleman from New York.

Mr. LINDSAY. I thank the gentleman.

Mr. CELLER. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Michigan. I yield to the gentleman from New York.

Mr. CELLER. I think the interpretation that the gentleman from Michigan places upon the provisional voting portion of H.R. 8601 is highly important, and also important is the colloquy between the gentleman who now has the floor and the gentleman from New York [Mr. LINDSAY], because it would be the criteria that will govern the courts in their interpretation of these sections.

Under the provisional voting paragraph as it now reads and as we intended it to be interpreted when we presented it to the House, the 20-day time period does not affect registration periods set by State law, as I understand it, and I am sure that the gentleman will agree, and has relevance only with regard to

the time within which an applicant appears before the referee to seek redress. Am I correct?

Mr. O'HARA of Michigan. That is in accordance with my understanding.

Mr. CELLER. The language added by the other body does not require a final determination of the applicant's qualifications under State law before an order entitling him to vote provisionally is issued. The effect of the proviso is to avoid any inference that the court is required to issue an order permitting provisional voting to a person obviously not qualified under State law.

Mr. O'HARA of Michigan. I thank the gentleman from New York, and I will state that is in accordance with my understanding of the statute.

Mr. Speaker, I earnestly hope that the House will accept the Senate amendments to this bill, and that we will take a step forward in our fight for equal rights for all Americans.

GENERAL LEAVE TO EXTEND REMARKS

Mr. BOLLING. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks at this point in the RECORD on the resolution now under consideration.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. BOW. Mr. Speaker, I shall support this legislation for civil rights. The right to vote is a sacred right of all Americans and should be denied to none.

I regret that this bill has neglected two important fields, one being that of the rights of American soldiers to vote. The privilege is denied to thousands. In this case both colored and white citizens are foreclosed from exercising their franchise.

The other area of neglect is the citizen of the District of Columbia. You will recall, Mr. Speaker, I offered an amendment to grant these rights to the disfranchised citizen of our Federal city. It was ruled out of order. The distinguished chairman of the Judiciary Committee claimed a constitutional amendment was required to grant these rights. I claimed, Mr. Speaker, that the Congress now has constitutional authority. I still maintain that position.

I am pleased that hearings have been held on the constitutional amendment. I shall support it if it comes to the floor.

I fear, however, a long and costly road ahead for the constitutional amendment.

I claim we could pass proper legislation now to give citizens of the District of Columbia the right to vote for electors for President and Vice President, and representation in the Congress.

I think this should be done now. I would support representation with full powers in the House and have the bill go to the Senate and permit them to include a member of their body with such powers and rights as they might legislate. Why deny the rights to vote this year, a presidential year, to those now disfranchised in the District?

Mr. Speaker, I practiced law 30 years before coming to the Congress. The question of law as to the powers of Congress over the Capital City has fascinated me. I have studied the legal and constitutional question carefully. I am convinced what I advocate can be done. I submit to the House and to the Judiciary Committee a memorandum of law I have prepared. Under unanimous consent I include it with my remarks.

MEMORANDUM

QUESTION PRESENTED

Whether Congress, without a constitutional amendment, has the right to grant citizens of the District of Columbia the right to vote in national elections and to have representation in the Congress of the United States.

FACTUAL BACKGROUND

Article I, section 8, clause 17 of the Constitution of the United States provides that Congress shall have the power "to exercise exclusive legislation in all cases whatsoever over such District (not exceeding 10 miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States."

In 1788 and 1789, Maryland and Virginia ceded territory to the Federal Government and Congress, by acts which were approved on July 16, 1790,[1] and March 3, 1791,[2] established the District of Columbia, which was finally proclaimed to be the national capital after the national elections of 1800. Jurisdiction over the District of Columbia vested in the United States on the first Monday of December 1800 (*United States* v. *Hammond*, 1, Cr C.C. 15 (1801)).

The city of Washington was made a municipality by act of Congress in 1802.[3] That form of government continued until 1817, when Congress established a territorial form of government for the District of Columbia. This form of government lasted for approximately 3 years, after which a temporary commission form of government was installed; by act of Congress in 1878,[4] the present commission form of government was established in the District of Columbia. Under this present form of government, all legislative powers with respect to District affairs are retained by Congress, while an executive board of three commissioners appointed by the President is vested with ordinance powers.

District citizens voted in the national elections of 1792, 1796, and 1800, but have not participated in any national election since the election of 1800. Under the territorial form of government established by the act of 1871, the District was given a delegate in the House of Representatives; this act was superseded, however, by the act of 1878, and in consequence the District lost its last vestige of any form of national representation.

APPLICABLE LAW AND ARGUMENT

I. Status of the District of Columbia as to "State"

A. The Hepburn case: The Members of the House of Representatives are chosen by the electors in each State (art. I, sec. 2, of the Constitution), Members of the Senate are elected by the people of the respective States (amendment 17 of the Constitution of the United States), and the President and Vice President of the United States are chosen by electors who are appointed by the legislatures of the several States (art. II, sec. 1). Proponents of the view that it requires a constitutional amendment to grant citizens of the District of Columbia the right to vote in national elections and to have national representation in the Congress argue that because Representatives, Senators, and the President and Vice President are chosen, either directly or indirectly, by the citizens of the several States, citizens of the District of Columbia cannot exercise these rights because they are not citizens of a "State" within the meaning of that term as used in the Constitution. This view rests squarely on the decision of *Hepburn* v. *Ellzey* (2 Cr. 445 (1805)) and its progeny.

In the Hepburn case the Supreme Court of the United States was confronted with the question of whether residents of the District of Columbia could maintain an action in the Circuit Court of the United States for the District of Virginia under an act of Congress which limited the jurisdiction of the circuit courts to cases between a citizen of the State in which the suit is brought and a citizen of another State. Chief Justice Marshall, in an extremely brief opinion, held that citizens of the District of Columbia were not citizens of a State within the meaning of that term as used in the act of Congress conferring jurisdiction on the circuit courts. In interpreting the term "State," Chief Justice Marshall made note of the fact that under the Constitution Members of the House were chosen by the people of the several States and that the Senate was composed of Senators from each State, and from that he concluded that the term "State" as used in the Constitution designates, and is limited to, a member of the Union of the United States. In the course of his opinion, however, Chief Justice Marshall prophetically commented:

"It is true that as citizens of the United States, and of that particular District which is subject to the jurisdiction of Congress, it is extraordinary that the courts of the United States, which are open to aliens, and to the citizens of every State of the Union, should be closed upon them. But this is a subject for legislative, not for judicial, consideration" (2 Cr. at 452).

Careful examination of the opinion of the Supreme Court in *Hepburn* v. *Ellzey, supra,* thus discloses that proponents of the necessity for constitutional amendment (to permit citizens of the District of Columbia to vote in national elections and to have representation in the Congress) are relying upon a decision in which the question of whether citizens of the District of Columbia were citizens of a "State" within the meaning of the term "State" as used in the Constitution was not before the Court. The decision interpreting the term "State" as used in a statute, therefore, does not interpret the term "State" as used in the Constitution and is, clearly, subject to the maxim:

"That general expressions, in every opinion, are to be taken in connection with the case in which those expressions are used. If they go beyond the case, they may be respected, but ought not to control a judgment in a subsequent suit, when the very point is presented for decision" (Chief Justice Marshall, in *Cohens* v. *Virginia* (6 Wheat. 264, 399 (1821))).

B. The National Mutual Insurance Co. case: In the century and a half since *Hepburn* v. *Ellzey, supra,* there has been some significant disagreement with the views which Chief Justice Marshall expressed in that case. In *Watson* v. *Brooks* (13 F. 540, 543–544 (1882)), for example, the Court, in reluctantly following *Hepburn* v. *Ellzey, supra,* commented:

"But it is very doubtful if this ruling would now be made if the question was one of first impression; and it is to be hoped it may yet be reviewed and overthrown.

"By it, and upon a narrow and technical construction of the word 'State', unsupported by any argument worthy of the able and distinguished judge who announced the opinion of the court, the large and growing population of American citizens resident in the District of Columbia and the eight territories of the United States are deprived

[1] 1 Stat. 139 (1790).
[2] 1 Stat. 214 (1791).
[3] *U.S.* v. *Simms* (1 C.R. 252, 256 (1803)).
[4] 2 Stat. 103, 104 (1801).

of the privilege accorded to all other American citizens, as well as aliens, of going into the national courts when obliged to assert or defend their legal rights away from home. Indeed, in the language of the court in *Hepburn and Dundas* v. *Ellzey, supra,* they may well say: 'It is extraordinary that the courts of the United States, which are open to aliens, and to the citizens of every State in the Union, should be closed upon them.' But so long as this ruling remains in force, the judgment of this court must be governed by it."

Much more recently, and far more significantly, Mr. Justice Rutledge with whom Mr. Justice Murphy concurred, in *National Mutual Insurance Co.* v. *Tidewater Transfer Co., Inc.* (337 U.S. 582, 69 S. Ct. 1173 (1939)), taking exception to the decision of Chief Justice Marshall in *Hepburn* v. *Ellzey, supra,* stated:

"Marshall's view of the 1789 act, iterated in his later dictum, Corporation of *New Orleans* v. *Winter* (1 Wheat. 91, 94, 4 L. ed. 44); cf. *Sere* v. *Pitot* (6 Cranch 332, 336, 3 L. ed., 249), has been consistently adhered to in judicial interpretation of later congressional grants of jurisdiction. And, by accretion, the rule of the Hepburn case has acquired the force of a considered determination that, within the meaning of article III, sec. 2, 'the District of Columbia is not a "State" and its citizens are therefore not citizens of any State within the article's meanings.'

* * * * *

"However, nothing but naked precedent, the great age of the Hepburn ruling, and the prestige of Marshall's name, supports such a result. It is doubtful whether anyone could be found who now would write into the Constitution such an unjust and discriminatory exclusion of District citizens from the Federal courts. All of the reasons set forth for allowing District citizens a furtive access to Federal courts, point to the conclusion that they should enter freely and fully as other citizens and even aliens do.

"Precedent of course is not lightly to be disregarded, even in the greater fluidity of decision which the process of constitutional adjudication concededly affords.

"And Marshall's sponsorship in such matters always is weighty. But when long experience has disclosed the fallacy of a ruling, time has shown its injustice, and nothing remains but a technicality the only effect of which is to perpetuate inequity, hardship and wrong, those are the circumstances which this Court repeatedly has said call for reexamination of prior decisions. If those conditions are fulfilled in any case, they are in this one.

"The Hepburn decision was made beforetime, through later decisions here, had destroyed its basic premise and at the beginning of Marshall's judicial career, when he had hardly started his great work of expounding the Constitution. The very brevity of the opinion and its groundings, especially in their ambiguity, show that the master hand, which later made his work immortal, faltered.

"The sole reason Marshall 'assigned for the decision was a conviction that the members of the American Confederacy only are the States contemplated in the Constitution,' a conviction resulting as he said from an examination of the use of that word in the charter to determine 'whether Columbia is a State in the sense of that instrument.' 2 Cranch 445, at page 452, 2 L. Ed. 332. 'When the same term which has been used plainly in this limited sense (as designating a member of the Union) in the articles respecting the legislative and executive departments, is also employed in that which respects the judicial department, it must be understood as retaining the sense originally given to it' (ibid.)".

In *National Mutual Insurance Co.* v. *Tidewater Transfer Co., supra,* the Supreme Court was confronted squarely with the issue of whether Congress could constitutionally extend the jurisdiction of Federal courts outside the District of Columbia to actions by a citizen of the District of Columbia against a citizen of one of the States. Congress, in 1940, had enacted a statute conferring jurisdiction upon Federal courts in actions between citizens of different States, or citizens of the District of Columbia, the Territory of Hawaii, or Alaska, and any State or Territory.[5] The plaintiff, a resident of the District of Columbia, had commenced an action in the U.S. District Court for Maryland for a money judgment arising out of an insurance contract.

The district court judge, whose judgment was later affirmed on appeal by a divided court of appeals, concluded that, while the action met the jurisdictional requirements of the congressional act, it did not comply with the diversity requirements of the Constitution, and therefore dismissed the action. The Supreme Court, by a divided Court, reversed. Mr. Justice Rutledge and Mr. Justice Murphy, constituting two-fifths of the majority, voted to overrule *Hepburn* v. *Ellzey, supra,* and concluded that the District of Columbia was a State within the meaning of the diversity clause, article III, section 2, of the Constitution. The remaining members of the majority, however, Mr. Justice Jackson, Mr. Justice Black, and Mr. Justice Burton, rejected this argument, and refused to overrule the Hepburn case, but concluded that Congress constitutionally had the power to legislate for the District of Columbia with respect to the matter under review, and thus gave life to the prophetic words of Chief Justice Marshall in *Hepburn* v. *Ellzey,* in which he had said that the subject was one for legislative, and not for judicial, consideration.

II. Article I, section 8, clause 17

A. Plenary power to legislate: The District of Columbia is the permanent seat of the Government of the United States.[6] By virtue of article I, section 8, clause 17, of the Constitution, Congress possesses "the combined powers of a general and a State government" over the District (*Stoutenburgh* v. *Hennick,* 129 U.S. 141, 147, 9 S. Ct. 256 (1889)). The power conferred by this article is plenary (*O'Donoghue* v. *United States,* 289 U.S. 516, 53 S. Ct. 740 (1933)). This plenary power has been recognized in numerous decisions of both the courts of appeal and of the Supreme Court. In *Grether* v. *Wright* (75 F. 742, 756 (C.A. 6, 1896)), Circuit Judge Taft, afterwards Chief Justice of the Supreme Court, after reciting the foregoing clause and outlining the organization of the District under it, said:

"It was meet that so powerful a sovereignty should have a local habitation the character of which it might absolutely control, and the government of which it should not share with the States in whose territory it exercised but a limited sovereignty, supreme, it is true, in cases where it could be exercised at all, but much restricted in the field of its operation. The object of the grant of exclusive legislation over the District was, therefore, national in the highest sense, and the city organized under the grant became the city, not of a State, not of a district, but of a nation. In the same article which granted the powers of exclusive legislation over its seat of government are conferred all the other great powers which make the Nation, including the power to borrow money on the credit of the United States. He would be a strict constructionist, indeed, who should deny to Congress the exercise of this latter power in furtherance of that of organizing and maintaining a proper local government and maintaining a proper local government at the seat of government. Each is for a national purpose, and the one may be used in aid of the other."

In *O'Donoghue* v. *United States, supra,* the Supreme Court, faced with the issue of whether Congress constitutionally had the power to reduce the rate of compensation to judges sitting on the Supreme Court of Appeals for the District of Columbia, held that courts in the District of Columbia were constitutional courts within the meaning of article III of the Constitution, and therefore subject to its provisions. The majority of the court noted, however, that Congress could, under its power to legislate for the District of Columbia, extend the jurisdiction of the Federal courts sitting in the District of Columbia to matters over which purely constitutional courts could not take cognizance. The court said:

"In dealing with the District, Congress possesses the powers which belong to it in respect of territory within a State, and also the powers of a State (*Keller* v. *Potomac Elec. Power Co.* (261 U.S. 428, 442, 443, 43 S. Ct. 445, 448, 67 L. ed. 731)). 'In other words,' this court there said, 'it possesses a dual authority over the District, and may clothe the courts of the District, not only with the jurisdiction and powers of Federal courts in the several States, but which such authority as a State may confer on her courts (*Kendall* v. *United States* (12 Pet. 524, 619, 9 L. ed. 1181)). Instances in which congressional enactments have been sustained which conferred powers and placed duties on the courts of the District of an exceptional and advisory character are found in *Butterworth* v. [*United States ex rel.*] *Hoe* (112 U.S. 50, 60, 5 S. Ct. 25, 28 L. ed. 656); *United States* v. *Duell* (172 U.S. 576, 19 S. Ct. 286, 43 L. ed. 559); and *Baldwin Co.* v. *Howard Co.* (256 U.S. 35, 41 S. Ct. 405, 65 L. Ed. 816). Subject to the guarantees of personal liberty in the amendments and in the original Constitution, Congress has as much power to vest courts of the District with a variety of jurisdiction and powers as a State legislature has in conferring jurisdiction on its courts" (at 545).

B. Limitations of plenary power: By virtue of the plenary power vested in Congress by article I, section 8, clause 17 of the Constitution, Congress may legislate over the District of Columbia in all cases whatsoever, provided that in exercising its power Congress does not authorize a denial to the inhabitants of the District of Columbia of any constitutional guarantee "not plainly inapplicable" (*O'Donoghue* v. *United States, supra* (at 539)).

Nothing in the Constitution, its history, or the original amendments can justify the assertion that citizens of the District may be deprived of the benefit of any of the constitutional grants of life, liberty, property, or the privilege of a jury trial in criminal cases (*Callan* v. *Wilson,* 127 U.S. 540, 550, 8 S. Ct. 1301 (1888)). To the contrary, everything in the Constitution, its history, and its amendments justifies the assertion that citizens of the District are to be accorded every right and every privilege accorded by the Consituation to citizens of the several States. Thus, in *Downes* v. *Bidwell* (182 U.S. 244, 260–261, 21 S. Ct. 770 (1901)), Mr. Justice Brown said:

"This District had been a part of the States of Maryland and Virginia. It had been subject to the Constitution, and was a part of the United States. The Constitution had attached to it irrevocably. There are steps which can never be taken backward. The tie that bound the States of Maryland and Virginia to the Constitution could not be dissolved, without at least the consent of the Federal and State governments to a formal separa-

[5] This was later reenacted by Congress as part of the Judicial Code, 28 U.S.C., sec. 1332.

[6] 1 Stat. 130, sec. 1 (1790).

tion. The mere cession of the District of Columbia to the Federal Government relinquished the authority of the States, but it did not take it out of the United States or from under the aegis of the Constitution. Neither party had ever consented to that construction of the cession. If, before the District was set off, Congress had passed an unconstitutional act affecting the inhabitants, it would have been void. If done after the District was created, it would have been equally void; in other words, Congress could not do indirectly, by carving out the District, what it could not do directly. The District still remained a part of the United States, protected by the Constitution. Indeed, it would have been a fanciful construction to hold that territory which had been once a part of the United States ceased to be such by being ceded directly to the Federal Government."

To the same effect, see *O'Donoghue* v. *United States* (at 540) wherein Mr. Justice Sutherland stated:

"It is important to bear constantly in mind that the District was made up of portions of two of the original States of the Union, and was not taken out of the Union by the cession. Prior thereto its inhabitants were entitled to all the rights, guaranties, and immunities of the Constitution, among which was the right to have their cases arising under the Constitution heard and determined by Federal courts created under, and vested with the judicial power conferred by, article III. We think it is not reasonable to assume that the cession stripped them of these rights, and that it was intended that at the very seat of the National Government the people should be less fortified by the guaranty of an independent judiciary than in other parts of the Union."

The nature of plenary power of Congress to legislate for the District of Columbia was fully recognized by the Supreme Court in *National Mutual Insurance Co.* v. *Tidewater Transfer Co., supra.* In that case, as pointed out hereinabove, Congress extended the jurisdiction of Federal courts in the several States to actions between citizens of the District of Columbia and citizens of the several States. While two of the Justices sustained the validity of the legislation, on the ground that the District of Columbia was a State (thus bringing the legislation within the purview of article III), three Justices, Jackson, Black and Burton, concluded that the legislation was constitutional, and authorized by virtue of the plenary power of Congress to legislate for the District of Columbia. Mr. Justice Jackson, writing an opinion in which Justices Black and Burton joined, stated:

"It is elementary that the exclusive responsibility of Congress for the welfare of the District includes both power and duty to provide its inhabitants and citizens with courts adequate to adjudge not only controversies among themselves but also their claims against, as well as suits brought by, citizens of the various States. It long has been held that Congress may clothe District of Columbia courts not only with the jurisdiction and powers of Federal authority as a State may confer on her courts (*Kendall* v. *United States ex rel. Stokes* (12 Pet. 524, 619, 9 L. ed. 1181); *Capital Traction Co.* v. *Hof* (174 U.S. 1, 19 S Ct. 580, 43 L. ed. 873); *O'Donoghue* v. *United States* (289 U.S. 516, 63 S. Ct. 740, 77 L. ed. 1356). The defendant here does not challenge the power of Congress to assure justice to the citizens of the District by means of Federal instrumentalities, or to empower a Federal court within the District to run its process to summon defendants here from any part of the country. And no reason has been advanced why a special statutory court for cases of District citizens could not be authorized to proceed elsewhere in the United States to sit, where necessary or proper, to discharge the duties of Congress toward District citizens.

* * * * *

"Unless we are to deny to Congress the same choice of means through which to govern the District of Columbia that we have held it to have in exercising other legislative powers enumerated in the same article, we cannot hold that Congress lacked the power it sought to exercise in the act before us.

* * * * *

"We conclude that where Congress in the exercise of its powers under article I finds it necessary to provide those on whom its power is exerted with access to some kind of court or tribunal for determination of controversies that are within the traditional concept of the justiciable, it may open the regular Federal courts to them regardless of lack of diversity of citizenship. The basis of the holdings we have discussed is that when Congress deems that for such purposes it owes a forum to claimants and trustees, it may execute its power in this manner. The Congress, with equal justification apparently considers that it also owes such a forum to the residents of the District of Columbia in execution of its power and duty under the same article. We do not see how the one could be sustained and the other denied.

"We therefore hold that Congress may exert its power to govern the District of Columbia by imposing the judicial function of adjudicating justiciable controversies on the regular Federal courts which under the Constitution it has the power to ordain and establish and which it may invest with jurisdiction and from which it may withhold jurisdiction 'in the exact degrees and character which to Congress may seem proper for the public good.' (*Lockerty* v. *Phillips* (319 U.S. 182, 187, 63 S. Ct. 1019, 1022, 87 L. ed. 1339))."

Framed in its broad perspective, the significance of the Supreme Court's decision, in *National Mutual Insurance Co.* v. *Tidewater Transfer Co., supra,* lies in the fact that the Supreme Court, in that case, gave complete recognition to the full breadth of the plenary power of Congress to legislate for the District of Columbia in all cases whatsoever. In sustaining the constitutionality of the act of Congress, which vested jurisdiction over suits between citizens of the District of Columbia and citizens of States in Federal courts sitting outside the District of Columbia, the court gave explicit cognizance to the concept that citizens of the District of Columbia were entitled to all those rights, privileges, and immunities which the Constitution secured for the citizens of the several States and to the further concept that mere cession of territory by the States of Virginia and Maryland could not, and did not, strip citizens of the United States (who had been citizens of Maryland and Virginia) of these same rights. To do this, the Supreme Court found, that Congress, under article I, section 8, clause 17, not only had the right to carry the effects of its legislation for the District of Columbia outside the boundaries of the District of Columbia, but also that Congress under this article could add to the jurisdiction of Federal courts outside the District of Columbia and in effect extend jurisdiction of those courts which was otherwise limited by article III of the Constitution.

CONCLUSION

Under its plenary power to legislate for the District of Columbia, Congress possesses powers which belong to it in respect of territory within a State, and also the powers of a State. In the exercise of its absolute sovereignty, Congress treats the District of Columbia just as the legislatures of the several States treat the territory which is subject to their jurisdiction. This was intended and recognized by the framers of the Constitution. See, for example, Federalist No. 43, wherein Mr. Madison stated:

"The indispensable necessity of complete authority at the seat of government carries its own evidence with it. It is a power exercised by every legislature of the Union, I might say of the world, by virtue of its general supremacy."

Under its plenary power to legislate for the District of Columbia, Congress has the power to enact all legislation necessary to secure for citizens of the District of Columbia those rights which they would otherwise enjoy, had the territory of the District of Columbia remained a part of a State. See *National Mutual Insurance Co.* v. *Tidewater Transfer Co., supra.* This includes the power to legislate, to grant citizens of the District of Columbia rights which they had enjoyed prior to the cession of the territory which became the District of Columbia, i.e., the right to vote in national elections and to have representation in Congress. The bare bones of an ancient precedent, which has been subject to much criticism and very little critical analysis, obscures this conclusion, but by the application of both logic and reasoned law, as set forth in decisions subsequent to *Hepburn* (said decisions being cited herein), the conclusion is inescapable that Congress, by legislation under its plenary power, may grant suffrage to citizens of the District of Columbia and that constitutional amendment is not necessary.

I am sure, based upon the authority I have cited, no court would disturb legislation passed to grant the rights I propose. In fact, I suggest, Mr. Speaker, the courts have suggested we act.

Mr. UDALL. Mr. Speaker, in its final form the Civil Rights Act of 1960 is a disappointment. It is based on a narrow conception of the problem, seriously restricts the opportunities for creative executive leadership, and underrates the force and majesty of the law.

This legislation rests on a questionable magic-wand theory that the exercise of voting rights will prove to be the "open sesame" of all other civil rights. The truth of the matter, however, is that our human relations problems touch most facets of our national life and if one accepts the premise that our country cannot afford a double standard in its human relations it follows that our laws should be addressed to the total issue and be designed to encourage action toward moderate solutions of all the main problems.

The issues and solutions in our human relations crisis are closely interrelated and it is plain that action—and success—in any area affects and influences the struggle to enlarge human rights in other areas. For instance, who would deny that the example set in professional and amateur sports during the last decade has not had immeasurable influence on the course of events in housing, education and the use of public facilities?

If in truth our laws not only compel obedience to certain standards but change the hearts and minds of men as well, we have surely erred in narrowing the scope of this legislation. It is plain, I think, that the one unanswerable argument available to the southern moderate is his contention that respect for the law must override all other considerations.

Consequently, although this act will have some moral force, its impact will

be limited by the final, narrow dimensions of the bill. It is also easy to predict from our experience with the 1957 act that the voting rights provisions of this legislation will in some States serve only as an invitation to lawsuits and further State legislation designed to make voting more difficult.

The manifold problems we face in the area of human relations will yield only as moderate opinion is strengthened, and as public opinion is reenforced by the enactment of wisely conceived laws. We should, in my opinion, tackle the whole problem rather than to put our faith in the pious assumption that all will be well once the millenium of universal sufferage is reached.

Mr. HEMPHILL. Mr. Speaker, the fact that the Senate has made some minor amendments to the so-called civil rights bill of 1960 does not remove from this legislation the dangers it threatens to American freedoms.

It provides a threat to the ballot box of America. It is an unconstitutional theft of the right of the State to control its own elections. Such is un-American and I predict it will work irreparable harm to our present system of free elections. Once we lose free elections we lose the American way. Look at what is happening in Korea and look at Cuba. You say it cannot happen here. We saw bayonets at Little Rock and many years there were bayonets at elections in my own State. We do not want those days to come again.

We do not need any civil rights legislation this year. We need racial peace, open and honest lines of communication, and a concerted effort to stop the trend toward hatred, mistrust, and turmoil that this and other legislation of a political nature have spurred on. Some will be led to believe that this legislation encourages all sorts of outbreaks; others will shudder with the realization that an ambitious district attorney or Attorney General can use this legislation as a vehicle of havoc and trouble, a grab for power.

People who have not been discriminated against have been told they were discriminated against. People have been called second-class citizens who are not second-class citizens. None of this has helped racial relations, rather it has widened the breach. The continued emphasis on the subject of race relations, aborted and colored by the political objectives, has inspired a constant turmoil in race relations. The papers are full of it every day.

I am opposed to any and all civil rights legislation this year or any other time. We simply do not need it, watered up, watered down, or otherwise.

Mr. POFF. Mr. Speaker, earlier during the course of debate there was a colloquy among the gentleman from Michigan [Mr. O'HARA], the gentleman from New York [Mr. CELLER], the gentleman from New York [Mr. LINDSAY], and the gentleman from Ohio [Mr. MCCULLOCH] concerning the effect of the Dirksen amendment to the provisional voting section. That amendment appears on page 20 of the Senate bill and is numbered "23."

Obviously, the colloquy was planned in advance as an effort to establish so-called legislative intent to guide the courts in the interpretation of the provisional voting section. I take vigorous exception to the intent as expressed in that colloquy, and I respectfully submit that the Senate debate, which is the best evidence of the intent of the Senate amendment, clearly demonstrates a contrary intent. In response to a question propounded by the gentleman from New York [Mr. LINDSAY], the gentleman from Michigan [Mr. O'HARA] in substance replied that, in order to vote provisionally, it was not necessary that the applicant had previously attempted to register and had been denied registration. He based his answer on the theory that, inasmuch as the court had already found that a practice or pattern of racial discrimination existed, it would have been futile for him to make application for registration before the State registrar, and since a court of equity does not deny relief because the petitioner failed to perform a futile act, the court could grant him a provisional vote order even though he had never made timely application before the registrar.

Not only is such reasoning inconsonant with the legislative intent reflected in the debate in the other body, it is manifestly in conflict with the substantive language and procedural provisions of title VI. Beginning on line 9 page 16 of the bill, I read in pertinent part as follows:

> If the court finds such pattern or practice, any person of such race * * * shall * * * be entitled * * * to an order declaring him qualified to vote, upon proof that at any election or elections (1) he is qualified under State law to vote, and (2) he has since such finding by the court been (a) deprived of * * * the opportunity to register to vote * * * or otherwise to qualify to vote.

I emphasize the words "since such finding by the court." This plainly means that all applicants for a voting order from the court must have previously made an effort to register or otherwise qualify to vote, which application must have been made subsequent to the court's finding of a practice or pattern of discrimination in the original suit. This is the condition precedent to the right to an unconditional voting order; surely the requirement would be no less for the right to a provisional voting order.

In summary, according both to the unequivocal language of the bill and the expressed purposes of the author of the provisional voting section and the author of the Senate amendment, what Congress intends is:

First. That an application for a voting order cannot be granted unless the applicant has previously been denied the right to register.

Second. That a voting order cannot be granted unless such registration application was made and denied subsequent to the court's finding that a practice or pattern of racial discrimination existed.

Third. That provisional voting section does not amend valid State registration laws.

Fourth. That provisional voting order cannot be granted unless (a) the court has found the existence of a practice or pattern, (b) the applicant has subsequent thereto made application for and been refused registration, and (c) the applicant is "qualified to vote under law."

If, as has been suggested, this has the practical effect of eliminating provisional voting, then it must necessarily be construed that Congress so intended.

Mr. DADDARIO. Mr. Speaker, passage of this bill today marks an important step on the path of assuring equality for all our citizens in step with the Constitution. The subject has taken many hours and has preoccupied some of the most distinguished Members of this body because it represents a social change of great magnitude to those who believe that we should hold the clock still. I do not believe we can afford to do so, and I welcome an advance.

We all realize, however, that the true contest for civil rights for all our citizens, regardless of race, color, or creed, is not being conducted in a parliamentary setting. It is, rather, within ourselves. It is within the hearts and minds of men that the greatest obstacles lie, and this is true regardless of geography. Our aim has been to secure the equal protection of the laws for all our citizens, but the greater achievement will be to banish prejudice and bias wherever it exists.

This Nation has made progress through patience and the broadening of our laws to guarantee equal rights where force and custom was being applied against such progress. In this sense, the Civil Rights Act of 1960 is a heartening thing, again advising the world that watches us so closely that we mean what we say, and that we are determined to see that in fact, as well as in theory, we enforce constitutional rights for all our citizens.

This lesson will mean much in the world. I hope it is especially noted in the Union of South Africa, where force has been too much in evidence in recent months and years. Force is not a policy—it is bankruptcy of policy. This Nation was founded on the principle that all men are created equal, wherever they may be born, and it can only be disturbing and painful to see others deprived of their full rights.

Mr. DOWDY. Mr. Speaker, I am opposed to this bill, even with the Senate amendments. I can add nothing to what I said when this matter was before this House earlier this year. I ask only that my remarks then made be considered here. There is no occasion, no need, no demand for legislation of this character. It is destructive of constitutional principles and personal liberty.

Mr. GILBERT. Mr. Speaker, the civil rights battle in Congress has ended for the present. To those of us who will not rest until every vestige of discrimination has been wiped out, the bill as passed is a grave disappointment, and we feel many regrets over the lost provisions of the bill. At best, we have passed only moderate legislation, it is merely a short step forward, and a great dis-

tance still lies ahead toward our goal of complete equality for all.

Some satisfaction can be felt in our victory for equality in one of the fundamentals of our democracy—the voting booth. The voting referee system withstood every major assault, and if properly enforced, it promises to give the Negro free access to the polls for the first time since the days of the Reconstruction.

The stiff penalties provided in the bill for interference by threats or force with any Federal court order, regarding hate bombings, the requirement for preservation of local election records, should prove effective weapons for ending some of the present evils perpetrated by hate mongers and those who would deny Negroes the rights guarenteed them under our Constitution.

Powerful opposition prevented enactment of many provisions which would have been extremely helpful to those now subjected to discriminatory practices; one of these provisions included FEPC principles relating to Government contracts.

Our joy in the victory we have achieved for civil rights today is overshadowed by our losses, but we have reason to believe that the day is not too far distant when all our citizens will enjoy true equality. I, for one, pledge my untiring efforts for the benefit of all those who suffer under the scourge of discrimination, and I shall continue to work with confidence, in the knowledge that human decency and right will eventually prevail, for it was upon these principles that our Nation was founded.

Mr. SPRINGER. Mr. Speaker, to many of us the present bill does not encompass the protection of civil rights that we had visualized when debate opened on this bill.

Giving credit to the bill in the most favorable light, this is only moderate legislation. We still have a long way to go in guaranteeing civil rights to all Americans, regardless of race, color, or creed. I have given earnest consideration to the bill. This seems to be the best bill which can be obtained at this time and under these circumstances. This is an advance over the Civil Rights Act of 1957. This is the second step in the onward march of civil rights for all of our people. It has taken us almost a century to come this far. However, we have in the past 8 years made much greater progress than in the previous 75 years.

If we can take the experience of the Attorney General with reference to the 1957 civil rights bill, it does seem that we will have better means of enforcement of constitutionally guaranteed rights. In many ways this legislation will be a challenge to the Attorney General to enforce these rights in accordance with the legislation.

I have voted for this bill as a means of helping to achieve a better climate in which civil rights may be enforced and guaranteed. It is true that the Senate made substantial changes when it came to that body. In title I, the Senate deleted the word "corruptly" and struck out the portion under which the criminal penalty imposed would not run concurrently. From the same title was stricken language which would have made it a crime to interfere or obstruct a court order by a threatening letter or communication.

The other body also struck out a section which would have made it a crime to travel in interstate commerce to avoid prosecution for having given wrong information regarding a bombing. However, the Senate did include a provision making it a Federal crime to transport in interstate commerce any explosive for bombing purposes. The Senate version also reduced the preservation of voting records from 2 years to 22 months.

In other sections, the Senate eliminated the House section whereby the Commissioner of Education could negotiate for leasing of school buildings which were constructed with Federal aid—whenever local authorities could not provide educational facilities for children of members of the Armed Forces.

In title VI, the Senate put in a section requiring that hearings before any voting referee shall be held under the direction of the U.S. district court.

It appears to me that this bill is neither one to the right or the left, but is essentially a middle-of-the-road bill. However, if properly enforced, I believe that it could result in substantial gains in the next few years for those who have been denied their civil voting rights for almost a century.

I think probably the greatest one gain to come from this bill is the moral support which will be given to those who seek to have their voting rights established, as well as to we who have been interested in helping them obtain those rights. I personally shall continue to work to obtain decent treatment for these people who have suffered so long. If these rights must come inch by inch, at least we will realize that as Americans they are worth working for.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

Mr. BOLLING. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 288, nays 95, answered "present" 2, not voting 45, as follows:

So the resolution was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Aspinall for, with Mr. Rogers of Texas against.

Mrs. St. George for, with Mr. Johanson against.

Mr. Keogh for, with Mr. Davis of Tennessee against.

Mr. Rooney for, with Mr. Burleson against.

Mr. Brock for, with Mr. Young against.

Mr. Moulder for, with Mr. Fisher against.

Mr. King of Utah for, with Mr. Grant against.

Mr. Auchincloss for, with Mr. Cooley against.

Mr. McCormack for, with Mr. Meader against.

Mr. Sisk for, with Mr. Barden against.

Mr. Hays for, with Mr. Mitchell against.

Until further notice:

Mr. Dent with Mr. Taylor.

Mr. Montoya with Mr. Norblad.

Mr. Morris of New Mexico with Mr. McIntire.

Mr. Oliver with Mr. Horan.

Mr. Anderson of Montana with Mr. Jackson.

Mr. Mack with Mr. Derounian.

Mr. McGovern with Mr. Fenton.

Mr. Diggs with Mr. Andersen of Minnesota.

Mr. Holland with Mr. Lafore.

Mr. Powell with Mr. Lipscomb.

Mr. Hargis with Mr. Gavin.

Mr. Kasem with Mr. Withrow.

Mr. ASPINALL. Mr. Speaker, I have a live pair with the gentleman from Texas [Mr. ROGERS]. If present he would have voted "no." Therefore I wish to change my vote from "yea" to "present."

Mr. JOHANSEN. Mr. Speaker, I have a live pair with the gentlewoman from New York [Mrs. ST. GEORGE]. If present she would have voted "yea." I wish to change my vote from "no" to "present."

The result of the vote was announced as above recorded.

RECOMPUTING OF RETIRED PAY

Mr. THORNBERRY. Mr. Speaker, by direction of the Committee on Rules, I present the following privileged resolution (H. Res. 506) for printing in the RECORD:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11318) to provide that those persons entitled to retired pay or retainer pay under the Career Compensation Act of 1949 who were prohibited from computing their retired pay or retainer pay under the rates provided by the Act of May 20, 1958, shall be entitled to have their retired pay or retainer pay recomputed on the rates of basic pay provided by the Act of May 20, 1958. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

RIVERTON FEDERAL RECLAMATION PROJECT

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the resolutions (S.J. Res. 150) permitting the Secretary of the Interior to continue to deliver water lands in the Third Division, Riverton Federal reclamation project, Wyoming.

The Clerk read the resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That pending completion of a repayment contract the Secretary of the Interior is authorized to continue to deliver water to the lands in the Third Division, Riverton Federal reclamation project, Wyoming, during the calendar years 1960 and 1961, as under the provisions of section 9, subsection (d)(1), of the Reclamation Project Act of 1939 (53 Stat. 1187, 1195, 43 U.S.C. 485h(d)) but without regard to the time limitation therein specified.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. ASPINALL. Mr. Speaker, the enactment of this resolution would take care of an emergency situation that has developed on the Riverton Federal reclamation project in Wyoming. The legislation is necessary to permit the Secretary of the Interior to deliver water to lands of the third division of the project during the 1960 irrigation season. Information from the farmers on the project and from the Department indicates the water deliveries are needed immediately. The Secretary cannot deliver water to a portion of the project lands because the 10-year development period provided under reclamation law has expired and the repayment contract between the irrigation district and the Department has not been executed.

The third division of the Riverton project is a relatively small public lands project comprising approximately 8,000 acres. The lands were opened to entry in 1949 and 1950. At that time a 10-year development period was established to provide for organization of a district and the negotiation and execution of a repayment contract. Petition for organization of the district was finally filed in May of 1957 but litigation followed and there was a year and a half delay before the formation of the district was affirmed on October 17, 1958. Since that time, negotiations have been carried on between the Bureau of Reclamation and the district but it has not been possible to conclude all the required steps leading to the execution of the repayment contract. We have been advised by the Department of the Interior that all necessary contract arrangements are expected to be completed in the near future. However, since several steps remain to be taken and approval by the Congress of final repayment arrangements will be necessary, the resolution provides for water deliveries both this year and 1961.

Although my committee is displeased that the situation requiring enactment of this resolution has developed because we believe the contract should have been completed within the allowed time, the committee agrees that water deliveries must be continued to all lands in the project, not only from the standpoint of the welfare of the farmers on the project but also in the interest of protecting the Federal Government's investment.

The SPEAKER. Is there objection to the request of the gentleman from Colorado [Mr. ASPINALL]?

There was no objection.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MUTUAL SECURITY ACT OF 1960

Mr. MORGAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 11510) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 11510, with Mr. MILLS in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday the Clerk had read through section 1 ending on line 4. Are there amendments to this section?

Mr. CASEY. Mr. Chairman, I move to strike out the last word and ask unanimous consent to proceed out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. CASEY. Mr. Chairman, today in my district by the little city of Deer Park, and the city of Pasadena, is a beautiful green plain with a beautiful monument marking a hallowed piece of ground in the State of Texas. Today there are bands playing and children laughing and playing on that ground, speeches are being made and the names of Stephen Austin, Travis, Bowie, Sam Houston, and other great Texas patriots, being mentioned with reverence.

One hundred and twenty-four years ago today the scene was quite different. It was a swamp on the banks of a lazy, sluggish bayou. In that swamp were encamped 1,600 Mexican soldiers under the

leadership of their President, Santa Ana. They had, so they thought, trapped on a little rise of ground 910 Texans under the leadership of Sam Houston. They were waiting for the Texans to surrender, but the Texans had burned in their hearts and their minds the memories of the slaughter of Goliad and the slaughter of those brave defenders of the Alamo. The Texans did not wait for Santa Ana and his well-plumed and well-armed 1,600 to make their attack; the 910 charged the Mexican Army. This was one of the most decisive battles in history. In a matter of less than 20 minutes Sam Houston's men had conquered completely the army of Santa Ana. Six hundred and thirty Mexicans lay dead, 230 wounded, and over 700 captured. The Texans lost 9 men killed, and 30 wounded.

There were many Latin Americans in the fray, but we now enjoy a tremendous good neighbor relationship with our Mexican neighbors. Their culture has enriched ours. But on this day we revere, San Jacinto Day. Those heroic deeds still live in our memory when the Texans fought to establish their rights. That is why Texans have always held the rights of the individual to freedom in such high regard, and that is why Texans wish the enslaved countries of the world to have their San Jacinto Day, and we hope it may be in the very near future.

Mr. PASSMAN. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, usually I do not speak on the authorization bill for mutual security, as it is my privilege to chairman the subcommittee handling funds for the total mutual security program. However, I asked for this time in order to direct the attention of the Committee to the fact that whereas the Committee on Foreign Affairs—and it is a great committee—the Foreign Affairs Committee spent some 16 or 17 days conducting its hearings. The Foreign Operations Appropriations Subcommittee may require from 7 to 9 weeks for its studies of the requests for funds.

We run into many things that are indeed shocking. There is one matter of that type which I should like to direct to the attention of the Committee of the Whole House at this time. The ICA formulated a special educational course, and went to Johns Hopkins University which told them that no such course was available there. But the ICA prevailed upon Johns Hopkins to formulate such a course, and it was put together.

I believe the Committee would like to investigate this unusual contract with Johns Hopkins. The class consists of 20 students. All of them had previously been indoctrinated thoroughly in ICA, before they were turned over to Johns Hopkins, where they take a 5-month course. The amount that we pay Johns Hopkins is $80,000, which amounts to $4,000 per student, for a 5-month training course.

Mr. Chairman, this procedure is spreading also to other universities, and it should be investigated. Our subcommittee will document this situation with many pages of factual information. Many of the arrangements are just about as unreasonable and wasteful as the one to which I have just referred.

This so-called mutual-security program has grown to a point that there are more than 43,000 employees, many of them now in the top echelon. Every year new jobs are being created, many of them never before heard of in government. But the witnesses frequently cannot even tell us what these people are going to do. It is one of the most miserable conditions with which our subcommittee has had to contend.

Some time ago I addressed myself to the membership and stated that foreign aid is now costing the American taxpayers $10 billion annually. I want to amend that figure and say that if the interest on what we are borrowing to pay for foreign aid is included, it will result in a total annual cost of nearly $11 billion.

When we bring the appropriation bill to the floor, we will thoroughly document evidence of waste and mishandling and poor planning, and so forth; and you will know, as I do, that this is the most wastefully expensive and most inefficiently controlled program ever conceived by the mind of man.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Virginia.

Mr. GARY. The gentleman mentioned that for the 20 in training now at Johns Hopkins the Government is paying $80,000. They are asking for authority to train 43 at Johns Hopkins next year, which would cost $4,000 apiece, $840 a month for tuition, resulting in a figure of $172,000 rather than the $80,000 the gentleman mentioned.

Mr. PASSMAN. That is correct.

Mr. GARY. There is a similar contract with another university, Boston College, I believe.

Mr. PASSMAN. That is correct.

Mr. GARY. For a similar number.

Mr. PASSMAN. That is correct.

In addition, they have broken up the so-called technical aid program so that it is now in several different categories. They started a $20 million program of special assistance which they admitted is purely and simply technical aid, but because of the commodity portion amounting to more than 10 percent of the total, they decided to take it out of the technical assistance account.

There are seven of those technical aid programs, which branch off in different directions; but I can assure you that the subcommittee will certainly endeavor to bring them together. If you will read carefully the many hundreds of pages of testimony that our subcommittee will present to you on this subject you will more fully understand the puzzling situation with which we are confronted.

This implies no discredit to the Committee on Foreign Affairs, which held hearings on the authorization during 17 days. But, on the other hand, the Foreign Operations Appropriations Subcommittee will hold from 7 to 9 weeks of hearings. We believe you will support the reduced amount which the committee will recommend for this undeniably wasteful worldwide program.

Mr. DORN of South Carolina. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from South Carolina.

Mr. DORN of South Carolina. Is it my understanding that this course at Johns Hopkins and at the Boston University is designed to train people in the professional art of giving away the taxpayers' money?

Mr. PASSMAN. I think that that is very well stated. These people are already a part of ICA, and they bring them in and give them these additional courses, 166 subjects, in 5 months.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I cannot get too excited about the bill we have before us, and I am sure there are many others in the House who did not expect the Committee on Foreign Affairs to do anything but what they have done, and that is, give the administration practically every dime requested for the foreign handout program. I will be on hand to help the Appropriations Committee cut it down.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Pennsylvania.

Mr. MORGAN. I do not think that is true.

Mr. GROSS. It does not miss it very far.

Mr. MORGAN. Yesterday the gentleman said that $100,000 is a lot of money. One hundred and thirty-six million dollars is a lot of money, too, and that is what was kept out of this program.

Mr. GROSS. Relatively speaking, you cut out nickels and dimes. I still insist you gave them just about everything they asked for.

Yesterday I listened to practically all the debate, and I was amused by the number of those who apologized for the waste and inefficiency in this program. In fact, I heard the greatest array of apologists for a bill that I heard in my 12 years around here. With a few exceptions—and I am talking now about the members of the Committee on Foreign Affairs—the gentleman from Georgia [Mr. PILCHER], the gentlewoman from Illinois [Mrs. CHURCH], and the gentleman from Indiana [Mr. ADAIR], made no apology for their opposition to the bill. Practically everyone else on the committee who spoke were apologetic. The gentleman from Minnesota [Mr. JUDD], in his printed supplemental views on this bill, time after time told of his disappointments because of the waste and inefficiency.

On page 84 of the report there is another disappointment, yet the gentleman from Minnesota supports every dime in this bill.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I will be glad to yield to the gentleman if he can explain all the criticism he made about this program and still defend it.

Mr. JUDD. I practiced surgery for 19 years.

Mr. GROSS. Just a moment.

Mr. JUDD. Many, many times I used procedures that I thought would save the patient's life or relieve his disease or suffering. Sometimes I was disappointed. Those particular measures failed; but I did not abandon the patient. I kept on trying. I continued to search for a better technique or procedure that would save his life.

Mr. GROSS. Just a moment.

Mr. JUDD. And I am going to continue to make that sort of constructive criticism and effort with respect to this program.

Mr. GROSS. And if the patient died, the undertaker took care of him. Who is going to take care of this corpse known as the taxpayer of the United States if you continue your errant ways in respect to this kind of spending?

Mr. JUDD. If you were to knock this program out, you would not save anything for the taxpayers. You would increase the overall tax burden on them, to pay for the far greater cost of enlarged Armed Forces of our own.

Mr. GROSS. That is your opinion, and it is not supported by a single fact.

Mr. JUDD. I think I am a better friend of the taxpayers than my colleague from Iowa.

Mr. GROSS. What is that? I did not hear the gentleman.

Mr. JUDD. I said I think that in supporting this program I am a better friend of the taxpayers and saving them more money now than is my distinguished colleague from Iowa.

Mr. GROSS. That, again, is the gentleman's opinion. Of course, the gentleman from Minnesota and the rest of those who apologize for this program say, "Oh, yes, sometime in the dim, distant future—we do not know when, but sometime in the dim, distant future—we will correct all of the waste and inefficiency that has been going on from the time this baby was born."

Mr. JUDD. Mr. Chairman, will the gentleman yield further?

Mr. GROSS. Yes.

Mr. JUDD. Is the gentleman happy about the results of all our various farm programs? Is he not a little disappointed with respect to some of the efforts we have made and are making to solve our farm problems?

Mr. GROSS. At least, whatever the deficiencies of those programs, we have been spending the money in this country.

Mr. JUDD. Of course, 80 percent of the money in this program is spent in this country, in the first instance.

Mr. GROSS. I repeat that Americans are getting some benefit from the farm program, and I do not accept the statement that 80 percent of the foreign handout program is spent in this country.

Mr. JUDD. I am sure that the gentleman, representing a farming district in Iowa, will not give up on efforts to get a better farm program just because we have been disappointed in the existing one.

Mr. GROSS. And I do not think Public Law 480 is any solution to the farm problem, either; perhaps the gentleman thinks it is, but I do not.

Mr. JUDD. And to the extent that it is not, we will have to find other and better solutions.

Mr. GROSS. The gentleman had a great deal of time during general debate yesterday and I did not have any success in obtaining time.

Mrs. BOLTON. The gentleman was not here when we looked for him.

Mr. GROSS. I was here when the gentlewoman yielded back 21 minutes of time.

Mrs. BOLTON. I looked for the gentleman, because I promised that I would, but the gentleman was not here on the floor.

Mr. GROSS. Well, we will not argue about that any more than we did yesterday when the gentlewoman from Ohio said that this is a $1,300 million bill when the entire program will cost more than $4 billion.

The CHAIRMAN. The time of the gentleman from Iowa [Mr. GROSS] has expired.

Mr. GROSS. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

Mr. COOK. Mr. Chairman, I object.

Mr GROSS. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

Mr. GROSS moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken.

The CHAIRMAN. The gentleman from Iowa is recognized in support of his preferential motion.

Mr. GROSS. I would like to ask the gentleman from Pennsylvania why this exception of $100 million on page 3. The language in the bill reads as follows:

The Fund shall not allocate or commit funds aggregating in excess of $100,000 for use in any country under this title unless (1) an application for such funds has been received for use in such country which is supported by sufficient engineering, financial, or other data to indicate reasonably (A) the manner in which it is proposed to use such funds—

Why do you except $100,000?

Mr. MORGAN. The gentleman first said $100 million.

Mr. GROSS. Well, I mean $100,000. I cannot always keep up with the Committee on Foreign Affairs on figures.

Mr. MORGAN. This is for preliminary engineering studies. You cannot start a project and submit a program unless you have some engineering studies.

Mr. GROSS. It says nothing about limiting it to $100,000 for engineering studies.

Mr. MORGAN. In excess of $100,000.

Mr. GROSS. It does not say anything about limiting any project under the Development Loan Fund to $100,000 for engineering services. This pertains to a project involving $100,000; is that not correct?

Mr. MORGAN. Yes; a project.

Mr. GROSS. It does not say anything about engineering or management or anything else. But why leave it at $100,000? That could grow into several million dollars in view of the number of projects going on all over the world.

Mr. MORGAN. The gentleman from Virginia [Mr. HARDY] is the author of this language and the author of the amount, $100,000.

Mr. GROSS. I hope that an amendment will be adopted removing the $100,000 exception and provide that no project can be started regardless of the amount involved without proper planning.

I should like to ask the gentleman how many supergrades there are in this bill.

Mr. MORGAN. Four.

Mr. GROSS. Why?

Mr. MORGAN. The administration asked for eight. The committee cut it down to four. Last year, if the gentleman remembers, the committee wrote in the Inspector General-Comptroller. The committee felt that two of these supergrades should be for the new agency, the Comptroller-Inspector General. One was to go to the Office of the Coordinator and one to the ICA.

Mr. GROSS. Congress gave this outfit 10 supergrades last year; did it not?

Mr. MORGAN. Yes.

Mr. GROSS. And now you want four this year.

Mr. MORGAN. You remember, the year before, they cut it back from 50 to 35. That was in 1958.

Mr. GROSS. There must have been good justification for it or we would not have been able to make a cut in this glorified bill. I do not know why you should want 4 additional supergrades this year, in view of the fact that you obtained 10 last year, and I shall offer an amendment at the proper time, if no one else does, to eliminate that request.

Earlier, when the State Department bill was before the House, I will say to the gentleman from Louisiana [Mr. PASSMAN], I mentioned the Milton Eisenhower-Johns Hopkins operation in connection with the Foreign Service Training Institute, or whatever it is.

I pointed out at that time that they have, as I remember it, three $16,000-a-year instructors for some 20 students.

Mr. PASSMAN. If the gentleman will yield, their salaries have been raised since that time. This fact was brought out in our subcommittee this morning.

Mr. GROSS. I am glad the gentleman from Louisiana called the attention of the House to some of the operations that are going on around here. I assume there is an authorization in this bill for the military assistance training school over in Arlington Towers where the American Research Institute is paying a retired general $14,000 a year in addition to the $6,000 a year he is drawing as retirement pay.

Mr. PILCHER. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Georgia, and compliment him on the fine statement he made yesterday in opposition to this bill.

Mr. PILCHER. Talking about that $100,000, there are some countries where the Development Loan Fund has earmarked millions of dollars and the project has not yet been devised. In other words, they have earmarked the money but they have not yet even decided on a project.

Mr. GROSS. Yes. Here is some unclassified information I obtained from

the mutual security outfit a few days ago. If you get the classified information, I do not know whether you could carry it around or not, but this is a list of the Development Loan Fund loans. I recall a couple of years ago that I raised a question concerning $5-million loan to Yugoslavia to purchase diesel locomotives. I asked at that time whether the locomotives would be bought in this country and I was assured they would be. Now I find in this record that they are being purchased abroad, $5 million worth of them.

The CHAIRMAN. The question is on the motion offered by the gentleman from Iowa.

The motion was rejected..

Mr. BAILEY. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I was intensely interested in the debate that has been going on here particularly in the field of education and in the field of contracting educational programs abroad through the International Cooperation Administration.

I have here a letter from the Director of the International Cooperation Administration and from it I should like to read two or three paragraphs. Then I want to take up some of the details that are involved here.

DEAR MR. BAILEY: This is in reply to your letter of March 30 in which you request information about contracts between the U.S. Government and certain educational institutions to carry on educational programs abroad.

University contracts are employed by ICA as one means of implementing the technical cooperation program. As of March 31, 1960, the total cumulative obligations for contracts specifically aimed at education amounted to $26,644,208, involving 33 contracts with 27 universities operating in 19 countries. As early as 1951, the Economic Cooperation Administration negotiated an agricultural contract between Cornell University and the University of the Philippines. At the same time, the Institute of Inter-American Affairs negotiated a somewhat similar contract with the University of Arkansas for work in Panama, and the Technical Cooperation Administration negotiated a contract with the Oklahoma Agricultural and Mechanical College for work in Ethiopia.

May I digress from my set remarks at this time to remind you that we built an agricultural college in Ethiopia and we have built or are presently building nine agricultural high schools. The construction is paid for largely by the American taxpayers' money. And we are not only constructing buildings, but we are paying the major part of the salaries of all of these teachers in that agricultural college.

I have some comments a little further on on that particular project in Ethiopia.

University contracts are administered under the Office of Contract Relations, International Cooperation Administration.

I have here, and I am going to ask unanimous consent to put in the RECORD, a list of all the countries in which they are carrying on this program together with a brief description of what the program is. I am doing this, Mr. Chairman, for the sole purpose of calling to your attention the fact that I am going to be here pleading with you in the matter of a few days, I hope, to do something or other about the education of and creating educational facilities for American children. If we have the money to do this in a program of this kind, we ought not even have to go to the trouble of having a debate to furnish our American youth at least with an opportunity equal to what we are doing all over the world.

The matter referred to is as follows:

EXAMPLES OF ACCOMPLISHMENTS

Africa: Ethiopia has developed the foundation for the first modern public school system in the nation's 5,000-year history as a consequence of stimulation and joint planning with the ICA education program. In 1953 there were fewer than 500 qualified teachers to cope with a school population of 72,000 crowded into 718 makeshift classrooms. The single teacher-training institution that year graduated a total of 18 teachers. Today, because of joint effort, there are 4,300 teachers and supervisors in the nation's 3,910 classrooms which house 210,000 children. Teacher-training institutions now number 4 and produce 500 teachers annually. As a result of ICA assistance about 75 percent of all teachers receive summer school training for professional upgrading. The establishment of 148 new self-help village schools has improved and expanded educational opportunities in rural areas. Operating in all provinces, 87 post-elementary, academic, and special schools graduate about 1,300 skilled workers yearly for employment in 23 critical manpower areas.

Through ICA assistance the training of semiskilled and skilled artisans in the building and mechanical trades has progressed. The building trade school in Addis Ababa commenced as a joint effort in 1956 as one means of producing much needed building tradesmen and trade instructors. Training is now offered in electricity, carpentry, masonry, plumbing, and related subject matter in applied mathematics, science, and mechanical drawing. Over 100 graduates annually are obtaining employment in these trades while others are being trained and entering the teaching field in vocational education.

The vocational trades school in Asmara, Eritrea, which began as a cooperative program in 1953, was phased over to the Ministry of Education during fiscal year 1959. U.S. advisers have been reduced from 13 to 9 since the nationals have been trained to take over various shops. It is estimated that in 5 years sufficient vocational teachers can be trained to operate Ethiopian vocational schools with a reduced U.S. advisory staff providing backstopping only.

Libya: The teacher education project in Libya, which was initiated in 1953, has as its objectives the training of additional teachers through preservice programs and upgrade others through inservice programs. The accomplishment of these objectives will eliminate the necessity for the Libyan Government to employ untrained teachers and non-Libyan teachers. Approximately 300 teachers have been graduated from the teachers colleges in Tripolitania and Cyrenaica in each of the years 1958 and 1959. An additional 1,000 received training in a 10 weeks' summer program held at Tripoli and in special classes in Cyrenaica. Acceleration for the certification of elementary teachers is being carried on through evening inservice courses in six centers in Tripolitania.

Liberia: The vocational education program at the Booker T. Washington Institute in Liberia has shown rapid expansion since 1955, when ICA obtained under contract the services of Prairie View A. & M. College to assist in the training of vocational teachers and skilled workers. Enrollment at BWI Vocational High School has increased from 195 in 1954 to 450 at the present time. A total of 206 students have been graduated since 1955. The last graduating class consisted of 63 students. During the period from April 1956 to May 1959, 10 buildings were constructed primarily by American technicians and BWI students. An academic building was completed by the Government of Liberia. The newly expanded Booker Washington Institute opened February 1958, with instructional programs in 16 vocational areas. Among the vocational trades included are agriculture, arts and crafts, automobile mechanics and machine shop, building trades, distributive education, heavy equipment mechanics, home economics, radio and communication, secretarial science, and tailoring. Under the Prairie View contract, ICA provided six advisers in 1955. A full complement of 23 advisers was reached in fiscal year 1958. As a result of training key people Liberian counterparts commenced working with American technicians in 1958. It is contemplated that by 1961, Liberian teachers will assume the major responsibility for operating the school.

LATIN AMERICA

Brazil: When ICA was requested to render technical assistance to Brazil in 1951, the State of Sao Paulo, one of the most active of industrial areas, lacked enough trained lower-level executives, foremen, and supervisors with which to promote industrial growth. At the request of the Ministry of Education, a training within industry program was instituted which involved (1) job instruction training, (2) job methods training, (3) job safety training, (4) conference leadership, and (5) human relations within industry. About 30,000 foremen and supervisors were trained in these courses. This particular program was phased out in 1958. As a followup on this training a newer program is now being organized in the same area for skilled and unskilled workers.

The Brazilian Air Corps had developed an aviation engineering college at Sao Jose de Campos. Brazil had no aviation industry and a study of the records of graduates indicated that they were absorbed in industries other than aviation. With the assistance of ICA this institution has been converted into a general engineering college with seven major fields in which students can specialize. This institution will now be able to supply Brazil with her much needed engineer corps.

The textile industry is the second largest industry in Brazil employing over 400,000 workers. With ICA assistance a survey was conducted to determine manpower needs of this industry; and it disclosed an acute shortage of foremen, departmental and top executives and highly skilled technicians. Again ICA technical assistance aided in organizing a textile institute in Rio, on the junior college level, which is now able to fill this gap in manpower needs. This project was phased out in 1959.

Guatemala: Guatemala has a population reported to be about 60 percent illiterate. The compulsory military training law brings all 18-year-old men into service for a 2-year period. With ICA assistance about 40 army officers have been trained in the techniques of teaching adults and these officers are now conducting literacy classes for new recruits. About 1,000 men at a time are taken for this training. Through such a program illiteracy is being reduced considerably.

Paraguay: As in other developing countries, Paraguay, while agricultural, needs workers in service occupations. ICA assisted in the development of a vocational school in Asuncion which is now producing a trained corps of servicemen in a variety of occupations. The school solved a major problem during 1958 when the city of Asuncion installed a water system for the first time.

There were, however, no plumbers to connect homes to water mains. The vocational school established special courses and, by working day and night, trained the needed plumbers. As of June 1960 this school is being phased over to the Government of Paraguay, no longer in need of technical assistance for effective operation.

Peru: Peru is a country in which the mining, petroleum, fishing, and manufacturing industries are making great progress. In all of these industries, chemical and industrial engineering—as well as analytical chemistry—play an important role. Many of the industries have modern laboratories equipped with modern instruments to carry on the chemical analysis and tests necessary for the development and control of production, but in all of Peru there has been no educational institution with trained professors in the field of analytical chemistry and instrumentation for giving effective training in these areas. Recognizing that the offering of such training would be of tremendous importance in the industrial development of the country, the University of San Marcos in Lima requested ICA to assist in the modernizing and broadening of the department of chemistry. Three years ago ICA entered into a contract with the University of New Hampshire to carry out such a program of assistance at the University of San Marcos through the training of professors and the provision of a modest amount of equipment basic to the training program. This very successful program will be completed in June 1960.

NEAR EAST-SOUTH ASIA

Turkey: One of Turkey's major problems is the erasure of illiteracy. Since 50 percent of the conscripts for military service are unable to read and write the Turkish Ministry of National Defense and the U.S. military mission found themselves seriously handicapped in their efforts to develop modern military units. A project for literacy training in the armed forces was launched in the spring of 1959 under the joint effort of the Turkish Ministries of Education and Defense, the U.S. military mission and the ICA technicians were furnished from the USOM Education Staff and the Georgetown University contract team temporary housing by the U.S. military mission. Every 2 months 11,000 recruits enter the literacy training programs. Four such groups have completed the 2-month course. Materials have been developed and produced for use in literacy education. Results to date indicate that a high percentage of recruits emerge with an effective degree of reading and writing ability; some of these are being given advanced training in preparation for promotion to officer status. Many are selected to continue literacy education in their communities upon their discharge from the Army. Followup reading materials are now being prepared for use by the newly literate.

Jordan: Jordan, which had no organized teacher education program prior to ICA assistance in 1952, now has preservice training facilities for about 500 and has increased its in-service training and summer school programs for teachers from approximately 200 to 2,500 annually. This growth has been due primarily to the efforts of ICA and the Jordanians who have put into practice that which they have learned, under the auspices of ICA.

Afghanistan: Afghanistan is one of the border countries of the free world. While Soviet bloc economic assistance activity is present in Afghanistan, the U.S. program is the only bilateral effort which is presently permitted in the field of education which is of paramount importance in the battle for men's minds. It already affects (a) higher education through assistance which is being given to the college of agriculture and engineering, to the university administration, and to the affiliated institute of education—and through the quick acceptance of many of the recommendations made late in 1959 by the University of Illinois team which carried out a comprehensive survey of Kabul University; (b) teacher education through the Institute of Education and in-service teacher training courses; (c) a large segment of elementary and secondary education; (d) vocational industrial education through the Afghan Institute of Technology; (e) vocational agriculture, through the vocational agriculture school developed under the program; and (f) a major project in the teaching of English as the "second language" of Afghanistan. Plans for an even more intensive program of action in education are presently under discussion with Afghan authorities.

India: India's effort to develop her economy to meet the needs of a rapidly expanding population of some 415 million, requires a major effort to expand agricultural and industrial production, public works, transportation, irrigation, conservation and reclamation facilities. To make possible increases in industrial output there must be a sharp increase in the supply of engineers, an improvement in their quality, and at the same time an adequate corps of technicians must be trained to back up the work of the engineers.

Much has already been accomplished through the ICA technical cooperation program. During an initial phase from fiscal year 1953 through fiscal year 1958 assistance was provided, through contracts with American universities, for developing and strengthening 11 existing engineering educational institutions. During that phase, which ended in fiscal year 1958, 45 U.S. engineering professors served a total of 67 man-years in India, and 60 Indian engineers were trained in the United States, primarily for staffing the engineering colleges.

A second and more intensive phase is now under way. In this program, technical cooperation is concentrated on developing a new program of graduate study and engineer teacher training in five leading engineering institutions. New contracts for this purpose, replacing old contract activities, were signed during fiscal year 1960 with the Universities of Wisconsin and Illinois, and a third university contract is scheduled to come into effect late this fiscal year. In another project, 170 Indian engineering educators have been brought to the United States with approximately 200 more to come by the end of fiscal year 1961. New plants (or enlargement of present plants) are being constructed for these five institutions and their curriculums are being revised. Thus, an impressive start has been made on measures to meet the present engineering teacher shortage which has been estimated at 1,500 teachers. Plans for the development of a major Institute of Technology at Kanpur are progressing rapidly, in addition to the projects mentioned above.
